(2) The method of enforcing the emission reductions used as offsets for new major sources is vague. Maryland informed EPA that the operating permit conditions would be the enforcement tool used by the State. Furthermore, the December 10, 1979 SIP submittal revises regulations 10.18.04 and 10.18.05, Section .05(B), to require that sources adhere to offset agreements. However, to insure enforceability of all external offsets Maryland must submit them as individual SIP revisions. As proposed elsewhere in this **Federal Register,** EPA's intent is to grant conditional approval, upon the State of Maryland submitting a commitment to submit SIP revisions for external offsets by September 1, 1980.

(3) The Maryland regulations require that actual future emissions are to be offset against present allowable emissions. EPA initially stated that this differed from the Section 173 requirement that allowable future emissions be offset against allowable present emissions. EPA has reviewed Maryland's position that its regulatory language better ensures an air quality benefit. EPA now believes that the regulation is consistent with the Clean Air Act requirements and provides at least an equivalent offset.

(4) EPA noted in the notice of proposed rulemaking that the Maryland offset provision required continued further progress on an annual basis. The question arose as to the review of the impact of sources which would operate on a seasonal basis. Maryland stated that in the permit application review, the short-term emission rates and impacts would apply in the permit. A conditional approval of this provision of the regulation, proposed elsewhere in today's **Federal Register,** may be granted, provided Maryland submits by September 1, 1980 a written commitment to examine and use the most restricting emission rate.

(5) Regulatory provisions for pre-construction review for new or modified major sources of carbon monoxide were omitted from the Maryland Plan. EPA is taking no action on this part of the plan. Therefore until the regulations are amended to incorporate pre-construction review in accordance with Section 173 and included in the SIP, no major sources of carbon monoxide may locate in the nonattainment areas for CO. Maryland has stated that such revisions will be made; it is EPA's recommendation that the State of Maryland accomplish this as soon as possible.

Additionally, during the comment period on the proposed rulemaking, a national environmental group pointed out that the Maryland regulations require a permit applicant to demonstrate that all major sources owned or operated by the applicant are in compliance or on a schedule for compliance with applicable emission standards. However, the regulations do not require the same showing of sources owned or operated by any entity controlling, controlled by, or under common control with the applicant as required by Section 173(3) of the Clean Air Act. As a condition of the Part D approval, proposed elsewhere in today's **Federal Register,** Maryland must take action to amend the new source regulations language to correct the noted omission. This amendment must be submitted as a formal SIP revision by December 31, 1980.

In conclusion, until the pre-construction review regulations are approved with the above conditions, and by the dates which are proposed for public comment elsewhere in today's **Federal Register,** no new sources to which Section 173 of the Act applies may be permitted for construction in the designated nonattainment areas. For those areas where Maryland has requested a change in the nonattainment designation, EPA is taking no action on the pre-construction regulations and Section 173 requirements. Therefore, as noted previously, until EPA's "Final Rulemaking" on the redesignation appears in the **Federal Register,** these provisions of the plan for those areas will not be finally acted upon.

III. *Ozone*

1. *Adoption After Reasonable Notice and Hearing*

Maryland adopted the regulations in its plan after public hearings on November 9, 21, and 27, 1978, conducted in accordance with Section 110 of the Clean Air Act and 40 CFR 51.4. Therefore this requirement is satisfied.

2. *Attainment Date*

Maryland does not anticipate achieving the ozone standard by the end of 1982 for either of the metropolitan nonattainment areas for ozone and has requested an extension of the deadline for achieving this standard until the end of 1987. EPA's review of Maryland's submittal with respect to the 0.12 ppm ozone standard supports the request for an extension. Section 172(a)(2) and Section 172(b)(11) of the Act allow for such an extension. Despite the implementation of RACT for the VOC stationary source categories and the implementation of transportation control measures, including a motor vehicle inspection and maintenance program (I/M), the State of Maryland has demonstrated that attainment of the standard by 1982 is impossible. Further, the State has shown that attainment by 1987 will be difficult requiring additional planning efforts and measures yet to be investigated. EPA approves the extension to December 31, 1987 as discussed in the EPA actions section of this notice.

2. *Emission Inventory*

materials, photochemical reactive

The Metropolitan Washington Council

The plan was developed using the 0.08

3. *Emission Inventory*

Maryland has submitted a 1977 emission inventory for the Metropolitan Baltimore region. The emission inventory used for the National Capital region was for 1976. This has been found to be acceptable. EPA has made this decision based upon (1) that the State of Maryland through its participation in the Northeast Corridor Regional Oxidant Study will be developing an accurate and current VOC emissions inventory, and (2) it will be required that the State submit adequate source-specific emission inventory updates in the annual reports associated with the Reasonable Further Progress (RFP) requirements. Maryland should use updated emissions inventories in any future revisions of the SIP.

4. *Reasonable Further Progress (RFP)*

The RFP presentation in the originally-submitted plan used 6 a.m.–9 a.m. hydrocarbon emissions instead of daily (24 hour) values in determining the required ozone reductions. This was deficient because the percent contribution of mobile and stationary sources is different between daily and 6 a.m.–9 a.m. calculations. Background data, including all calculations performed in developing the RFP, were not submitted with the plan. Also, Maryland assumed the future emissions from gasoline marketing facilities to be constant in the Baltimore area. The emissions in this category should increase with growth.

EPA asked Maryland to recalculate emissions using daily values, to reassess the gasoline marketing growth assumptions, and to submit these with the relevant background data. Maryland has submitted the information requested and adequately addressed the above concerns. Therefore the RFP schedule is approved.

5. *Margin for Growth*

Maryland has adequately addressed growth factors and estimates. The growth estimates used in the development of the RFP schedules will be tracked through the required annual reports.

6. *Preconstruction Review*

This aspect of the ozone plan is discussed above in the New Source Review Section with the noted deficiencies and remedies.

7. *RACT as Expeditiously as Practicable*

The Control Techniques Guidelines (CTG) documents provide information on available air pollution control techniques, and contain recommendations of what EPA calls the "presumptive norm" for RACT. Based on the information in the CTG's EPA believes that the regulations submitted by Maryland can be generally accepted as RACT; however, the following portions of the regulations requiring the use of RACT for stationary sources of VOC emissions should be improved:

(1) The vapor recovery provisions in Section J(2) of the Maryland regulations do not represent application of RACT. However, EPA had previously promulgated regulations, 38 FR 34252, 1973, and as subsequently amended, which in conjunction with Maryland's rules, are considered RACT. In EPA's opinion, it would be preferable for the State to adopt regulation in accordance with the EPA promulgation.

(2) Maryland Regulation section K(10)(C) includes a temperature exemption for use of cutback asphalt. A seasonal exemption was recommended by EPA, for ease of enforcement. In discussion with Maryland, the State indicated that it intends to use the temperature exemption and will enforce the regulation by means of the Maryland Highway Administration's responsibility to enforce the materials specification for highway use. Additionally, the State of Maryland has informed us that the regulation will allow for some solvent to be present in the emulsified asphalts as represented by the specifications of the State Highway Administration. This intent will be clarified in a regulation amendment. As proposed elsewhere in today's **Federal Register**, EPA intends to conditionally approve this regulation based upon the State submitting by December 31, 1980, documentation of the operation procedure or the policy which will form the basis of the enforcement of the regulation, and an acceptable regulatory limit upon the solvent content in emulsified asphalts.

(3) In the notice of proposed rulemaking on August 1, 1979, 44 FR 45194, EPA noted that in the Gasoline Bulk Terminal regulation (Section J(2)(c)), the cutoff size for terminals built before January 1, 1974 is 40,000 gallons per day instead of 20,000 gallons per day, the figure recommended by EPA; Maryland's cutoff size for fixed-roof storage tanks built before January 1, 1973 is 65,000 gallons capacity whereas EPA's cutoff figure is 40,000 gallons. Maryland informed EPA that there are no sources which fall between the cutoff limits and has adequately addressed EPA's concern and therefore these regulations are found acceptable.

Maryland's SIP exempts methyl chloroform (1,1,1, trichloroethane) from its definition of "organic material." On May 16, 1980, EPA published a clarification of agency policy concerning the control of methyl chloroform and methylene chloride in ozone SIPs. (45 FR 32424). EPA explained that it cannot approve or enforce controls on either of these two compounds as part of a federally enforceable ozone SIP because current information indicates that neither compound is an ozone precursor. Consequently, EPA is not disapproving Maryland's exemption of methyl chloroform from the definition of "organic material."

This policy is in no way an expression of EPA's view on the desirability of controls on these compounds. States retain the authority to control these compounds under the authority reserved to them in section 116 of the Clean Air Act. In addition, state officials and sources should be advised that there is a strong possibility of future regulatory action by EPA to control emissions of these two compounds. (See, *e.g.*, Proposed New Source Performance Standards for Organic Solvent Cleaners, 45 FR 39766, June 11, 1980.)

8. *I/M, If Necessary, As Expeditiously As Practicable*

I/M programs are required in the two metropolitan ozone nonattainment areas. Maryland has proposed a conditionally approvable plan to implement I/M in these areas; authorizing legislation was signed by the Governor on May 30, 1979. A discussion of Maryland's I/M program is presented in the INTRODUCTION section.

9. *Transportation Controls, If Necessary, As Expeditiously As Practicable*

This topic is covered in the Transportation Measures section below.

10. *Enforceability*

EPA has the following concerns: (1) Section J(2) should include a definition for "household reactive solvent." EPA recommends that this definition be added when Maryland submits a SIP revision in the near future. (2) The following sections of Maryland's VOC regulations should include a test method for determining compliance with the requirement for 90 percent collection efficiency: K(2)(b)(iii)(bb), K(3)(b)(ii)(bb), K(4)(b)(ii)(bb), K(5)(b)(ii)(bb), K(6)(b)(ii)(bb), and K(7)(b)(ii)(bb). An EPA memorandum dated November 15, 1979 outlining the VOC Test Methods for Procedures has been transmitted to the State of Maryland and should be used in the development of the State regulations to be incorporated into the SIP. As published elsewhere in today's **Federal Register**, EPA is proposing conditional approval of these regulations, and to allow Maryland until December 31, 1980 to adopt appropriate test procedures.

Public comments made have reflected confusion over definitions in the Maryland VOC regulations in section .04j, for example, the definitions of photochemical reactive organic materials, photochemical reactive organic solvents and organic materials. EPA will reserve action on this portion of the plan, as noted above, until after the public comment period on the notice clarifying the status of the Maryland urban hydrocarbon and volatile organic compound regulations, 45 FR 26368, published on April 18, 1980.

11. *State Commitments and Resources to Implement and Enforce Adopted Measures*

The State of Maryland has made an adequate commitment to implement the Maryland regulations in the SIP. However, since the control strategy demonstration depends in part upon EPA-promulgated regulations, EPA recommends that Maryland commit to adopt equivalent State regulations.

12. *State Commitments to Comply With Schedules*

EPA has published additional Control Techniques Guideline (CTG) documents for the control of stationary source categories of VOC's. The State of Maryland has made an acceptable commitment to develop and adopt legally enforceable regulations for all appropriate stationary source categories of VOC's subsequent to EPA's issuance of these guideline documents. As noted in the General Preamble for Proposed Rulemaking on Approval of Plan Revisions for Nonattainment Areas, 44 FR 20376 (April 4, 1979), the minimum acceptable level of stationary source control for ozone SIPs includes RACT requirements for VOC sources covered by CTGs the EPA issued by January 1978 and schedules to adopt and submit by each future January additional RACT requirements for sources covered CTGs issued by the previous January. The submittal date for the first set of additional RACT regulations was revised from January 1, 1980 to July 1, 1980 by **Federal Register** notice of August 28, 1979, 44 FR 50371. Today's approval of the ozone portion of the Maryland plan is contingent on the submittal of the additional RACT regulations which are due July 1, 1980 (for CTGs published between January 1978 and January 1979). In addition, by each subsequent January beginning January 1, 1981, RACT requirements for sources covered by CTGs published by the preceding January must be adopted and submitted to EPA. The source requirements are set forth in the "Approval Status" section of the final rule. If RACT requirements are not adopted and submitted to EPA according to the time frame set forth in the rule, EPA will promptly take appropriate remedial action.

13. *Public Involvement and Analysis of Effects*

The Metropolitan Washington Council of Governments and the Regional Planning Council, both regional planning agencies, assisted Maryland in developing the SIP. These agencies and the State of Maryland provided an acceptable public involvement program. Notwithstanding the actions being taken today, the State of Maryland must still submit a SIP revision for public consultation to EPA to meet the requirements of Section 121 of the Act.

14. *Transportation Measures* (for Ozone and Carbon Monoxide)

As a result of the ozone and carbon monoxide nonattainment designations described in the INTRODUCTION of the notice, a process of consultation among affected local governments led the then Acting Governor to designate, on March 23, 1978, the Section 174 agencies. These are the Metropolitan Washington Council of Governments (COG) for the Maryland portion of the National Capital Interstate AQCR and the Regional Planning Council for the Metropolitan Baltimore Intrastate AQCR.

National Capital Area

In fulfillment of its Section 174 responsibilities, COG produced a document, dated November 29, 1978 entitled "Washington Metropolitan Air Quality Plan for the Control of Photochemical Oxidants and Carbon Monoxide." After notice and public hearing, a final draft of this document was incorporated into the National Capital portion of the Maryland SIP.

COG, using the 1976 emissions inventory and an ozone design value of 0.225 ppm, calculated 64% to be the amount of the emission reduction of volatile organic compound needed to meet the former 0.08 ppm photochemical oxidant standard in the National Capital area. Despite the application of reasonably available control measures, including the Federal Motor Vehicle Control Program, RACT on the applicable stationary sources, and transportation control measures, the plan estimates that by the end of 1982, there will be at 24% reduction of emissions instead of the needed 64%.

For carbon monoxide, using its emission inventory, COG conducted an analysis of "hot spots" as well as an analysis of total regionwide CO emissions, COG concluded from the analysis that the eight-hour CO standard could not be met in 1982.

Thus, for both carbon monoxide and ozone, Maryland requested an extension of the 1982 attainment deadline. Approval of this extension is discussed in the EPA Actions Section of this notice.

The plan was developed using the 0.08 ppm oxidant standard and is subject to revision using the new 0.12 ppm statistical ozone standard promulgated on February 8, 1979. This reassessment may alter the amount of emission reduction needed for attainment of the ozone standard, and the length of the attainment date extension.

In preparing the plan, COG recommended 28 transportation measures to the local governments as appropriate for consideration in the 1979 SIP submittal. These measures were selected from an initial list of 70 measures identified as having potential for reducing transportation-related emissions.

COG is conducting an analysis of alternatives (of transportation measures), for which it has been funded by the Urban Mass Transportation Administration under Section 175 of the Clean Air Act, to reassess all 70 of the transportation measures for consideration for possible inclusion in the SIP in accordance with Section 172(c) of the Act.

Commitments made by local governments in Montgomery and Prince Georges Counties toward implementing the 28 measures recommended are detailed in Appendix "E" of the COG plan. Notable among the commitments are the endorsements for affirmative actions toward the implementation of transportation measures made by the jurisdictions in the below-listed seventeen categories of transportation measures: (COG recommendations are shown in parentheses.)

1. Continue construction of Metrorail (completion of the presently committed 60 miles) (COG #1), Endorsed by Montgomery County, Prince Georges County and City of Rockville.

2. Eliminate all day on-street, non-residential parking where appropriate (COG #3), Endorsed by Montgomery County and Prince Georges County.

3. Provide fringe parking lots at selected locations (COG #4A), Endorsed by Montgomery County, the City of Gaithersburg, the City of Bowie and Prince Georges County.

4. Provide fringe parking to accommodate deficiencies at Metro stations (COG #4B), Endorsed by Montgomery and Prince Georges Counties.

5. Implement carpools and Vanpools in both the public and private sectors (COG #5), Endorsed by Montgomery County and the city of Bowie.

6. Reserve convenient parking spaces for carpools/vanpools (COG #7), Endorsed by Montgomery County and Prince Georges County.

V 45 A G 1 2 8 0 UMI

7. Build additional bicycle lanes and bikeways (COG #8), Endorsed by Montgomery County, the City of Gaithersburg, the City of Bowie, the City of Greenbelt, the City of Rockville and Prince Georges County.

8. Provide and improve regional and local ride-sharing activities (COG #9), Endorsed by Montgomery County and the City of Bowie.

9. Implement fixed route minibus or semi-demand-responsive transit (COG #10), Endorsed by Montgomery County, the City of Gaithersburg and the City of Greenbelt.

10. Install additional bicycle storage facilities (COG #12), Endorsed by Montgomery County.

11. Encourage specialized bus service (COG #15), Endorsed by Montgomery County and Prince Georges County.

12. Include Metrobus information with carpool/vanpool information (COG #16), Endorsed by Montgomery County.

13. Develop a coordinated private and public sector parking management policy (COG #18), Endorsed by Montgomery and Prince Georges Counties.

14. Provide additional pedestrian facilities and eliminate barriers to pedestrians (COG #19), Endorsed by Montgomery County, the City of Gaithersburg, the City of Rockville, Prince Georges County and the City of Greenbelt.

15. Improve signalization in the region (COG #23), Endorsed by Montgomery County, the City of Gaithersburg and Prince Georges County.

16. Encourage staggered or flexible work hours for the public and private sectors (COG #24), Endorsed by Prince Georges County.

17. Encourage additional corridor studies implementing Transportation System Management elements (COG #28), Endorsed by Montgomery County.

In the August 1, 1979 notice of proposed rulemaking, EPA requested more clarification and justification of the process of selecting and rejecting transportation control measures. EPA believes that as a minimum, Maryland must include a commitment to, or detailed descriptions of the rationale for not considering, the following COG measures:

(COG #2) Institute Commercial Rates for Government Employees.

(COG #6) Build/Designate Exclusive Lanes for High Occupance Vehicles.

(COG #11) Freeway Ramp Metering with Preference for High Occupancy Vehicles.

(COG #13) Develop a Regional Coordinated Effort to Increase the Fuel Tax.

(COG #14) Increase Washington Metropolitan Area Transportation Authority Express But Frequency.

(COG #17) Develop a Program for Regional Tax to Support Transit.

(COG #20) Encourage Employers to Subsidize Employee Transit Fares.

(COG #21) Add Signal Preemption Devices for Transit Vehicles.

(COG #22) Provide Free or Discounted Transit Fares in the Offpeak hours.

(COG #25) Shift Airline Flights from National to Dulles and Baltimore/Washington International Airports.

(COG #26) Encourage Payroll Deduction Plans for Transit Rides.

(COG #27) Develop a Program to Transfer Interstate Funds to transit.

Metropolitan Baltimore Area

As a result of the work program negotiated by the appropriated State agencies, the Regional Planning Council produced a four-volume document entitled "Transportation Control Plan for the Baltimore Region." This plan was transmitted to the then Acting Governor on September 29, 1978 and after notice and public hearing, was incorporated into the Maryland SIP.

Based upon a 1977 emissions inventory provided by Maryland Air Quality Programs and an ozone design value of 0.24 ppm, the Baltimore plan indicated a 67% reduction in volatile organic compound emissions is necessary to meet the former 0.08 ppm oxidant standard. Despite the application of the Federal Motor Vehicle Control Program, RACT on applicable stationary sources, and committed transportation measures, the plan states that the oxidant standard would not be attained by 1982.

For carbon monoxide, using a 1977 emissions inventory provided by Maryland Air Quality Programs and rollback techniques, the plan shows a 29% reduction is necessary to achieve the NAAQS for CO in the Baltimore Central Business District. The plan anticipates that attainment of the CO standard will not occur until 1983.

Since extension of the 1982 attainment deadline is needed for both ozone and carbon monoxide in the Metropolitan Baltimore Intrastate AQCR, Maryland has committed to undertake an I/M program for motor vehicles and the program for further analysis and implementation of the transportation control measures. The first phase of the analysis work of transportation measures under the Urban Air Quality Planning Program has been funded by UMTA.

The plan prepared by RPC contained a candidate list of twenty eight transportation measures, developed through public and intergovernmental consultation. These measures are described in Volume Four of the Metropolitan Baltimore Transportation Plan. Twelve of the transportation measures are those to be implemented in the near term, and are as follows:

1. *Park-and-Ride Lots*

To the extent funding sources allow, construct 21 part-and-ride lots included in the Transportation Improvement Program for 1978–1981. Maryland Department of Transportation (MDOT) is committed to construct 300 new park-and-ride spaces per year through 1982.

2. *Improved Rail Transit*

MDOT will construct an eight-mile rapid-transit line from the Baltimore Central Business District out to Reisterstown Road.

MDOT will rehabilitate stations, locomotives and coaches to improve rail service to Washington, D.C. along with Baltimore & Ohio Railroad Lines through Baltimore and Howard Counties.

3. *Carpooling*

COMPUTERIDE, the Baltimore's region's carpool program, will attempt to form 1500 new carpools annually through increased public awareness, employer incentives, and carpool matching programs.

4. *Vanpooling*

VANGO Inc., the corporation responsible for implementing the vanpool program in Baltimore, will attempt to form at least 50 new vanpools annually.

5. *Preferential Parking for Ridesharing*

The City of Baltimore has agreed to commit 35% of the available off-street parking spaces for carpools with no fewer than 300 spaces available at any time.

6. *Bus Service Improvements*

MDOT will purchase new buses, and will provide additional maintenance and new bus shelters.

7. *Inspection and Maintenance*

Implement and I/M program, as described in the Introduction Section of this notice.

8. *Traffic Flow Improvements*

Improve signalization in Anne Arundel County, Baltimore City, and Baltimore County, and implement other traffic flow improvements to reduce extended idling, including the Maryland right-turn-on-red law.

9. *Bicycle Right of Way*

Construct bikeway safety projects.

10. *Residential Permit Parking Program*

Establish a pilot residential permit parking program in the Oakenshawe neighborhood of Baltimore City.

11. *Land Use Management*

The following measures are incorporated into the plan:

A. Maryland Agricultural Land Preservation Program

B. Anne Arundel County Growth Management Ordinance, Title 13 of Anne Arundel County Code

C. Baltimore County Bill, No. 12–77

D. Carroll County Zoning Ordinance Text, Amendment T–43

12. *Public Education Campaign*

An information program for the widespread dissemination of information promoting air quality control measures has been proposed for funding as authorized by Section 175 of the Clean Air Act.

The only measure of the 28 not included in the submittal was fuel rationing, which the Maryland plan states would be considered only in the regional context of a national program. EPA believes this is an adequate justification for not analyzing the measure at this time. RPC is committed to examining and reassessing the remaining transportation measures listed in Section 108(f) of the Clean Air Act, during the alternatives analysis, funded by Section 175 of the Act.

All County jurisdictions in the region ratified the transportation portion of the plan for the Metropolitan Baltimore area. However, two jurisdictions had qualifying statements on their endorsement. The Baltimore City Council endorsed the plan and proposed control measures except for the on-street parking restrictions as they apply to Baltimore City. The Harford County Council did not endorse the proposed Motor Vehicle Inspection and Maintenance Program.

In reviewing the transportation control components of the Maryland SIP, EPA solicited comments for the U.S. Department of Housing and Urban Development (HUD) and the U.S. Department of Transportation (DOT).

Comments from HUD to EPA pertained only to the Maryland portion of the National Capital region. In general these comments supported the transportation control measures as consistent with the objectives of the National Urban Policy.

DOT submitted comments concerning the substance of the plans and the compatibility of scheduling, funding, and implementation of proposed transportation control measures with other ongoing transportation programs. EPA has evaluated these comments along with others before taking this final action on the SIP revision.

Presented in the following paragraphs is a summarized evaluation of both the COG and RPC plans discussed in the August 1, 1979 proposal, 44 FR 45194.

1. The designation of the nonattainment areas for ozone is adequate.

2. The hydrocarbon and carbon monoxide emission inventories used for the Baltimore and Maryland National Capital submittals are adequate.

3. The estimates of emission reduction necessary for attainment of the carbon monoxide and ozone standards described in the plan profiles are adequate in the documentation of assumptions. Growth and modeling procedures demonstrate that the NAAQS cannot be attained by 1982.

4. The documentation of the designation process for the certification of COG and RPC as lead planning agencies under Section 174 is adequate.

5. The identification of tasks and responsibilities for agencies participating in the development of these nonattainment plans is generally adequate. However, the submittals lack a clear description of the project programming process in Maryland and the criteria used for determining conformity of transportation plans and projects with air quality requirements. On May 14, 1979, RPC submitted to EPA an outline of a technical report to be written describing the Maryland project programming process. On November 16, 1979 this was forwarded to EPA as supplemental information and is now acceptable. Criteria for determining conformity between transportation plans and programs should be developed in accordance with the Section 121 Consultation SIP revision which was due to EPA on December 16, 1979. In the absence of specific federal guidance, EPA encourages each designated lead agency and appropriate metropolitan planning organization (MPO) where different from the lead agency, to develop and adopt such criteria and procedures. At a minimum, however, each lead agency (and MPO) in response to Section 176(c) of the Act must affirm its (their) commitment not to approve any project, program, or plan which does not conform to the plan being approved (or conditionally approved) today. Maryland should submit this revision as soon as possible.

6. Subsequent to the August 1, 1979 notice of proposed rulemaking, both COG and RPC have completed detailed work programs consistent with their FY 1980 Unified Planning Work Programs and the requirements of the EPA/DOT Federal Register Notice on Urban Air Quality Planning Grants, 43 FR 60215, 1978, and have thus received awards by UMTA for Section 175 grants.

7. A synopsis of the reasonable available transportation measures slated for adoption were portrayed in the Maryland National Capital and Baltimore Area Profiles, above. The details are presented in Appendix "E" of the COG Air Quality Plan and Volume 4 of the Metropolitan Baltimore transportation portion of the plan. These are adequate as the initial steps in the implementation of the transportation measures in the Part D plan. The measures of the plan must include schedules, including interim milestones and commitments by responsible agencies to implement needed measures.

8. Commitments to justify decisions for the non-adoption of measures including difficult-to-implement, but reasonable available, measures have been incorporated as a task item in both the COG and RPC Work Programs for the transportation alternatives analysis. The justifications are to be scrutinized by DOT and EPA prior to the rejection of a measure.

9. Notwithstanding the fact that EPA described in the notice of proposed rulemaking the exemplary process of consultation between public interest groups and elected officials covered in the COG and RPC plans, and notwithstanding that since that time these agencies have further instituted a public information program for I/M, they still must address the requirements of the June 18, 1979 call for SIP revisions on public consultation to meet the requirements of Section 121.

10. A full identification of financial and other resources necessary to carry out the analysis of transportation alternatives has been made by COG and RPC in their work programs. While EPA and UMTA have some reservations about the current overall work programs for the transportation planning work, it is recognized that more detailed descriptions will be made a part of future work programs. As such UMTA has funded the Phase I work of COG and RPC.

11. Public hearings were conducted in accordance with Section 110 of the Clean Air Act and 40 CFR 51.4 in the Maryland portion of the National Capital Interstate AQCR on October 26, 1978 and November 27, 1978, and in the Metropolitan Baltimore Intrastate AQCR on November 21, 1978. EPA finds that the requirements for public hearing have been adequately met.

12. Provisions for reporting progress of implemented measures have been included in the RPC and COG program for the alternatives analysis that is currently underway. COG and RPC, the grantees, will be required to file quarterly reports with UMTA on the progress of the analyses. In addition, these planning agencies are required to provide input to Maryland Air Quality

Programs; that agency is responsible for submitting annual reports documenting the incremental emission reductions to demonstrate Reasonable Further Progress.

13. Enabling legislation for a program of motor vehicle inspection and maintenance (Senate Bill 751) passed the Maryland Legislature on April 9, 1979. This Bill was signed into law on May 30, 1979, and provides for the commencement of a voluntary I/M program in January 1981, and a mandatory program by January 1, 1982. This will be implemented by regulations and procedures to be established by the State, as discussed above in the section on I/M. EPA has found the enabling legislation to be generally adequate.

14. The required commitment to use available grants and funds which will improve public transportation for basic transportation needs appears to be met through the administration of grants by the operating transit agencies in the Baltimore and National Capital metropolitan areas. Notably, the approval of the amended capital assistance grant by DOT on September 29, 1978, for the Washington Metropolitan Area Transit Authority and the commitments made by Maryland in the Interim Capital Contribution Agreement will facilitate the completion of the 60-mile portion of the Metrorail transportation system called for in the plan.

Commitments are also made to transportation needs by the Secretary of the Maryland Department of Transportation on behalf of the Mass Transit Administration, the operating agency for the Metropolitan Baltimore area. These commitments appear adequate for the 1979 plan submission. However, a requirement of the determination of conformity in accordance with Section 176(C) of the Act will require MDOT to reaffirm annually the commitments of the transportation measures in the SIP.

15. As previously stated, the Unified Planning Work Programs for COG and RPC have subsequently been modified to include air quality planning activities. The COG plan contained a schedule for this modification. RPC submitted a schedule to EPA as supplementary information to its plan on January 30, 1979. As these planning agencies develop criteria in accordance with Section 176(c) of the Act, they must demonstrate how their plans and programs conform with the plan being approved in part today.

16. The emission reduction estimates are reasonable for the adopted transportation measures.

17. The analysis of economic, environmental, energy, social and welfare effects of the COG and RPC plans is adequate, although cursory, and the opportunity for public comment was provided. However, in the notice of proposed rulemaking, 44 FR 45194, 1979, EPA requested that COG and RPC develop an analytical method for assessing these impacts in the alternatives analysis. COG and RPC have been addressing these impacts in the alternatives analysis. COG and RPC have been addressing this both independently in their Urban Air Quality Planning Grant and jointly as members of a Section 174 Agency Workgroup (comprised of 174 planning agencies from Pittsburgh, Pa., Philadelphia, Pa., and the New Jersey, New York Metropolitan areas).

18. The determination of conformity should require a prioritization of projects in the Transportation Improvement Program to be made annually by MDOT. Assuring timely implementation of the needed transportation measures.

19. No specific transportation measures in the current federally approved SIP were proposed for deletion by Maryland in the 1979 submittal. Maryland has not requested deletion of the obsolete transportation measures promulgated in 40 CFR 52.1079 et seq.—Approval and Promulgation of State Implementation Plans—Subpart V, for the Metropolitan Baltimore Intrastate AQCR and the Maryland portion of the National Capital Interstate AQCR. As a result of legislative, administrative, and judicial actions, the original SIP containing these transportation measures has been significantly altered. This does not substantially affect the plan being acted upon today and a request for deletion of the obsolete sections of 40 CFR Part 52 can be submitted at some future time.

IV. *Total Suspended Particulates*

As discussed above in the INTRODUCTION and BACKGROUND sections, in response to the nonattainment area designations and the requirements of the Clean Air Act as amended, the State of Maryland submitted a revised implementation plan for total suspended particulates (TSP) on January 19, 1979. The plan submitted was designed to attain the primary TSP standard by December 31, 1982, the required attainment date. The State of Maryland has requested an eighteen-month extension to develop a plan to attain the secondary standard for TSP. The State believes that the extension is necessary to study the fugitive particulate emissions prior to development of appropriate regulations to control these emissions.

The TSP Plan submitted by the State of Maryland on January 19, 1979, included an emission inventory, a commitment of an annual incremental reduction in particulate emissions, as well as a commitment and proposal for further study and subsequent adoption of fugitive particulate regulations.

The EPA in its review of the TSP implementation plan identified several deficiencies in the notice of proposed rulemaking on August 1, 1979, 44 FR 45194. These are noted and discussed in the following paragraphs.

1. *Adoption After Reasonable Notice and Hearing*

The State of Maryland held public hearings on the provisions of the SIP on November 21, 1978. The regulations have been adopted by Maryland in accordance with Section 110 of the Clean Air Act and 40 CFR 51.4. Therefore, this requirement is adequately satisfied.

2. *Control Strategy and Demonstration of Attainment*

The State submittal contained a diffusion modeling analysis as the basis for demonstrating attainment of the primary TSP standard. Further, the State clearly demonstrated that a significant contributor to the TSP secondary standard nonattainment is non-traditional particulate matter. EPA noted in the proposed rulemaking that the model overpredicted pollutant concentrations. Therefore, EPA requested that appropriate corrections to the emission inventories be made along with subsequent correction of the predicted pollutant concentrations. Maryland reviewed the emission inventory and performed a sensitivity analysis of the changed emissions. Additionally, Maryland amended the dispersion model results. EPA has reviewed the amended work and finds the demonstration of primary attainment acceptable. The State has committed to submit a more detailed description and a schedule of the work to study and define controls for non-traditional particulate matter. Based upon a review of the State's proposal, EPA is granting an extension until July 1, 1980 for submission of a plan to attain secondary standards.

3. *Emission Inventory*

The plan submittal presented emission inventories for 1977 and 1982. EPA, as a result of a limited review of the inventory, identified in the proposed rulemaking notice discrepancies between EPA-estimated emissions and those values submitted by Maryland in the revised SIP. The State reassessed the inventory for accuracy and made some corrections. EPA is approving the inventory for the primary plan.

4. *Reasonable Further Progress*

An adequate presentation of Reasonable Further Progress was included in the revised SIP. EPA indicated that the RFP was acceptable in the August 1, 1979 Notice of Proposed Rulemaking, 44 FR 45194. Therefore, this is approved.

5. *Margin for Growth*

The State has accommodated area source growth by incorporating growth factors in the emission projections used in the attainment demonstration. Growth of major point sources will be accommodated by a case-by-case emission offset provision discussed previously in this notice. EPA in its review found some inconsistencies in the narrative and charts reflecting the development of the growth factors used by the State of Maryland. The State has made the appropriate corrections, and therefore this is acceptable, aside from the pre-construction review deficiencies and conditions noted previously.

6. *Reasonable Available Control Technology (RACT)*

The plan requires the application of RACT in the primary standard nonattainment area of the Metropolitan Baltimore region. The State has shown that attainment of the secondary standard will require application of RACT and non-traditional TSP emission control. Therefore, as noted above, Maryland has requested an extension to prepare the secondary plan while they study and identify the additional control measures. As stated in the BACKGROUND section, the plan includes the January 5, 1978 submittal of the iron and steel regulations. Since Maryland has chosen to remedy EPA's noted deficiencies on these regulations through the plan for compliance for steel facilities, EPA's evaluation of the primary plan is based upon the emission limits represented in the regulations and the Bethlehem Steel Sparrows Point Plan for Compliance submitted by Maryland on July 24, 1979. Therefore, Maryland must submit as a part of the Plan a final Plan for Compliance for the Bethlehem Steel Plant by October 1, 1980, as condition of approval of Maryland Regulation 10.18.04.02(E) and 10.18.04.03(G) as proposed elsewhere in today's **Federal Register**. It should be noted that while the Plan for Compliance for the Bethlehem Steel facility addresses EPA's concerns with the enforceability of the iron and steel regulations for attainment of the primary TSP standard, the enforceability deficiencies for other steel facilities in Maryland must be remedied by the State submitting a Plan for Compliance for each such facility.

7. *Enforceability*

EPA in the notice of proposed rulemaking of August 1, 1979, 44 FR 45194, had recommended several changes in the regulation language which will enhance the enforceability of the TSP regulations. These related to the definition of "Total Operating Capacity" for grain drying equipment; the timetable for installing control technology per Regulation 10.18.05.03(D)(5); and the control technology and testing procedures required by the iron and steel industry regulations. The "Total Operating Capacity" definition comment related to the exemption for certain grain drying equipment in Regulation 10.18.05.03(d)(2)(b). EPA's concern was whether the exemption applied to a single piece of equipment or an entire installation. The State in discussions with EPA, and by letter of September 21, 1979, has stated that the regulation applies to a single piece of equipment and has so interpreted the regulation since its adoption in 1975. This satisfies EPA's concern.

The timetable for installing conventional control technology per Regulation 10.18.05.03(d)(5) is 18 months longer for sources than that for applying alternative technologies. EPA requested a rationale for this. The State responded stating that the timetable for conventional techniques is based upon the fact that installation requires major modification. Therefore, if a source chooses to attempt an alternative technology, it must be installed such that the eighteen month period is available to apply conventional controls, should the alternate fail to achieve compliance. EPA finds this explanation acceptable.

With respect to the iron and steel regulations, the State of Maryland is addressing EPA's concerns through the development of a Plan for Compliance for steel facilities as discussed in the preceding section.

8. *Preconstruction Review*

This is addressed in detail previously in the DEFICIENCIES AND REMEDIES section of this notice.

9. *Identification and Analysis of Air Quality, Health, Welfare, Economic, Energy, and Social Effects*

Section 172(b)(9) of the Act requires an identification and analysis of air quality, health, welfare, economic, energy and social effects of the plan provisions required by Section 172 and a summary of the public comment on such analysis. EPA stated in the notice of proposed rulemaking, 44 FR 45194, that this analysis was omitted in the plan submission. On September 21, 1979 Maryland submitted this analysis. In reviewing this analysis, which included VOC regulations as well as TSP regulations, EPA finds it sufficient at this time, satisfying the requirement of Section 172(b)(9).

V. *Carbon Monoxide.*

For the Metropolitan areas of Baltimore and Washington, D.C. the plans for ozone related to transportation or mobile sources which are discussed above. These will concurrently form the plan for attainment of the carbon monoxide standard. Of major importance of these plans are the continued implementation of the Inspection and Maintenance program to assure the continued emissions reductions of the FMVCP.

For discussion of the transportation plan elements refer to the ozone plan section above.

For the Metropolitan Baltimore Intrastate AQCR and the Maryland portion of the National Capital Interstate AQCR the standards will not be achieved by 1982. Therefore, the State of Maryland has requested an extension of the attainment date until 1987. EPA has reviewed the support material for the request; the material indicates attainment will be achieved in the Baltimore region prior to 1987. As such, since the Clean Air Act requires attainment as expeditiously as possible, EPA is approving the CO plan with an extended attainment date to January 1, 1984. If in preparing the SIP amendment to be submitted on July 1, 1982 for attainment of the CO and ozone standards, the State of Maryland finds and demonstrates that attainment will be achieved by a date different from January 1, 1984, then the Administrator will consider an appropriate change of the extension request.

As noted in the BACKGROUND section, Maryland has requested a redesignation of the attainment status for the Hagerstown and Cumberland areas. Therefore, EPA will not take any action on the plans for these areas at this time.

Public Comments on Proposal

(1) *National Comments*

Comment and Responses: Two commenters submitted extensive comments which they requested by considered part of the record for each State plan. Each of the points raised by the commenter and EPA's responses appear in the notice of final rulemaking for the State of Delaware, 45 Fed. Reg. 14551, 1980. Although some of the issues raised are not relevant to provisions in Maryland's submittal, EPA is notifying

the pubic of its response to these comments at this time.

Comments were also received from the Asphalt Emulsion Manufacturers Association (AEMA) concerning the availability of emulsified asphalts with low solvent content for all applications in all regions of the country. Although some of the issues raised are not relevant to the Maryland plan, EPA is notifying the public of its response to these comments at this time. AEMA's main point is that no general rule regarding solvent content of emulsified asphalt for the nation is possible because of varying conditions. AEMA urges that EPA accept each State's emulsion specifications as RACT. AEMA also incorrectly concludes that EPA has been using a figure of five percent as nationwide RACT for maximum solvent content is emulsified asphalt.

EPA recognizes that varying conditions may require different solvent content asphalts. RACT for asphalt should be determined on a case-by-case basis in order to take varying conditions into account. Therefore, EPA has not set a nationwide standard for the solvent content of emulsified asphalt. However, EPA has accepted a five percent maximum solvent content regulation where a State has chosen to submit an across-the-board regulation for emulsified asphalt, rather than develop case-by-case RACT. The intent of EPA guidance has been for States to specify in the regulations, and justify, those emulsions and/or applications where addition of solvent is necessary. Since RACT can be determined on a case-by-case basis, States are free to specify necessary solvent contents on the basis of application of asphalt grade. Where a State demonstrates that these are RACT, EPA will approve the regulations. The following maximum solvent contents for specific emulsified asphalt applications have appeared in EPA guidance and are based on American Society of Testing Materials (ASTM), American Association of State Highway and Transportation Officials (AASHTO), and State specifications and on information recently received from the Asphalt Institute.

Use	Maximum solvent content (percent)
Seal coats in early spring or late fall	3
Chip seals when dusty or dirty aggregate is used	3
Mixing w/open graded aggregate that is not well washed	8
Mixing w/dense graded aggregate	12

(2) *Comments Specific to the Maryland SIP Revision*

This sub-section will summarize the issues raised by commenters during the public comment period following the August 1, 1979 notice of proposed rulemaking on the Maryland plans. Also presented are the EPA responses.

(a) One commenter questioned the attainment of the carbon monoxide standard in the Cumberland-Keyser Interstate AQCR solely through the implementation of the Federal Motor Vehicle Emission Control Program (FMVCP). The commenter pointed out that no provision existed for review of new sources in the AQCR. EPA in its notice of proposed rulemaking likewise indicated the omission of the New Source Review (NSR) provisions. However, EPA is presently considering a request for redesignation of the area to attainment. Until EPA takes final action on the request, no action will be taken on this portion of the plan. Should attainment of standards be demonstrated in accordance with Section 107 of the Act, then the question of attainment solely through the implementation of the FMVCP is moot.

(b) Only one comment was received on the I/M program. The commenter noted that Maryland's SIP did not require the implementation of I/M; the commenter also stressed the need for requiring I/M in rural nonattainment areas. Since the original submission of the State Implementation Plan, the Maryland legislature has committed the State to an I/M program by passage of enabling legislation. Although EPA recognizes that mobile source emissions from rural areas may well impact downwind ozone concentrations, recent studies indicated that the additivity factor for transport precursors is approximately 50 percent. Since rural hydrocarbon emissions from mobile sources are typically less than 15 percent of the hydrocarbon emissions in downwind urban areas, it is evident that implementation of I/M in rural areas (at 25 percent effectiveness will have a negligible (i.e., less than 2 percent) impact on downwind ozone concentrations.

(c) Another commenter, a national environmental group, questioned the validity of the design value chosen for the Metropolitan Baltimore Intrastate AQCR, and the application of the proportional rollback model without allowance for transport or background concentrations.

Although Maryland's original submission designated the second highest 1977 ozone concentration as the design value, a subsequent statistical analysis of valid data from properly located downwind monitors indicated an "expected" second highest ozone concentration of 0.19 ppm, which was determined by the procedure designated in Appendix H of Part 51, 44 Fed. Reg. 8202, 1979. EPA's evaluation of the statistical analysis finds that the chosen design value of 0.19 ppm is correct.

The commenter maintained that Maryland incorrectly applied the rollback method of analysis to determine the amount of emission reduction necessary to attain NAAQS, since Maryland's formulation, shown as follows, failed to include background or transport concentrations:

$$R = \frac{a-b}{a} \times 100 \quad (1)$$

Where R=required emissions reductions, a=design value, and b=NAAQS. The commenter proposed that the following equation is a more correct formulation:

$$R = \frac{a-b}{a-c} \times 100 \quad (2)$$

Where R, a, and b are as stated above and where c=background oxidant levels. EPA has determined that Maryland's formulation represented by Equation (1) is the more accurate representation, since it provides for the effects of both transport and background concentrations. For a more detailed analysis, see the Rationale Document prepared in support of this rulemaking notice and EPA document entitled "Uses, Limitations, and Technical Basis for Procedures for Quantifying Relationships between Photochemical Oxidants and Precursors," EPA 450/2-77-021a (November, 1977).

(d) The State of New Jersey submitted comments on the proposed Part D ozone revisions for several States. New Jersey contends that SIPs which do not include uniform Statewide controls for existing and new sources which meet the requirements of Part D will not attain the ozone standard. New Jersey urges the Administrator to disapprove the ozone SIPs which do not include such Statewide measures. In addition, New Jersey argues as it did in objecting to the Administrator's ozone nonattainment area designations that entire states

should be designated nonattainment, thereby requiring Part D SIP revisions Statewide.

The Administrator considered all of New Jersey's objections to the designations and responded in the document entitled "Technical Support Document for Agency Policy Concerning Designation of Attainment, Unclassified, and Nonattainment Areas for Ozone" January 1979. Availability of this document was announced in the February 1, 1979 **Federal Register** (44 FR 6395). This document and the Administrator's response to New Jersey's comments are incorporated herein by reference. Since Maryland has applied RACT to the CTG sources in the urban nonattainment areas and certified that there are no 100 ton sources to which the CTG's apply are in the rural nonattainment areas, Maryland has satisfied the requirement for an approvable Part D ozone SIP and there is no basis for disapproval.

(e) Another commenter, a national environmental organization, made the following comments each of which is responded to in turn:

(1) *Oxidants* (Ozone)

The commenter noted that the State failed to submit a plan for the Cumberland-Keyser area and due to the significant influence of pollutant transport, challenged the State's position that no further control was necessary in the AQCR. Furthermore, the commenter questioned the EPA position stated in the notice of proposed rulemaking, 44 FR 45194, 1979, which the commenter felt implied agreement with the State. EPA's position was that the State had certified that no sources of VOC covered by a CTG existed in the Cumberland-Keyser area; however, the State was obligated to commit to examine future CTG's and apply controls where applicable. As discussed in the BACKGROUND section of this notice, Maryland has since requested a redesignation of the attainment status for the Cumberland-Keyser area. EPA policy on rural ozone nonattainment areas, as explained in the General Preamble, 44 FR 20372, requires the adoption of RACT for 100 ton sources covered by CTG's. Maryland has satisfied the requirement by certifying that no such sources are located in the AQCR. On April 1, 1980, 45 FR 21244, EPA redesignated two of the three counties, Garrett and Allegany, to attainment. No action was taken concerning Washington County, the third county in the AQCR, pending the State's further review of the monitoring data. Therefore, EPA reserves action on the lack of a plan until review of the State's supplemental submission and final rulemaking upon the redesignation request for Washington County.

(2) *Monitoring*

The commenter stated that there was no support of the State's conclusion that monitoring stations were improperly located in the Luke, Maryland area. He also noted that prior to redesignation, the support for that conclusion must be available for public review and comment. EPA on April 23, 1979 proposed the redesignation to an unclassified area, for public review and comment, 44 FR 23885, with the rationale and support material available for review. The comment period for the redesignation proposal ran from April 23, 1979 to June 23, 1979; representatives of the above mentioned commenter requested and obtained information about the redesignation during the comment period, however no comments were received on the proposal. EPA's review of the monitor site, as presented in the support material, agreed with the Maryland conclusion that the site was improperly placed. Final rulemaking redesignating the Luke Election District No. 8 as unclassified was published in the **Federal Register** on April 10, 1980, 45 FR 24469.

(3) *Particulates*

The commenter raised several points concerning the emissions reductions anticipated from the Bethlehem Steel Corporation, Sparrows Point Plant. Items questioned were the enforceability of the iron and steel regulations due to the nature of the language in the regulations, the compliance plan for the facility, the non-application of all reasonably available control measures, and the 1985 date for attainment of the secondary standard.

EPA has previously notified the State of Maryland of its concerns that the vagueness of some of the iron and steel regulations inhibits their enforceability and therefore the creditable emissions reductions. However, EPA has reviewed the impact upon the primary nonattainment area from the emission levels represented by the enforceable levels of the iron and steel regulations and the final draft version (July 24, 1979) of the Bethlehem Steel Plan for Compliance. This review indicates that the level of control is sufficient for primary attainment. As proposed elsewhere in today's **Federal Register**, the following conditions are placed upon the plan approval:

(a) The State of Maryland must finalize the Plan for Compliance, submitting it as a part of the plan to complement the iron and steel regulation by October 1, 1980.

The primary plan does represent application of RACT to sources located in the primary nonattainment area, with additional controls applied to sources located outside, but impacting the area in order to achieve attainment.

As for the secondary attainment date, the State as a part of the secondary plan to be submitted July 1, 1980 must demonstrate attainment. The demonstration must meet the requirements of the Act, and, therefore, whatever attainment date is demonstrated must be supported as being as expeditious as practicable. EPA is not taking any action upon Maryland's initial estimate of secondary attainment and will review the attainment date specified in the secondary plan to be submitted by July 1, 1980.

(4) *New Source Review*

Numerous comments were made by the environmental group on the new source review regulations. The commenter correctly noted that there were no provisions for new major stationary sources of carbon monoxide and that the Maryland regulations do not contain provisions for reviewing major modifications. EPA had noted both of these in its proposed rulemaking. In this notice, EPA states that Maryland has remedied the deficiency of omitting major modifications, and published elsewhere in today's **Federal Register** is proposing to condition this SIP approval upon Maryland remedying the other deficiencies.

The commenter also stated "The Maryland regulations require a permit applicant to demonstrate that all major sources *owned or operated by the applicant* are in compliance or on a schedule for compliance with applicable emission standards. They do not require the same showing of sources owned or operated *by any entity controlling, controlled by, or under common control with the applicant* as required by Section 173(3) of the Clean Air Act." EPA has noted this comment and has proposed conditional approval of Maryland's Part D plan upon Maryland amending its regulation by December 31, 1980, as published elsewhere in today's **Federal Register**.

Another comment of the national environmental group was that the Maryland regulations do not require offsets to be legally binding prior to operation of the new source. A condition, proposed today elsewhere in this **Federal Register**, is that Maryland must commit to formally submit each offset as a SIP revision, assuring enforceability under the SIP.

An additional comment made was that the regulation permits offsets against actual as opposed to allowable emissions from existing sources. EPA, in

the discussion of the New Source regulations, has noted that the Maryland regulation requires that *actual* future emissions are offset against present *allowable* emissions. While this differs from the language of Section 173 which requires that *allowable* future emissions are to be offset against allowable present emissions, EPA in reviewing the Maryland definition, believes that it is consistent with the Clean Air Act requirement and will provide at least an equivalent offset.

Finally, the commenter stated that in order to determine whether enough offsets have been achieved for reasonable further progress toward attainment, the State must consider not only the emissions from the new or modified major stationary sources, but also from new or modified sources, which are not major emitting facilities. Maryland, in constructing the SIP demonstration and the RFP lines and schedules, considered growth of minor sources; furthermore, the new source regulation also requires an assurance of RFP prior to permit approval. EPA therefore believes that the commenter's concerns are adequately addressed.

(5) *State Boards*

The commenter noted that neither the State plan nor the State regulations provide for the requirements of Section 128 of the Act governing State boards. EPA agrees with the comment and in its proposed rulemaking noted the omission. Maryland holds the position that it does not have a board covered by Section 128. EPA intends to discuss this requirement of Section 128 in a separate rulemaking action.

EPA Actions

This section summarizes the various remedies and approvals noted throughout this notice. Unless otherwise stated, those portions of the plan for which no conditions have been identified are granted final approval and are effective immediately. The remainder of the plan, where deficiencies are noted, are proposed to be conditionally approved, elsewhere in today's **Federal Register.**

The January 19, 1979 submittal was comprised of revised Maryland regulations 10.18.01.01, 10.18.01.07, 10.18.01.11, 10.18.04 and 10.18.05 Sections .03, .04 and .06. Today's action approves the revised portions of 10.18.01.01, 10.18.01.07, and 10.18.01.11 as submitted on January 19, 1979. Partial approval is granted to 10.18.04 and 10.18.05 Sections .03, .04 and .06. As discussed in this notice and elsewhere in today's **Federal Register,** EPA proposes to conditionally approve the noted parts of 10.18.04 and 10.18.05 Sections .02, .03, .04(K), and .06. No final action will be taken on 10.18.04 and 10.18.05 Section .04J and .06G as noted above in the SUMMARY.

1. EPA approves the request for extension of the attainment dates submitted by Maryland. Attainment of the ozone standard must be achieved by December 31, 1987. For carbon monoxide, the standard must be achieved by January 1, 1984.

2. EPA approves the extension to July 1, 1980 for the submission of a plan to attain the secondary standard for TSP.

3. EPA approves the I/M schedule and the commitment to 25% emission reduction.

4. EPA will follow the procedures described in the INTRODUCTION section of this notice with respect to conditional approvals. A notice soliciting comments on items proposed for conditional approval and the acceptability of the deadlines to fulfill these conditions appear elsewhere in today's **Federal Register.** These items, on which EPA takes no action in this notice, are the following:

(a) EPA proposes conditional approval of the Part D Maryland Plan on the condition that the New Source regulations are amended in accordance with the discussion above, which summarized is:

(1) Each offset must be submitted as a formal SIP revision. Maryland must commit to do this by September 1, 1980.

(2) Maryland must commit, in writing, to examine and use the most restrictive short-term emission rates in permitting new sources. This must be received by September 1, 1980.

(3) Amendment of the language to ensure that all major sources owned or operated by an entity controlling, controlled by, or under common control with the applicant are in compliance or on a schedule for compliance with the applicable emission standards must be submitted as a formal SIP revision by December 31, 1980.

EPA is reserving action upon the lack of provisions for new major sources of carbon monoxide. Therefore, until the regulations are submitted and approved as formal SIP revisions, no major carbon monoxide sources to which Section 173 applies may construct in the nonattainment areas.

(b) Approval of the VOC regulations 10.18.04.04(K) and 10.18.05.04(K) is proposed on the condition that Maryland adopt test procedures by revising its regulations appropriately and submitting them as formal SIP revisions by December 31, 1980.

(c) Approval of the Asphalt regulation (Section .04K(10) of 10.18.04 and 10.18.05) is proposed on the condition that Maryland submit an acceptable limit on solvent content in emulsions and document the enforcement policy and mechanism by December 31, 1980.

(d) Approval of the TSP plan submitted for the Metropolitan Baltimore area is proposed on the condition:

(1) Maryland finalize the Bethlehem Steel Plan for Compliance and submit it as a part of the iron and steel regulation by October 1, 1980.

Finally, as noted in the Background section, EPA will not take any action on the plans in those areas where the State has requested redesignation of the attainment status, where final action remains to be taken, until such time the growth restrictions remain.

Maryland has not as yet submitted the information required by Section 128 (Composition of State Boards). While this is not a Part D requirement, EPA is reminding the State of the requirement and will address it in a separate rulemaking action.

EPA finds that good cause exists for making this action immediately effective. EPA has a responsibility to take final action on these revisions as soon as possible in order to lift growth sanctions in those areas for which the State of Maryland has submitted adequate plans in accordance with Part D requirements.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized". I have reviewed this regulation and determine that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(42 U.S.C. 7401–842)

Dated: August 5, 1980.

Douglas M. Costle,

Administrator.

Title 40, Part 52 of the Code of Federal Regulations is amended as follows:

1. In § 52.1070 paragraphs (c) (27) and (28) are added as follows:

§ 52.1070 Identification of plan.

* * * * *

(c) * * *

(27) Amendments to Sections .01, .07, and .11 of Maryland Regulation 10.18.01 as submitted on January 19, 1979 by the Governor.

(28) Amendments to Sections .03D, .03F, .03H, .06I of Maryland Regulation 10.18.04 and 10.18.05 as submitted on January 19, 1979 by the Governor.

2. Section 52.1071 is amended by changing the heading "photochemical oxidants (hydrocarbons)" to "ozone".

3. Section 52.1072 is amended by adding paragraph (c), (d) and (e) to read as follows:

§ 52.1072 Extensions.

* * * * *

(c) The Administrator hereby extends until December 31, 1987 the attainment date for the national standard for O_3 in the Metropolitan Baltimore and the Maryland portion of the National capital nonattainment areas.

(d) The Administrator hereby extends the attainment date for the national standard for CO in the Metropolitan Baltimore and the Maryland portion of the National Capital nonattainment areas to January 1, 1984.

(e) The Administrator hereby extends for 18 months (until July 1, 1980) the statutory timetable for submission of Maryland's plan for the attainment and maintenance of the secondary standards for particulate matter in the Baltimore nonattainment area.

4. Section 52.1073(f) is revised as follows:

§ 52.1073 Approval status.

* * * * *

(f) With the exceptions set forth in this subpart, the Administrator approves the amendment to Regulation 10.18.01 Sections .01, .07, and .11, Regulation 10.18.04 and 10.18.05 Section .03D, .03F, .03H, .06I of Maryland's plan for the attainment and maintenance of the national standards under Section 110 of the Clean Air Act. Furthermore, the Administrator finds that portions of the plan, as submitted January 19, 1979, satisfy the requirements of Part D, Title 1, of the Clean Air Act as amended in 1977.

In addition, continued satisfaction of the requirements of Part D for the ozone portion of the SIP depends on the adoption and submittal of RACT requirements by July 1, 1980 for the sources covered by CTGs issued between January, 1978 and January, 1979 and adoption and submittal by each subsequent January of additional RACT requirements for sources covered by CTGs issued by the previous January.

5. Section 52.1078 is revised as follows:

§ 52.1078 Attainment dates for national standards.

* * * * *

BILLING CODE 6560-01-M

40 CFR Part 52

[FRL 1555-6]

Approval and Promulgation of Implementation Plans; North Dakota

AGENCY: Environmental Protection Agency.

ACTION: Final rulemaking.

SUMMARY: The purpose of this notice is to approve revisions and amendments to the North Dakota State Implementation Plan (SIP) submitted by the Governor of North Dakota on January 25, 1980. The revisions are concerned with Section 110(A)(2)(k) of the Clean Air Act (CAA) regarding collection fees for permit review, Section 127 CAA regarding public notification, Part 58 of Title 40, *Code of Federal Regulations* addressing monitoring requirements, and Section 109 CAA which will add an ambient standard for lead. An amendment will change the title of photochemical oxidants to ozone and raise the ambient standard to .12 parts per million (ppm). On May 5, 1980 (45 FR 29595) EPA published a proposed **Federal Register** notice which discussed the results of EPA's review and requested public comments. No comments were received.

DATE: Effective August 12, 1980.

FOR FURTHER INFORMATION CONTACT: Robert R. DeSpain, Chief, Air Programs Branch, Environmental Protection Agency, 1860 Lincoln Street, Denver, Colorado 80295, (303) 837–3471.

SUPPLEMENTARY INFORMATION: On January 17, 1980, pursuant to Part 51.285, Part 58, Part 50.12 of Title 40, *Code of Federal Regulations,* the State of North Dakota submitted proposed State Implementation Plan revisions for public notification, monitoring requirements, and an ambient standard for lead respectively. Also submitted was a permit processing fee and a change to the ozone standard. The following is a discussion of these provisions and the issues involved.

Public Notification

Since the State of North Dakota has no cities larger than 200,000 people they are only required to present an annual report. North Dakota plans to announce violations on a regular basis to the appropriate news media when an Ambient Air Quality Standard has been exceeded. The notices will include any potential health hazard associated with the exceedance and measures the public can take to prevent future exceedances.

Monitoring Requirements

This SIP revision establishes the State and local air monitoring stations (SLAMS), special purpose monitoring stations (SPMS), and their maintenance plus the method of data reporting and annual reviews which pertain to the above stations. The SLAMS stations will monitor ambient levels of "criteria pollutants" or pollutants which have an established national ambient air quality standard (NAAQS). Once obtained, this data will be used mostly for determining

compliance with the NAAQS, determining if a source which emits criteria pollutants requires controls, tracking air pollution episodes and determining the impact of certain sources. The process of network design was carried out as required by Appendix D of 40 CFR Part 58. A network description will be available for review at the Missouri Office Building, 1200 Missouri Avenue, Bismark, North Dakota, which will include the following: (a) SAROAD site identification form for existing stations, (b) analyzer description, (c) sample of analysis procedure, (d) operating schedule, (e) monitoring objective, and (f) spatial scale of representativeness. All SLAMS stations will be operated in accordance with the criteria established in Subpart B to 40 CFR Part 58, sited according to Appendix E to 40 CFR Part 58. Reference or equivalent monitors will be used as defined in 40 CFR 50.1 and the quality assurance procedures will be followed as outlined in Appendix A to 40 CFR Part 58.

Beginning January 1, 1980, the State will annually review their SLAMS network to insure that the monitors are located where needed. A report shall be submitted to EPA Region VIII by April 1 of each year, which will include a schedule to add, relocate, or eliminate stations. These needs will be determined based on the requirements in Appendix D to 40 CFR Part 58 or references therein.

The State of North Dakota will establish and operate a network of National Air Monitoring Stations (NAMS) as required in Subpart D of 40 CFR Part 58. The NAMS stations will also be SLAMS stations and the design procedure for NAMS will be identical to that for SLAMS.

Lead Standard

The State of North Dakota has adopted an ambient lead standard of 1.5 ug/m³ set forth by the U.S. E.P.A. At the present time, the State feels a lead control strategy is not warranted since measured lead levels at seven sites in rural and urban areas are much below the ambient standard. However, the adoption of a standard and the inclusion of its consideration in the existing new source review program should provide for maintenance of the national standard for lead.

Permit Fees

In accordance with Section 110(A)(2)(k) for Implementation Plans of the Clean Air Act, North Dakota requires a permit or registration processing and inspection fee. A section of the North Dakota Century Code has been amended to provide for registration of certain air contaminant sources.

The new requirement provides for collection of reasonable fees for the issuance of permit or registration certificates and for an inspection program to determine the compliance status of sources with the permits or registration certificates. The amendment allows certain air contaminant sources to be registered in lieu of being issued a permit. A construction permit fee also has been implemented.

Ozone Standard

The Photochemical Oxidant Category has been renamed to read Ozone and the Ambient Standard has been raised to .12 ppm to coincide with the Federal standard.

Final Action

On May 5, 1980 (44 FR 29595), EPA published a notice of proposed rulemaking which described the nature of the SIP revision and requested public comment. No comments were received and no new issues were raised. The Administrator believes the North Dakota SIP revisions received on January 24, 1980, satisfy the requirements of Section 127, Section 110(A)(2)(k), and Section 109 of the Clean Air Act, and 40 CFR Part 58. Therefore, EPA is approving these revisions.

Under Section 307(b)(1) of the Clean Air Act, judicial review of this final rule is available *only* by the filing of a petition for review in the United States Court of Appeals for the appropriate circuit within 60 days of today. Under Section 307(b)(2) of the Clean Air Act, the requirements which are the subject of today's notice may *not* be challenged later in civil or criminal proceedings brought by EPA to enforce these requirements.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore, subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized". I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

EPA finds good cause for making the action taken in this notice immediately effective since the implementation plan revisions are already in effect under State law and EPA approval poses no additional regulatory burden.

(Secs. 127, 110(A)(2)(k), and 109 of the Clean Air Act)

Dated August 5, 1980.

Douglas M. Costle,
Administrator.

Title 40, Part 52 of the Code of Federal Regulations is amended as follows:

1. In § 52.1820 paragraph (c)(11) is revised to read as follows:

§ 52.1820 Identification of plans.

* * * * *

(c) * * *

(11) On January 25, 1980, the Governor submitted a plan revision to meet the requirements of Air Quality Monitoring 40 CFR Part 58, subpart C, Paragraph 58.20, and Public Notification required under Section 127 of the Clean Air Act.

[FR Doc. 80-24254 Filed 8-11-80; 8:45 am]

BILLING CODE 6560-01-M

---

40 CFR Part 52

[FRL 1538-1]

Approval and Promulgation of Implementation Plans; Revision of Massachusetts State Implementation Plans

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is taking final action to approve an extension of a temporary revision to Massachusetts Regulation 310 CMR 7.06 *Visible Emissions* to allow the burning of a 30% coal/70% oil mixture in the New England Power Company's (NEPCo), Unit No. 1, Salem Harbor Station, Salem, Massachusetts until December 31, 1980 as a research project funded by the U.S. Department of Energy (DOE).

EFFECTIVE DATE: August 12, 1980.

FOR FURTHER INFORMATION CONTACT: Margaret McDonough, Air Branch, EPA Region I, Room 1903, JFK Federal Building, Boston, Massachusetts 02203, (617) 223-5809.

SUPPLEMENTARY INFORMATION: On March 7, 1980, the Regional Administrator published in the **Federal Register** (45 FR 14885) a notice proposing approval of an extension of a temporary revision to the Massachusetts SIP. The SIP revision, submitted by the Commissioner of the Massachusetts Department of Environmental Quality Engineering (the Massachusetts Department) on December 28, 1979, is a temporary variance to Massachusetts Regulation 310 CMR 7.06 *Visible Emissions* (formerly Regulation 6).

The variance to regulation 310 CMR 7.06 *Visible Emissions* relaxes from six minutes per hour to fifteen minutes per hour the allowed exceedances of the 20 percent opacity limit (No. 1 on the Ringlemann Chart). The plume opacity shall at no time be greater than 40 percent (No. 2 on the Ringlemann Chart). This approval will allow NEPCo's Salem Harbor Station, Unit No. 1, Salem Massachusetts to burn 30% coal/70% oil mixture until December 31, 1980 as a research and development project funded by the DOE.

On February 7, 1979 (44 FR 7712) the Regional Administrator approved a temporary revision to the Massachusetts SIP which included variances to Massachusetts Regulations 310 CMR 7.05 *Sulfur-in-Fuel* and 310 CMR 7.06 *Visible Emissions* (formerly regulations 5 and 6). On May 21, 1979, EPA approved a permanent revision to Massachusetts Regulation 310 CMR 7.05 *Sulfur-in-Fuel* which allowed the Salem Harbor Station to burn fossil fuel with a maximum sulfur content of 1.21 pounds per million BTU heat release potential (approximately equivalent to 2.2% sulfur content residual fuel oil by weight). Therefore, it is not necessary to vary the provisions of 310 CMR 7.05. The variance to regulation 310 CMR 7.06 *Visible Emissions* which was approved on February 7, 1979 expired on December 31, 1979.

To prevent any nuisance condition, the terms of extension of the variance require that:

(1) The project shall commence using a 10 percent/90 percent coal/oil mixture, progress gradually to a 20 percent/80 percent coal/oil ratio, and then go to a maximum of 30 percent/70 percent coal/oil, if feasible.

(2) Stack testing shall take place after each incremental increase in coal percentage and compliance with the particulate emissions limitation (0.12 pounds per million Btu) and all other applicable regulations shall be demonstrated prior to any further increase in coal/oil slurry ratio.

(3) If nuisance conditions occur as a result of any coal handling or burning operations, then the variance shall be subject to immediate termination.

(4) The extension of the variance shall expire on December 31, 1980.

No comments were received during the 30 day comment period.

After evaluation of the State's submittal, the Administrator has determined that the Massachusetts revision meets the requirements of the Clean Air Act and 40 CFR Part 51. Accordingly, this revision is approved as a revision to the Massachusetts State Implementation Plan. The Agency finds that good cause exists for making this action immediately effective for the following reasons:

Implementation plan revisions are already in effect under state law and EPA approval imposes no additional regulatory burden.

(Section 110(a) of the Clean Air Act, as amended, 42 U.S.C. 7401, et seq.)

Dated: August 6, 1980.

Douglas M. Costle,
Administrator.

Part 52 of Chapter I, Title 40 of the Code of Federal Regulations is amended as folows:

Subpart W—Massachusetts

§ 52.1120 [Amended]

1. Section 52.1120(c)(17) is amended by adding the phrase "and an extension to 310 CMR 7.06, *Visible Emissions*, submitted on December 28, 1979."

[FR Doc. 80-24228 Filed 8-11-80; 8:45 am]

BILLING CODE 6560-01-M

40 CFR Part 180

[FRL 1566-8; PP 7F1879/R266]

Mesurol; Tolerances and Exemptions from Tolerances for Pesticide Chemicals in or on Raw Agricultural Commodities

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerance for residues of the insecticide mesurol (3,5,-dimethyl-4-(methylthio), phenol methylcarbamate) and its cholinesterase-inhibiting metabolites in or on citrus fruits at 0.02 part per million (ppm). This regulation was requested by Mobay Chemical Corp. The regulation will establish the maximum permissible levels of the residues of mesurol in or on citrus fruits.

EFFECTIVE DATE: August 12, 1980.

FOR FURTHER INFORMATION CONTACT: William Miller, Product Manager (PM) 16, Registration Division (TS-767), Office of Pesticide Programs, Rm. E-343, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460, (202/426-9458).

SUPPLEMENTARY INFORMATION: The EPA issued a notice that published in the **Federal Register** of November 18, 1976 (41 FR 50854) that Mobay Chemical Corp., P.O. Box 4913, Hawthorne Road, Kansas City, MO 64120 had filed a pesticide petition (PP 7F1879). This petition proposed that 40 CFR 180.320 be amended by establishing a tolerance for residues of the insecticide, mesurol (3,5-dimethyl-4-(methylthio)phenol methylcarbamate) and its cholinesterase-inhibiting metabolites in or on the raw agricultural commodity group citrus fruits at 0.02 part per million (ppm).

The data submitted in the petition and other relevant material have been evaluated, and it is concluded that the tolerance will protect the public health.

The toxicological data considered in support of the proposed tolerance included two-year rat and dog feeding studies with no-observed-effect-levels (NOEL's) of 100 ppm and 250 ppm, respectively; a 3 generation rat reproduction study with a NOEL of 300 ppm; a rat teratology study which was negative at 10 milligrams (mg)/kilogram (kg); a rat oncogenic study which was negative; a delayed neurotoxicity study in hens which was negative up to 800 ppm; and a dominant lethal assay test in mice which was negative at 10mg/kg. Based on the two-year rat feeding study with a NOEL of 100 ppm and using a safety factor of 100, the acceptable daily intake (ADI) for humans is 0.05 milligram (mg) of body weight (bw)/day and the maximum permissible intake (MPI) is 3.0 mg/day for a 60 kg human.

The theoretical maximum residue contribution (TMRC) in the human diet from permanent tolerance for combined residues of the pesticide and its cholinesterase-inhibiting metabolites now in effect in or on corn at 0.03 ppm, cherries at 25 ppm, peaches at 15 ppm, and blueberries at 25 ppm utilize 8.44 percent of the ADI.

The theoretical maximum residue (TMRC) in the human diet from the permanent tolerances and the temporary tolerances now in effect in or on grapes at 15 ppm; meat, fat, and meat byproducts of cattle, goats, hogs, horses, and sheep at 0.05 ppm; the eggs, meat, fat, and meat byproducts of poultry at 0.02 ppm; in milk at 0.01 ppm; and raisins at 25 ppm utilize 12.79 percent of the ADI. The permanent, temporary, and proposed tolerances on citrus fruits result in a TMRC of 0.03849 mg/day and utilize 12.83 percent of the ADI. The increase due to citrus fruits is 0.04 percent.

The incremental dietary exposure from food uses has been assessed for the new use of citrus fruits and is considered insignificant. The percentage increase in the TMRC due to the new use is less than 0.1 percent. The presently available data base for this chemical does not give the cause for toxicological concern. Since no detectable (<0.01 ppm) residues of the pesticide on citrus were found to result from the proposed use, no residues are expected in dried citrus pulp and molasses; and there is no reasonable expectation of finite residues occurring in meat, milk, poultry, or eggs.

An adequate analytical method for determining residues of the insecticide is available for enforcement purposes. The nature of the residues are adequately understood. No actions are pending against registration of the insecticide, and no other considerations are involved in establishing the tolerance.

The pesticide is considered useful for the purpose for which the tolerance is sought. Establishment of the tolerance will protect the public health. Therefore, the regulation is established as set forth below.

Any person adversely affected by this regulation may, on or before September 11, 1980, file written objections with the Hearing Clerk, EPA, Room M–3708 (A–110), 401 M Street, SW, Washington, D.C. 20460. Such objections should be submitted in quintuplicate and specify the provisions of the regulation deemed to be objectionable and the grounds for the objections. If a hearing is requested the objections must be supported by grounds legally sufficient to justify the relief sought.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other "specialized" procedures. This regulation has been reviewed and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Effective date: August 12, 1980.

(Sec. 408(d)(2), 68 Stat. 514 (21 U.S.C. 349a(e))

Dated: July 30, 1980.

James M. Conlon,

Deputy Assistant Administrator for Pesticide Programs.

Therefore, Subpart C of 40 CFR Part 180 is amended by alphabetically inserting "citrus fruits" in the table in § 180.320 to read as follows:

§ 180.320 3,5-Dimethyl-4-(methylthio)phenyl methylcarbamate; tolerances for residues.

* * * * *

Commodity	Part per million
* * * * *	
Citrus fruits	0.02
* * * * *	

[FR Doc. 80-24363 Filed 8-11-80; 8:45 am]

BILLING CODE 6560-01-M

40 CFR Part 180

[FRL 1567-2; PP 7F1977/R265]

Copper Monoethanolamine; Tolerances and Exemptions From Tolerances for Pesticide Chemicals in or on Raw Agricultural Commodities

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes an exemption from the requirement of a tolerance for copper in eggs, fish, meat, milk, irrigated crops, and shellfish resulting from the use of copper monoethanolamine as an algicide or herbicide in fish hatcheries, lakes, ponds, and reservoirs. The regulation was requested by Applied Biochemists, Inc.

EFFECTIVE DATE: Effective on August 12, 1980.

ADDRESS: Richard F. Mountfort, Product Manager (PM) 23, Registration Division (TS–767), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Richard Mountfort (202–755–1397).

SUPPLEMENTARY INFORMATION: A notice was published in the **Federal Register** of December 6, 1977 (42 FR 61626) that Applied Biochemists, Inc. P.O. Box 25, Mequon, WI 53092, had filed a petition (PP 7F1977) with the EPA. This petition proposed that 40 CFR 180.1021 be amended by establishing an exemption from the requirement of a tolerance for copper from the use of copper monoethanolamine complex as an algicide or herbicide in fish hatcheries, lakes, ponds, and reservoirs. No comments were received in response to this notice of filing.

Copper is presently exempted from the requirement of a tolerance in eggs, fish, meat, milk, irrigated crops, and shellfish when it results from the use of: (a) copper sulfate as an algicide or herbicide in irrigation conveyance systems and lakes, ponds, reservoirs, and bodies of water in which fish or shellfish are cultivated; (b) basic copper carbonate (malachite) as an algicide or herbicide in impounded or stagnant bodies of water; or (c) copper triethanolamine as an algicide or herbicide in fish hatcheries, lakes, ponds, and reservoirs.

The data submitted in this petition and relevant material have been evaluated. Copper monoethanolamine is expected to dissociate in water into copper ion and the free amine, monoethanolamine; both copper and monoethanolamine are naturally occurring compounds. Levels of copper range from 0.3 part per million (ppm) in milk to 100 ppm in calves livers. A tolerance level of 1 ppm was previously established for residues of copper in potable water resulting from the use of copper containing algicides and herbicides. A related document in this issue of the **Federal Register**, establishes a tolerance of 1 ppm in potable water for residues of copper resulting from the use of copper monoethanolamine as an algicide or aquatic herbicide to control aquatic plants in reservoirs, lakes, ponds, and irrigation ditches and other potential sources of potable water. Monoethanolamine, which is a constituent of human phospholipid cell membranes, is expected to degrade to ammonia, simple organic acids, and aldehydes. The highest calculated initial concentration of monoethanolamine from the use of copper monoethanolamine as an algicide or aquatic herbicide is 2.83 ppm. Due to the low level of exposure and the natural occurence of copper monoethanolamine and its expected metabolites, no overt hazard is envisioned due to this regulation.

Currently, only one formulated product containing copper monoethanolamine (in combination with triethanolamine) is proposed for use as an algicide or aquatic herbicide. The Agency previously had concerns regarding the level of nitrosamine in this product in view of the presence of 2.1 ppm of *N*-nitrosodiethanolamine in the formulation. The presence of the *N*-nitrosoamine at this level is of concern since 80 percent of known *N*-nitrosoamine compounds have been shown to be carcinogenic in a variety of species. However, the petitioner has since resolved this concern by submitting a revised formulation which contains less than 1 ppm of the *N*-nitrosodiethanolamine. This quantity of the *N*-nitrosoamine is at the level of method sensitivity for *N*-nitrosoamine analysis and represents a risk level which is acceptable to the Agency, in accordance with the Agency's proposed policy on Pesticides Contaminated with *N*-nitroso compounds, published in the **Federal Register** on June 25, 1980 (45 FR 42854).

There are no regulatory actions pending against copper monoethanolamine. Analytical methods are available for the determination of residues of copper monoethanolamine/triethanolamine complexes and ionic copper.

The pesticide is considered useful for the purpose for which an exemption from the requirement of a tolerance is being sought. It has been concluded that the exemption will protect the public health and that the proposed amendment should be adopted as set forth below.

Any person adversely affected by this regulation may, within 30 days after publication of this notice in the **Federal Register**, file written objections with the Hearing Clerk, EPA, Room M–3708 (A–110), 401 M Street, SW, Washington, D.C. 20460. Such objections should be submitted in quintuplicate and specify the provisions of the regulation deemed to be objectionable and the grounds for the objections. If a hearing is requested the objections must be supported by grounds legally sufficient to justify the relief sought.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other "specialized" procedures. The regulation has been reviewed and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Effective on August 12, 1980.

(Sec. 408(d)(2), 68 Stat. 514, (21 U.S.C. 346a(e))

Dated: August 4, 1980.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

Therefore, Subpart D of 40 CFR Part 180 is amended by revising paragraph (c) in § 180.1021 to read as follows:

§ 180.1021 Copper; exemption from the requirement of a tolerance.

* * * * *

(c) Copper triethanolamine and copper monoethanolamine as an algicide or herbicide in fish hatcheries, lakes, ponds, and reservoirs.

[FR Doc. 80-24375 Filed 8-11-80; 8:45 am]

BILLING CODE 6560-01-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 322

Delegation of Certain Defense Production Act; Priorities and Allocation Authorities

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Final rule.

SUMMARY: This amendment to 44 CFR Part 322 delegates Defense Production Act Title 1, priorities and allocations authority to the Secretary of Transportation in the area of civil transportation services.

EFFECTIVE DATE: August 12, 1980.

FOR FURTHER INFORMATION CONTACT: Clair K. Blong or Charles McIntosh, Resources Management Division (FEMA). Telephone: (202) 566–1324.

SUPPLEMENTARY INFORMATION: This delegation helps the Department of Defense meet its motor carrier services requirements in defense contingencies by providing the Secretary of Transportation with authority to expeditiously carry out his leadership and coordinating roles in the area of civil transportation services. This amendment to 44 CFR Part 322 is not subject to the provisions for notice and public comment in 5 U.S.C. 553 because it involves the military function of the United States.

§ 322.3 [Amended]

Accordingly, 44 CFR, Chapter 1, § 322.3 is amended by renumbering paragraphs (b) through (e) as (c) through (f) and adding a new paragraph (b) as follows:

* * * * *

(b) The functions conferred upon the Director of the Federal Emergency Management Agency under Title 1 of the Defense Production Act of 1950, as amended, with respect to priorities and allocations for civil transportation services are hereby delegated to the Secretary of Transportation, subject to the limitations prescribed in this regulation.

John W. Macy, Jr.,

Director, Federal Emergency Management Agency.

August 6, 1980.

BILLING CODE 6718-01-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 285

Atlantic Bluefin Tuna

AGENCY: National Oceanic and Atmospheric Administration (NOAA)/Commerce.

ACTION: Notice of change in catch rate.

SUMMARY: On June 13, 1980, final regulations promulgated under the authority of the Atlantic Tunas Convention Act (16 U.S.C. Sections 971–971h), and implementing the provisions thereof, were filed with the Office of the Federal Register. Section 285.32(b)(1) of those final regulations provides that in the Northern Area, as defined in § 285.30(b)(2), "Vessels fishing for, catching or taking giant Atlantic bluefin tuna, which are registered in the General Category under § 285.21(b)(1), may catch only one giant Atlantic bluefin tuna per day per vessel. On or about August 7, the Assistant Administrator shall review dealer and buy-boat reports to determine the total catch of giant bluefin tuna. If the Assistant Administrator determines that 30 percent or more of the quota of giant bluefin tuna is caught, the allowable catch shall be continued at one giant bluefin tuna per day per vessel; if the Assistant Administrator determines that 17 or more percent and less than 30 percent of the quota has been caught, the allowable catch shall be increased to two giant bluefin tuna per day per vessel; if less than 17 percent has been caught the allowable catch shall be increased to three giant tuna per day per vessel."

This notice changes the allowable catch rate of giant Atlantic bluefin tuna in the General Category, Northern Area, from one (1) per day per vessel to two (2) per day per vessel.

EFFECTIVE DATE: 0001 hours e.d.t. August 11, 1980.

FOR FURTHER INFORMATION CONTACT: Allen E. Peterson, Jr., Regional Director, Northeast Region, National Marine Fisheries Service, 14 Elm Street, Gloucester, MA 01930; telephone (617) 281–3600.

SUPPLEMENTARY INFORMATION: Notice is hereby given that the Assistant Administrator has determined, based upon dealer and buy-boat landing reports, that the catch of giant Atlantic bluefin tuna in the General Category, Northern Area, is approximately 420 fish. As this number is 17 or more percent and less than 30 percent of the total quota, the daily catch rate of giant Atlantic bluefin tuna shall be increased from one (1) to two (2) fish per day per vessel at 0001 e.d.t. on August 11, 1980. This catch rate will remain in effect at least until September 7, 1980, when the Assistant Administrator shall reevaluate the catch rate, as prescribed by regulation. The change in the daily catch for giant Atlantic bluefin tuna does not apply to those vessels registered in the Charter or Harpoon Boat Categories in the Northern Area, or those vessels permitted to take giant Atlantic bluefin tuna in the Southern Area with gear other than purse seines.

Actual notice of this change in catch rate has been given to all vessel owners holding a valid vessel permit for this fishery.

(16 U.S.C. 971–971h)

Signed at Washington, D.C. this 7th day of August 1980.

Robert K. Crowell,

Deputy Executive Director, National Marine Fisheries Service.

BILLING CODE 3510-22-M

Proposed Rules

Federal Register

Vol. 45, No. 157

Tuesday, August 12, 1980

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Parts 339, 432, 752, and 831

Qualification Requirements (Medical); Reduction in Grade and Removal Based on Unacceptable Performance; Adverse Actions; Retirement

AGENCY: Office of Personnel Management.

ACTION: Proposed regulations.

SUMMARY: These regulations would implement recommendations resulting from the Office of Personnel Management's study of the disability retirement program and its study of the fitness-for-duty examination procedures.

DATE: Comments must be received by October 14, 1980.

ADDRESS: Send written comments to Craig B. Pettibone, Director, Office of Pay and Benefits Policy, Compensation Group, Office of Personnel Management, P.O. Box 57, Washington, D.C. 20044.

FOR FURTHER INFORMATION CONTACT:

—Part 339—Gay Gardner or Eugene Littleford, (202) 632–4634.
—Parts 432 and 752—Wilma L. Lehman or Cynthia Field, (202) 632–7778.
—Part 831—John Ray, (202) 632–4684 or Eugene Littleford, (202) 632–4634.
—Parts 339 and 831 (Medical Questions)—Dr. George Smith, (202) 632–5510.

SUPPLEMENTAL INFORMATION: Recent research and analysis by OPM has revealed a need for major changes in the medical aspects of the Federal personnel management program. Particular problems have resulted from agencies' authority to order medical examinations of employees and from the definition of "disability" as applied in awarding disability retirement or otherwise separating the employee for medical reasons. Copies of the Office's recent staff papers on fitness-for-duty and disability retirement were forwarded to personnel directors of Federal agencies for comment. The proposed regulations incorporate comments we received from these agencies. Copies of the staff papers are available from the Office of Pay and Benefits Policy, Office of Personnel Management, 1900 E. Street, N.W., Room 4351, Washington, D.C. 20415.

Extensive criticism has been levied at present policy regarding fitness-for-duty examinations. Currently, an agency may direct an employee to undergo a medical examination when the employee has a performance or conduct deficiency that *may* be health-related, as well as when the agency has information that the employee has a health problem. The agency may remove the employee for refusing to participate in the examination. Current regulations do not identify circumstances in which a mandatory medical examination is appropriate, and they inadequately protect employees' rights when an examination is ordered.

Weaknesses of present provisions identified by OPM research and analysis when a fitness-for-duty examination is ordered because of *possible* health problems include the following:

—Absence of review by a third party of the need for an examination when the employee believes the examination is unnecessary;
—Performance of psychiatric examinations in an adversarial setting and psychiatric evaluation based on only one interview with the employee;
—Translation of personaltiy clashes between employees and supervisors into ostensible mental health problems on the part of the employees;
—Indecision of agencies as to whether they should file a disability retirement application on the employee's behalf. Policy derived from court decisions and GAO opinions requires agencies to file a disability retirement application for an employee whose deficiency is believed to be related to a mental condition and who otherwise would qualify for disability retirement.

These problems are discussed more fully in OPM's staff paper on fitness-for-duty. Comments received from agencies in response to our staff paper have led us to propose an additional subpart in Part 339, Qualification Requirements (Medical), to set forth instances in which agencies will retain authority to order mandatory medical examinations. Except for those situations specified in the proposed regulations, medical examinations will be voluntary.

Although our staff paper emphasized that agencies would continue to be able to order medical exams for positions that have preestablished medical retention standards, some agencies were confused on this point. Concerns were also expressed about employees whose presence on the job, because of a possible health problem, poses an immediate danger to themselves, other employees, and/or the public, such as an employee who may be a carrier of a contagious disease. Agencies also expressed a strong interest in retaining authority to order medical exams where an employee is suspected of abusing sick leave. We are sympathetic to these concerns and agree that agencies should be able to order medical examinations where problems are based on an apparent health condition, rather than on a performance or conduct deficiency that may or may not be health-related. The proposed regulations provide for mandatory medical exams in the former kinds of situations.

The preferred option in the staff paper mentioned counselling of the employee who displayed a performance or conduct deficiency as an activity preliminary to a voluntary medical examination. It was the intention of OMP to thus offer agencies an additional tool to gather information needed to determine the prospective value of a medical examination in resolving the employee relations problem. It was not our intention to create an employee right to counselling when the agency did not anticipate that a medical examination would be of value. However, on reconsideration, OPM staff determined that the suggested counselling provision might well be interpreted in that manner. Therefore, it was determined to delete any reference to counselling from these regulations, and to approach the problem of how an agency may best collect information later in FPM guidance. On the other hand, Public Laws 91–616 and 92–255 have been interpreted to require agencies to offer counselling in cases of alcoholism or drug abuse. Information about these services may be obtained from Art Purvis, Employee Health Services Branch, Room 233K, Office of

Personnel Management, Washington, D.C. 20415, phone (202) 254–5720.

The OPM study of the disability retirement program also revealed the need for several reforms most of which were connected with the definition of disability. 5 U.S.C. 8331(6) defines "disabled" and "disability", as "totally disabled or total disability, respectively, for useful and efficient service in the grade or class of position last occupied by the employee or Member because of disease or injury not due to vicious habits, intemperance, or willful misconduct on his[her] part within 5 years before becoming so disabled." While OPM has in the past allowed disability retirement in cases where the applicant has been unable to perform only one of the several functions of his/her position, this interpretation is no longer considered appropriate under the statutory rule. Many employees, although by current definition disabled for their particular positions, could continue to be productively employed if certain accommodations could be made in their assigned duties or in the work environment, or if they could be reassigned to different positions. The Federal Government should not be deprived of the services of qualified, experienced employees simply because of a narrow interpretation of the term "disabled"; neither should employees be denied an opportunity to continue to function as productive members of society.

The statutory definition of "disability" refers to "disability . . . in the grade or class of position last occupied . . ." In the past, the OPM has interpreted this phrase to apply only to the position the employee actually occupies. A broader, more appropriate interpretation of this phrase would require the employee to be medically unqualified to fill all vacant positions for which he/she is otherwise qualified at the same pay and grade. We believe that the agency, in its attempt to reassign the employee, should avail itself of all the resources and alternatives that would be appropriate in the placement of a handicapped individual under the selective placement program. This would support Federal policies that require reasonable accommodation of a handicapped individual and encourage the retention of a partially disabled employee in a productive capacity. A disservice is done both to the employee and the Government when such an individual is not given the full opportunity to continue to use his or her skills in another position. There would be necessary exceptions where the employee's condition causes conduct deficiencies which are not directly related to performance but are otherwise unacceptable at the worksite, and where there are medical conditions that, because of health and safety factors, restrict the employee from the work-site or from performing critical elements of his/her position.

A demonstrated disability must begin with evidence that the employee's service (performance, conduct, or attendance) in his/her position is inadequate to merit his/her retention at that particular position or grade level. An inability to perform several minor functions of the position does not necessarily render the employee's service less than useful and efficient.

Once a qualifying service deficiency has been established, OPM must determine if this deficiency can be attributed to a medical condition from which the employee suffers. A direct relationship between the deficiency and the medical condition such that the medical condition has caused the deficiency is essential to a determination of disability. It is insufficient for the applicant to merely demonstrate that a medical condition exists. If the condition has not caused the service deficiency, then there is no "disability".

Also, in a recent court decision, *Moysey* v. *Andrus*, the Court found that there is nothing in the civil service retirement provisions of title 5, United States Code, that prohibits the reexamination of disability retirees age 60 and over, and that such reexaminations should be conducted upon the annuitants' requests so that the disability retirement provisions will be consistent with the Age Discrimination in Employment Act (Public Law 95–256, approved April 6, 1978). Therefore, the Office of Personnel Management will, upon request of a disability retiree who is at least 60 years old, reevaluate the retiree to determine if he or she is recovered from his or her disability or is restored to earning capacity. If a finding of recovery or restoration is made, the annuity of the retiree will terminate upon his or her reemployment in the Federal service or one year from the date of the finding of recovery or restoration, whichever occurs first.

Finally, we are also proposing supplemental changes to make Part 432, Reduction in Grade and Removal Based on Unacceptable Performance, and Part 752, Adverse Actions, compatible with the changes in Parts 339 and 831.

Office of Personnel Management
Beverly M. Jones,
Issuance System Manager.

Accordingly, OPM proposes to amend Title 5, Code of Federal Regulations, as follows:

(1) 5 CFR 339 is revised to read as follows:

Subpart A—Definitions and Medical Disqualifications

Sec.
339.101 Definitions.
339.102 Medical disqualifications.

Subpart B—[Reserved]

Subpart C—Mandatory Medical Examinations

339.301 Agency authority.
339.302 Examinations.
339.303 Records.

Subpart D—Fitness-for-Duty Examinations

339.401 Agency action.
339.402 Records.

Authority: 5 U.S.C. 3301; E.O. 9830, Feb. 24, 1947.

Subpart A—Definitions and Medical Disqualifications

§ 339.101 Definitions.

For the purposes of this part:

"Deficient service" and "service deficiency" means that which would, if continued, meet the standards for possible action under Parts 432 or 752 of this chapter.

"Examining physician" means a licensed Doctor of Medicine or Doctor of Osteopathy.

"Fitness-for-duty examination" means a voluntary medical examination which an agency may offer to an employee whose service is deficient when a question about the employee's health is raised either by the agency or by the employee as a possible cause of the deficiency.

"Mandatory medical examination" means an examination that an agency may order an employee to take, solely as provided by § 339.301 of this chapter.

"Medical condition" means health impairment which results from injury or disease, including psychiatric disease, but not including personality, character, or behavior disorders, which may affect an employee's ability to function on the job.

"Medical qualification requirement" is a state of health which is sufficient for selection for or retention in a position. Entrance requirements are the medical qualifications for selection or appointment. Retention requirements are the medical qualifications for retention in a position.

"Medically qualified" means that the individual has no medical or health

conditions which preclude satisfactory service in a position. When there are published medical standards for a position, the individual meets the standards either for selection or retention.

§339.102 Medical disqualifications.

Subject to Subpart C of Part 731 of this chapter, OPM may deny an applicant examination, deny an eligible appointment, and instruct an agency to remove an appointee by reason of physical or mental unfitness for the position for which he or she has applied or to which he or she has been appointed.

Subpart B—[Reserved]

Subpart C—Mandatory Medical Examinations

§ 339.301 Agency authority.

(a) An agency may order an employee to report for a mandatory medical examination

(1) Periodically when there are medical retention standards for the position in order to determine whether or not the individual is medically qualified for retention, and

(2) Whether or not there are published medical standards for the position, when the agency has no evidence that a service deficiency exists, but

(i) The employee furnishes evidence that he or she has a health impairment that will affect the employe's performance on the job, or

(ii) The agency has reason to believe that, because of a health impairment, the employee's presence on the job poses a clear and immediate danger to the employee, other employees, the public, or Government property.

(b) An agency may order an employee who has used extensive leave for health reasons, including an employee who is on leave-without-pay while receiving injury compensation payments under 5 U.S.C. chapter 81, to report for a mandatory medical examination in order to determine whether continuation on leave or return to limited or full duty is warranted.

§339.302 Examinations.

(a) When an agency orders a mandatory medical examination under § 339.301, it shall inform the employee in writing, or orally in the event of an emergency, of its reasons for ordering the examination and the consequences of his or her refusal to report for the examination. Refusal may be cause for removal under Part 752 of this chapter. To support such an action an agency must show that it had good cause to order the employee to take the mandatory medical examination and that the employee refused to do so.

(b) The agency shall designate the examining physician, but shall offer the employee an opportunity to submit medical information from his or her personal physician, which shall be considered by the agency.

(c) An agency shall not order an employee to undergo a psychiatric evaluation unless it has first ordered a non-psychiatric medical examination as provided in § 339.301 of this chapter and unless the examining physician, an agency managerial or supervisory official, and an agency personnel official agree, in the light of all available facts of the case, that a psychiatric evaluation appears necessary. Any psychiatric evaluation under this section must consist of more than one interview with the employee by a board-certified psychiatrist and must include psychological testing.

§ 339.303 Records.

Agencies shall maintain records of all actions taken under § 339.302 in accord with instructions provided in FPM Chapter 339.

Subpart D—Fitness-for-Duty Examinations

§ 339.401 Agency action.

(a)(1) When an employee has a service deficiency and when the employee submits or the agency otherwise obtains information regarding a health impairment which may be causing the service deficiency, the agency must offer the employee a fitness-for-duty examination if it believes that medical information would help identify alternatives to correct the service deficiency.

(2) An agency's offer of a fitness-for-duty examination does not free the agency from any obligation under Pub. L. 91–616 and Pub. L. 92–255 to provide counselling to employees with alcohol and drug abuse problems. When an agency offers a fitness-for-duty examination to an employee who may be eligible for disability retirement, it shall inform the employee of the requirements and his or her possible eligibility for disability retirement.

(b)(1) If the employee accepts the offer of a fitness-for-duty examination, the agency shall designate three to five possible examining physicians from which the employee shall choose one to conduct the examination.

(2) If the examining physician recommends, and the agency agrees, that examination by a specialist would be helpful, the agency shall offer the opportunity for further examination. The agency shall again designate a list of board-certified physicians from which the employee shall choose.

(3) No psychiatric evaluation shall be offered under this section unless the agency has first offered and the employee has taken a non-psychiatric medical examination under this subpart and unless the examining physician and the agency agree that a psychiatric evaluation would be helpful. Any psychiatric evaluation under this section must consist of more than one interview with the employee by a board-certified psychiatrist and must include psychological testing.

(4) Examinations under this section shall be conducted at the agency's expense.

§ 339.402 Records.

(a) Agencies shall maintain records of employees' medical examinations in accord with instructions of the Office of Personnel Management in FPM Chapter 339.

(b) Medical information gathered under the procedure set forth in § 339.401 may be used to identify possible alternatives to involuntary reduction in grade or removal based on performance or misconduct. This information shall not be used as a reason for any involuntary action against the employee under Parts 432, 752, or 831 of this chapter.

(2) § 831.502 is revised to read as follows:

§ 831.502 Disability retirement.

(a) *Definitions.* For the purposes of this part:

"Disabled" and "disability" means "totally disabled or total disability, respectively, for useful and efficient service in the grade or class of position last occupied . . . because of disease or injury not due to vicious habits, intemperance, or willful misconduct . . . within 5 years before becoming so disabled." (5 U.S.C. 8331(6)).

"In the grade or class of position last occupied" means the actual position last held by the employee or any other position in the same grade level or its equivalent under a different pay system within the same agency and competitive area where last employed for which the employee is qualified and to which a reassignment can be effected.

"Medical examination" means a medical examination that was made not more than 90 days before its receipt in the Office of Personnel Management.

"Useful and efficient service" means actual satisfactory service with respect to performance, conduct, and attendance, or the potential to perform

satisfactorily without detriment to the employee, his or her fellow workers, the public, or Government property, of as many of the essential functions of a position as would normally merit retention of the employee in his or her pay level or grade.

(b) *Prima facie case of disability.* A prima facie case of disability is agency documentation that specifically demonstrates the employee's failure to provide useful and efficient service in his or her current position, documentation of a medical condition which has caused the deficiency in service, and documentation of the agency's actions to place the employee in other positions at his or her grade or equivalent positions under a different pay system. While the application for disability retirement may be accompanied by a report of examination already made by a medical officer of the United States, or by other good and sufficient medical evidence, the Office of Personnel Management (OPM) may, at its sole discretion and expense, require further examination.

(c) *Reevaluation and reemployment.* (1) Each disability annuitant who is under 60 years of age shall be reevaluated annually under direction of OPM. A disability annuitant age 60 or over shall be reevaluated only on his or her own request. When OPM determines that the disability is likely to continue for a definite period of time, OPM may order a medical or other evaluation in any case at any time to determine the facts relative to the nature and degree of disability of a disability annuitant. When OPM determines that the disability is likely to be permanent, OPM will order further evaluation only when warranted and shall notify the annuitant accordingly.

(2) When an evaluation made in compliance with the direction of OPM shows that a disability annuitant has recovered, OPM shall discontinue the annuity at the expiration of 1 year from the date of the evaluation. When the disability annuitant is reemployed under a career, career conditional, SES career, or equivalent appointment by a department or agency within the 1 year, OPM shall discontinue the annuity from the date of reemployment.

(3) When a recovered disability annuitant is not reemployed in a position in which he/she is subject to Civil Service Retirement coverage, and based on current medical examination or other evaluation, OPM finds that he/she has again become disabled before becoming 62 years of age because the medical condition that occasioned the disability retirement has recurred, OPM shall reinstate his or her disability annuity, of the same type and at the rate last payable, from the date of the determination.

(4)(i) If otherwise qualified, a disability annuitant may be reemployed in any position for which he/she is medically qualified. Generally, these annuitants will be employed under conditions whereby their salaries and annuities will be governed by Subpart H of this part and 5 U.S.C. 8344. However, when the annuitant is reemployed in a permanent position covered by the Civil Service Retirement law, in the same grade or class of position or its equivalent under a different pay system from which he/she retired, the employing agency shall notify OPM of such reemployment, submitting with the notification evidence of the basis on which it found him or her qualified, along with supporting medical evidence. On the basis of this evidence, OPM may find the annuitant recovered from his or her disability as of the date of reemployment. The employing agency shall withhold civil service retirement deductions from the date of employment, and OPM shall suspend payment of annuity pending determination of recovery status.

(ii) If the annuitant is found recovered, his or her reconsideration right, as described in § 831.108 of this chapter, shall begin on the date of that finding or from the date he/she is once again, voluntarily or involuntarily, separated for disability, provided the separation occurs within one year of the date of reemployment.

(iii) If the annuitant is not found recovered, OPM shall notify the agency of that finding, and the annuitant's reemployment shall be considered subject to the provisions of Subpart H of this part. The retirement deductions withheld under the provisions of this paragraph will be refunded to the annuitant by OPM, and his or her annuity shall be reinstated.

(d) *Income limitation.* (1) Each disability annuitant who is under 60 years of age shall report to OPM, in a format acceptable to OPM, his or her annual income from wages or self-employment or both, for any period after retirement. If an annuitant fails to submit a report, OPM may suspend annuity payments until entitlement to continued annuity is satisfactorily established.

(2) When, in each of two succeeding calendar years, a disability annuitant has received income from wages or self-employment or both, equaling at least 80 percent of the current rate of pay of the position from which he/she retired, the annuitant's earning capacity is deemed restored and OPM shall continue the annuity at the expiration of 1 year from the end of the two-year period. When the disability annuitant is reemployed by a department or agency within the 1 year, OPM shall discontinue the annuity from the date of reemployment. OPM presumes receipt of income equaling at least 80 percent of the current rate of pay of the position from which the disability annuitant retired for any calendar year for which the disability annuitant fails to report his or her income.

(3) When a disability annuitant whose earning capacity has been restored,

(i) Is not reemployed in a position in which he/she is subject to Civil Service Retirement coverage;

(ii) Has not recovered from the disability for which retired; and

(iii) Has again lost his or her earning capacity, as determined by OPM, before becoming 62 years of age,

OPM shall reinstate his or her disabiliity annuity, of the same type and at the rate last payable, from the first of the year following the calendar year in which the earning capacity was lost. Earning capacity is deemed lost if during any complete calendar year the individual's income from wages or self-employment, or both, is less than 80 percent of the current rate of pay of the position from which he/she retired.

(e) *Effect of reinstatment of disability annuity.* Reinstatement of a disability annuity terminates, from reinstatement date, the right to any nondisability annuity which the annuitant may be receiving or entitled to receive, based on the same service, unless the annuitant elects in writing to retain instead the nondisability annuity. When the annuitant is employed in a department or ageny in a position not subject to Civil Service Retirement coverage, on the date of reinstatment of his or her disability annuity, OPM shall suspend payment of the annuity until he/she is separated from the service.

Authority: 5 U.S.C. 8347.

(3) Section 831.1203(a) is revised to read as follows:

§ 831.1203 Agency action.

(a) *Application.* When the agency has reason to believe an employee may be totally disabled within the meaning of paragraph (c)(1) of this section and satisfactory medical evidence is available, it may file an application for disability retirement on the employee's behalf, but it is not required to do so.

* * * * *

(5 U.S.C. 8347)

(4) Section 831.1206 is revised to read as follows:

§ 831.1206 Duty status.

An agency shall retain an employee in an active duty status until it receives the initial decision of the Associate Director for Compensation on an agency application for disability retirement, except that:

(a) The agency need not delay any personnel action which is otherwise appropriate under Part 432 or Part 752 of this chapter while the disability retirement application is pending before the Office of Personnel Management, and

(b) In accord with Part 630 of this chapter the agency, on the basis of a service deficiency and documented medical cause for the deficiency, may place an employee on leave with his or her consent, or without his or her consent. If the leave account of the employee is or becomes exhausted, any suspension or involuntary nonduty-nonpay status shall be effected in accord with applicable laws, Executive orders, and regulations. After receiving the decision of the Associate Director for Compensation, the agency shall not retain the employee solely for the purpose of exhausting unused sick leave.

* * * * *

(5 U.S.C. 8347)

(5) § 432.204(d) is added to read as follows:

§ 432.204 Procedures.

(d) *Health consideration.* (1) When the employee, or his or her representative, submits, or the agency otherwise obtains, information regarding a health impairment which may be causing the employee's unacceptable performance, the agency must offer a fitness-for-duty examination under § 339.401 of this chapter at or before the time it informs the employee that he or she is being given an opportunity to demonstrate acceptable performance under § 432.203(b) of this part.

(2) The agency may not require a fitness-for-duty examination under § 339.401 of this chapter.

(3) An agency will have fulfilled its obligation under this part to determine whether or not unacceptable performance is caused by a health impairment when it documents, as part of the record of the action, that the employee was given an opportunity to raise a possible health impairment which explains the unacceptable performance, and that the agency has complied with paragraph (d)(1) of this section.

(5 U.S.C. 4305)

(6) § 752.403(c) and § 752.403(d) are added, and § 752.404(f) is revised to read as follows:

§ 752.403 Standard for action.

* * * * *

(c) When an employee, or his or her representative, submits, or an agency otherwise obtains, information regarding a health impairment which may be causing a service deficiency, the agency may not take an adverse action against the employee unless it has offered a fitness-for-duty examination under § 339.401 of this chapter. If the employee refuses a fitness-for-duty examination, the agency shall base its action on the deficient service. An agency will have fulfilled its obligation under this part to determine whether a service deficiency is caused by a health impairment when it documents, as part of the record of the action, that the employee was given the opportunity to raise a possible health impairment which explains the service deficiency and that the agency complied with the requirements of this paragraph. This paragraph does not apply to:

(1) Actions based on refusal to participate in a mandatory medical examination required under § 339.301; or

(2) Actions taken under § 752.404(d).

(d) An agency may not take an adverse action based on an employee's refusal of a fitness-for-duty examination under § 339.401 of this chapter.

* * * * *

§ 752.404 Procedures.

* * * * *

(f) *Agency decisions.* (1) in arriving at its written decision, the agency shall consider only the reasons specified in the notice of propoise action and shall consider any answer of the employee and/or his or her representative made to a designated official, including any medical information, prior to the agency's decision.

(2) The agency shall deliver the notice of decision to the employee at or before the time the action will be effective. The notice shall tell the employee of his or her appeal rights.

(5 U.S.C. 7504, 7514)

[FR Doc. 80-24368 Filed 8-11-80; 8:45 am]

BILLING CODE 6325-01-M

---

5 CFR Part 930

Programs for Specific Positions and Examinations (Miscellaneous); Reinstatement of Administrative Law Judges (ALJ's)

AGENCY: Office of Personnel Management (OPM).

ACTION: Proposed rulemaking.

SUMMARY: OPM is proposing to revise the regulation on ALJs. This change would assure greater personnel mobility consistent with the objectives of the Civil Service Reform Act, and more easily attract and retain well-qualified ALJs.

COMMENT DATE: Any interested party may submit written comments regarding this proposal. To be considered, comments must be received on or before October 14, 1980.

ADDRESS: Send or deliver written comments to the Director, Office of Administrative Law Judges, Office of Personnel Management, 1900 E Street, N.W., Room 2470, Washington, D.C., 20415. Comments received will be available for public inspection at the above address between the hours of 9 a.m. and 4 p.m. Monday through Friday.

FOR FURTHER INFORMATION CONTACT: Judge Marvin H. Morse, 202-632-4604.

SUPPLEMENTARY INFORMATION: There have been a number of recent studies conducted of various phases of the ALJ program. On the basis of these studies we propose modifying and clarifying certain portions of the regulations pertaining to the ALJ program. The changes are also intended to make the program's regulations more equitable.

It is OPM's judgment that the ALJ program may often be best administered by having the Director, Office of Administrative Law Judges position encumbered by an ALJ. In order to attract and retain well-qualifed ALJs for this position, we feel it is essential that such persons be granted the opportunity to return without any restrictions to an ALJ position. OPM has determined that this is a significant regulation for the purposes of E.O. 12044.

Office of Personnel Management.

Beverly M. Jones,

Issuance System Manager.

Accordingly, OPM proposes to revise 5 CFR 930.207 to read as follows:

§ 930.207 Reinstatement.

(a) Except as provided in paragraph (b) of this section, an agency may reinstate a person who has served with absolute status as an administrative law judge under section 3105 of title 5, United States Code, only after:

(1) He/she has established his/her eligibility at the grade to which he/she is to be reinstated in accordance with requirements of Office of Personnel Management Announcement No. 318, or any revision or successor thereto, and

(2) He/she demonstrates that his/her experience satisfies all current qualifications requirements. Reinstatement is subject to investigation

by, and the prior approval of, the Office of Personnel Management.

(b) Any person who is or has been appointed directly from an administrative law judge position to the position of Director, Office of Administrative Law Judges, may at any time be reinstated to an administrative law judge position without regard to requirements set out in paragraph (a) of this section.

(5 U.S.C. 3105)

[FR Doc. 80-24397 Filed 8-11-80; 8:45 am]
BILLING CODE 6325-01-M

DEPARTMENT OF AGRICULTURE

Federal Crop Insurance Corporation

7 CFR Part 431

[Amdt. No. 2]

Soybean Crop Insurance Regulations

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Proposed rule.

SUMMARY: This proposed rule would amend two sections of the Soybean Crop Insurance Policy to prescribe procedures for allowing soybean crop insurance policyholders to replant acreage to soybeans under certain conditions and to become eligible for a replanting payment under certain conditions. This rule is promulgated under the authority of the Federal Crop Insurance Act, as amended, and is intended to provide a benefit to those insured producers who are faced with replanting acreage to soybeans.

DATE: Written comments, data, and opinions on this proposed rule must be submitted not later than October 14, 1980, to be sure of consideration.

ADDRESS: Written comments on this proposed rule should be sent to James D. Deal, Manager, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, D.C. 20250.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, D.C., 20250, telephone 202-447-3325.

The Draft Impact Analysis describing the options considered in developing this proposed rule and the impact of implementing each option is available from the above-named individual.

SUPPLEMENTARY INFORMATION: This proposed action has been reviewed under USDA procedures established in Secretary's Memorandum No. 1955 (August 25, 1978) to implement Executive Order No. 12044 (March 23, 1978) and has been classified as "not significant".

Under the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 *et seq.*), the Federal Crop Insurance Corporation proposes to amend the Soybean Crop Insurance Regulations (7 CFR Part 431) as published in the **Federal Register** on Thursday, November 8, 1979 (44 FR 64786) and December 20, 1979 (44 FR 75374), effective with the 1981 crop year.

The purpose of the amendment is to allow growers of soybeans whose crops are insured by the Federal Crop Insurance Corporation to replant acreage with soybeans in the event that their original soybean crop is destroyed and be eligible for a replanting payment under certain conditions.

The replanting payment will indemnify growers who are faced with increased costs of production and possible lower yield due to the replanting.

The proposed amendment to the Soybean Crop Insurance Policy involves subsection (7), "Notice of Damage or Loss", and subsection (8) of the 7 CFR 431(d), and the Appendix (Additional Terms and Conditions).

All written submissions made pursuant to this notice will be available for public inspection in the Office of the Manager during regular business hours, 8:15 a.m. to 4:45 p.m., Monday through Friday.

Proposed Rule

Accordingly, pursuant to the authority contained in the Federal Crop Insurance Act, as amended (7 U.S.C. 1501 *et seq.*), the Federal Crop Insurance Corporation proposes to amend 7 CFR 431(d) of the Soybean Crop Insurance Regulations and the Appendix at the end of such regulations, effective with the 1981 and succeeding crop years, as follows:

1. Sections 7 and 8 of the terms and conditions of the Soybean Crop Insurance Policy (7 CFR 431.7(d)), appearing at 44 FR 64786, are revised to read as follows:

§ 431.7 The application and policy.

* * * * *

(d) * * *

7. Notice of damage or loss. (a) Any notice of damage or loss shall be given promptly in writing by the insured to the Corporation at the office for the county.

(b) Notice shall be given promptly if (1) after June 1 the insured wants the consent of the Corporation to replant acreage damaged by an insured cause(s) in order to qualify for the replanting payment and such acreage is at least 25 acres or 10% of the insured acreage on the unit, (2) during the period before harvest, the soybeans on any unit are damaged to the extent that the insured does not expect to further care for the crop or harvest any part of it, or (3) the insured wants the consent of the Corporation to put the acreage to another use. No insured acreage shall be put to another use until the Corporation has made an appraisal of the potential production of such acreage and consents in writing to such other use. Consent to put acreage to another use (other than replanting to soybeans) shall not be given until it is too late or impractical to replant to soybeans. Notice shall also be given when such acreage has been replanted or put to another use.

(c) In addition to the notices required in subsection (b) of this section, if an indemnity is to be claimed on any unit, the insured shall give written notice thereof to the Corporation at the office for the county not later than 30 days after the earliest of (1) the date harvest is completed on the unit, (2) the calendar date for the end of the insurance period, or (3) the date the entire soybean crop on the unit is destroyed, as determined by the Corporation. The Corporation reserves the right to provide additional time if it determines there are extenuating circumstances.

(d) Acreage upon which a replanting payment will be claimed shall be left intact until consent is given by the Corporation to replant.

(e) Any insured acreage which is not to be harvested and upon which an indemnity is to be claimed shall be left intact until inspected by the Corporation.

(f) The Corporation may reject any claim for indemnity if any of the requirements of this section are not met.

8. Claim for Indemnity. (a) It shall be a condition precedent to the payment of any indemnity that the insured (1) establish the total production of soybeans on the unit and that any loss of production was directly caused by one or more of the insured causes during the insurance period for the crop for which the indemnity is claimed and (2) furnish any other information regarding the manner and extent of loss as may be required by the Corporation.

(b) Indemnities shall be determined separately for each unit. The amount of indemnity for any unit shall be determined by (1) multiplying the insured acreage of soybeans on the unit by the applicable production guarantee per acre, which product shall be the production guarantee for the unit, (2) subtracting therefrom the total production of soybeans to be counted for the unit, (3) multiplying the remainder by the applicable price for computing indemnities, and (4) multiplying the result obtained in step (3) by the insured share: *Provided,* That if the premium computed on the insured acreage and share is more than the premium computed on the reported acreage and share, the amount of indemnity shall be computed on the insured acreage and share and then reduced proportionately.

(c) The total production to be counted for a unit shall be determined by the Corporation and shall include all harvested and appraised production.

(1) Mature production which grades No. 4 or better shall be reduced .12 percent for each .1 percentage point of moisture in excess of 14 percent; and if, due to insurable causes, any soybeans do not grade No. 4 or better in accordance with the Official U.S. Grain Standards, the production shall be adjusted by (i) dividing the value per bushel of the damaged soybeans (as determined by the Corporation) by the price per bushel of U.S. No. 2 soybeans and (ii) multiplying the result by the number of bushels of such soybeans. The applicable price for No. 2 soybeans shall be the local market price on the earlier of: The day the loss is adjusted or the day the damaged soybeans were sold.

(2) Appraised production to be counted shall include: (i) the greater of the appraised production or 50 percent of the applicable guarantee for any acreage which, with the consent of the Corporation, is planted before soybean harvest becomes general in the current crop year to any other crop insurable on such acreage (excluding any crop(s) maturing for harvest in the following calendar year), (ii) any appraisals by the Corporation for potential production on harvested acreage and for uninsured causes and poor farming practices, (iii) not less than the applicable guarantee for any acreage which is abandoned or put to another use without prior written consent of the Corporation or damaged solely by an uninsured cause, (iv) only the appraisal in excess of the lesser of 3 bushels or 20 percent of the production guarantee for all other unharvested acreage, and (v) the lesser of 3 bushels or 20% of the production guarantee for acreage on which a replanting payment has been made.

(d) The appraised potential production for acreage for which consent has been given to be put to another use shall be counted as production in determining the amount of loss under the contract.

However, if consent is given to put acreage to another use and the Corporation determines that any such acreage (1) is not put to another use before harvest of soybeans becomes general in the county, (2) is harvested, or (3) is further damaged by an insured cause before the acreage is put to another use, the indemnity for the unit shall be determined without regard to such appraisal and consent.

(e) A replanting payment shall be applicable to any insured acreage replanted after June 1 upon which the Corporation has given consent to be replanted: *Provided,* That the acreage replanted is at least 25 acres or 10 percent of the insured acreage for the unit. *Provided, however,* no payment will be made on acreage (1) initially planted prior to the date determined as reasonable by the Corporation or (2) on which a prior replanting payment has been made during the current crop year. The amount per acre of such payment will be the lesser of 3 bushels or 20 percent of the production guarantee multiplied by the applicable price for computing indemities times the insured share: *Provided, further,* That if the premium computed on the insured acreage and share is more than the premium computed on the reported acreage and share, the amount of replanting payment shall be computed on the insured acreage and share and then reduced proportionately.

(f) Any replanting payment will be considered as an indemity with respect to all provisions of the policy and appendix except sections 7 and 8 of the policy.

2. By inserting a new subsection 1(i) in the Appendix appearing at 44 F.R. 64792, to read as follows:

Appendix—Additional Terms and Conditions

1. Meaning of Terms.

(a) * * *

* * * * *

(i) "Replanting" means performing the agricultural practices necessary to replant insured acreage to the same crop.

3. By redesignating subsections (i), (j), and (k) of section 1 of the Appendix, appearing at 44 FR 64792, as follows:

1(i) is redesignated as 1(j)
1(j) is redesignated as 1(k)
1(k) is redesignated as 1(l)

(Sections 506, 516, 52 Stat. 73, as amended, 77, as amended (7 U.S.C. 1506, 1516))

Note.—The reporting requirements contained herein have been approved by the Office of Management and Budget in accordance with the Federal Reports Act of 1942 and OMB Circular A-40.

This action will not have a significant impact, specifically on area and community development; therefore, review as required by OMB Circular A-95 is inapplicable.

Approved by the Board of Directors on July 14, 1980.

Dated: August 1, 1980.

Peter F. Cole,
Secretary, Federal Crop Insurance Corporation.

Approved by:

Everett S. Sharp,
Acting Manager.

BILLING CODE 3410-06-M

Agricultural Marketing Service

7 CFR Part 910

Lemons Grown in California and Arizona; Proposed Minimum Size Requirement

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This notice proposes a minimum size requirement of 1.82 inches in diameter for shipments of lemons grown in California and Arizona. This requirement is designed to provide for orderly marketing in the interest of producers and consumers.

DATES: Written comments must be received not later than September 4, 1980. Proposed effective dates: September 21, 1980, through September 19, 1981.

ADDRESS: Send two copies of comments to the Hearing Clerk, Room 1077, South Building, U.S. Department of Agriculture, Washington, D.C. 20250, where they will be made available for public inspection during regular business hours (7 CFR 1.27(b)).

FOR FURTHER INFORMATION CONTACT: Malvin E. McGaha, Chief, Fruit Branch, F&V, AMS, USDA, Washington, D.C. 20250, telephone 202-447-5975. The Draft Impact Analysis relative to this proposed rule is available on request from the above named individual.

SUPPLEMENTARY INFORMATION: This proposed action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and classified "not significant." The proposal is being published with less than a 60-day comment period because there is insufficient time between the date when the information upon which it is based became available and the effective date necessary to effectuate the declared policy of the act. The proposed regulation would be issued under the marketing agreement, as amended, and Order No. 910, as amended (7 CFR Part 910), regulating the handling of lemons grown in California and Arizona. The agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601-674). The proposed regulation was recommended by the Lemon Administrative Committee.

Shipments of lemons from the production area are now in progress, and such shipments are regulated by size through September 20, 1980, under Lemon Regulation 217, as amended (44 FR 69918). The proposed regulation, which would become effective September 21, 1980, would require shipments of lemons to be no smaller than 1.82 inches in diameter. The volume and size composition of the lemon crop in California and Arizona is such that ample supplies of the more desirable sizes are available to satisfy the demand in domestic fresh markets. The committee estimates that approximately 2-3% of the season's crop is smaller than 1.82 inches in diameter. The proposed regulation is designed to permit shipment of ample supplies of lemons of acceptable sizes, maturity, and juice content. Lemons which are smaller than 1.82 inches in diameter normally have negligible demand and sales opportunity, as they have relatively low juice yields. Lemons failing to meet this minimum size requirement could be shipped to fresh export markets, left on the trees to attain further growth, or utilized in processing. The proposed regulation is consistent with the

objective of the act of promoting orderly marketing in the interest of producers and consumers.

The proposed regulation reads as follows:

(a) From September 21, 1980, through September 19, 1981, no handler shall handle any lemons grown in District 1, District 2, or District 3 which are of a size smaller than 1.82 inches in diameter, which shall be the largest measurement at a right angle to a straight line running from the stem to the blossom end of the fruit: *Provided,* That not to exceed 5 percent, by count, of the lemons in any type of container may measure smaller than 1.82 inches in diameter.

(b) As used in this section, "handle", "handler", "District 1", "District 2", and "District 3" each shall have the same meaning as when used in said amended marketing agreement and order.

Dated: August 7, 1980.

Charles R. Brader,

Director, Fruit and Vegetable Division Agricultural Marketing Service.

DEPARTMENT OF ENERGY

Office of Conservation and Solar Energy

10 CFR Part 430

Energy Conservation Program for Consumer Products Other Than Automobiles; Energy Efficiency Standards for Nine Types of Consumer Products; Notice of Opportunity for Further Comment

AGENCY: Department of Energy.

ACTION: Extension of written comment period on proposed rule.

SUMMARY: By this notice the Department of Energy is extending the written comment period to provide interested persons more time to submit written comments to assist the Department in developing energy efficiency standards for nine types of consumer products. The comment period was originally scheduled to close August 29, 1980 in response to a notice of proposed rulemaking published June 30, 1980 (45 FR 43976).

DATE: Comments by September 15, 1980.

ADDRESS: Comments on this document to: Carol A. Snipes, U.S. Department of Energy, Office of Hearings and Dockets, Room 1-F-085, CAS-RM-78-110, 1000 Independence Avenue, SW., Washington, D.C. 20585, 202-252-9319.

FOR FURTHER INFORMATION CONTACT: James A. Smith, U.S. Department of Energy, Office of Conservation and Solar Energy, Mail Station G-H-068, 1000 Independence Avenue, SW., Washington, D.C. 20585, 202-252-9127.

SUPPLEMENTARY INFORMATION: Section 325 of the Energy Policy and Conservation Act (Pub. L. 94-163), as amended by section 422 of the National Energy Conservation Policy Act (Pub. L. 95-619), requires that the Department of Energy (DOE) prescribe energy efficiency standards for nine types of consumer products no later than December 1980. The nine types of products include refrigerators and refrigerator-freezers, freezers, clothes dryers, water heaters, room air conditioners, home heating equipment (not including furnaces), kitchen ranges and ovens, central air conditoners, and furnaces. On June 30, 1980 (45 FR 43976) DOE published a notice of proposed rulemaking which solicited comments from interested persons to assist DOE in this undertaking. Comments were to be submitted to DOE by August 29, 1980.

Because some respondents have indicated a desire to have further opportunity to provide data, views and arguments in response to the notice, DOE has determined to provide interested persons an opportunity to submit further written comments in response to the notice by September 15, 1980.

Comments should be identified on the outside of the envelope and on documents submitted to DOE with the designation, "Energy Efficiency Standards for Consumer Products, CAS-RM-78-110." Fifteen copies should be submitted to the Office of Hearings and Dockets.

Pursuant to the provisions of 10 CFR 1004.11, any person submitting information which he or she believes to be confidential and exempt by law from public disclosure should submit one complete copy, and fifteen copies from which information claimed to be confidential has been deleted. In accordance with the procedures established at 10 CFR 1004.11, DOE shall make its own determination with regard to any claim that information submitted be exempted from public disclosure.

All comments received on or before September 15, 1980 will be considered by DOE in developing the final standards.

Issued in Washington, D.C., August 6, 1980.

T. E. Stelson,

Assistant Secretary, Conservation and Solar Energy.

[FR Doc. 80-24258 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-01-M

CIVIL AERONAUTICS BOARD

14 CFR Parts 207, 208, 212 and 214

[EDR-405A; Docket 37169; Dated: August 6, 1980]

Stranded Charter Passengers; Contracts; Comment Period Extended

AGENCY: Civil Aeronautics Board.

ACTION: Proposed rule; extension of comment period.

SUMMARY: This action extends until September 25, 1980 the filing date for initial comments, and until October 10, 1980 for reply comments, in a rulemaking proceeding proposing to eliminate the clause in most charter contracts by which airlines exempt themselves from the obligation to return stranded charter passengers.

DATES: Comments by: September 25, 1980. Reply comments by: October 10, 1980. Comments and other relevant information received after this date will be considered by the Board only to the extent practicable.

ADDRESSES: Twenty copies of comments should be sent to Docket 37169, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428. Individuals may submit their views as consumers without filing multiple copies. Copies may be examined in Room 711, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428.

FOR FURTHER INFORMATION CONTACT: David Schaffer, Office of the General Counsel, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428; 202-673-5442.

SUPPLEMENTARY INFORMATION: By EDR-405, 45 FR 46812, July 11, 1980, the Board proposed to prohibit direct carriers from including a *force majeure* clause in their charter contracts. The effect of this would be to shift the financial burden of returning stranded charter passengers from the charter operator to the direct carrier. The comment deadline was August 25, 1980. Reply comments were due September 9, 1980.

Transamerica Airlines, Inc., requested an extension of this period. It asked that comments not be due until the Board has ruled on its motion to consolidate this proceeding with Docket 34997 concerning consumer protection for members of scheduled service tour groups. Alternatively, Transamerica requested that the date for comments be extended to September 25, 1980.

In support of its request, Transamerica stated that "reasonableness requires that the dates for comments be stayed until the Board acts on its motion to consolidate." The basis for its alternative request was PS-88, 44 FR 65052, November 9, 1979, where the Board stated that it would usually allow at least 60 days for comments on its Notices of Proposed Rulemaking.

Upon consideration of the above, the undersigned finds that it is not necessary to await Board action on Transamerica's motion to consolidate before requiring comments in this proceeding. The Board has already tentatively concluded in EDR-405 that the problem of charter strandings warrants a rule directed specifically to that subject. It also, however, requested comments on whether the stranding problem on scheduled service was of a magnitude that would call for regulatory action directed at that mode as well. If comments should warrrant, the Board can consolidate Dockets 34997 and 37169 after comments on both have been received.

Because of the importance of the issues presented on this proceeding, there is good cause to allow a reasonable extension of time. Transamerica's alternate request is therefore granted. This will provide a comment period of 76 days.

Accordingly, under authority delegated in 14 CFR 385.20(d), the time for filing comments is extended to September 25, 1980 and the time for reply comments is extended to October 10, 1980.

(Sec. 204 of the Federal Aviation Act of 1958, as amended, 72 Stat. 743, 49 U.S.C. 1324.)

Richard B. Dyson,

Associate General Counsel.

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 732

Public Disclosure of Comments Received from Federal Agencies on the Indiana State Permanent Program

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), U.D. Department of the Interior.

ACTION: Announcement of Public Disclosure of Comments on the Indiana Program from the Environmental Protection Agency (EPA), the Department of Agriculture (USDA), and other Federal agencies.

SUMMARY: Before the Secretary of the Interior may approve permanent state regulatory programs submitted under Section 503(a) of the Surface Mining Control and Reclamation Act of 1977 (SMCRA), the views of certain federal agencies must be solicited and disclosed. The Secretary has solicited comments of these agencies and is today announcing their public disclosure.

ADDRESSES: Copies of the comments received are available for public review during business hours at:

Office of Surface Mining Reclamation and Enforcement, Region III, 5th Floor, 46 E. Ohio Street, Indianapolis, Indiana 46204.

Office of Surface Mining, Department of the Interior, Room 153, South Building, 1951 Constitution Avenue, NW., Washington, D.C. 20240.

Division of Reclamation, Indiana Department of Natural Resources, 309 W. Washington St., Suite 201, Indianapolis, Indiana 46204.

FOR FURTHER INFORMATION CONTACT:

J. M. Furman, Assistant Regional Director, State & Federal Programs, Office of Surface Mining, 46 E. Ohio Street, Room 527, Indianapolis, Indiana 46204, Telephone (317) 269-2629.

or

Carl C. Close, Assistant Director, State & Federal Programs, Office of Surface Mining, U.S. Department of the Interior, 1951 Constitution Avenue, NW., Washington, D.C. 20240, Telephone (202) 343-4225.

SUPPLEMENTARY INFORMATION: The Secretary of the Interior is evaluating the Indiana permanent regulatory program submitted by Indiana for his review on March 3, 1980. In accordance with section 503(b)(1) of SMCRA and 30 CFR 732.13(b)(1) the Indiana program may not be approved until the Secretary has solicited and publicly disclosed the views of the Administrator of the Environmental Protection Agency, the Secretary of Agriculture, and the heads of other federal agencies concerned with or having special expertise relevant to the program as proposed. In this regard, the following federal agencies were invited to comment on the Indiana program:

Department of Agriculture
- USDA State Land Use Committee
- Soil Conservation Service
- Forest Service
- Farmers Home Administration
- Scientific and Educational Administration—Agricultural Research
- Agricultural Stabilization and Conservation Service

Advisory Council on Historic Preservation
Council on Environmental Quality
Department of Labor
- Mine Safety and Health Administration

U.S. Environmental Protection Agency
Water Resources Council
Department of Energy
Department of the Interior
- Bureau of Indian Affairs
- Bureau of Land Management
- Bureau of Mines
- Heritage Conservation and Recreation Service
- Water and Power Resources Service (formerly Bureau of Reclamation)
- Fish and Wildlife Service
- National Park Service
- U.S. Geological Survey
- Indiana River Basin Commission
- U.S. Army Corp of Engineers

Of those agencies invited to comment, OSM received comments from the following offices:

Department of Agriculture
- Soil Conservation Service
- Forest Service

Department of Labor
- Mine Safety and Health Administration

U.S. Environmental Protection Agency
Council on Environmental Quality
U.S. Army Corps of Engineers
Department of the Interior
- Bureau of Mines
- Heritage Conservation and Recreation Service
- Fish and Wildlife Service
- National Park Service
- U.S. Geological Survey

These comments are available for review and copying during business hours, at the locations listed above under "ADDRESSES".

Dated August 6, 1980.

Edgar A. Imhoff,

Regional Director, Office of Surface Mining.

[FR Doc. 80-24225 Filed 8-11-80; 8:45 am]

BILLING CODE 4310-05-M

30 CFR Parts 884 and 926

Abandoned Mine Lands Reclamation Program

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM) U.S. Department of the Interior.

ACTION: Extension of Review Period.

SUMMARY: The Director of OSM has extended for 30 days the period for agency review of the Montana Abandoned Mine Lands Reclamation Plan.

DATE: The review period is extended until September 15, 1980.

FOR FURTHER INFORMATION CONTACT: Hugh Montgomery, Assistant Regional Director, AML Office of Surface Mining, U.S. Department of the Interior Brooks Tower 1020—15th Street, Denver, Colorado 80202, Telephone: (303) 837-5511.

SUPPLEMENTARY INFORMATION: On June 16, 1980, the State of Montana submitted to OSM its proposed Abandoned Mine Lands Reclamation Plan under the Surface Mining Control and Reclamation

Act of 1977 (SMCRA). Notice of Receipt

mean that Section 176 and 316 of the

regulations, provided the conditions and

operation procedures on the policy which

technical documentation that the

Act of 1977 (SMCRA). Notice of Receipt of the Montana Reclamation Plan was published in the **Federal Register** on June 20, 1980 (45 FR 41659). To insure prompt and expeditious review, OSM regulations require the Director to approve, disapprove or otherwise act upon a State reclamation plan within 60 days after it is submitted or after a State regulatory program is approved, whichever is later. 30 CFR 884.14. The Montana permanent regulatory program was approved April 1, 1980 (45 FR 19268). On July 28, 1980, the State of Montana requested a 30 day extension of the review period to consider comments received on the proposed reclamation plan.

The Director has determined that the request for a 30 day extension is reasonable and granting the request constitutes his "otherwise act[ing]" in accordance with 30 CFR 884.14(a). This Notice extends the review period to September 15, 1980, the first weekday after the 30th day following the original termination date for the review period. The Department of the Interior has determined that this document is not a significant rule and does not require a regulatory analysis under Executive Order 12044 and 43 CFR Part 14, 43 FR 58292, *et seq.* (December 13, 1978).

The Department has determined that this action will not have a significant effect on the human environment and an environmental impact statement will therefore not be prepared.

Dated August 5, 1980.

Walter N. Heine,

Director.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL 1565-6]

Proposed Schedules and Conditions to Correct Deficiencies in Maryland's Nonattainment Area Plan Revision

AGENCY: Environmental Protection Agency.

ACTION: Proposed Rulemaking.

SUMMARY: Elsewhere in today's **Federal Register**, EPA is approving in part the Maryland plan where there are deficiencies and the State had provided assurances that it will submit corrections. This notice solicits comments on deadlines for conditionally approved items and proposes EPA's conditional approval of portions of Maryland's plan. Conditional approvals mean that Section 176 and 316 of the Clean Air Act and new source growth restrictions will not apply unless the State fails to submit the necessary SIP revisions by the scheduled dates, or unless the provisions are not approved by EPA.

DATE: Comments must be received on or before September 11, 1980.

ADDRESSES: All comments should be addressed to: James E. Sydnor, Chief (3AH11), DC, MD, VA Section, U.S. Environmental Protection Agency, Region III, Curtis Building, Sixth and Walnut Streets, Philadelphia, PA 19106, Attn: AH301MD.

Copies of the materials submitted by the State of Maryland are available for public inspection during normal business hours at the following locations:

U.S. Environmental Protection Agency, Region III, Curtis Building, Tenth Floor, Sixth and Walnut Streets, Philadelphia, PA 19106, ATTN: Patricia Sheridan.

Public Information Reference Unit. EPA Library, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT:

Mr. Edward A. Vollberg (3AH11), Air Programs Branch, U.S. Environmental Protection Agency, Region III, Curtis Building, Sixth and Walnut Streets, Philadelphia, PA 19106, Telephone: (215) 597-8990.

SUPPLEMENTARY INFORMATION:

I. Conditional Approval of Maryland Regulations 10.18.04 and 10.18.05 Sections .06(H) Governing Preconstruction Review

Section 172(b)(6) and Section 173 of the Clean Air Act require that a preconstruction review procedure be incorporated into the Part D plans. These requirements for major new or modified sources are defined in Section 173. EPA in the notice of proposed rulemaking, 44 Fed. Reg. 45194, 1979, identified several deficiencies with the Maryland preconstruction review regulations. These were:

(1) The regulations did not provide for a review of sources undergoing modification. The State of Maryland has agreed that this was an omission and has developed proposed regulations to remedy the problem. Public hearings on the proposed regulations were held in August, 1979. Maryland submitted these as a formal State Implementation Plan (SIP) revision on December 10, 1979. Regulation 10.18.01.01(y), 10.18.04 and 10.18.05, Section .06, now include modification, meeting the requirement of Section 173. EPA is proposing to conditionally approve the new source regulations, provided the conditions and dates noted below are met.

(2) EPA noted in the notice of proposed rulemaking that the Maryland offset provision required continued further progress on an annual basis. The question arose as to the review of the impact of sources which would operate on a seasonal basis. Maryland stated that in the permit application review, the short-term emission rates and impacts would apply to the permit. EPA proposes to conditionally approve the new source regulation, provided that Maryland submits by September 1, 1980 a written commitment to examine and use the most restrictive emission rate.

(3) The Maryland regulations require a permit applicant to demonstrate that all major sources owned or operated by the applicant are in compliance or on a schedule for compliance with applicable emission standards. They do not require the same showing of sources owned or operated by any entity controlling, controlled by, or under common control with the applicant as required by Section 173(3) of the Clean Air Act. As a condition of the Part D approval published elsewhere in today's **Federal Register**, Maryland must take action to amend the new source regulations language to correct the noted omission. EPA proposes to approve the regulation if this is submitted as a formal SIP revision by December 31, 1980.

(4) EPA proposes to conditionally approve the new source provisions, provided that Maryland commit in writing by September 1, 1980 to submit all external offsets as SIP revisions.

II. Conditional Approval of Maryland Regulations 10.18.04(K)(10) and 10.18.05.04(K)(10) Governing the Use of Cutback Asphalt

Maryland Regulations 10.18.04 and 10.18.05 Section K(10(c) include a temperature exemption for use of cutback asphalt. A seasonal exemption was recommended by EPA, for ease of enforcement. In discussions with Maryland, the State indicated that it intends to use the temperature exemption and will enforce the regulation by means of the Maryland Highway Administration's responsibility to enforce the materials specification for highway use. Additionally the State of Maryland has informed us that the regulation will allow for some solvent to be present in the emulsified asphalts as represented by the specifications of the State Highway Administration. This intent will be clarified in a regulation amendment. EPA proposes to conditionally approve this regulation based upon the State submitting by December 31, 1980, documentation of the operation procedure or the policy which will form the basis of the enforcement of the regulation and an acceptable regulatory limit upon the solvent content in emulsified asphalts.

III. Conditional Approval of the Maryland Volatile Organic Compounds (VOC) Regulations 10.18.04 and 10.18.05 Section .04(K)

The following sections of Maryland's VOC regulations should include a test method for determining compliance with the requirement for 90 percent collection efficiency: K(2)(b)(ii)(bb), K(3)(b)(ii)(bb), K(5)(b)(ii)(bb), K(6)(b)(ii)(bb), and K(7)(b)(ii)(bb). An EPA memorandum dated November 15, 1979 outlining the VOC Test Methods for Procedures has been transmitted to the State of Maryland and should be used in the development of the State regulations to be incorporated into the SIP. EPA is proposing conditional approval of these regulations, on the condition that Maryland adopt appropriate test procedures by December 31, 1980.

IV. Conditional Approval of the Control Strategies to Attain the Standards for Total Suspended Particulates (TSP)

EPA proposes to conditionally approve the primary portion of the TSP plan submitted for the Metropolitan Baltimore area provided that:

(1) Maryland finalize the Bethlehem Steel Plan for compliance and submit it as a part of the iron and steel regulations by October 1, 1980.

Submittal of Public Comments

The public is invited to submit to the address stated above, comments on whether the schedules and conditions to rectify the deficiencies contained in the Maryland nonattainment plan are acceptable. All comments submitted on or before September 11, 1980; will be considered. Under Executive Order 12044, EPA is required to judge whether a regulations is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized." I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(42 U.S.C. 7401-7642)

Dated June 6, 1980.

Jack J. Schramm,

Regional Administrator.

BILLING CODE 6560-01-M

40 CFR Part 52

[FRL 1567-3]

Approval and Promulgation of Implementation Plans; Illinois

AGENCY: U.S. Environmental Protection Agency.

ACTION: Withdrawal of Order as Proposed Revision; Disapproval of Orders as Proposed Revision.

SUMMARY: This action gives notice of withdrawal of proposed rulemaking on Illinois Pollution Control Board Order (PCB 78-41) issued to Cargill, Inc., and the disapproval by the U.S. Environmental Protection Agency (USEPA) of other Board Orders submitted to USEPA as proposed SIP revisions. The Orders disapproved as SIP revisions are PCB 76-124, issued to Granite City Steel, Division of National Steel Corp.; and PCB 76-242 which included settlement provisions of *IEPA and Citizens for a Better Environment v. Interlake, Inc.*, and *United States v. Interlake, Inc.* No. 76 C 3599.

FOR FURTHER INFORMATION CONTACT:

Gary Gulezian, Chief, Regulatory Analysis Section, Air Programs Branch, U.S. Environmental Protection Agency, Region V, 230 South Dearborn Street, Chicago, Illinois 60604, (312) 886-6029.

SUPPLEMENTARY INFORMATION:

I. Background

On April 3, 1979, the Illinois Environmental Protection Agency (IEPA) submitted certain variances and orders containing compliance schedules which extended beyond June 30, 1979, to USEPA as revisions to the Illinois State Implementation Plan (SIP). Copies of these variances and orders were contained in Volume 8 of the April 1, 1979 draft of the Illinois SIP submitted to USEPA April 3, 1979. The orders and variances, which were the subject of a notice proposed rulemaking published January 22, 1980 at 45 FR 4365, are as follows: PCB 76-124—*IEPA v. Granite City Steel Division of National Steel Corporation;* PCB 78-41—*IEPA v. Cargill, Inc.;* PCB 76-242—*IEPA and Citizens for a Better Environment v. Interlake, Inc.* (*U.S. v. Interlake, Inc.* No. 76 C 3599); No. S-CIV-76-0141—*U.S. v. City of Springfield* (*City of Springfield v. Illinois Pollution Control Board,* No. 13748); PCB 78-210—*PPG Industries, Inc. v. IEPA*; PCB 77-145—*Central Illinois Public Service Company* (*Newton Station*) *v. IEPA.*

In the January 22, 1980 **Federal Register** notice USEPA proposed to disapprove these variances and orders as SIP revisions because they lacked technical documentation that the proposed SIP revisions would protect the National Ambient Air Quality Standards (NAAQS).

Comments

1. PCB 78-41, *IEPA v. Cargill, Inc.*

Comment submitted on behalf of Cargill, Inc. stated that PCB 78-41, issued to Cargill, Inc., was issued solely for odor control and thus should not have been submitted to USEPA as a SIP revision. IEPA concurred in Cargill's assessment of the Order and withdrew the Order as a proposed SIP revision in a letter dated March 24, 1980.

USEPA Response

USEPA is withdrawing the Notice of Proposed Rulemaking of January 22, 1980 at 45 FR 4365 insofar as it pertains to PCB 78-41 issued to Cargill, Inc.

2. PCB 76-242, *IEPA and Citizens for a Better Environment v. Interlake, Inc., U.S. v. Interlake, Inc., No. 76c3599.*

Counsel for Interlake, Inc. submitted comments objecting to USEPA's proposed disapproval and urging approval because (a) "there is no showing that it will interfere with attainment and maintenance of air quality standards in the Chicago Metropolitan Area"; (b) "* * * it is Interlake's position that the 1977 Amendments to the Clean Air Act extended the date for attainment of the National Air Quality Standards until December 31, 1982"; and (c) "the variance which requires compliance prior to that time is legal under the Clean Air Act."

USEPA Response

Interlake's contention that the 1977 Amendments to the Clean Air Act extended the date for attainment of the NAAQS until December 31, 1982, is contrary to USEPA's interpretation of the Amendments. See General Preamble for Proposed Rulemaking on Approval of Plan Revisions for Nonattainment Areas, 44 FR 20372, 20373, April 4, 1979. As stated by Congressman Rogers in discussing the 1977 Amendments:

Section 110 (a)(2) of the Act made clear that each source has to meet its emission limits as 'expeditiously as practicable' but not later than three years after the approval of the plan. This provision was not changed by the 1977 Amendments. It would be a perversion of clear congressional intent to construe Part D to authorize relaxation or delay of emission limits for particular sources. The added time for attainment of the National Ambient Air Quality Standards was provided, if necessary, because of the need to tighten emission limits or bring preciously uncontrolled sources under control. Delays or relaxation of emission limits were not generally authorized or intended under Part

D. (123 Cong. Rec. H 11950, daily ed. November 1, 1979).

Interlake's statement that "there is no showing" that the proposed SIP revision will not protect the NAAQS is previsely why USEPA must disapprove the proposed SIP revision. When a State proposes to revise its implementation plan, the burden is on the State to submit technical information which demonstrates that the revision will not interfere with attainment and maintenance of the NAAQS.

Section 110 (a)(3)(A) of the Clean Air Act provides for approval of SIP revisions by the Administrator if the revision "meets the requirements of paragraph (2) and has been adopted by the State after reasonable notice and public hearings." Paragraph (2) refers to Section 110 (a)(2) which requires in subparagraph (B) that the revision contain emission limitations "* * * and such other measures as may be necessary to insure attainment of such primary or secondary standard * * *"

PCB 76-242 did not include any technical documentation that the "measures" included in the Order would "insure attainment" of the primary and secondary standards. Without such documentation USEPA must disapprove the proposed SIP revision.

3. PCB 76-124—*IEPA v. Granite City Steel Division of National Steel Corp.* No comments were received regarding USEPA's proposed disapproval of PCB 76-124. Thus USEPA is following its proposed action and disapproving as a SIP revision Order PCB 76-124 issued to Granite City Steel Division of National Steel Corp.

PCB 78-210—PPG Industries, Inc. v. IEPA; PCB 77-145—Central Illinois Public Service Co. (Newton Station v. IEPA; No. S-CIV 78-0141 U.S. v. City of Springfield v. Illinois Pollution Control Board, No. 13748.

Comments were received from the State and certain of the above sources which included technical information in support of the proposed revisions for PPG industries, Central Illinois Public Service Co. (Newton Station) and City of Springfield, Illinois. USEPA will address these comments and the adequacy of the technical information in supplemental notices of proposed rulemaking to be published shortly.

The disapproval of PCB 76-242, *IEPA and Citizens for a Better Environment v. Interlake, Inc., U.S. v. Interlake, Inc.*, No. 76c3589 and PCB 76-124—*IEPA v. Granite City Steel Division of National Steel Corp.* as SIP revisions is pursuant to 42 USC 7410 (a)(2) and (3).

Dated: August 5, 1980.

Douglas Costle,

Administrator.

BILLING CODE 6560-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Public Health Service

42 CFR Part 51

Project Grants to States for Hypertension Control Services; Proposed Rulemaking

AGENCY: Public Health Service, HHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: This notice sets forth proposals for implementing the program of project grants to States for hypertension control services under section 317(a)(1) of the Public Health Service Act, as amended by Public Law 95-626. The proposed regulation sets forth criteria for evaluating grant applications, and the service and administrative requirements which must be met by hypertension project grantees. Interested parties are invited to submit written comments and recommendations concerning these proposals, as well as suggestions for alternative methods for implementing the program. After consideration of the material received in response to this notice, the Secretary of Health and Human Services will issue final regulations.

DATE: Comments must be received by October 14, 1980.

ADDRESS: Written comments, preferably in triplicate, should be sent to the Director, Division of Policy Development, Bureau of Community Health Services, Health Services Administration, Room 6-40, 5600 Fishers Lane, Rockville, Maryland 20857. All comments received in timely response to this notice will be considered and will be available for public inspection in that office on weekdays (except Federal holidays) between the hours of 8:30 a.m. and 5:00 p.m.

FOR FURTHER INFORMATION CONTACT: Mr. James Purvis, Office of Primary Care, Bureau of Community Health Services, Room 7A-39, 5600 Fishers Lane, Rockville, Maryland 20857 301-443-2270.

SUPPLEMENTARY INFORMATION: The Assistant Secretary for Health, with the approval of the Secretary of Health and Human Services proposes to issue a regulation to implement section 317(a)(1) of the Public Health Service (PHS) Act (42 U.S.C. 247b) as enacted by section 202 of Public Law 95-626. The statute states: "The Secretary may make project grants to State health authorities to assist them in meeting the costs of establishing and maintaining preventive health service programs for screening for, the detection, diagnosis, prevention, and referral for treatment of, and followup on compliance with treatment prescribed for, hypertension."

Effective October 1, 1979 section 317(a)(1) replaced section 314(d)(7)(B) of the PHS Act, which had authorized the Secretary to award formula grants to establish and maintain hypertension service programs. The legislative intent in replacing the formula grant authority with a project grant authority was to increase the effectiveness of hypertension control programs by providing mechanisms which would assure greater accountability for funds.

The proposed regulation sets forth requirements which would apply to grants awarded under section 317(a)(1), and includes proposed service and administrative requirements for project grantees and the criteria for evaluating grant applications. The issues raised by the statute and the Department's proposed approaches for resolving them are as follows:

1. Grant Award Funding Method

The most significant issue raised by the statutory changes is determination of the funding method to be used to implement the awarding of grants. The legislative history supporting the change from the formula grant authority to a project grant program states in part:

"Notwithstanding the small authorization for this program, it appears to be achieving some measure of success in a number of States * * *. The Committee believes however, that automatic formula grants to all States may not be the most efficient way to target limited available resources at the problem of hypertenstion. In addition, the Committee recognizes a need for better data on the use and effectiveness of such funds in supporting these State programs. Beginning in fiscal year 1980 * * * the hypertension program would become one of project grants to the States rather than the current formula grants. The major effect of the change would be the requirement for an application from the States delineating how hypertension funds would be used, the distribution of funds based on the need and adequacy of the programs proposed, and an improved accounting of the effectiveness of funds appropriated for hypertension programs." House Report 95-1191, 95th Congress, Second Session, 39-40. (1978) (Committee on Interstate and Foreign Commerce).

Thus, the legislative history supports several approaches to funding the hypertension program. The Department considered two approaches to the funding issue: (a) institute an openly competitive program which would ensure funding for the States which submit the best applications, with the possible result that some programs might be defunded; or (b) design a program which would authorize the award of funds to each approvable State applicant based on previously awarded amounts, with only the remaining available funds awarded on a strictly competitive basis.

The Department proposes to select the first approach. (*See,* proposed § 51.306.) States would have the opportunity to compete for funds to support basic programs and special activities designed to enhance the availability and effectiveness of services for high-risk populations. Funds would be awarded based on the Secretary's consideration of factors such as the project's relative need, demonstrated effectiveness, and proposed additional activities. Although this approach could result in defunding of some hypertension control programs, it would offer an incentive to the States to improve their program operations and it would provide maximum assistance to those best able to use the funds for the purposes stated in the statute.

2. Program and Fiscal Accountability

Because the legislative history clearly indicates congressional intent to increase program accountability, the proposed regulation contains provisions for assessment of an applicant's previous and proposed performance levels (*see,* proposed § 51.305(i)). Project grantees would be required to operate at a satisfactory level of productivity, evaluated by consideration of such factors as the actual or proposed distribution and management of funds and the percentage of the population estimated to be at high-risk for hypertension being served or proposed to be served. The Department considered inclusion of specific, quantified program effectiveness and administrative efficiency indicators. However, due to the Department's limited experience in applying specific indicators to hypertension control programs, the Secretary believes it would be more appropriate to address the use of detailed productivity indicators in program guidance material. The Secretary invites public comment relevant to these evaluation factors and is interested in views regarding additional or more specific indicators of effectiveness and efficiency.

Section 317(b) of the Act contains a number of administrative requirements directed toward improving program accountability, i.e., requirements regarding fiscal control, fund accounting procedures, evaluations, records, reports and payments. Because the statute is specific in this regard, the Department proposes to incorporate these requirements by reference in the proposed regulation (*See,* proposed § 51.304(a)(3)).

The proposed rule also specifies the following means for achieving greater fiscal accountability: (a) applicants must describe in detail how hypertension funds are to be used and how the project will coordinate its services with other providers engaged in hypertension control (*See,* proposed § 51.304(a)); (b) the Secretary, in evaluating an application, will consider the applicant's administrative ability and the project's productivity (*See,* proposed § 51.306); and (c) grantees must establish systems to collect specific data regarding awarded funds (*See,* proposed § 51.305(e)).

The proposed requirements for recordkeeping and reporting will be subject to clearance by the Office of Management and Budget before being imposed in a final regulation.

3. Scope of the Program

A. Although these activities are not mentioned in the statute, the Department proposes to permit use of hypertension program funds for limited studies and short-term training in order to enhance the ability of States to implement cost-effective hypertension programs and increase the availability and accessibility of services to high-risk populations (*see,* proposed § 51.307(b)). States could make studies to determine the prevalence and location of the hypertensive population; and could sponsor short-term training for personnel in the provision of hypertension control services.

B. Because the statute allows grants to be made only to State health authorities, the Department proposes to require that hypertension control programs be statewide in scope (*See,* proposed § 51.305(a)), with services available to all residents of a State (*See,* proposed § 51.305(b)). However, because of the need to set priorities for use of limited resources, it is proposed to require also that services be targeted to populations at high-risk for hypertension (*see,* proposed § 51.305(f)).

4. Interagency Coordination

The National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health, is considered the lead agency with respect to Public Health Service hypertension control activities. The Health Services Administration has collaborated actively with the NHLBI, principally with their National High Blood Pressure Education Program and other components of the Institute having responsibility for hypertension control. This collaboration has provided important support for hypertension programming and has resulted in a concerted interagency effort.

The Secretary proposes to add a new Subpart C to 42 CFR Part 51 as set forth below.

Dated: May 9, 1980.

Charles Miller,

Acting Assistant Secretary for Health.

Approved: July 14, 1980.

Patricia Roberts Harris,

Secretary.

PART 51—GRANTS TO STATES FOR COMPREHENSIVE PUBLIC HEALTH SERVICES

Subpart C—Project Grants to States for Hypertension Control Services

Sec.

51.301 What is the scope and purpose of these regulations?
51.302 Definitions.
51.303 Who is eligible to apply for a project grant for hypertension control services?
51.304 How does a State health authority apply for a project grant for hypertension control services?
51.305 What requirements must be met by a hypertension project grantee?
51.306 How will the Secretary determine which applications for grants under this subpart to fund?
51.307 For what purposes may grant funds be used?
51.308 What additional information should an applicant or grantee have about a project grant for hypertension control services?

Authority: Section 215, Public Health Service Act, 58 Stat. 690, as amended, 63 Stat. 35 (42 U.S.C. 216). Section 317(a)(1), Public Health Service Act (42 U.S.C. 247b(a)(1)).

Subpart C—Project Grants to States for Hypertension Control Services

§ 51.301 What is the scope and purpose of these regulations?

The regulations of this subpart apply to all project grants for hypertension control services authorized by section 317(a)(1) of the Public Health Service Act (42 U.S.C. 247b(a)(1)). The purpose of these grants is to assist State health authorities in meeting the costs of establishing and maintaining programs for screening for, the detection, diagnosis, prevention, and referral for treatment of, and followup on compliance with treatment prescribed for, hypertension.

§ 51.302 Definitions.

As used in this subpart:

"Act" means the Public Health Service Act.

"Secretary" means the Secretary of Health and Human Services or any officer or employee to whom the authority involved has been delegated.

"State" means one of the 50 States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Marianas or the Trust Territory of the Pacific Islands.

§ 51.303 Who is eligible to apply for a project grant for hypertension control services?

Any State health authority is eligible to apply for a grant under this subpart.

§ 51.304 How does a State health authority apply for a project grant for hypertension control services?

(a) An application for a grant under this subpart must be submitted at the time and in the manner required by the Secretary. The application must provide:

(1) A complete description of the type and extent of the program for which the applicant is seeking a grant under this subpart, including a budget and narrative description of the high-risk populations in the State, the goals of the program, and how the applicant proposes to meet the requirements of this subpart;

(2) A description of the mechanism used or to be used to assure coordination of the grantee's program activities with the activities of other public and private agencies involved in hypertension control in the State; and

(3) The assurances and information required by section 317(b) of the Act.

(b) The application must be submitted by an individual authorized to act for the applicant and to assume for the applicant the obligations imposed by the statute, these regulations, and any additional conditions of the grant.

§ 51.305 What requirements must be met by a hypertension project grantee?

A grantee under this subpart must operate directly or indirectly a statewide hypertension control program which:

(a) Provides for screening for, the detection, diagnosis, prevention (including education and promotion), and referral for treatment of, and followup on compliance with treatment prescribed for, hypertension.

(b) Makes available the full range of hypertension control services described in paragraph (a) of this section to all residents of the State, as appropriate, in a manner which will assure continuity of service.

(c) Is operated in a manner designed to preserve human dignity, and maximize acceptability and use of project services.

(d) Implements a system for maintaining the confidentiality of patient records as required by § 51.308(a).

(e) Establishes basic statistical data, cost accounting, management information, and reporting or monitoring systems which enable the grantee to provide the statistics and other information which may be required by the Secretary.

(f) Establishes a means for review and evaluation annually of the progress of the program to achieve a more effective hypertension control program, including targeting of services to high-risk population groups in the State.

(g) To the extent possible, coordinates and integrates project activities with the activities of other Federal and State-supported hypertension control programs as well as public an private agencies providing hypertension control services.

(h) Participates in the National Public Health Program Reporting System.

(i) Operates at a level of productivity satisfactory to the Secretary, taking into consideration:

(1) The effective use of grant funds;

(2) The number of persons estimated to be at high-risk for hypertension;

(3) The total number of persons who have received the services described in paragraph (a) of this section;

(4) The number of persons in high-risk population groups who have received the services described in paragraph (a) of this section; and

(5) The geographic, social, and cultural barriers to care.

§ 51.306 How will the Secretary determine which applications for grants under this subpart to fund?

(a) Subject to the availability of funds, the Secretary may award grants under this subpart to eligible applicants which will, in the Secretary's judgment, best promote the purposes of section 317(a)(1) of the Act, taking into account:

(1) The relative need of each applicant;

(2) The relative ability of the applicant to meet the requirements of § 51.305;

(3) The relative administrative and management capability of the applicant;

(4) The comprehensiveness and soundness of the proposed objectives, scope and organization of the program;

(5) The adequacy of plans for coordination with other programs and resources;

(6) The adequacy of plans for reporting and evaluation;

(7) The demonstrated productivity, efficiency, and effectiveness of the program;

(8) Proposals to undertake and evaluate additional activities, such as:

(i) Development of innovative methods for delivering the services described in § 51.305(a), e.g., demonstration of new screening or followup procedures, or ways to improve access to, or acceptability of, services;

(ii) Limited studies, as approved by the Secretary, to identify and locate high-risk population groups; and

(iii) Provision of the services described in § 51.305(a) to population groups which have unique problems of access to these services.

(b) *Length of support.* (1) The notice of grant award specifies how long HEW intends to support the project without requiring the project to recompete for funds. This period, called the project period, will usually be for 2 years.

(2) Generally the grant will initially be for 1 year and subsequent continuation awards will also be for 1 year at a time. A grantee must submit a separate application to have the support continued for each subsequent year. Decisions regarding continuation awards and the funding level of such awards will be made after consideration of such factors as the grantee's progress and management practices, and the availability of funds. In all cases, continuation awards require a determination by HEW that continued funding is in the best interest of the government.

(3) Neither the approval of any application nor the award of any grant commits or obligates the United States in any way to make any additional, supplemental, continuation, or other award with respect to any approved application or portion of an approved application.

§ 51.307 For what purposes may grant funds by used?

(a) A grantee shall only spend funds it receives under this subpart according to the approved application and budget, the authorizing legislation, the terms and conditions of the grant award, applicable cost principles specified by Subpart Q of 45 CFR Part 74, and the regulations of this subpart.

(b) In addition to the purposes specified in the authorizing legislation, funds awarded under this subpart may be used to meet the costs of short-term training of personnel within the program to provide effective hypertension control services and to meet the costs of conducting limited studies to determine the prevalence and location of the hypertensive population, as determined by the Secretary to be appropriate, taking into account the need for the studies and the training and the feasibility of providing them within the limitation of funds available.

(c) Funds awarded under this subpart may *not* be used to meet the costs of:

(1) Providing treatment services;

(2) Conducting research, except as described in the preceding paragraph;

(3) Construction; or

(4) Acquisition of land or buildings.

§ 51.308 What additional information should an applicant or grantee have about a project grant for hypertension control services?

(a) *Confidentiality.* (1) Except as set forth in paragraph (b)(2) of this section, each recipient of a grant under this subpart must hold confidential all information obtained by its personnel about participants in the project related to their examination and care and may not divulge it without the individual's authorization, unless it is required by law or is necessary to provide service to the individual or in compelling circumstances to protect the health or safety of an individual.

(2) Information may be disclosed in summary, statistical, or other form which does not identify particular individuals. Information may be disclosed, whether or not authorized by the participants, to the Secretary or the Comptroller General if it is necessary for the performance of their duties under the Act. Records pertaining to project participants may be disclosed, whether or not authorized by the participants, to qualified personnel for the purpose of conducting scientific research, but these personnel may not identify, directly or indirectly, any individual participant in any report of the research or otherwise disclose participant identities in any manner.

(b) *Other HHS regulations that apply.* Several other regulations apply to grants under this subpart. These include but are not limited to:

42 CFR Part 50—PHS grant appeals process.
42 CFR Part 122, Subpart E—Health Systems Agency reviews of certain proposed uses of Federal health funds.
45 CFR Part 16—Department grant appeals process.
45 CFR Part 74—Administration of grants.
45 CFR Part 75—Informal grant appeals procedures (indirect costs rates, and other cost allocations).
45 CFR Part 80—Nondiscrimination under programs receiving Federal assistance through the Department of Health and Human Services' implementation of Title VI of the Civil Rights Act of 1964.
45 CFR Part 81—Practice and procedure for hearings under Part 80.
45 CFR Part 84—Nondiscrimination on the basis of handicap in programs receiving or benefiting from Federal financial assistance.
45 CFR Part 90—Nondiscrimination on the basis of age in programs or activities receiving Federal assistance.

(c) *Additional conditions.* The Secretary may with respect to any grant under this subpart impose additional conditions prior to or at the time of any award when in the judgment of the Secretary additional conditions are necessary to assure or protect advancement of the approved program, the interests of public health, or the proper use of grant funds.

BILLING CODE 4110-84-M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Establishment of Manatee Protection Areas in Kings Bay, Crystal River, Florida

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: On February 6, 1980, the Fish and Wildlife Service published a Notice of Intent to Establish Permanently a Manatee Protection Area in Kings Bay, Crystal River, Florida (45 FR 8675). The purpose of this action was to prevent the taking of manatees by harassment resulting from waterborne activities during the winter months. This action was taken under the authority of the Endangered Species Act of 1973, the Marine Mammal Protection Act of 1972, and 50 CFR 17.103, and follows the emergency establishment of a manatee refuge, in the same area, effective January 11, 1980. The emergency action which was taken to provide temporary protection from harassment during the 1979–80 winter season has now expired. The Service proposed to establish three permanent manatee sanctuaries in Kings Bay. All waterborne activities would be prohibited in these sanctuaries during the period November 15 through March 31 of each year.

DATES: Comments from the public must be received by September 12, 1980. Comments from the Governor of Florida must be received by , 1980. A public meeting will be held for the purpose of making comments on the permanent establishment of three manatee sanctuaries in Kings Bay, Crystal River, Florida. The meeting will be held at 7:30 p.m. on August 26, 1980 at Crystal River City–County Building, Citrus County, Florida. Comments may be made at that time, as well as questions asked of Service representatives who will be present.

ADDRESSES: Written comments regarding the permanent establishment of the three manatee sanctuaries are welcomed. Submit comments to Area Manager, Area Office, U.S. Fish and Wildlife Service, 15 North Laura Street, Jacksonville, Florida 32202. Comments and materials received will be available for public inspection during normal business hours at the Service's Jacksonville Area Office.

FOR FURTHER INFORMATION CONTACT: Jim Baker, Area Office, U.S. Fish and Wildlife Service, 15 North Laura Street, Jacksonville, Florida 32202, 904/791–2267, or, Robert R. Prather, Senior Resident Agent, U.S. Fish and Wildlife Service, 2639 N. Monroe Street, Box 56, Tallahassee, Florida 32303, 904/386–8079.

SUPPLEMENTARY INFORMATION: The West Indian manatee (*Trichechus manatus*) is a protected marine mammal which is also listed as an endangered species. In the winter months the manatee is dependent upon warm water sources for survival during periods when cold water temperatures prevail in the surrounding environment. The headwaters of Crystal River in Kings Bay, Citrus County, Florida, is one of only six natural warm water refuges used by West Indian manatees during the winter months. Over 100 over individual manatees have been known to use this area in recent years. The total population of manatees in Florida is estimated to be approximately 1,000 animals. Kings Bay has been developed extensively for residential and recreational use. Boating activity is heavy and the area is known internationally by divers and underwater photographers. Use of the area by divers, including snorkelers, is increasing at a rapid rate. It has been estimated that diving activity has doubled during the past winter as compared to the previous winters. Four dive shops are supported by this activity. Some of these shops actively promote contact with manatees by divers and use the manatees as an attraction for their business.

One of the main attractions to divers and photograhers, in addition to the clear warm waters around the underwater springs, is the presence of manatees. Some manatees have become conditioned to accept the presence of divers and will actually seek out contact with them. This behavior does not however, extend to the entire manatee population. Most of the animals tend to leave areas associated with human activity. The manatees are sought after

by boaters, swimmers and divers wherever they are located. They have virtually no area in the vicinity of the warm water springs where they are totally free from disturbance. This activity is probably not intended to harm the manatees, but it does involve the danger of taking manatees, within the meaning of the term "take" as defined by the Endangered Species Act of 1973 (16 U.S.C. 1531–1543), the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361–1407), and regulations promulgated under each.

On October 22, 1979 (44 FR 60962), the Service promulgated regulations (50 CFR 17.100–17.108) providing a means for establishing manatee protection areas. Under 17.103 the Director may establish manatee protection areas "whenever there is substantial evidence that there is imminent danger of a taking of one or more manatees, and that such action is necessary to prevent such taking."

The term "take" (i.e., taking) is defined by the Endangered Species Act of 1973 (16 U.S.C. 1532(19)) as meaning to "harass, harm, pursuse, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct."

The term "take" is similarly defined in the Marine Mammal Protection Act of 1972 (16 U.S.C. 1362(13)) as meaning "to harass, hunt, capture, or kill, or attempt to harass, hunt, capture, or kill any marine mammal." The Act also defines the term "marine mammal" to include all members of the order Sirenia, which includes the West Indian manatee.

The terms "harass" and "harm" are further defined in regulations promulgated under the Endangered Species Act of 1973, 50 CFR 17.3, as follows:

"Harass" in the definition of "take" in the Act means an intentional or negligent act or omission which creates the likehood of injury to wildlife by annoying it to such an extent as to significantly disrupt normal behavioral patterns which include, but are not limited to, breeding, feeding or sheltering;

"Harm" in the definition of "take" in the Act means an act or omission which actually injures or kills wildlife, including acts which annoy it to such an extent as to significantly disrupt essential behavioral patterns, which include, but are not limited to breeding, feeding or sheltering; * * *.

The term "take" is defined in regulations promulgated under the Marine Mammal Protection Act of 1972, 50 CFR 18.3, to mean: to harass, hunt, capture, collect, or kill, or attempt to harass, hunt, capture, collect, or kill any marine mammal, including, without limitation, any of the following: The collection of dead animals or parts thereof; the restraint or detention of a marine mammal, no matter how temporary; . . . or the negligent or intentional operation of an aircraft or vessel, or the doing of any other negligent or intentional act which results in the disturbing or molesting of a marine mammal.

As noted above, under 50 CFR 17.103, the Director may establish manatee protection areas whenever there is substantial evidence showing establishment is necessary to prevent the taking of one or more manatees. This includes a showing that such action is necessary in order to prevent the harassment of manatees. Observations made by Fish and Wildlife Service personnel and by researchers outside the Service have shown that manatees are being harassed to such an extent that their normal use of the warm water areas around the springs at the headwaters of Crystal River is being disrupted. This disturbance is caused by all forms of waterborne activity, including boating, swimming and diving (both SCUBA and snorkle diving). This disruption is affecting their normal sheltering behavior and may directly affect their breeding and calf-rearing activities. It may also directly affect their well-being by forcing them to use colder waters during critical periods, subjecting them to cold-related stress and disease. Such human activity involves imminent danger of a taking, or the actual taking of one or more manatees as the term "take" is variously defined.

The effectiveness of a manatee sanctuary has been observed in the emergency manatee refuge adjacent to Warden Key which was established during the winter of 1979–80 (45 FR 8675). Groups of manatees outside of the refuge have been observed by Service personnel moving through the unprotected areas as they were being followed or pursued by divers. Upon approaching the boundary of the refuge the divers stopped their pursuit and the manatees escaped from further harassment. Distribution data compiled from aerial surveys indicate that manatees increased their use of the sanctuary as compared to previous years. However, the lack of a warm water source within this area seriously limits its effectiveness during cold weather periods. For this reason, the Warden Key area has been dropped from consideration as a permanent manatee sanctuary.

The proposed manatee sanctuary adjacent to the south side of Banana Island, Kings Bay, Crystal River, is of critical importance to the maintenance of a healthy population of manatees in Kings Bay. It is immediately adjacent to the main spring and includes a large secondary warm water spring. It is a shallow water area containing an abundance of preferred manatee food plants. The area is frequented by divers and boaters seeking manatees. Divers anchor their boats in the proposed sanctuary area and swim to the main spring to dive. A floating diving platform is also adjacent to the proposed sanctuary from which divers enter the water. SCUBA diving classes are conducted on and around this platform and checkout dives are made in the main spring. The proposed sanctuary will not include areas essential for the continuation of these diving activities such as the main spring. When divers, swimmers and boaters enter the main spring area, most of the manatees leave. The proposed sanctuary is one of the first areas to which they retreat.

The proposed manatee sanctuary is primarily a shallow water area except for the relatively large secondary spring. It is believed that most of the manatees' needs will be met in this proposed sanctuary. They will be left unmolested in a warm water area where limited, but preferred, food plants and adequate space are available. In addition, diving activity in the main spring will continue much as in the past and divers will still have an opportunity to observe and interact with the individual tame manatees which choose to stay in this area. It is recognized that such co-existence is essential to the survival of manatees in the rapidly developing coastal environment.

The second proposed sanctuary is located directly south of the main spring south of Banana Island and is immediately adjacent to the Sunset Shores subdivision, Crystal River. It includes at least three known secondary warm water springs. This shallow water area is frequented by divers seeking manatees. Divers also enter the area by motorboat and anchor there. Manatees have been observed to retreat to this area from the main spring when disturbance by divers reaches an intolerable level. All but the most tolerant manatees are forced out of the spring area by intensive waterborne activities and are therefore deprived of the use of this natural warm water refuge. Designation of this area as well as the Banana Island site as a manatee sanctuary, prohibiting all waterborne activity during the winter months, is expected to be beneficial to divers as well as the manatees. It will enable more manatees to remain in the vicinity

of the main spring near Banana Island, which will enhance the opportunities for divers to see them. There are no diver instruction activities conducted in this proposed sanctuary; however, several private residents require access to their property by boat through the proposed area. Provisions for such access by the residents is provided in the proposed rulemaking.

The two proposed manatee sanctuaries at Banana Island and Sunset Shores will be designated by posting with signs and a floating line of sealed plastic (PVC) pipe sections. Openings will be provided in the Sunset Shores sanctuary to allow the entry of boats for access by residents. Both sanctuaries will have provisions for access by emergency and law enforcement boats.

The third proposed manatee sanctuary is located in a section of canal within the Springs O'Paradise subdivision in Crystal River. This section of canal is part of a network of man-made canals opening into the easterly shore of Kings Bay. A warm water spring, known as Magnolia Spring, or the Alligator Hole, is within the proposed manatee sanctuary. Several private residences exist on the canal. Through boat traffic is restricted by a low bridge at the north end of the proposed manatee sanctuary.

Several manatees frequent the Magnolia Springs area during the winter seeking warm waters and shelter. Boaters and divers enter the canal to observe and swim with the manatees. All but the tamest manatees seek to avoid boaters and divers and are forced to leave the area. Due to the confines of the canal, the danger to manatees from being struck by boats is increased. Local residents report many incidents of manatee harassment by swimmers, divers and boaters. Elimination of this activity is essential to prevent the taking of manatees by harassment. The proposed manatee sanctuaries will be marked with signs. Private residents will not be deprived of access to their property by boat but will be required to operate boats at idle speed within the sanctuary.

A critical cold weather period may occur during which it is necessary that the manatees have the undisturbed use of the warm waters in these three areas. It is essential that all waterborne activities be prohibited in order to prevent the taking of one or more manatees by harassment.

It is not proposed to establish a permanent manatee sanctuary adjacent to Warden Key, Kings Bay, Crystal River in the area which was designated as an emergency manatee sanctuary during a portion of the winter of 1979–80. The absence of any warm water springs in this area makes it less essential as a sanctuary than the areas proposed herein.

The Service hereby announces that a public meeting will be held on this proposed rule. The public is invited to attend this meeting and to present opinions and information on the proposal. Specific information relating to the public meeting is set out below:

Place: Crystal River City-County Building; Date: Aug. 26, 1980; Time: 7:30 p.m.

National Environmental Policy Act: An Environmental Assessment has been prepared in conjunction with this rule. It is on file in the Service's Jacksonville Area Office, 15 North Laura Street, Jacksonville, Florida 32202, and may be examined by appointment during regular business hours. This assessment forms the basis for a decision that this is not a major Federal action which would significantly affect the quality of the human environment within the meaning of section 102(2)(c) of the National Environmental Policy Act of 1969.

Primary Author: The primary author of this rule is Bettina Sparrowe, Office of Endangered Species, 1000 North Glebe Road, Arlington, Virginia 22201 (703/235–2760).

Regulations Promulgation: It is proposed to amend Title 50, Chapter 1, Subchapter B, Part 17, Subpart J, subsection 17.108, List of Designated Manatee Protection Areas, by adding the following:

§ 17.108 List of Designated Manatee Protection Areas

A. Manatee Sanctuaries

The following areas are designated as manatee sanctuaries. All waterborne activities are prohibited in these areas during the period November 15-March 31 of each year. The areas which will be posted, are described as follows:

1. That part of Kings Bay, Crystal River, Citrus County, within T. 18S., R. 17 E., Tallahassee meridian; located in SW¼ fractional section 28, more particularly described as follows: Beginning at Corner 1 (N–1,653,459/E–308,915) Florida Coordinate System, West Zone, a point on the shoreline of Kings Bay near the southwest corner of Lot 9 as accepted on a plat by the Department of the Interior, General Land Office, dated January 10, 1928; thence easterly, along said shoreline, approximately 1240 feet to Corner 2 (N–1,653,762/E–309,641) a point; thence S. 56° 58′ 11″ W., across open water, 776.49 feet to Corner 3 (N–1,653,339/E–308,990) a point; thence N. 32° 03′ 07″ W., across open water, 142.26 feet to the point of beginning, containing 3.41 acres, more or less, to be known as the Banana Island Sanctuary.

2. That part of Kings Bay, Crystal River, Citrus County, Florida, within T. 18 S., R. 17 E., Tallahassee meridian; located in SW¼ fractional section 28, more particularly described as follows: Beginning at Corner 1 (N–1,652,684/E–309,396) Florida Coordinate System, West Zone, a point on the shoreline of Kings Bay, said point being the northwest corner of Lot 31 Sunset Shores Addition to Woodward Park (Plat Book 2, page 140 Citrus County Property Appraiser's Office); thence N. 35° 05′ 33″ W., across open water, 439.10 feet to Corner 2 (N–1,653,043/E–309,144) a point; thence N. 67° 23′ 28″ E., across open water, 873.45 feet to Corner 3, a point on the shoreline of Kings Bay said point also being a corner in the northerly boundary line of Lot 21 in said subdivision; thence southwesterly along said shoreline and the northerly boundary of Lots 21–31, including a canal, approximately 920 feet to the point of beginning, containing 5.62 acres, more or less, to be known as the Sunset Shores Sanctuary.

3. That part of Crystal River, Citrus County, Florida, within the Springs O'Paradise subdivision, T. 18 S., R. 17 E., Tallahassee meridian; located in SE¼ and SW¼ fractional section 21 and NE¼ fractional section 28, more particularly described as follows: Beginning at Corner 1, the southeast corner of Lot 3 Paradise Isle Subdivision (Plat Book 3, page 88 Citrus County Property Appraiser's Office), thence N. 89° 48′ 30″ E. along an extension of the south line of said Lot 3, across Spring Run, approximately 120 feet to Corner 2, a point in the line of mean high water on the east side of Spring Run; thence northerly along said mean high water line approximately 500 feet to Corner 3, a point in the line of mean high water on the north side of Caspian Canal; thence westerly along said mean high water line approximately 300 feet to Corner 4, a point on the east side of the S.W. 1st Court bridge; thence south along said bridge approximately 50 feet to Corner 5, a point in the line of mean high water on the south side of Caspian Canal; thence easterly along said mean high water line approximately 200 feet to Corner 6, a point in the line of mean high water on the west side of Spring Run; thence southerly along said mean high water line approximately 400 feet to the point of beginning, containing 1.70 acres, more or less, to be known as the Magnolia Springs Sanctuary.

B. Exception for Residents

PROPOSED MANATEE SANCTUARIES

B. Exception for Residents

Boat access to private residences, boat houses and boat docks through these sanctuaries by the residents and their authorized guests is permitted. Any such authorized boating activity must be conducted by operating motorboats at idle speed/no wake. Resident's boats will be identified by the placement of a sticker provided by the Fish and Wildlife Service, in a conspicuous location on each boat. Use of the waters within the proposed sanctuary by boats will be only for the purpose of access to residences and the storage of such boats in waters adjacent to residences.

Dated: August 8, 1980.

F. Eugene Hester,

Acting Director, U.S. Fish and Wildlife Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 611

Bering Sea and Aleutian Islands, Groundfish Fishery: Approval of Amendments to Preliminary Fishery Management Plan

AGENCY: National Oceanic and Atmospheric Administration (NOAA)/ Commerce.

ACTION: Approval of an Amendment of Preliminary Management Plan and Proposed Implementing Regulations.

SUMMARY: This action would apportion to the domestic annual harvest (DAH) 7,814 metric tons (mt) of yellowfin sole currently comprising the unallocated portion of the total allowable level of foreign fishing (TALFF), and to apportion this amount to joint venture processing (JVP) so that domestic fishermen may catch that fish and deliver it to joint venture processors.

DATE: Comments on the amendment and proposed implementing regulations will be received until August 21, 1980.

ADDRESS: Comments should be addressed to Mr. Denton R. Moore, Chief, Permits and Regulations Division, National Marine Fisheries Service, 3300 Whitehaven Street, NW., Washington, D.C. 20235.

FOR FURTHER INFORMATION CONTACT:
Mr. Robert W. McVey, Acting Director, Alaska Region, National Marine Fisheries Service, P.O. Box 1668, Juneau, Alaska 99802. Telephone: (907) 586–7221.

SUPPLEMENTARY INFORMATION:
Yellowfin sole are managed under a regime provided by the preliminary fishery management plan (PMP) for the Trawl and Herring Gillnet Fishery of the Bering Sea and Northeast Pacific. The PMP was published in the **Federal Register** (42 FR 9298) on February 15, 1977, and implemented March 1, 1977, under provisions of the Fishery Conservation and Management Act of 1976. It was extended through 1978 and 1979, and again extended with amendments through 1980 (45 FR 1028).

The current amendment, approved by the Assistant Administrator July 31, 1980, establishes a TALFF for yellowfin sole of 109,000 mt of which 7,820 mt were allocated to the Soviet Union. The Soviet fleet harvested 6 mt of this amount. As a result of a Presidential order early this year, the remaining 7,814 mt was withdrawn and retained as an unallocated portion of TALFF. At the present time, two joint ventures are operating in the Bering Sea and are successfully targeting on yellowfin sole. However, the yellowfin sole JVP is presently inadequate to provide for joint ventures. NMFS surveys of U.S. fishing intent indicate that the amount of yellowfin sole established as domestic annual processing (DAP) will not need to be supplemented during the remainder of the fishing year, and therefore it is appropriate to allocate the entire 7,814 mt to JVP. This action will enable these highly important ventures to continue to operate efficiently and without unnecessary interruption.

The Assistant Administrator has determined that this amendment to the FMP is necessary and appropriate to the conservation and management of Bering Sea groundfish resources, and that it is consistent with the National Standards of FCMA section 301, other provisions of the FCMA, and other applicable law. He has therefore approved the amendment and the proposed regulations set forth below. The Assistant Administrator has determined that promulgation of the amendment and the proposed implementing regulations does not constitute a major Federal action requiring the preparation of an environmental impact statement under the National Environmental Policy Act, and that it does not constitute a significant regulation requiring the preparation of a regulatory analysis under Executive Order 12044.

The Assistant Administrator has determined that, under the circumstances, a public comment period of 15 days on the proposed regulation is reasonable and appropriate. The proposed action is neither complex nor controversial. The regulation can be analyzed and commented upon by the public on a relatively short period of time. NOAA is aware of no interest which would be adversely affected by the action, since: (1) the Department of State has been consulted and has no objections; (2) foreign nations will lose no allocations; (3) there is almost no subsistance fishing for yellowfin sole; (4) no landings of sole from the Bering Sea for on-shore processing have been reported this year; (5) the action will have no adverse environmental impact; (6) U.S. fishermen participating in joint ventures will benefit; and (7) no additional restrictions will be imposed on any interest as a result of the proposed action. A longer comment period will result in interruption of the successful joint venture fishery and may hinder the FCMA and PMP objective of achieving the optimum yield in an underutilized fishery.

(16 U.S.C. 1801 *et seq.*)

Signed in Washington, D.C. this 7th day of August, 1980.

Robert K. Crowell,
Deputy Executive Director, National Marine Fisheries Service.

A. Amendments to the Preliminary Fishery Management Plan

The following changes are made in 42 FR 9325 (February 15, 1977). Table 18, as amended:

For yellowfin sole, TALFF—to 101,286 mt from 109,100 mt; DAH—to 9,864 mt from 2,050 mt; JVP—to 8,664 mt from 850 mt.

B. Proposed Amendments to Implementing Regulations

The following changes are proposed in 50 CFR 611.20, Appendix 1, Part 4A, as amended.

For yellowfin sole, DAH—to 15,714 mt from 7,900 mt; JVP—to 14,514 mt from 6,700 mt; TALFF—to 101,286 mt from 109,100 mt.

DEPARTMENT OF AGRICULTURE

Agricultural Stabilization and Conservation Service

1980 Feed Grains, Soybeans, Wheat, Rice, Upland Cotton and Extra Long Staple Cotton Programs—Determinations Regarding Various 1980 Program Decisions

AGENCY: Agricultural Stabilization and Conservation Service.

ACTION: Notice of Determinations of 1980-Crop Normal Crop Acreages (NCA), Established "Target" Prices, Loan and Purchase Rates for Feed Grains, Soybeans, Wheat, and Rice, and Loan Rates for Upland and Extra Long Staple (ELS) Cotton.

SUMMARY: This notice is for the purpose of implementing the normal crop acreage (NCA) requirement and announcing 1980-crop established "target" prices, loan and purchase levels for feed grains, soybeans, wheat, and rice, and loan levels for upland and ELS cotton.

Producers who plant within the farm NCA will qualify for deficiency and disaster payments based upon higher wheat and feed grain (corn, sorghum and barley) established "target" prices as provided for in the Agricultural Act of 1949, as amended by the Agricultural Adjustment Act of 1980 (Pub. L. 96–213, 94 Stat. 119). These higher established "target" prices for wheat, corn, sorghum and barley are $3.63, $2.35, $2.50, and $2.55 per bushel, respectively. Producers who do not plant within the farm NCA will, for the 1980 crop, qualify for program benefits in accordance with the 1980-crop established "target" prices as provided in the Agricultural Act of 1949, as amended by the Food and Agriculture Act of 1977, which are $3.08 per bushel for wheat; $2.05 per bushel for corn; $2.45 per bushel for sorghum; and $2.29 per bushel for barley.

Producers of 1980-crop upland cotton and rice will be eligible for program benefits based upon the established "target" prices of 58.4 cents per pound and $9.49 per hundredweight, respectively.

Loan and purchase rates for 1980 crops will be $3.00 per bushel for wheat; $2.25 per bushel for corn; $2.14 per bushel for sorghum; $1.83 per bushel for barley; $1.191 per bushel for rye; $1.16 per bushel for oats; $5.02 per bushel for soybeans; and $7.12 per hundredweight for rice.

The loan rate for the 1980 crop of upland cotton will be 48 cents per pound, basis Strict Low Middling 1 1/16 inch, micronaire 3.5 through 4.9, at average location in the United States. The 1980-crop ELS cotton loan rate will be 93.5 cents per pound.

There will be no offsetting compliance requirements for 1980 program purposes.

EFFECTIVE DATE: August 7, 1980.

FOR FURTHER INFORMATION CONTACT:
Bruce R. Weber, Agricultural Program Specialist, Production Adjustment Division, USDA-ASCS, P.O. Box 2415, Washington, D.C. 20013, (202) 447–6688. Final Impact Statements describing the options considered in developing this notice of determination and the impact of implementing each option are available on request from the above-named individual.

SUPPLEMENTARY INFORMATION: This notice of determination action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant".

The need for this notice is to satisfy the statutory requirements provided in Sections 105A(a)(1), 105A(a)(2), 105A(b)(1)(B), 105A(b)(1)(D), 107A(a), 107A(b)(1)(B), 103(f)(1), 103(f)(4), 101(f), 101(h)(1), 101(h)(2), and 201(e), of the Agricultural Act of 1949, as amended, and Sections 1001(a), 1001(b), and 1001(c), of the Food and Agriculture Act of 1977, as amended. The announcement of these determinations by the Secretary must be made immediately so that farmers can indicate their 1980 program participation. Therefore, it is impractical and contrary to the public interest to comply with the public rulemaking requirements of 5 U.S.C. 553 and Executive Order 12044. Thus, this notice of determination shall become effective upon date of filing with the Director, Office of the Federal Register.

The Agricultural Act of 1949, as amended by the Agricultural Adjustment Act of 1980 (Pub. L. 96–213, 94 Stat. 119) provides for the following changes applicable to 1980 crops.

A. The 1980-crop established "target" prices for wheat and corn are increased to $3.63 and $2.35 per bushel, respectively. For sorghum and barley, the established "target" price shall be such rate as determined fair and reasonable in relation to the rate at which payments are made available for corn. The increased 1980-crop established "target" prices for sorghum and barley are $2.50 per bushel and $2.55 per bushel, respectively.

B. For the 1980 crops of wheat and feed grains, the Secretary may require that producers not exceed the acreage on the farm normally planted to designated crops (hereinafter referred to as "NCA") in order for such producers to be eligible to receive deficiency and disaster payments based upon the established "target" prices as provided for in paragraph A above.

C. Whenever the Secretary requires producers to plant within the farm NCA in order to be eligible for payments as provided for in paragraph B above, the Secretary may increase the established "target" price for any such commodity by an amount determined appropriate to compensate producers for not exceeding the NCA.

D. Producers of 1980 crops of wheat and feed grains who exceed the farm NCA are eligible for loans and purchases, as well as deficiency and disaster payments, based on the established "target" price for the commodity as determined under the provisions of the Agricultural Act of 1949, as amended by the Food and Agriculture Act of 1977.

E. The authority of the Secretary to make disaster payments under the wheat, feed grains, upland cotton and rice programs was extended through the 1980 crops.

F. The total amount of disaster payments a person can receive under one or more of the 1980 crops of wheat, feed grains, upland cotton and rice shall not exceed $100,000.

The Agricultural Act of 1949, as amended by the Food and Agriculture Act of 1977, provides that 1980-crop established "target" prices for wheat, feed grains (corn, sorghum and if designated by the Secretary, oats and

barley), upland cotton and rice shall be

National Forest and Crooked River

establish the following advisory

Contact Person for Agenda and More

barley), upland cotton and rice shall be based upon the established "target" prices for 1979 adjusted to reflect any change in the average costs of production for crop years 1978 and 1979 from the average costs of production for crop years 1977 and 1978. Costs of production used in this determination are limited to variable costs, machinery ownership costs and general farm overhead costs. The Secretary has not designated the 1980 crop of oats as eligible for payments.

Accordingly, the Secretary has made determinations pertaining to the 1980 crops of wheat, feed grains, soybeans, rice, upland cotton and ELS cotton. The purpose of this notice is to announce these determinations.

Determinations

1. *1980-Crop Loan and Purchase Levels:*

It is hereby determined that 1980-crop loan and purchase rates shall be:

Commodity	Loan/ purchase level
Wheat (per bu.)	$3.00
Corn (per bu.)	2.25
Sorghum (per bu.)	2.14
Sorghum (per cwt.)	3.82
Barley (per bu.)	1.83
Oats (per bu.)	1.16
Rye (per bu.)	1.91
Soybeans (per bu.)	5.02
Rice (per cwt.)	7.12
Upland Cotton (per lb.)	[1]0.48
ELS Cotton (per lb.)	[1]0.935

[1] Purchase program does not apply to these commodities. Loan and purchase rates for corn have been established at such level as will encourage the exportation of feed grains and not result in excessive total stocks of feed grains in the United States. Loan and purchase rates for sorghum, barley, oats, and rye have been established at such levels as the Secretary determines to be fair and reasonable in relation to the level at which loans and purchases are made available for corn, as well as taking into consideration certain other factors. Loan and purchase rates for soybeans have been established at a level determined appropriate in relation to competing commodities taking into consideration domestic and foreign supply and demand factors. Loan and purchase rates for wheat have been established so that wheat will maintain its competitive relationship to other grains in domestic and export markets. (Discounts will be increased for factors which reduce the quality of wheat for food use. The discount schedule will be published in Part 1421 of Chapter 7. The subpart of Part 1421 which governs the operation of the farmer-owned reserve will describe the grades which will be eligible for entry into the reserve.) The rice loan and purchase rates reflect the same relationship to the established "target" price as they did for the 1979 crop. The upland cotton loan rate was established in accordance with the formula calculation provided in Section 103(f)(1) of the Agricultural Act of 1949, as amended. The ELS cotton loan rate was established in accordance with Section 101(f) of the Agricultural Act of 1949, as amended.

2. *1980-Crop Established "Target" Prices:*

A. The 1980-crop established "target" prices as determined under provisions of the Agricultural Act of 1949, as amended by the Agricultural Adjustment Act of 1980, will be:

Commodity	Established "target" price/ bushel [1]
Wheat	$3.63
Corn	2.35
Sorghum	2.50
Barley	2.55

[1] The 1980-crop wheat and corn established "target" prices are specified by law. The barley and sorghum established "target" prices are set at rates that have been determined to be fair and reasonable in relation to the rate established for corn. (1980-crop barley and sorghum rates reflect the same relative percentage change in established "target" prices over 1979 levels as does corn).

B. The 1980-crop established "target" prices as determined under provisions of the Agricultural Act of 1949, as amended by the Food and Agriculture Act of 1977, will be:

Commodity	Established "target" price [1]
Wheat (per bu)	$3.08
Corn (per bu)	2.05
Sorghum (per bu)	2.45
Barley (per bu)	2.29
Upland cotton (per lb.)	0.584
Rice (per cwt.)	9.49

[1] These established "target" prices reflect the latest costs of production estimates for variable costs, machinery ownership costs and general farm overhead costs. They have been determined in accordance with the formula calculation as provided in the Food and Agriculture Act of 1977.

3. *Normal Crop Acreages (NCA):*

(a) It is hereby determined that for the 1980 crops of wheat and feed grains (corn, sorghum and barley), producers are required to plant within the farm NCA as a condition of eligibility to receive payments based upon the established "target" prices provide for in 2(A) above.

(b) Producers of 1980-crop wheat, corn, sorghum and barley, who do not comply with the NCA established for the farm are eligible to receive payments based upon the established "target" prices provided for in 2(B) above.

(c) Producers of 1980-crop upland cotton and rice will not be required to plant within the farm NCA to receive cotton and rice program benefits.

(d) All producers of 1980-crop wheat and feed grains are eligible for loans and purchases whether or not such producers complied with the NCA established for the farm.

Imposition of the NCA requirement for the 1980 crops of wheat and feed grains will help control plantings and, thus, moderate the adverse impact of bringing fragile lands into production. Otherwise, all producers of wheat, corn, sorghum, and barley, would have been eligible for program payments based on the established "target" prices as provided in the Agricultural Act of 1949, as amended by the Agricultural Adjustment Act of 1980, regardless of 1980-crop plantings.

4. *1980-Crop Offsetting Compliance:*

It is hereby determined that offsetting compliance requirements will not be effective for the 1980 crops of wheat and feed grains.

Signed at Washington, D.C. on August 7, 1980.

Bob Bergland,

Secretary.

Forest Service

Coconino National Forest Grazing Advisory Board; Notice of Meeting

The Coconino National Forest Grazing Advisory Board will hold its first meeting since the Charter was approved for renewal at 1:30 p.m., September 5, 1980, at the Coconino National Forest Supervisor's Office Conference Room, 2323 E. Greenlaw Lane, Flagstaff, Arizona. The purpose of the meeting is to: 1) Elect a Board Chairman; 2) Discuss and adopt the operating By-laws; 3) Review the 1981–1982 and proposed 1983 work plans involving Range Betterment funds.

The meeting will be open to the public.

William L. Holmes,

Acting Forest Supervisor.

July 30, 1980.

BILLING CODE 3410-11-M

Land and Resource Management Plan; Ochoco National Forest and Crooked River National Grassland Crook, Grant, Harney, Jefferson, Wheeler Counties, Oreg.; Intent To Prepare an Environmental Impact Statement

Pursuant to the National Environmental Policy Act of 1969, the Forest Service, Department of Agriculture will prepare an Environmental Impact Statement for the Forest Land and Resource Management Plan for the Ochoco National Forest and Crooked River National Grassland. The Plan for these combined areas will encompass 949,782 acres.

The Plan will be developed in accordance with direction established in the regulations for National Forest System Land and Resource Management Planning (36 CFR 219).

The resulting Plan will provide for multiple use and sustained yield of products and services from the Ochoco National Forest and Crooked River National Grassland. The Plan will guide all natural resource management activities and establish management standards and guidelines. It will determine resource management practices, harvesting levels and procedures under the principles of multiple use and sustained yield, and the availability and suitability of lands for resource management.

The Forest Plan will be selected from among representative alternatives that will include at least, (1) a no-change in existing resource outputs alternative, (2) an alternative that deviates from the sustained yield-even flow concept, (3) a range of alternatives that display possible outputs of resources available at each of several expenditure levels and (4) alternatives designed to resolve the identified major public issues and management concerns.

Public participation will be an integral part of the planning process. "Scoping" meetings will be held early in the process to identify issues to be addressed. The outcome of these meetings will be shared through the use of mails, news media, and public meetings to expand upon and firmly establish the issues to be addressed during the planning process. The meeting locations and dates will be provided to the public at a later date.

R. E. Worthington, Regional Forester, Pacific Northwest Region, is the responsible official for this plan. Questions or comments about the planning process, Environmental Impact Statement, and this Notice of Intent should be directed to: James H. Rogers, Forest Planning Staff Officer, Ochoco National Forest and Crooked River, National Grassland, P.O. Box 490, Federal Building, Prineville, Oregon 97754 (503–447–6247).

The Draft Environmental Impact Statement is expected to be available for public review by September 1983. The Final Environmental Impact Statement is scheduled to be completed in June 1984.

Frank J. Kopecky

Deputy RF, State and Private Forestry.

August 4, 1980.

Office of the Secretary

Agricultural Advisory Committees for Trade; Proposed Establishment

Notice is hereby given that the Secretary of Agriculture, after consultation with the United States Trade Representative, proposes to establish the following advisory committees: Agricultural Policy Advisory Committee for Trade, and eight separate Agricultural Technical Advisory Committees for Trade on: Cotton, Dairy Products, Fruits and Vegetables, Grain and Feed, Livestock and Livestock Products, Oilseeds and Products, Poultry and Eggs, and Tobacco.

The purpose of these committees is to provide advice to the Secretary and the Trade Representative with respect to the trade policy of the United States pursuant to section 135(c) of the Trade Act of 1974 (Pub. L. 93–618), as amended by the Trade Agreements Act of 1979 (Pub. L. 96–39). Meetings of these committees will be open only to members of the committees in accordance with section 135(f)(2) of the Act unless otherwise determined.

The establishment of such committees is in the public interest in connection with the duties of the Department imposed by the Trade Act of 1974, as amended by the Trade Agreements Act of 1979.

Comments may be submitted to Thomas B. O'Connell, Advisory Committees Support Group Leader, FAS, U.S. Department of Agriculture, room 5528 South Building, Washington, D.C. 20250 until August 27, 1980.

Bob Bergland,

Secretary of Agriculture.

Science and Education Administration

Committee of Nine; Meeting

In accordance with the Federal Advisory Committee Act of October 6, 1972 (Public Law 92–463, 86 Stat. 770–776), the Science and Education Adminstration, Cooperative Research, announces the following meeting:

Name: Committee of Nine.
Dates: September 9 and 10, 1980.
Time: 9:00 a.m., both days.
Place: Ohio Agricultural Research and Development Center, Conference Room, Wooster, Ohio.
Type of Meeting: Open to the public. Persons may participate in the meeting as time and space permit.
Comments: The public may file written comments before or after the meeting with the contact person listed below.
Purpose: To evaluate and recommend proposals for cooperative research on problems that concern agriculture in two or more States, and to make recommendations for allocation of regional funds appropriated by Congress under the Hatch Act for research at the State agricultural experiment stations.

Contact Person for Agenda and More Information: Dr. Estel H. Cobb, Recording Secretary, U.S. Department of Agriculture, Science and Education Administration, Cooperative Research, Washington, D.C. 20250, telephone: 202/447–4329.

Done at Washington, D.C., this 7th day of August, 1980.

Edward C. Miller,

Acting Administrator, Cooperative Research.

BILLING CODE 3410-22-M

CIVIL AERONAUTICS BOARD

Air Florida Dallas/Fort Worth-Houston Subpart Q Proceeding

AGENCY: Civil Aeronautics Board.

ACTION: Notice of order to show cause (80–8–20).

SUMMARY: The Board is proposing to award nonstop air route authority between Dallas/Ft. Worth (DFW Regional Airport) and Houston to Air Florida under the expedited procedures of Subpart Q of its Procedural Regulations. The tentative findings and conclusions will become final if no objections are filed.

The complete text of this order is available as noted below.

DATES: Objections: All interested persons having objections to the Board issuing an order making final the tentative findings and conclusions shall file, by September 8, 1980, a statement of objections together with a summary of the testimony, statistical data, and other material expected to be relied upon to support the stated objections. Such filings should be served upon all parties listed below.

ADDRESSES: Objections to the issuance of a final order should be filed in Docket 38340, which we have entitled the *Air Florida Dallas/Ft. Worth-Houston Subpart Q Proceeding.* They should be addressed to Docket Section, Civil Aeronautics Board, Washington, D.C. 20428.

In addition, copies of such filings should be served on the Mayors of the Cities of Dallas, Ft. Worth and Houston; the Texas Aeronautics Commission; and the airport managers of the DFW Regional Airport, the Houston International Airport and the William P. Hobby Airport.

FOR FURTHER INFORMATION CONTACT: Samuel Lebowich, Bureau of Domestic Aviation, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428, (202) 673–5329.

SUPPLEMENTARY INFORMATION: The complete text of Order 80–8–20 is available from our Distribution Section,

Room 516, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428. Persons outside the metropolitan area may send a postcard request for Order 80–8–20 to that address.

By the Bureau of Domestic Aviation:
August 5, 1980.
Phyllis T. Kaylor,
Secretary.

BILLING CODE 6320-01-M

Part-Time Career Employment Program

AGENCY: Civil Aeronautics Board.

ACTION: Notice.

SUMMARY: CAB is proposing internal rules to implement the Federal Employees Part-Time Career Employment Act of 1978.

COMMENT DATE: Comments will be considered if received on or before September 15, 1980.

ADDRESS: Written comments should be addressed to the Director, Office of Human Resources, Civil Aeronautics Board, 1825 Connecticut Avenue, N.W., Washington, D.C. 20428.

SUPPLEMENTARY INFORMATION: Pub. L. 95–437; the Federal Employees Part-Time Career Employment Act of 1978, requires Federal agencies to publish proposed internal rules in the **Federal Register** for public comment. After comments are received, considered, and necessary changes are made, CAB will adopt these regulations as CAB Manual Chapter 221.

221.1 General
221.2 Program Responsibilities
221.3 Procedures for Evaluating and Requesting Conversion to Part-Time Employment
221.4 Effect on Employee of Converting to Part-Time Employment
221.5 Increasing Hours of Part-Time Tour of Duty/Converting Back to Full-Time Employment
221.6 Effect of the Program on Filling Temporary Positions With Part-Time Employees
221.7 Inquiries About the Program

221.1 General.

221.11 Purpose. This chapter describes the policies and procedures to implement Pub. L. 95–437, the Federal Employees Part-time Career Employment Act of 1978, by establishing a continuing program in the Civil Aeronautics Board to provide career part-time employment opportunities (5 U.S.C. 3401 note and 3402).

221.12 Definitions. Part-time career employment—regularly scheduled work of from 16 to 32 hours per week performed by individuals serving under career or career-conditional appointments in the competitive service or whose tenure is equivalent to career or career-conditional (e.g., excepted without time limitation). Temporary or intermittent employees are excluded.

221.13 Policy. It is the Board's policy to employ persons on the basis of merit without regard to race, color, religion, sex, national origin, age, or handicap. In keeping with this commitment to equal employment opportunity, and in accordance with the Federal Employees Part-time Career Employment Act of 1978, the Board provides career part-time employment opportunities in positions GS–1 through GS–15 (or equivalent grades) in the competitive service subject to availability of resources and mission requirements. Consistent with this policy, managers are encouraged to use part-time employment as an alternative to full-time employment in planning for the accomplishment of the work of their organizations. Such categories as the physically or mentally handicapped, persons with family responsibilities, students or persons desiring part-time employment to continue their education, older persons, and others as appropriate, are considered valuable recruitment sources of part-time employees.

221.2 Program Responsibilities.

221.21 Office of Human Resources. The Office of Human Resources is responsible for:

a. Coordinating bureau/office efforts to determine functions that could be effectively performed by part-time employees;

b. Identifying and developing recruitment sources;

c. Designating a staff member to coordinate the part-time employment program;

d. Providing assistance to bureau/offices in restructuring jobs and work schedules, as appropriate;

e. Preparing reports on part-time employment for transmittal to the Office of Personnel Management and the Congress; and

f. Notifying the public of vacant part-time positions.

221.22 Bureau and Office Heads. Bureau and office heads are responsible for:

a. Implementing within their respective organizations the policies set forth in this chapter;

b. Reviewing positions which become vacant to determine which could be effectively performed by part-time employees; and

c. Restructuring jobs and changing work schedules, as necessary, to maximize opportunities for effective use of part-time employees.

221.3 Procedures for Requesting and Evaluating Conversion to Part-Time Employment.

221.31 Employees desiring to change from full-time to part-time career employment should submit a written request to the immediate supervisor stating the reasons for the request and the work schedule desired.

221.32 The immediate supervisor will evaluate the request, taking into consideration the following factors:

a. Workload—regular and peak workloads which might lend themselves to part-time schedules and the ease of filling the "second-half" of the position;

b. Employment ceilings—effective October 1, 1980, part-time employees will be counted toward personnel ceilings on the basis of the fractional part of the 40-hour week actually worked;

c. Adaptability or flexibility of the work to be performed on a part-time basis;

d. Special space and equipment requirements, if any; and

e. Benefits to employee—e.g., alleviating child care concerns for parents; lessening pressure of a full day's work on those with health problems; allowing those near retirement to discontinue work gradually.

1221.33 Based on the above considerations, the employee's immediate supervisor will approve or deny the request and forward it to the second-level supervisor for review and concurrence. There is no employee right of appeal for denials of request for conversion to part-time tours of duty.

221.34 All approved requests for conversion to part-time employment shall be forwarded to the Office of Human Resource on SF–52 for processing and documentation on SF–50, Notification of Personnel Action. These requests will be maintained in the Office of Human Resources for statistical purposes and as a record in the employee's Official Personnel Folder.

221.4 Effect on Employee of Converting To Part-Time Employment.

221.41 Status of Employee. Conversion to a part-time tour of duty does not change the respective employees's overall appeal rights and protections (or lack thereof) in adverse actions and reduction in force proceedings, conveyed by status as a probationary, career employee.

a. Appealable Actions—Actions which a career part-timer may appeal include those taken for his/her removal, suspension for more than 14 days, reduction in grade or pay, and any involuntary reduction in the scheduled number of hours of duty.

b. Reduction in force—Part-timers are entitled to complete only for other part-time jobs in a reduction in force and have no right of assignment to full-time jobs if there are no part-time jobs they can continue working in; likewise, full-time employees have no assignment rights to displace employees occupying part-time jobs.

221.42 Accrual of Experience for Promotion Eligibility. Part-time experience is credited on a prorated basis according to the relation it bears to a full workweek. In order to be eligible for promotion, such accumulated experience must meet the minimum amount of experience required by the Office of Personnel Management's Handbook of Qualification Standards X–118, which is available for review in the Office of Human Resources.

221.43 Earnings. The rate of pay is directly proportionate to the time schedule and hours worked. At in the case of full-time employees, waiting periods for within-grade increases are based on an appropriate number of calendar weeks or creditable service, as stipulated by OPM regulations.

221.44 Overtime While agencies are prohibited from regularly employing part-time

permanent workers under schedules of more than 32 hours per week, they are not restricted from temporarily increasing an employee's hours of duty above 32 hours per week for limited periods to meet heavy workloads, permit employee training, etc. Under Title 5 U.S.C., hours of work must be in excess of 40 hours in an administrative workweek or 8 hours in a day to be considered overtime. Under the Fair Labor Standards Act, overtime begins after an employee has completed 40 "hours of work" in a week, excluding holidays and paid leave.

221.45 Leave. Annual leave is earned on a pro-rata basis at the rate determined by years of service. Maximum carryover at the end of the leave year remains the same. Sick leave is earned at the rate of one hour for every 20 hours in a pay status. No leave (annual or sick) is earned for hours worked in excess of 80 in a single pay period. A part-time employee is not eligible for Military Leave. Other leave categories (e.g., Absence Without Leave, Funeral Leave, Excused Absence) are not affected. For all categories of leave for which a part-time employee is eligible, leave is charged only for absences during those hours the employee is scheduled to work.

221.46 Holidays. Holiday pay is received only if an employee is regularly scheduled to work on that day, and only for the number of hours covered by the employee's regular tour of duty.

221.47 Life Insurance Coverage. The amount of insurance carried will automatically decreases whenever an employee's annual pay rate is decreased by an amount sufficient to lower pay to a different $1,000 bracket (except that it cannot be lower than $10,000 minimum insurance amount).

221.48 Health Benefits Coverage. The Government's contribution for the health benefits of an eligible employee who becomes part-time after April 8, 1979, is prorated on the basis of the fraction of a full-time schedule worked. An employee who was working under a permanent part-time schedule on April 7, 1979, receives a full Federal health benefits contributions for as long as the employee remains part-time. In addition, a change in status of employment from full-time to part-time is an event which allows an employee to change health benefits enrollment to another plan and/or option within 31 days from the effective date of the change in status.

221.49 Retirement.

a. *Retirement Annuity.* Retirement annuity computations are based on the highest average annual basic pay for any three consecutive years of creditable service. Therefore, if years of part-time service are among the high three, an employee's annuity will be affected to the extent earnings were limited during those years.

b. *Retirement Date Eligibility.* Part-time employment has no affect on an employee's date of eligibility for retirement. Service time counts in full—it is not prorated but is credited by calendar days.

221.50 Returning to Full-Time Duty. If the position held by the employee immediately before converting to part-time, or a position of equal or lower grade elsewhere is vacant, and the employee meets the basic requirements for the job, he or she can be placed in the job if selected by the selecting official. If the position sought would involve a promotion or has promotion potential, the employee must complete with other applicants, as required in CAB Manual Chapter 236, as well as meet the basic requirements for the job.

221.5 Increasing Hours of Part-Time Tour of Duty/Converting Back to Full-Time Work.

221.51 Management Decision. It is the prerogative of management to make a decision to meet the work needs of the Board by increasing the hours of work of a part-time employee to a maximum prescribed by law (32 hours per week), or reassign a part-time employee back to his/her former full-time position. When such a decision is made, an affected employee must be given sufficient advance notice, but not less than two calendar weeks.

221.52 Employee Refusal. Failure of the part-time employee to comply with such management decision may result in separation.

221.6 Effect of the Program on Filling Temporary Positions With Part-Time Employees. While this part-time employment program relates solely to career-type (permanent) appointments, it neither prevents nor affects agency authority to staff nonpermanent positions with part-time personnel. Part-time workers may be employed in temporary and excepted positions of limited duration, when determined appropriate, by applying the same procedures outlined in section 221.3. Such temporary or other non-career part-time employees, however, are not restricted to a work schedule of from 16 to 32 hours per week, as for career part-timers; they may work any amount of time authorized by management, permitted by law governing the appointment and which does not exceed 39 hours a week.

221.7 Inquires. Inquires concerning the program should be directed to the immediate supervisor or the Office of Human Resources.

Dated: August 7, 1980.
Wilma Kriviski,
Assistant to the Director.

DEPARTMENT OF COMMERCE

Economic Development Administration

Industrial Development, New Orleans, Louisiana; Intent to Prepare an Environmental Impact Statement

Notice is hereby given that, pursuant to Section 102(2)(C) of the national Environmental Environmental Policy Act of 1969, the Economic Development Administration of the U.S. Department of Commerce will prepare an Environmental Statement (EIS) on the proposed industrial development in an area east of New Orleans, Louisiana, known as the Almonaster-Michoud Industrial District (A–MID). The proposal includes the analysis of environmental impacts of the drainage, site preparation, infrastructure improvements, and future planned growth in conjuction with a master plan currently being undertaken by the City.

Pursuant to the Council on Environmental Quality's regulations, a scoping meeting will be held both to inform interested parties and to solicit their comments. A notice will be published in a local newspaper prior to the meeting indicating the time, date, and location of the scoping meeting.

Comments and question regarding the development of A–MID, the EIS, or the time and place of the scoping meeting should be directed to Mr. John W. Faris, EIS Coordinator, Economic Development Administration, U.S. Department of Commerce, 221 West Sixth Street, Suite 600, Austin, Texas 78701, telephone: (512) 397–5849.

The Catalog of Federal Domestic Assistance official program number and the title of the program under which this EIS is prepared is 11.300 Economic Development—Grants and Loans for Public Works and Development Facilities. The Clearing house review requirements of Office of Management and Budget Circular No. A–95 will apply to the application for this project in accord with 13 CFR 309.17.

Dated: August 5, 1980.
H. W. Williams,
Acting Assistant Secretary for Economic Development.

BILLING CODE 3510-22-M

Minority Business Development Agency

Financial Assistance Application Announcement

The Minority Development Agency (MBDA), formerly the Office of Minority Business Enterprise, announces that it is seeking applications under its program to operate one project for a 14 month period, beginning October 1, 1980, in Alaska, Arinzona, California, Hawaii, Idaho, Nevada, Oregon, Washington, and the Pacific Trust Territories. The cost of the project is estimated to be $325,000 and the Project Number is 09–10–50540–00.

Funding Instrument: It is anticipated that the funding instrument, as defined by the Federal Grant and Cooperative Agreement Act of 1977, will be a grant.

Program Description: Executive Order 11625 authorized MBDA to fund projects which will provide technical and management assistance to eligible clients in areas related to the establishment and operation of businesses. This proposed project is specifically designed to prepare business evaluation summaries for clients needing highly specialized management and technical assistance, and to obtain professional consultant services to meet those needs.

Eligibility Requirements: There are no rearictions. Any profit or non-profit institution is eligible to submit an application.

Application Materials: An application kit for this project may be requested by writing to the following address: San Francisco Regional Office, Minority Business Development Agnency, U.S. Department of Commerce, 450 Golden Gate Avenue, Box 36014, San Francisco, California 94102.

In requesting an application kit, the applicant must specify its profit status (i.e., State or local government, Federally recognize Indian tribes, educational institutions, hospitals, and other profit and non-profit organizations). This information is necessary to enable MBDA to include the appropriate cost principles in the application kit.

Award Process: All applications that are submitted in accordance with the instructions in the application kit will be submitted to a panel for review and ranking. The applications will be ranked according to the capability of the applicant, the proposed program plan, the budget allocation plan, and the applicant's knowledge of the area to be served. Specific criteria will be included in the application kit.

Closing Date: Applicants are encouraged to obtain an application kit as soon as possible in order to allow sufficient time to prepare and submit an application before the closing date of September 4, 1980. Detailed submission procedures are outlined in each application kit.

11.800 Minority Business Development (Catalog of Federal Domestic Assistance)

Dated: August 6, 1980.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Changes in the Textile Category System

August 7, 1980

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Changes in the textile category system.

SUMMARY: "The Correlation: Textile and Apparel Categories with the Tariff Schedules of the United States, Annotated" provides for placement of Tariff Schedules of the United States, Annotated (T.S.U.S.A.) numbers in the Textile Category System. Amendments to the U.S.U.S.A. as a result of changes made in Supplement 3 to the T.S.U.S.A. 1980 require amendments to the Correlation. These changes are cited on the list which follows this notice.

EFFECTIVE DATE: July 1, 1980.

FOR FURTHER INFORMATION CONTACT: Claire McDermott, Commodity Industry Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, Washington, D. C. 20230 (202/377–5423).

BILLING CODE 3510-25-M

Announcing Additional Import Controls on Certain Cotton Textile Products From Mexico

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Controlling cotton dresses in Category 336, at the level of 22,075 dozen during the twelve-month period which began on January 1, 1980.

(A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the Federal Register on February 28, 1980 (45 FR 13172) as amended on April 23, 1980 (45 FR 27463)).

SUMMARY: Under the terms of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of February 26, 1979, as amended, between the Governments of the United States and Mexico, the United States Government has decided to control imports of cotton textile products in Category 336 produced or manufactured in Mexico and exported to the United States during the twelve-month period which began on January 1, 1980, in addition to those categories previously designated. (See 44 FR 76383).

EFFECTIVE DATE: August 14, 1980.

FOR FURTHER INFORMATION CONTACT: William J. Boyd, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, Washington, D.C. 20230 (202/377–5423).

SUPPLEMENTARY INFORMATION: On December 26, 1979, there was published in the Federal Register (44 FR 76383) a letter dated December 18, 1979 from the Chairman of the Committee for the Implementation of Textile Agreements to the Commissioner of Customs, which established levels of restraint for certain specified categories of cotton and man-made fiber textile products, produced or manufactured in Mexico, which may be entered into the United States for consumption or withdrawn from warehouse for consumption during the twleve-month period which began on January 1, 1980 and extends through December 31, 1980. In accordance with the terms of the bilateral agreement, the United States Government has decided also to control imports of cotton textile products in Category 336, produced or manufactured in Mexico and exported to the United States during the twelve-month period which began on January 1, 1980. Accordingly, in the letter published below the Chairman of the Committee for the Implementation of Textile Agreements directs the Commissioner of Customs, effective on August 14, 1980, to prohibit entry for consumption or withdrawal from warehouse for consumption of cotton textile products in Category 336, produced or manufactured in Mexico and exported during the twelve-month period which began on January 1, 1980, in excess of the designated level of restraint. The level has not been adjusted to reflect any imports after December 31, 1979. Imports during the January-May 1980 period amounted to 10,388 dozen and will be charged. As the data become available, further charges will be made to account for the period which began on May 1, 1980 and extends through the effective date of this action.

Arthur Garel,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

Commissioner of Customs,
Department of the Treasury,
Washington, D.C.

Dear Mr. Commissioner: This directive amends, but does not cancel, the directive issued to you on December 18, 1979 by the Chairman, Committee for the Implementation of Textile Agreements, concerning imports into the United States of certain cotton and man-made fiber textile products, produced or manufactured in Mexico.

Under the terms of the Arrangement Regarding International Trade in Textiles done at Geneva on December 20, 1973, as extended on December 15, 1977; pursuant to the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of February 26, 1979, as amended, between the Governments of the United States and Mexico; and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended by Executive Order 11951 of January 6, 1977, you are directed to prohibit, effective on August 14, 1980 and for the twelve-month period beginning on January 1, 1980 and extending through December 31, 1980, entry into the United States for consumption and withdrawal from warehouse for consumption, of cotton, textile products in Category 336, produced or manufactured in Mexico and exported on and after January 1, 1980, in excess of 22,075 dozen.[1]

Cotton textile products in Category 336 which have been exported to the United States prior to January 1, 1980 shall not be subject to this directive.

Cotton textile products in Category 336 which have been released from the custody of the U.S. Customs Service under the provisions of 19 U.S.C. 1448(b) or 1484(a)(1)(A) prior to the effective date of this directive shall not be denied entry under this directive.

A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the Federal Register on February 28, 1980 (45 FR 13172), as amended on April 23, 1980 (45 FR 27463).

In carrying out the above directions, entry into the United States for consumption shall be construed to include entry for consumption into the Commonwealth of Puerto Rico.

The actions taken with respect to the Government of Mexico and with respect to imports of cotton textile products from Mexico have been determined by the Committee for the Implementation of Textile Agreements to involve foreign affairs functions of the United States. Therefore, these directions to the Commissioner of Customs, which are necessary for the implementation of such actions, fall within the foreign affairs exception to the rule-making provisions of 5 U.S.C. 553. This letter will be published in the Federal Register.

Sincerely,

Arthur Garel,

Acting Chairman, Committee for the Implementation of Textile Agreements.

[FR Doc. 80-24284 Filed 8-11-80; 8:45 am]

BILLING Code 3510-25-M

[1] The level of restraint has not been adjusted to reflect any imports after December 31, 1979. Imports during the period, January through May 1980, have amounted to 10,388 dozen.

Corps of Engineers, Department of the Army

Public Hearings Schedule for Draft Environmental Impact Statement To Dispose of DOD Stocks of DDT

The U.S. Army Corps of Engineers, Omaha District, is preparing, on behalf of the Defense Property Disposal Service of Battle Creek, Michigan, a Plan for the *Safe Collection, Transportation, and Ultimate Disposal of Department of Defense Stocks of DDT.* The Draft Environmental Impact Statement was published in July 1980. You are invited to participate in public hearings to be conducted in accordance with the National Environmental Policy Act of 1970 (Pub. L. 91–190). The public hearing schedule is as follows:

City: Kansas City, Missouri.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.
Date: 19 August 1980.
Location: Environmental Protection Agency, 324 East 11th Street, Room 415, Kansas City, MO 64106.
City: Dallas, Texas.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.

Date: 21 August 1980.
Location: Holiday Inn-Downtown, Holiday Room III, 1015 Elm Street, Dallas, TX 75202.
City: New York, New York.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.
Date: 26 August 1980.
Location: U.S. Army Engineer District, New York, 26 Federal Plaza, Room 2038, New York, NY 10278.
City: Washington, D.C.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.
Date: 28 August 1980.
Location: Headquarters, Environmental Protection Agency, Waterside Mall, Room 3906/3908, 401 M Street S.W., Washington, DC 20460.
City: Seattle, Washington.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.
Date: 9 September 1980.
Location: Environmental Protection Agency, 1200 Sixth Avenue, 12th Floor Conference Room Seattle, WA 98101.
City: San Francisco, California.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.
Date: 11 September 1980.
Location: Environmental Protection Agency, 215 Fremont Street, 6th Floor Conference Room, San Francisco, CA 94105.
City: Atlanta, Georgia.
Time: 9:00 a.m. to 12:00 Noon and 7:00 p.m. to 10:00 p.m.
Date: 16 September 1980.
Location: Environmental Protection Agency, 345 Courtland Street, Room 107, Atlanta, Georgia 30365.
Agenda: Opening remarks and summary: 1 hour public comment: 2 hours (Each speaker will be limited to a five minute presentation).
Date: August 7, 1980.

John O. Roach II,
Army Federal Register Liaison Officer.

BILLING CODE 3710-08-M

Department of the Navy

Amendment to Systems of Records

AGENCY: Department of the Navy (DON).

ACTION: Notice of amendment to systems of records.

SUMMARY: The Department of the Navy proposes to amend two systems of records subject to the Privacy Act of 1974. The specific changes to the systems being amended are set forth below followed by the systems published in their entirety, as amended.

DATE: The systems shall be amended as proposed without further notice on September 11, 1980, unless comments are received on or before September 11, 1980, which would result in a contrary determination.

ADDRESS: Send comments to the systems managers identified in the records systems notices.

FOR FURTHER INFORMATION:
The Navy systems of records notices as prescribed by the Privacy Act of 1974, Title 5 U.S.C., Section 552a (Public Law 93-579) have been published in the Federal Register as follows:

FR Doc 79-36400 (44 FR 67703) November 27, 1979.
FR Doc 79-36798 (44 FR 68947) November 30, 1979.
FR Doc 79-37052 (44 FR 74553) December 17, 1979.
FR Doc 80-6599 (45 FR 13794) March 3, 1980.
FR Doc 80-14985 (45 FR 32037) May 15, 1980.
FR Doc 80-15427 (45 FR 33679) May 20, 1980.
FR Doc 80-17286 (45 FR 38099) June 6, 1980.
FR Doc 80-19803 (45 FR 43841) June 30, 1980.
FR Doc 80-20317 (45 FR 43938) July 8, 1980.
FR Doc 80-23111 (45 FR 50851) July 31, 1980.

The proposed amendments are not within the purview of the provisions of 5 U.S.C. 552a(o) of the Act which requires the submission of a new or altered systems report.

Dated: August 7, 1980.

M. S. Healy,
OSD Federal Register Liaison Officer, Washington Headquarters Services, Department of Defense.

SYSTEM NAME:

Automated Claims Information System (ACIS) (44 FR 68947) 30 Nov 79

CHANGES:

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Add the following entry at the end of the paragraph: ". . . and 31 U.S.C. 231."

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Add the following entry at the end of the paragraph: "The cognizant U.S. Attorney and/or officials and employees of the Department of Justice who are charged with responsibility for either initiating civil actions or defending civil actions arising under the aforementioned claims statutes, and for prosecuting civil or criminal cases under the False Claims Act (31 U.S.C. 231)."

N00022 PERSREHSUPPSYS

SYSTEM NAME:

Navy Personnel Rehabilitation Support System (44 FR 74596) 17 Dec 79

CHANGES:

SYSTEM LOCATION:

In the second line after the words Rehabilitation Centers, add the following phrase: ". . . Naval Regional Medical Centers . . ."

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

In line 4, delete the phrase: ". . . recovered alcoholic and nonalcoholic professional personnel who work part-time helping alcoholics;" and add: ". . . personnel who work part-time helping alcoholics;"

After the last word in the entry, add the following phrase: ". . . and spouses and significant others (this includes parents, live-togethers, and other non-spouses who play an important part in the alcoholic's/drug abuser's life) of Navy personnel who have undergone counseling and rehabilitation in Navy Drug or Alcohol Rehabilitation facilities, who themselves participate in counseling or treatment programs at such facilities, and civilians authorized by the Secretary of the Navy for treatment at a military facility for rehabilitiation purposes."

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Delete the entire entry and substitute with the following: "Title V, Public Law 92-129; Section 413, Public Law 92-255."

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Delete the entire entry and substitute with the following: "Blanket "routine uses" identified in the yearly recompilation do not apply to this system of records".

Records of identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175, as amended by 88 Stat. 137, and Title 42 U.S.C., Section 4582, as amended by 88 Stat. 131. These statutes take precedence over the Privacy Act of 1974, in regard to accessibility of such records except to the individual to whom the record pertains.

Within the Armed Forces or within those components of the Veterans Administration furnishing health care to veterans or between such components and the Armed Forces.

To medical personnel outside the Armed Forces to the extent necessary to meet a bona fide medical emergency.

To Government personnel for the purpose of obtaining benefits to which the patient is entitled.

To qualified personnel for the purpose of conducting scientific research, management or financial audits, or program evaluation, but such personnel may not identify, directly or indirectly, any individual patient in any report of such research, audit or evaluation, or otherwise disclose identities in any manner.

To a court of competent jurisdiction upon authorization by an appropriate order after showing good cause therefore. In assessing good cause, the court shall weigh the public interest and the need for disclosure against the injury to the patient, to the physician-patient relationship, and to the treatment services. Upon the granting of such order, the court, in determining the extent to which any disclosure of all or any part of any record is necessary, "shall impose appropriate safeguards against unauthorized disclosure."

RETRIEVABILITY:

Delete he entire entry and substitute with the following: "Manual records may be retrieved by name and social security number. Automated records may be retrieved by social security number. Computer programs associated with automated records maintained in this system allow for names and social security numbers to be removed while leaving other data elements intact. When the name and social security number is removed, data is aggregated for use in research, management information, and planning."

RETENTION AND DISPOSAL:

Delete the entire entry and substitute with the following: "Manual records are maintained for two years and automated records are maintained indefinitely."

NOTIFICATION PROCEDURE:

Add the following phrase at the beginning of the second line: ". . . activity to which the individual received treatment or to the . . ."

N00013

SYSTEM NAME:

Automated Claims Information System (ACIS).

SYSTEM LOCATION:

Office of the Judge Advocate General, Department of the Navy, 200 Stovall Street, Alexandria, VA 22332.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

All individuals who have filed claims against the Department of the Navy under the Federal Tort Claims Act, the Foreign Claims Act, Military Claims Act, the 'Nonscope' Claims Act, Legislative Reorganization Act, or Military and Civilian Employees' Claims Act. All individuals who have filed claims with the U.S. Postal Service for loss or damage to mailed matter, and which claims have been paid by the U.S. Postal Service and thereafter forwarded for reimbursement by the Department of the Navy pursuant to 39 U.S.C. 712. All individuals who have asserted claims or instituted suits under the Public Vessels Act and Suits in Admiralty Act against the Department of the Navy in the name of the United States and all individuals who have instituted suits against third parties who have impleaded the Department of the Navy in the name of the United States. All individuals against whom the Navy has claims sounding in tort, and all individuals who are in the military or are dependents of military members and have been provided medical care by a Naval medical facility for injuries resulting from such tortious conduct. All common carriers against whom recovery has been sought by the Department of the Navy.

CATEGORIES OF RECORDS IN THE SYSTEM:

Individual's name, social security number, office processing the claim, dollar amount of claim, dollar amount paid, type of claim, type of property damage, type of personal injury, date of incident that caused the claim date the claim was presented to the Navy, date payment was made or claim was closed, amount claimed against individual, amount received from individual, location of incident, and government bill of lading (if applicable).

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Federal Tort Claims Act (28 U.S.C. 1346(b), 2671-2680); 32 CFR 750.30-750.49; Medical Care Recovery Act (42 U.S.C. 2651-53); Federal Claims Collection Act (31 U.S.C. 951-53); 32 CFR 757.1-757.21; Foreign Claims Act (10 U.S.C. 2734); 32 CFR 753.1-753.29; Military Claims Act (10 U.S.C. 2733); 32 CFR 750.50-750.59; 'Nonscope' Claims Act (10 U.S.C. 2737); 32 CFR 750.60-750.69; Military and Civilian Employees Claims Act (31 U.S.C. 240-243); 32 CFR 751.0-751.3; Legislative Reorganization Act (10 U.S.C. 1552); Admiralty Claims Act (10 U.S.C. 7622); 39 U.S.C. 712; 5 U.S.C. 30; 5 U.S.C. 301; 44 U.S.C. 3101; and 31 U.S.C. 231.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

The officials and employees of the Department of the Navy in the performance of their official duties related to monitoring the current status of the Navy claims program. The officials and employees of the Military Traffic Management Command in the performance of their official duties related to the management of the Department of Defense personal property movement and storage program. The system will be used to report contingent liability to the Government Accounting Office to satisfy requirements of the GAO Policy and Procedures Manual. The cognizant U.S. Attorney and/or officials and employees of the Department of Justice who are charged with responsibility for either initiating civil actions or defending civil actions arising under the aforementioned claims statutes, and for prosecuting civil or criminal cases under the False Claims Act (31 U.S.C. 231).

POLICIES AND PRACTICES FOR STORING, RETRIEVING ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records are maintained on magnetic disk, magnetic tape, and hard copy forms.

RETRIEVABILITY:

ACIS users obtain information by means of either a query or a request for a standard report. Data may be indexed by any data item although the primary search keys are the name of social security number.

SAFEGUARDS:

Access to building is protected by uniformed guards requiring positive identification for admission after hours. The system is protected by the following software features; user account number and password sign-on, data base authority, set and item authority for list, add, delete and update.

RETENTION AND DISPOSAL:

An individual's record is retained on disk and will be available for on-line access for three years after the close of the individual's claim. The record will be transferred to magnetic tape after three years and will be utilized in a batch processing mode. After ten years, the record will be erased from the tape.

SYSTEM MANAGER(S) AND ADDRESS:

Head, Claims Defense Program, Office of the Judge Advocate General, Department of the Navy, 200 Stovall Street, Alexandria, VA 22332.

NOTIFICATION PROCEDURE:

the Secretary of Energy on matters

Bonneville Power Administration

NOTIFICATION PROCEDURES:

Information should be obtained from the System Manager. Requesting individuals should specify their full names. Visitors should be able to identify themselves by any commonly recognized evidence of identity. Written requests must be signed by the requesting individual.

RECORD ACCESS PROCEDURES:

The agency's rules for access to records may be obtained from the System Manager.

CONTESTING RECORD PROCEDURES:

The agency's rules for contesting contents and appealing initial determinations by the individual concerned may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

Information in this system comes from the individual to whom it applies and from offices processing claims.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

N00022 PERSREHSUPPSYS

SYSTEM NAME:

Navy Personnel Rehabilitation Support System

SYSTEM LOCATION:

Primary System—Navy Military Personnel Command, Navy Department, Washington, D.C. 20370

Decentralized segments—Navy Drug Rehabilitation Center, Navy Alcohol and Drug Information System Processing Office, Navy Alcohol Rehabilitation Centers, Naval Regional Medical Centers, Navy Counseling and Assistance Centers, Navy Alcohol Rehabilitation Drydocks, Naval Health Research Center, Navy Correction Centers, and local activities to which an individual is assigned (see Directory of Department of the Navy Mailing Addressess).

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Navy personnel (officers and enlisted) who have been identified as drug or alcohol abusers, or have undergone counseling and rehabilitation for drug or alcohol abuse in Navy Drug or Alcohol Rehabilitation facilities; personnel who work part-time helping alcoholics; active duty Navy recovered alcoholics who help their commands develop alcoholism prevention programs; Navy personnel convicted by court-martial and sentenced to confinement, or who were in pre-trial confinement; spouses and significant others (this includes parents, live-togethers and other non-spouses who play an important part in the alcoholic's/drug abuser's life) who have undergone counseling and rehabilitation in Navy Drug or Alcohol Rehabilitation facilities, who themselves participate in counseling or treatment programs at such facilities and civilian authorized by the Secretary of the Navy for treatment at a military facility for rehabilitation purposes."

CATEGORIES OF RECORDS IN THE SYSTEM:

Correspondence and records in both automated and non-automated form concerning interview appraisals, personnel, service, biographical, educational, evaluation and testing, performance, and drug and alcohol rehabilitation program data. Correspondence and records in both automated and non-automated form concerning those in confinement containing offence, legal, service, health, personal, evaluation and classification, discipline and conduct, work and training data, interview appraisals, inventories or confinement personnel management data.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Title V, Public Law 92–129; Section 413, Public Law 92–255

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

Blanket "routine uses" identified in the yearly recompilation do not apply to this system of records.

Records of identity, diagnosis, prognosis, or treatment of any client/patient, irrespective of whether or when he/she ceases to be a client/patient, maintained in connection with the performance of any alcohol or drug abuse prevention and treatment function conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, shall, except as provided therein, be confidential and be disclosed only for the purposes and under the circumstances expressly authorized in Title 21 U.S.C., Section 1175, as amended by 88 Stat. 137, and Title 42 U.S.C., Section 4582, as amended by 88 Stat. 131. These statutes take precedence over the Privacy Act of 1974, in regard to accessibility of such records except to the individual to whom the record pertains.

Within the Armed Forces or within those components of the Veterans Administration furnishing health care to veterans or between such components and the Armed Forces.

To medical personnel outside the Armed Forces to the extent necessary to meet a bona fide medical emergency.

To government personnel for the purpose of obtaining benefits to which the patient is entitled.

To qualified personnel for the purpose of conducting scientific research, management of financial audits, or program evaluation, but such personnel may not identify, directly or indirectly, any individual patient in any report of such research, audit or evaluation, or otherwise disclose identities in any manner.

To a court of competent jurisdiction upon authorization by an appropriate order after showing good cause therefor. In assessing good cause, the court shall weigh the public interest and the need for disclosure against the injury to the patient, to the physician-patient relationship, and to the treatment services. Upon the granting of such order, the court, in determining the extent to which any disclosure of all or any part of any record is necessary, shall impose appropriate safeguards against unauthorized disclosure.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Automated records may be stored on magnetic tapes, disc, drums, or on punched cards. Manual records may be stored in file folders, microfiche or microfilm.

RETRIEVABILITY:

Manual records may be retrieved by name, social security number. Automated records may be retrieved by social security number. Computer programs associated with automated records maintained in this system allow for names and social security numbers to be removed while leaving other data elements intact. When name and social security number is removed, data is aggregated for use in research, management information, and planning.

SAFEGUARDS:

Computer and punched card processing facilities are located in restricted areas accessible only to authorized persons who are properly screened, cleared, and trained.

RETENTION AND DISPOSAL:

Manual records are maintained for two years and automated records are maintained indefinitely.

SYSTEM MANAGER(S) AND ADDRESS:

Chief of Naval Personnel, Navy Department, Washington, D.C. 20370.

NOTIFICATION PROCEDURE:

Written requests should be addressed to activity to which the individual received treatment or to the Chief of Naval Personnel, Navy Annex, Washington, D.C. 20370. Requests must contain full name, social security account number, military status, address and signature of requester. (Those inquiring about records at Confinement Centers must have their signature notarized, if not confined at the time of the request.) The individual may visit the Chief of Naval Personnel, Arlington Annex (FOB–2) for assistance with records located in the Naval Military Personnel Command; the individual may also visit local activities concerned (see Directory of Department of the Navy mailing addresses). Proof identification will consist of military identification card for persons having such cards, or other picture-bearing identification.

RECORD ACCESS PROCEDURES:

The agency's rules for access to records may be obtained from the system manager.

CONTESTING RECORD PROCEDURES:

The agency's rules for contesting contents and appealing initial determinations by the individual concerned may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

Officials and employees of the Navy, Department of Defense, and components thereof, in performance of their official duties and as specified by current instructions and regulations promulgated by competent authority; notes and documents from service jackets and records, Federal, State, and local court documents; general correspondence concerning the individual.

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

None.

BILLING CODE 3810–71–M

DEPARTMENT OF ENERGY

National Petroleum Council, Coordinating Subcommittee of the Committee on Arctic Oil and Gas Resources; Meeting

Notice is hereby given that the Coordinating Subcommittee of the Committee on Arctic Oil and Gas Resources will meet in August 1980. The National Petroleum Council was established to provide advice, information, and recommendations to the Secretary of Energy on matters relating to oil and natural gas or the oil and natural gas industries. The Committee on Arctic Oil and Gas Resources will analyze the various issues bearing on expeditious resource development of this promising frontier area. Its analysis and findings will be based on information and data to be gathered by the various task groups. The time, location and agenda of the Coordinating Subcommittee meeting follows:

The meeting will be on Tuesday, August 19, 1980, starting at 4:00 p.m. in the 37th Floor Conference Room of the Atlantic Richfield Company, 515 South Flower Street, Los Angeles, California.

The tentative agenda for the meeting follows:

1. Discuss the scope of the study to be conducted in response to the Secretary of Energy's request for an analysis of issues bearing on Arctic oil and gas resources.

2. Discuss an organizational structure for the study.

3. Discuss a timetable for completion of the study.

4. Discuss any other matters pertinent to the overall assignment from the Secretary.

The meeting is open to the public. The Chairman of the Coordinating Subcommittee is empowered to conduct the meeting in a fashion that will, in his judgment, facilitate the orderly conduct of business. Any member of the public who wishes to file a written statement with the Coordinating Subcommittee will be permitted to do so, either before or after the meeting. Members of the public who wish to make oral statements should inform R.D. Langenkamp, Deputy Assistant Secretary, Resource Development and Operations, Office of Resource Applications, 202/633–8400, prior to the meeting and reasonable provision will be made for their appearance on the agenda.

Summary minutes of the meeting will be available for public review at the Freedom of Information Public Reading Room, Room 5B–180, DOE, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C., between the hours of 8 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued at Washington, D.C. on August 5, 1980.

Robert Lawton,

Acting Deputy Assistant Secretary, Resource Development and Operations.

BILLING CODE 6450–01–M

Bonneville Power Administration

Ashe-Slatt (Pebble Springs) 500–kV Transmission Line; Intent To Prepare a Supplement to the Final Environmental Impact Statement (EIS)

The Bonneville Power Administration (BPA) hereby gives public notice of its intent to prepare a supplement to its final EIS for the Ashe-Slatt 500–kV transmission line. That final EIS was entitled "Final Facility Location Supplement to BPA's Fiscal Year 1976 Program EIS, Ashe-Willamette Valley (Ashe-Pebble Springs, FES 75–79)," and was filed with the Environmental Protection Agency on September 16, 1975. Construction of this transmission line (now referred to as the Ashe-Slatt line) is nearly complete except for the Columbia River crossing. The supplement to the final EIS will address design alternatives for the portion of the Columbia River crossing at Crow Butte slough, located approximately 21 miles upstream from Arlington, Oregon.

The proposed river crossing was originally designed to be a double-circuit 500–kV overhead line on both the north and south sides of Crow Butte Island. In April 1980, BPA agreed with the U.S. Fish and Wildlife Service to investigate using subsurface cables for the crossing of Crow Butte slough on the north side of the island. This proposed modification of the original design plans resulted from concerns over perceived environmental impacts associated with the overhead transmission lines crossing the slough. The remainder of the proposed overhead line across Crow Butte Island and the Columbia River is unaffected by the subsurface cable proposal and is to remain an overhead line.

By agreement with the U.S. Fish and Wildlife Service, which manages the Umatilla National Wildlife Refuge and Crow Butte Island, a temporary single-circuit 500–kV overhead line will be built across the Crow Butte slough. The temporary line will allow energization of the Ashe-Slatt line in the fall of 1980 and will be left in place for up to three years to allow for environmental and technical studies on the subsurface cables and completion of a permanent facility.

The supplement to the final EIS will address several alternatives for the 500–kV double-circuit transmission line across Crow Butte slough. These are:

A. Installation of cables beneath Crow Butte slough along the overhead alignment (approximately 4,100 feet).

B. Installation of cables along the existing causeway to Crow Butte Island (approximately 7,200 feet).

C. Installation of cables along the new

of October 31, 1980 to and including

addition to, the total currently

C. Installation of cables along the new causeway constructed for the cables (approximately 4,100 feet).

D. The original double-circuit 500–kV overhead line (approximately 4,100 feet).

E. Two single-circuit 500–kV line overhead lines (approximately 4,100 feet).

F. No action.

All interested parties are invited to comment upon the scope of the supplement. The following agencies have been invited to cooperate in the development of the supplement to the final EIS: (1) U.S. Fish and Wildlife Service, as the project involves the Umatilla National Wildlife Refuge; (2) the U.S. Army Corps of Engineers, a Federal permit-granting agency for water projects; (3) Washington State Parks and Recreation Commission, because of the proximity of Crow Butte State Park. Other Federal, State, regional and local agencies and appropriate public interest and other organizations will be consulted during the environmental analysis.

Although the draft supplement to the final EIS will be subject to public and agency review, BPA is now soliciting comment so that all issues may be fully considered in the draft supplement. Any suggestions or questions regarding the supplement should be directed to: Mr. John E. Kiley, Environmental Manager, Bonneville Power Administration, U.S. Department of Energy, P.O. Box 3621–SJ, Portland, Oregon 97208. Phone number: (503) 234–3361, extension 5137.

Dated at Portland, Oregon, this 1st day of August 1980.

Ray Folsen,

Acting Administrator.

BILLING CODE 6450-01-M

Economic Regulatory Administration

[ERA Docket No. 80-17-NG]

Midwestern Gas Transmission Co.; Application

AGENCY: Department of Energy, Economic Regulatory Administration.

ACTION: Notice of application for an order amending existing authorization to import natural gas.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy gives notice of receipt of the application of Midwestern Gas Transmission Company (Midwestern) to amend the previous order of the ERA in Docket No. 79–04–NG in order to extend the present authorization to import natural gas from Canada into the United States from the current expiration date of October 31, 1980 to and including October 31, 1981. No increase in the maximum daily import of 350,000 Mcf or to the total authorized import quantity of 114,000 MMcf is requested. Midwestern is also proposing to add Niagara Falls, New York, as a second import point in addition to the currently authorized point near Emerson, Manitoba. The application is filed with ERA pursuant to Section 3 of the Natural Gas Act and the Secretary of Energy's Delegation Order No. 0204–54. Protests or petitions to intervene are invited.

DATE: Protests or petitions to intervene are to be filed on or before August 27, 1980.

FOR FURTHER INFORMATION CONTACT:

Leonard B. Levine (Division of Natural Gas), Economic Regulatory Administration, 2000 M Street, N.W., Room 7108, Washington, D.C. 20461, (202) 653–3286.

James K. White, Acting Assistant General Counsel for Natural Gas and Mineral Leasing, 1000 Independence Ave., S.W., Room 5E–074, Washington, D.C. 20585, (202) 252–2900.

SUPPLEMENTARY INFORMATION:

On August 9, 1979, ERA authorized Midwestern in Docket No. 79–04–NG to import 350,000 Mcf of natural gas per day until October 31, 1980 or until a total quantity of 114,000,000 Mcf was imported. This natural gas is now being purchased by Midwestern from TransCanada Pipelines Ltd. (TransCanada) and is being resold to Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), Northern Natural Gas Company and Natural Gas Pipe Line Company of America. Midwestern's current application states that "the proposed import will permit gas to be delivered from TransCanada which has been previously authorized but not imported within the previously authorized period." The application is silent on the reasons for Midwestern's inability to import the already authorized volumes before October 31, 1980, as well as on the need for the gas at this time.

Midwestern is now requesting approval of an "additional point of delivery" at Niagara Falls, New York, at the existing interconnection of the facilities of TransCanada and Tennessee. Midwestern states that this additional point of delivery will allow it the flexibility to make sales directly to Tennessee when such sales are needed by Tennessee's customers in that area. All quantities imported at Niagara would be resold to Tennessee. Such volumes would be limited to 75,000 Mcf per day and would be part of, not in addition to, the total currently authorized of 350,000 Mcf per day.

According to the application, TransCanada is currently seeking authorization from the Canadian National Energy Board (NEB) to extend its exportation until October 31, 1981. Midwestern states that the price proposed to be paid by Midwestern to TransCanada is "the rate prescribed by the Canadian government as permitted by the ERA and the Commission."

In view of the termination of the present authorization on October 31, 1980, Midwestern has requested that the processing of this application be expedited.

OTHER INFORMATION:

The ERA invites protests or petitions for intervention in the proceeding. Such protests or petitions are to be filed with the Economic Regulatory Administration, Room 7108, 2000 M Street, N.W., Washington, D.C. 20461, in accordance with the requirements of the rules of practice and procedure (18 CFR 1.8 and 1.10). Such protests or petitions for intervention will be accepted for consideration if filed no later than 4:30 p.m., August 27, 1980.

Any person wishing to become a party to the proceeding or to participate as a party in any hearing which may be convened herein must file a petition to intervene. Any person desiring to make any protest with reference to the petition and application for certificate should file a protest with the ERA in the same manner as indicated above for petitions to intervene. All protests filed with ERA will be considered by it in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding.

A formal hearing will not be held unless a motion for such hearing is made by any party or intervenor and is granted by ERA, or if the ERA on its own motion believes that such hearing is required. If such hearing is required, due notice will be given.

A copy of Midwestern's petition is available for public inspection and copying in Room 7108, 2000 M Street N.W., Washington, D.C. 20461 between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, D.C., on July 29, 1980.

F. Scott Bush,

Assistant Administrator, Regulations and Emergency Planning, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket No. RA80-51]

Alameda Texaco; Filing of Petition for Review

August 6, 1980.

Take notice that Alameda Texaco on June 18, 1980, filed a Petition for Review under 42 U.S.C. § 7194(b) (1977 Supp.) from an order of the Secretary of Energy.

Copies of the petition for review have been served on the Secretary, Department of Energy, and all participants in prior proceedings before the Secretary.

Any person desiring to be heard with reference to such filing should on or before August 20, 1980 file a petition to intervene with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8). Any person wishing to become a party or to participate as a party must file a petition to intervene. Such petition must also be served on the parties of record in this proceeding and the Secretary of Energy through John McKenna, Office of General Counsel, Department of Energy, Room 5142, 12th and Pennsylvania Ave., N.W., Washington D.C. 20461. Copies of the petition for review are on file with the Commission and are available for public inspection at Room 1000, 825 North Capitol St., N.E., Washington, D.C. 20426.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24298 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-549]

Arkansas Power & Light Co.; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that Arkansas Power & Light Company (AP&L), on July 28, 1980, tendered for filing a Letter Agreement with Arkansas Electric Cooperative Corporation (AECC). This agreement provides for the sale of 15,000 kilowatts of additional capacity to AECC by AP&L to assure AECC of adequate reserve margins during the twelve motnhs ending June 30, 1981.

Copies of the filing were served upon Arkansas Electric Cooperative Corporation and also upon the Arkansas Public Service Commission, Louisiana Public Service Commission, and the Tennessee Public Service Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Acting Secretary.

[Docket No. ID-1723]

Frank N. Bien; Filing

August 4, 1980.

The filing party submits the following:

Take notice that on July 28, 1980, Frank N. Bien (Applicant) submitted for filing an application, pursuant to Section 305(b) of the Federal Power Act, to hold the following positions:

Director and Vice Chairman—Operations, American Electric Power Service Corp., Public Utility.

Vice President and Director, Columbus & Southern Ohio Electric Co., Public Utility.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C., 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-548]

Central Hudson Gas & Electric Corp.; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that the Central Hudson & Electric Corporation (Central Hudson), on July 28, 1980, tendered for filing as a rate schedule an executed agreement dated July 1, 1980 between Central Hudson and Connecticut Light and Power Company (CL&P). The proposed rate schedule provides for the sale of generating capacity and associated energy by Central Hudson as available and as scheduled from day to day.

The rate schedule provides for a capacity charge of $3 per megawatt per hour scheduled and an energy charge equal to Central Hudson's incremental fuel and maintenance costs, incremental out-of-pocket costs, incremental costs of transmission losses and applicable taxes.

Central Hudson requests waiver of the notice requirements of Section 35.3 of the Commission's Regulations so that the proposed rate schedule can be made effective August 1, 1980 in accordance with the anticipated utilization by the parties.

Central Hudson states that a copy of its filing was served on CL&P.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-561]

Consumers Power Co.; Filing

August 6, 1980.

The filing company submits the following:

Take notice that Consumers Power Company on July 30, 1980, tendered for filing a Service Agreement for firm electric transmission service to be provided by Consumers Power Company upon the request of the City of Holland, Michigan. Such service will be provided for one or more weeks at a capacity reservation not to exceed 8,000 kW, at a voltage of approximately 138 kV. The service, if and when requested, will be provided under Consumers Power Company's Contract Rate FTR for firm transmission service under FERC Electric Tariff Original Volume No. 2. Consumers Power states that the Service Agreement will become effective on the first day of the first capacity reservation thereunder, and the Agreement will terminate on October 1, 1980, unless earlier cancelled by mutual consent.

Consumers Power states that copies of the filing were served on the City of Holland and on the Michigan Public Service Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's rule of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of filing are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Project No. 2742]

Copper Valley Electric Association., Inc.; Application for Approval of Revised Exhibit S

August 6, 1980.

Take notice that the Copper Valley Electric Association, Inc. (Copper Valley) filed on November 23, 1979, and supplemented on June 17, 1980, an application (pursuant to Article 38 of its license) for approval of a revised Exhibit S for the Solomon Gulch Project No. 2742 located on Solomon Gulch Creek near Valdez, Alaska. Correspondence with the Applicant should be directed to: Mr. James F. Palin, General Manager, Copper Valley Electric Association, Inc., Glennallen, Alaska 99588.

Description.—In the revised Exhibit S, Copper Valley proposes measures for the enhancement and protection of fish and wildlife resources at the project. These measures include development and maintenance of the 350-foot long powerhouse tailrace as a spawning channel for salmon and construction of a weir downstream of the powerhouse to prevent migrating salmon from entering the facility. Also, Copper Valley would adopt measures, during construction of the 105-mile long project transmission line to Glennallen, for the control of pollution and erosion; fish, wildlife, and raptor protection; maintenance of stream bank integrity; and other measures recommended by the Alaska Department of Natural Resources and the Bureau of Land Management, Department of the Interior. Further, Copper Valley would conduct a study, in cooperation with resource agencies, to determine the effect, if any, of project operation on salmon activities in Solomon Gulch Creek.

Comments, Protests, or Petitions to Intervene.—Anyone desiring to be heard or to make any protest about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR, § 1.8 or § 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in § 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition or intervene in accordance with the Commission's Rules. Any comments, protest, or petition to intervene must be filed on or before *September 12, 1980.* The Commission's address is: 825 North Capitol Street, NE., Washington, D.C. 20426. The application is on file with the Commission and is available for public inspection.

Kenneth F. Plumb,

Secretary.

[Volume 251]

Determinations by Jurisdictional Agencies Under the Natural Gas Policy Act of 1978

August 5, 1980.

The following notices of determination were received from the indicated jurisdictional agencies by the Federal Energy Regulatory Commission pursuant to the Natural Gas Policy Act of 1978 and 18 CFR 274.104. Negative determinations are indicated by a "D" after the section code. Estimated annual production (PROD) is in million cubic feet (MMcf).

The applications for determination in these proceedings together with a copy or description of other materials in the record on which such determinations were made are available for inspection, except to the extent such material is treated as confidential under 18 CFR 275.206, at the Commission's Office of Public Information, Room 1000, 825 North Capitol Street, N.E., Washington, D.C. 20426.

Persons objecting to any of these final determinations may, in accordance with 18 CFR 275.203 and 18 CFR 275.204, file a protest with the Commission by August 27, 1980.

Please reference the FERC Control Number (JD NO) in all correspondence related to these determinations.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-C

[Volume 252]

Determinations by Jurisdictional Agencies Under the Natural Gas Policy Act of 1978

Issued August 5, 1980.

The following notices of determination were received from the indicated jurisdictional agencies by the Federal Energy Regulatory Commission pursuant to the Natural Gas Policy Act of 1978 and 18 CFR 274.104. Negative determinations are indicated by a "D" after the section code. Estimated annual production (PROD) is in million cubic feet (MMcf).

The applications for determination in these proceedings together with a copy or description of other materials in the record on which such determinations were made are available for inspection, except to the extent such material is treated as confidential under 18 CFR 275.206, at the Commission's Office of Public Information, Room 1000, 825 North Capitol Street, N.E., Washington, D.C. 20426.

Persons objecting to any of these final determinations may, in accordance with 18 CFR 275.203 and 18 CFR 275.204, file a protest with the Commission by August 27, 1980.

Please reference the FERC Control Number (JD NO) in all correspondence related to these determinations.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24286 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-C

[Volume 253]

Determinations by Jurisdictional Agencies Under the Natural Gas Policy Act of 1978

Issued August 5, 1980.

The following notices of determination were received from the indicated jurisdictional agencies by the Federal Energy Regulatory Commission pursuant to the Natural Gas Policy Act of 1978 and 18 CFR 274.104. Negative determinations are indicated by a "D" after the section code. Estimated annual production (PROD) is in million cubic feet (MMcf).

The applications for determination in these proceedings together with a copy or description of other materials in the record on which such determinations were made are available for inspection, except to the extent such material is treated as confidential under 18 CFR 275.206, at the Commission's Office of Public Information, Room 1000, 825 North Capitol Street, N.E., Washington, D.C. 20426.

Persons objecting to any of these final determinations may, in accordance with 18 CFR 275.203 and 18 CFR 275.204, file a protest with the Commission by August 27, 1980.

Please reference the FERC Control Number (JD NO) in all correspondence related to these determinations.

Kenneth F. Plumb,
Secretary.

BILLING CODE 6450-85-C

[Volume 254]

Determinations by Jurisdictional Agencies Under the Natural Gas Policy Act of 1978

Issued August 5, 1980.

The following notices of determination were received from the indicated jurisdictional agencies by the Federal Energy Regulatory Commission pursuant to the Natural Gas Policy Act of 1978 and 18 CFR 274.104. Negative determinations are indicated by a "D" after the section code. Estimated annual production (PROD) is in million cubic feet (MMcf).

The applications for determination in these proceedings together with a copy or description of other materials in the record on which such determinations were made are available for inspection, except to the extent such material is treated as confidential under 18 CFR 275.206, at the Commission's Office of Public Information, Room 1000, 825 North Capitol Street, N.E., Washington, D.C. 20426.

Persons objecting to any of these final determinations may, in accordance with 18 CFR 275.203 and 18 CFR 275.204, file a protest with the Commission by August 27, 1980.

Please reference the FERC Control Number (JD NO) in all correspondence related to these determinations.

Kenneth F. Plumb,

Secretary

R. E. Disbrow; Notice of Filing

August 4, 1980.

Take notice that on July 29, 1980 R. E. Disbrow (Applicant) filed an application pursuant to Section 305(b) of the Federal Power Act to hold the following positions:

Vice President and Director, Appalachian Power Company, Electric Utility.
Vice President and Director, Columbus and Southern Ohio Electric Company, Electric Utility.
Vice President and Director, Indiana & Michigan Company, Electric Utility.
Director, Kanawha Valley Power Company, Electric Utility.
Vice President and Director, Kentucky Power Company, Electric Utility.
Vice President and Director, Kingsport Power Company, Electric Utility.
Vice President and Director, Michigan Power Company, Electric Utility.
Vice President and Director, Ohio Power Company, Electric Utility.
Vice President and Director, Wheeling Electric Company, Electric Utility.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commisison, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 31, 1980.

Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Acting Secretary.

John E. Dolan; Notice of Filing

August 4, 1980.

The filing party submits the following:

Take notice that on July 29, 1980, John E. Dolan (Applicant) submitted for filing an application, pursuant to Section 305(b) of the Federal Power Act, to hold the following positions:

Vice Chairman—Engineering and Construction, American Electric Power Service Corp., Public Utility.
Director, Cardinal Operating Co., Public Utility.
Vice President and Director, Columbus & Southern Ohio Electric Co., Public Utility.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Lois D. Cashell,
Acting Secretary.

[Docket No. ER 80-564]

Duke Power Co.; Supplement to Electric Power Contract

August 6, 1980.

The filing Company submits the following:

Take notice that Duke Power Company (Duke Power) tendered for filing on July 29, 1980 a supplement to the Company's Electric Power Contract with the City of Rock Hill. Duke Power states that this contract is on file with the Commission and has been designated Duke Power Company Rate Schedule FERC No. 228.

Duke Power further states that the Company's contract supplement, made at the request of the customer and with agreement obtained from the customer, provides for changes in SEPA reallocation. Duke Power proposes an effective date of July 20, 1980.

According to Duke Power copies of this filing were mailed to the City of Rock Hill and the South Carolina Public Service Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,
Secretary.

BILLING CODE 6450-85-M

[Docket No. RP80-124]

El Paso Natural Gas Co.; Tariff Filing

August 1, 1980.

Take notice that on July 23, 1980, El Paso Natural Gas Company ("El Paso") pursuant to Part 154 of the Commission's Regulations Under the Natural Gas Act, tendered for filing Third Revised Sheet No. 141 and First Revised Sheet No. 141-A to special Rate Schedule X-12 contained in its FERC Gas Tariff, Third Revised Volume No. 2.

El Paso states that special Rate Schedule X-12 is comprised of a Gas Exchange Agreement ("Exchange Agreement") dated February 8, 1977, between El Paso and Transwestern Pipleine Company ("Transwestern") providing for the transportation and delivery of natural gas, by the parties on an exchange basis, in certain specified areas of interest in the States of Texas, New Mexico and Oklahoma. Such arrangements were authorized at Docket Nos. CP77-604 (El Paso) and CP77-658 (Transwestern), by order issued February 13, 1978, as amended by orders issued April 17, 1978, and July 24, 1978.

El Paso states that the tendered tariff sheets when accepted for filing and permitted to become effective will amend the Exchange Arrangement by providing for a new Article IV, *Construction of Facilities*, pursuant to a Letter Agreement dated May 30, 1980, between the parties.

El Paso states that inasmuch as the Exchange Agreement comprises special Rate Schedule X-12 to El Paso's Third Revised Volume No. 2 Tariff and, as well, special Rate Schedule X-1 to Transwestern's Original Volume No. 2 Tariff, the concurrent effectiveness of the tendered tariff sheets to El Paso's and Transwestern's said special rate schedules is desirable. El Paso further states that Transwestern will file a tariff tender with the identical revisions and will request an effective date coincident with the effective date requested by El Paso. El Paso has requested that the tariff sheets tendered as well as the aforementioned tariff sheets tendered by Transwestern be made effective after

thirty (30) days following the date of filing.

Any person desiring to be heard or to make any protest with reference to said tariff filing should, on or before Aug. 15, 1980, file with the Federal Energy Regulatory Commission, Washington, D.C., 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations Under the Natural Gas Act (18 CFR 157.10). Protests filed with the Commission will be considered by it in determining the appropriate action to be taken, but will not serve to make any protestants parties to the proceeding. Any person wishing to become a party to a proceeding must file a petition to intervene in accordance with the Commission's Rules. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Acting Secretary.

BILLING CODE 6450-85-M

[Docket No. RP79-12; (Extension)]

El Paso Natural Gas Co.; Motion by El Paso Natural Gas Co. for Leave To Effectuate Stipulation and Agreement Subject to Conditions

August 6, 1980.

Take notice that on July 29, 1980, El Paso Natural Gas Company (EL Paso), pursuant to 18 C.F.R. § 1.12, filed a motion requesting Commission authorization to effectuate a Stipulation and Agreement filed by the company on January 16, 1980, and approved by the Commission on May 30, 1980 in the above-listed docket. The principal purpose of such January 16, 1980, Stipulation and Agreement (Extension Agreement) is the extension of a prior Stipulation and Agreement (Original Agreement) approved by the Commission on July 20, 1979, in the above-listed docket.

El Paso states that principal elements of the Extension Agreement are (i) El Paso has agreed to a rate reduction reflecting (a) a decrease in depreciation rates and (b) acceptance of the Commission Staff's income tax normalization methodology; [1] (ii) El Paso has agreed to make interim refunds and to expand its refund obligation beyond the requirements of the Original Agreement to include certain increased natural gas liquid revenues resulting from decontrol of butane and natural gasoline, which additional revenues will be used principally to minimize future purchased gas cost rate adjustments; (iii) El Paso will be permitted to defer refunding a portion of the amount required by the Original Agreement for a limited period: (iv) El Paso's authority to track gas well royalty and production tax costs will be extended for an additional year through May 31, 1981; and (v) El Paso agreed to a post-period audit respecting cost incurred during the rate-period ending May 31, 1981. The remaining provisions of the Original Agreement (except for certain minor language modifications) are unchanged by the Extension Agreement.

In addition, El Paso observes that, although the Extension Agreement contains significant benefits accruing to the rate-payers, such agreement will not become effective until either (1) the Commission's order approving the Extension Agreement has become final and no longer subject to judicial review, or (2) the unilateral effectuation of such extension by the company pending judicial review. Accordingly, El Paso desires, notwithstanding the possibility of judicial review of the Extension Agreement, to exercise its right to unilaterally effectuate such agreement, but subject to certain conditions.

Specifically, El Paso seeks Commission approval of certain conditions that the company believes will protect it from undue prejudice if the May 30, 1980 Commission order approving the Extension Agreement is reversed on appeal. Therefore, the company requests express agreement and approval of the following specific conditions:

(i) El Paso shall be permitted to retain on file in suspended status the rate filing made by El Paso on December 31, 1979 in Docket No. RP80-63, notwithstanding effectuation of the Extension Agreement;

(ii) Such rate filing may be made effective subject to refund and to any conditions imposed by the Commission's January 30, 1980, suspension order in Docket No. RP80-63, at El Paso's option, at any time during the pendency of judicial review, if any, until the earlier of (a) the date on which the Commission's order approving the Extension Agreement becomes final and no longer subject to judicial review or (b) the effective date of any general, system-wide rate increase filed by El Paso following its effectuation of the Extension Agreement;

(iii) If the Docket No. RP80-63 rates have not been made so effective, El Paso shall withdraw its Docket No. RP80-63 tariff sheets upon the occurence of the earlier of the events or dates described in (ii) (a) or (b), *supra;*

(iv) El Paso shall be permitted to file on or about November 30, 1980, a general, systemwide rate increase to be effective June 1, 1981, notwithstanding the requirements of Section 154.66 of the Commission's Regulations; and

(v) El Paso be granted the authority to effectuate the Extension Agreement, subject to the foregoing conditions, as soon as practicable but, in any event, not later than August 15, 1980.

Any party or staff counsel desiring to object to or answer El Paso's motion should, on or before August 13, 1980, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, an objection pursuant to 18 C.F.R. § 1.12. All objections filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-552]

The Empire District Electric Co.; Proposed Tariff Change

August 4, 1980.

The filing Company submits the following:

Take notice that The Empire District Electric Company on July 28, 1980, tendered for filing proposed changes in its FERC Electric Service Tariff, Volume No. One. The proposed changes would increase revenues from present jurisdictional sales and service to the City of Chetopa, Kansas by $65,654 based on the 12-month period ending February 28, 1978.

The presently effective rates are based on contractual agreements made up to thirteen years ago. Since that time Empire has experienced substantial increase in all elements of its cost, including fuel, labor, interest, taxes and construction to provide additional capacity and meet environmental requirements.

Copies of the filing were served upon the public utility's jurisdictional customers and the Kansas State Corporation Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Acting Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-554]

The Empire District Electric Co.; Proposed Tariff Change

August 4, 1980.

The filing Company submits the following:

Take notice that the Empire District Electric Company (EDE), on July 29, 1980 tendered for filing a proposed Service Schedule L, Peaking Power Service, as a supplement to an Electric Interchange Agreement between EDE and Kansas Gas and Electric Company (KGE).

The proposed Service Schedule L provides for the sale of 30 Mw of peaking capacity and related energy from Empire to KGE for the period beginning July 1, 1980. The capacity charge is cost plus $0.27 per Kw per month. Related energy will be furnished at cost plus 10% with an allowance for incurred losses. The schedule further provides that KGE will purchase no more than 36,000 Mwh during any contract year, 18,000 Mwh during any four consecutive months, and 6,000 Mwh in any one month. No less than 1,800 Mwh may be purchased in any one month.

Copies of the filing were served upon the Missouri Public Service Commission and Kansas Gas and Electric Company.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, DC 20426, in accordance with §§ 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ES80-66]

Gulf States Utilities Co.; Application

August 1, 1980.

Take notice that on July 25, 1980, Gulf States Utilities Company (Applicant) filed an application with the Federal Energy Regulatory Commission seeking an order pursuant to Section 204(a) of the Federal Power Act authorizing the issuance of up to 500,000 Shares of New Preferred Stock. Applicant is incorporated under the laws of Texas with its principal business office at Beaumont, Texas, and is engaged in the electric utility business in portions of Louisiana and Texas. Natural gas is purchased at wholesale and distributed at retail in the City of Baton Rouge, Louisiana and vicinity.

The Applicant proposes to sell the New Preferred Stock on or about September 16, 1980, by competitive bidding in accordance with the Commission's Regulations under the Federal Power Act. The Applicant proposes to invite bids on or about September 8, 1980, (unless postponed), for the purchase of the New Preferred Stock. The proceeds from the sale of the New Preferred Stock will be used to pay off part of the Company's outstanding short-term debt previously authorized by the Commission and the balance, if any, to provide funds for other general corporate purposes including construction expenditures.

Any person desiring to be heard or to make any protest with reference to said application should on or before August 14, 1980, file with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and procedure (18 CFR 1.8 and 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Persons wishing to become parties to a proceeding or to participate as a party in any hearing therein must file petitions to intervene in accordance with the Commission's rules. The application is on file with the Commission and available for public inspection.

BILLING CODE 6450-85-M

[Project No. 2935]

Graniteville Co.; Application for Short-Form License (Minor)

August 5, 1980.

Take notice that Graniteville Company (Applicant) filed on June 16, 1979, an application for license [pursuant to the Federal Power Act, 16 U.S.C. §§ 791(a)-825(r)] for continued operation of a water power project to be known as Enterprise Project No. 2935. The project would be located on the Augusta Canal of the Savannah River in the City of Augusta, Richmond County, Georgia. Correspondence with the Applicant should be directed to: Mr. G. S. Pardue, General Manager, Plant Services, Graniteville Company, Graniteville, South Carolina 29829.

Project Description.—The project consists of: (1) intake works (gates and trash racks); (2) two 300-foot long, 8-foot diameter penstocks; (3) a reinforced concrete and masonry textile mill building housing two 600 kW generating units; and (4) appurtenant facilities. The average annual generation is 5,100 MWh.

Purpose of project.—To supplement power purchased from others and to lower the peak electrical demand of the Applicant's textile mill.

Agency Comments.—Federal, State, and local agencies that receive this notice through direct mailing from the Commission are requested to provide comments pursuant to the Federal Power Act, the Fish and Wildlife Coordination Act, the Endangered Species Act, the National Historic Preservation Act, the Historical and Archeological Preservation Act, the National Environmental Policy Act, Pub. L. No. 88-29, and other applicable statutes. No other formal requests for comments will be made.

Comments should be confined to substantive issues relevant to the issuance of a license. A copy of the

[1] Under Article XVII of the Original Agreement, the issue of El Paso's use of comprehensive interperiod income tax allocation (normalization) instead of full flow-through of actual tax benefits for certain transactions was reserved for expedited hearing. However, should such hearing result in a decision requiring the company to use normalization, then Article XIX adopts the Commission's South Georgia normalization methodology.

application may be obtained directly from the Applicant. If an agency does not file comments within the time set below, it will be presumed to have no comments.

Competing Applications.—Anyone desiring to file a competing application must submit to the Commission, on or before September 12, 1980, either the competing application itself or a notice of intent to file a competing application. Submission of a timely notice of intent allows an interested person to file the competing application no later than January 10, 1981. A notice of intent must conform with the requirements of 18 CFR 4.33 (b) and (c), *as amended* 44 FR 61328, (October 25, 1979). A competing application must conform with the requirements of 18 CFR 4.33 (a) and (d), *as amended*, 44 FR 61328, (October 25, 1979).

Comments, Protests, or Petitions To Intervene.—Anyone desiring to be heard or to make any protest about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR, 1.8 or 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in § 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's Rules. Any comments, protest, or petition to intervene must be filed on or before September 12, 1980. The Commission's address is: 825 North Capitol Street, NE., Washington, D.C. 20426. The application is on file with the Commission and is available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-560]

Idaho Power Co.; Filing

August 4, 1980

The filing Company submits the following:

Take notice that on July 29, 1980, the Idaho Power Company tendered for filing in compliance with the Federal Energy Regulatory Commission's Order of October 7, 1978, a summary of sales made under the Company's 1st Revised FERC Electric Tariff, Volume No. 1 (Supersedes Original Volume No. 1) during June 1980, along with cost justification for the rate charged.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24287 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-575]

Illinois Power Co.; Filing

August 6, 1980.

The filing company submits the following:

Take notice that Illinois Power Company ("the Company") on July 31, 1980 tendered for filing proposed changes in the following rate schedules:

Rate Schedule FPC No. 52, applicable to Clinton County Electric Cooperative, Inc.
Rate Schedule FPC No. 53, applicable to Corn Belt Electric Cooperative, Inc.
Rate Schedule FPC No. 54, applicable to Farmers Mutual Electric Co.
Rate Schedule FPC No. 55, applicable to Illinois Valley Electric Cooperative, Inc.
Rate Schedule FPC No. 56, applicable to McDonough Power Cooperative.
Rate Schedule FPC No. 57, applicable to Monroe County Electric Cooperative, Inc.
Rate Schedule FPC No. 58, applicable to Southwestrn Electric Cooperative, Inc.
Rate Schedule FPC No. 59, applicable to Tri-County Electric Cooperative, Inc.
Rate Schedule FPC No. 60, applicable to Western Illinois Power Cooperative, Inc.

The proposed changes would increase revenues from juridictional sales and service by approximately $1,763,939 based on the twelve month period ended December 31, 1979.

The Company states that with the present rates it earned a rate of return of only 10.40 percent on electric sales to these customers during the twelve months ended December 31, 1979. Continuing increases in cost of capital, labor and materials and supplies are expected to further reduce the Company's earnings. The Company states that the electric rate changes made by this filing are necessary to more fully provide compensation for these increasing costs. The Company proposes the increased rates become effective on September 1, 1980 as agreed to by the Company and each of its nine electric cooperative customers.

Copies of the filing were served upon the Company's electric cooperative jurisdictional customers, the Association of Illinois Electric Cooperatives, and the Illinois Commerce Commission, Springfield, Illinois.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E. Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 27, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceedings. Copies of this application are on file with the Commission and are available for public inspection.

Secretary.

[FR Doc. 80-24286 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-568]

Kanawha Valley Power Co.; Proposed Changes In Rates and Charges

August 6, 1980.

The filing company submits the following:

Take notice that Kanawha Valley Power Company (Kanawha) on July 31, 1980, tendered for filing modifications to its 1935 and 1937 Agreements with Appalachian Power Company (Appalachian) providing for the supply of power and energy from Kanawha's Marmet and London (Project No. 1175) and Winfield (Project No. 1290) hydro-electric plants, respectively, to be effective October 1, 1980.

The modifications would increase annual revenues to Kanawha for sales to Appalachian by $574,137 based on the 12-month period ending September 30, 1980.

The proposed changes are required due to substantial increases in the cost of providing service under the 1935 and 1937 Agreements since the last rate modification in 1952. Kanawha states that its calendar 1979 operations for sales of power and energy to Appalachian resulted in a net loss of $131,830. The rates under the proposed modification are designed to provide Kanawha with the opportunity to earn a 11.18% overall return. Both Kanawha and Appalachian are affiliates of the American Electric Power System.

Kanawha states that a copy of the filing has been provided to the West Virginia Public Service Commission, the State Corporation Commission of Virginia and Appalachian Power Company.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Project No. 3116]

Merced Irrigation District; Application for Exemption for Small Conduit Hydroelectric Facility

August 6, 1980.

Take notice that on July 7, 1980, Merced Irrigation District (District) filed an application under Section 30 of the Federal Power Act (Act) [16 U.S.C. Section 823(a)], for exemption of a proposed hydroelectric project from requirements of Part I of the Act. The proposed Fairfield Power Plant (FERC Project No. 3116) would be located on a proposed 600-foot long channel connecting the District's existing LeGrand and Fairfield Canals, approximately ¾ mile southeast of Lake Yosemite, in Merced County, California. Water is diverted into the District's Main Canal (which flows into the LeGrand Canal) from the Merced River at Snelling Diversion Dam, approximately 5½ miles northeast of the proposed project. Correspondence with the Applicant should be directed to Mr. Jay Anderson, Manager-Secretary, Merced Irrigation District, P.O. Box 2288, Merced, California 95340.

Purpose of Project.—Project energy would be sold to a nearby power utility, the Turlock Irrigation District (TID), for use within the TID's electrical service area.

Estimated Cost.—The cost of the project is estimated by the Applicant to be $2,546,000.

Project Description.—The proposed project would include a concrete powerhouse containing a single generating unit with a rated capacity of 900 kW and a substation adjacent to the powerhouse housing a 5/12-kV transformer. The powerplant would utilize an effective head of 30 feet, would be remotely monitored and controlled from the TID's Control Center in Turlock, California, and would produce approximately 3.6 million kilowatt-hours of energy per year.

Agency Comments.—Federal, State, and local agencies that receive this notice through direct mailing from the Commission are invited to submit comments on the described application for preliminary permit. (A copy of the application may be obtained directly from the Applicant.) Comments should be confined to substantive issues relevant to the issuance of a permit and consistent with the propose of a permit as described in this notice. No other formal request for comments will be made. If an agency does not file comments within the time set below, it will be presumed to have no comments.

Comments, Protests, or Petitions To Intervene.—Anyone desiring to be heard or to make any protest about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR 1.8 or 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in § 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's Rules. Any comments, protests, or petition to intervene must be filed on or before September 15, 1980. The Commission's address is: 825 North Captiol Street, NE., Washington, D.C. 20426. The application is on file with the Commission and is available for public inspection.

August 6, 1980.

Take notice that on July 7, 1980, Merced Irrigation District (District) filed an application under Section 30 of the Federal Power Act (Act) [16 USC Section 823(a)], for exemption of a proposed hydroelectric project from requirements of Part I of the Act. The proposed Canal Creek Power Plant

(FERC Project No. 3114) would be located on a proposed 450-foot long channel connecting the District's existing Main and Creek Canals in Merced County, approximately 10½ miles north of the City of Merced, California. Water is diverted into the Main Canal from the Merced River at Snelling Diversion Dam, approximately 4½ miles northeast of the proposed project. Correspondence with the Applicant should be directed to Mr. Jay Anderson, Manager-Secretary, Merced Irrigation District, P.O. Box 2288, Merced, California 95340.

Purpose of Project.—Project energy would be sold to a nearby power utility, the Turlock Irrigation District (TID), for use within the TID's electric service area.

Estimated Cost.—The cost of the project is estimated by the Applicant to be $2,253,000.

Project Description.—The proposed project would include a concrete powerhouse containing a single generating unit with a rated capacity of 900 kW and a substation adjacent to the powerhouse housing a 5/12-kV transformer. The power plant would utilize an effective head of 30 feet, would be remotely monitored and controlled from the TID's Control Center in Turlock, California, and would produce approximately 3.6 million kilowatt-hours of energy per year.

Agency Comments.—The U.S. Fish and Wildlife Service and the California Department of Fish and Game are requested, pursuant to Section 30 of the Federal Power Act, to submit appropriate terms and conditions to protect any fish and wildlife resources. Other Federal, State, and local agencies that receive this notice through direct mailing from the Commission are requested to provide any comments they may have in accordance with their duties and responsibilities. No other formal requests for comments will be made. Comments should be confined to substantive issues relevant to the granting of an exempiton. If an agency does not file comments within the time set below, it will be presumed to have no comments.

Comments, Protests, or Petitions to Intervene.—Anyone desiring to be heard or to make any protests about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR, 1.8 or 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in Section 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's Rules. Any comments, protest, or petition to intervene must be filed on or before September 15, 1980. The Commission's address is: 825 North Capitol Street, N.E., Washington, D.C. 20426. The application is on file with the Commission and is available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Project No. 3115]

Merced Irrigation District; Application for Exemption for Small Conduit Hydroelectric Facility

August 6, 1980.

Take notice that on July 7, 1980, Merced Irrigation District (District) filed an application under Section 30 of the Federal Power Act (Act) [16 USC Section 823(a)], for exemption of a proposed hydroelectric project from requirements of Part I of the Act. The proposed Escaladian Power Plant (FERC Project No. 3115) would be located on the District's Escaladian Canal approximately 10 miles northeast of the City of Merced, in Merced County, California. Water is diverted into the Main Canal (which flows into the Escaladian Canal) from the Merced River at Snelling Diversion Dam, approximately 5 miles northeast of the proposed project. Correspondence with the Applicant should be directed to Mr. Jay Anderson, Manager-Secretary, Merced Irrigation District, P.O. Box 2288, Merced, California 95340.

Purpose of Project.—Project energy would be sold to a nearby power utility, the Turlock Irrigation District (TID), for use within the TID's electric service area.

Estimated Cost.—The cost of the project is estimated by the Applicant to be $1,438,000.

Project Description.—The proposed project would include a concrete powerhouse containing a single generating unit with a rated capacity of 300 kW and a substation adjacent to the powerhouse housing a 5/12-kV transformer. The power plant would utilize an effective head of 15 feet, would be remotely monitored and controlled from the TID's Control Center in Turlock, California, and would produce approximately 1.2 million kilowatt-hours of energy per year.

Agency Comments.—The U.S. Fish and Wildlife Service and the California Department of Fish and Game are requested, pursuant to Section 30 of the Federal Power Act, to submit appropriate terms and conditions to protect any fish and wildlife resources. Other Federal, State, and local agencies that receive this notice through direct mailing from the Commission are requested to provide any comments they may have in accordance with their duties and responsibilities. No other formal requests for comments will be made. Comments should be confined to substantive issues relevant to the granting of an exemption. If an agency does not file comments within the time set below, it will be presumed to have no comments.

Comments, Protests, or Petitions to Intervene.—Anyone desiring to be heard or to make any protests about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR 1.8 and 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in Section 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's rules. Any comments, protest, or petition to intervene must be filed on or before September 15, 1980. The Commission's address is: 825 North Capitol Street, N.E., Washington, D.C. 20426. The application is on file with the Commission and available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24329 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. RP79-39]

Michigan Wisconsin Pipe Line Co.; Tariff and Service Agreement Changes Filed Pursuant to Order Approving Stipulation and Agreement

August 6, 1980.

On July 29, 1980, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) tendered for filing revised tariff sheets to its FERC Gas Tariff to be effective July 17, 1980, as follows:

Original Volume No. 1

Eighth Revised Sheet No. 7.

First Revised Volume No. 2

Substitute Ninth Revised Sheet Nos. 92, 110, 129 and 130.

Substitute Eighth Revised Sheet Nos. 141, 142 and 171.

Substitute Sixth Revised Sheet Nos. 214 and 215.

Substitute Fifth Revised Sheet Nos. 231, 232, 297, 315 and 339.

Substitute Fourth Revised Sheet Nos. 420 and 421.

Substitute First Revised Sheet Nos. 486, 508, 519, 531, 553, 563, 575, 585, 596, 597, 611, 612, 618, 619, 680, 681, 698 and 699.

Substitute Second Revised Sheet No. 656.

First Revised Sheet Nos. 856, 857 and 865.

Additional, Michigan Wisconsin tendered for filing a revised service agreement with Michigan Consolidated Gas Company to be effective September 1, 1979.

Michigan Wisconsin states this filing is being made in accordance with the Commission's order dated July 17, 1980, approving the Stipulation and Agreement at Docket No. RP79-39. Michigan Wisconsin further states that copies of the filing have been mailed to its customers and all interested parties.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20406, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 22, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24290 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. CP66-110, et al. (CP66-121)]

Midwestern Gas Transmission Co.; Petition To Amend

August 6, 1980.

Take notice that on July 23, 1980, Midwestern Gas Transmission Company (Petitioner), P.O. Box 2511, Houston, Texas 77001, filed in Docket No. CP66-110, *et al.* a petition to amend the order issued June 20, 1967,[1] as previously amended, in the instant docket pursuant to Section 3 of the Natural Gas Act so as to authorize Petitioner's importation of presently authorized quantities of gas purchased from TransCanada PipeLines Limited (TransCanada) for an extended term until and including October 31, 1981, with authorization for an additional point of importation at Niagara Falls, New York, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Petitioner states that the order issued June 20, 1967, as amended, authorized it to import during the period ending October 31, 1980, an additional total quantity of 14,000,000 Mcf of natural gas purchased from TransCanada. Pursuant to an amending agreement between Petitioner and TransCanada dated June 16, 1980, Petitioner requests authorization to extend the term of importation until and including October 31, 1981, while utilizing only presently authorized total quantities and existing facilities.

Petitioner states that one point of importation would be near where Petitioner's pipeline system interconnects with TransCanada's on the United States-Canadian boundary near Emerson, Manitoba. It is stated that there would be a second point of delivery by TransCanada to Petitioner at the existing interconnection of the facilities of TransCanada and Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), at Niagara Falls, New York (Niagara Interconnection). Petitioner asserts that the additional point of delivery at the niagara Interconnection would provide Petitioner with the flexibility to make direct sales to Tennessee when Tennessee's customers need such volumes. It is further stated that the second point of importation would be limited to a maximum import quantity of 75,000 Mcf per day which would be part of and not in addition to the total daily import quantity of 350,000 Mcf per day and that all quantities imported at the Niagara Interconnection would be resold to Tennessee.

Petitioner states that TransCanada has advised Petitioner that it is currently seeking authorization from the Canadian National Energy Board to extend its exportation of the subject quantities of gas until October 31, 1981.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before August 25, 1980, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24291 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[1] This proceeding was commenced before the FPC. By joint regulation of October 1, 1977 (10 CFR 1000.1), it was transferred to the Commission.

[Docket No. ER80-576]

Mississippi Power & Light Co.; Filing

August 6, 1980.

The filing Company submits the following:

Take notice that on August 1, 1980, Mississippi Power & Light Company (Mississippi) tendered for filing an unexecuted Agreement for Purchase of Power. This Agreement provides for the sale of electric energy by Mississippi to Delta Electric Power Association (Delta), to be delivered to a new delivery point near Shelby, Mississippi.

Mississippi states that its Rate Schedule REA-15, incorporated in the Agreement was heretofore filed with the Commission on August 29, 1977, as Mississippi's service rate schedule applicable to all existing and new points of delivery.

Mississippi requests that the Commission waive applicable notice requirements and permit the Agreement to become effective on June 15, 1980, the date service was initially rendered.

Mississippi states that a copy of this filing has been mailed to Delta.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capital Street, N.E., Washington,

V 45 A G 12 80 UMI

D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 27, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24232 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-546]

Monongahela Power Co., et al.; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that Allegheny Power Service Corporation (APSC) on July 23, 1980, tendered for filing on behalf of Monongahela Power Company (Monongahela), The Potomac Edison Company (Potomac), and West Penn Power Company (West Penn), the electric utilities which make up the integrated Allegheny Power System, Amendment No. 8 dated July 21, 1980 to the Operating Agreement dated January 1, 1973 between Monongahela, Potomac, and West Penn and Virginia Electric Power Company (Vepco) designated Monongahela Rate Schedule FPC No. 32, Potomac Rate Schedule FPC No. 33, West Penn Rate Schedule FPC No. 31, and Vepco Schedule FPC No. 99.

Amendment No. 8: (1) provides for increases in the demand charges for Short Term power from $0.70 to $0.85 per kilowatt-week and Short Term power obtained by the supplying party from another system from $0.24 per kilowatt-week; (2) provides for increases in the demand charges for Limited Term power from $3.75 to $4.50 per kilowatt-month and Limited Term power obtained by the supplying party from another system from 0.75 to $1.00 per kilowatt-month; and (3) places a $0.002 per kilowatt-hour cap ($0.001 when coming from a third party as required by the Commission in Rule 35.23(f)) on the adders to the out-of-pocket costs of providing energy sold under the Short Term and Limited Term Schedules.

APSC requests waiver of the Commisison's notice requirements to allow these increases to become effective August 1, 1979. APSC states that since Short Term Power and Energy transactions and Limited Term Power and Energy transactions are scheduled from time to time as load and capacity conditions on the systems of the parties dictate it is impossible to estimate the increases in revenues which would result from Amendment No. 8.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426 in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure. All such petitions or protests should be filed on or before August 22, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not make protestants parties to the proceding. Any person, wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Acting Secretary.

[FR Doc. 80-24331 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-574]

Nantahala Power & Light Co.; Proposed Tariff Change

August 6, 1980.

The filing Company submits the following:

Take notice that Nantahala Power and Light Company (Nantahala) on July 31, 1980, tendered for filing proposed changes in its FERC Electric Rate Schedule PL and a new Optional Rate Schedule PL (COSAC). The proposed changes would increase revenues from jurisdictional sales or service by $24,558, based on the 12 month period ending on December 31, 1979.

The proposed rate changes and rate charges are designed to increase the revenue from Nantahala Power and Light Company's jurisdictional customers sufficiently to improve the quality of the Company's earnings and to raise the rate of return on the investment necessary to serve jurisdictional customers to an acceptable level. Proper reflection of the cost of service in the proposed rate design results in Haywood Electric Membership Corporation and The Town of Highlands receiving a small increase in costs and Western Carolina University receiving a small decrease in costs.

Copies of the filing were served upon Nantahala's jurisdictional customers and on the regulatory commission of the State of North Carolina.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with Section 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 27, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24332 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Project No. 3128]

New Hampshire Water Resources Board; Application for Preliminary Permit

August 5, 1980.

Take notice that the New Hampshire Water Resources Board (The Board) filed on April 1, 1980, an application [pursuant to the Federal Power Act, 16 U.S.C. §§ 791(a)–825(r)] for preliminary permit for a proposed hydroelectric power project to be known as the Lochmere Project, FERC Project No. 3128, that would be located on the Winnipesaukee River and use the existing Lochmere Dam near the Towns of Belmont and Tilton, Belknap County, New Hampshire. The Board revised its application on June 30, 1980. The former owner of the power facilities, Public Service Company of New Hampshire (PSC), discontinued power generation at the project in the late 1960's. Ownership was then transferred to the Board. Correspondence with the Board should be addressed to: Mr. George M. McGee, Sr., New Hampshire Water Resources Baord, 37 Pleasant Street, Concord, New Hampshire 03301.

Purpose of the Project.—Power generated by Project No. 3128 would be sold to PSC.

Proposed Scope and Cost of Studies Under Permit.—The work proposed under this preliminary permit would include preliminary designs, and economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on results of these studies, the Permittee would decide whether to proceed with more detailed studies and the preparation of an application for license to rehabilitate and operate the project. The Board estimates that the work to be performed under this preliminary permit would cost $100,000.

Project Description.—The project would consist essentially of: (1) the existing diversion dam, built in 1910, 223 feet long and 14 feet high; (2) a reservoir 450 yards long when 2-foot high flashboards are installed, having negligible storage capacity; (3) a redeveloped power canal 60 feet long; (4) a new penstock inlet structure; (5) two existing penstocks, approximately 500 feet long; and (6) a redeveloped 25 by 75 foot power station. A study will be made to determine whether retrofitting the existing power station or construction of a new station would be more cost effective. Four turbines having a total rated capacity of about 1,000 kW would be installed in the power station. The median flow of the Winnipesaukee River is about 530 cfs. Estimated average annual output would be 5,600,000 kWh.

Purpose of Preliminary Permit.—A preliminary permit does not authorize construction. A permit, if issued, gives the Permittee, during the term of the permit, the right of priority of application for license while the Permittee undertakes the necessary studies and examinations to determine the engineering, economic, and environmental feasibility of the proposed project, the market for the power, and all other information necessary for inclusion in an application for a license. In this instance, the Applicant seeks a 36-month permit.

Agency Comments.—Federal, State, and local agencies that receive this notice through direct mailing from the Commission are invited to submit comments on the described application for preliminary permit. (A copy of the application may be obtained directly from the Applicant.) Comments should be confined to substantive issues relevant to the issuance of a permit and consistent with the purpose of a permit as described in this notice. No other formal request for comments will be made. If an agency does not file comments within the time set below, it will be presumed to have no comments.

Competing Applications.—This application was filed as a competing application to one filed by the Town of Belmont, New Hampshire on October 10, 1979, as Project No. 2982, under 18 C.F.R. § 4.33 *as amended,* 44 *Fed. Reg.* 61328 (October 25, 1979), and, therefore, no further competing applications or notices of intent to file a competing application will be accepted for filing.

Comments, Protests, or Petitions to Intervene.—Anyone desiring to be heard or to make any protests about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure 18 CFR, § 1.8 or § 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in § 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's rules. Any comments, protest, or petition to intervene must be filed on or before September 12, 1980. The Commission's address is: 825 North Capitol Street, N.E., Washington, D.C. 20426. The application is on file with the Commission and available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24333 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket Nos. G-280, et al.]

Northern Natural Gas Co., Division of InterNorth, Inc.; Redesignation

August 4, 1980.

By a Certificate of Amendment to a Certificate of Incorporation, dated March 28, 1980, filed with the Commission on April 25, 1980, Northern Natural Gas Company has changed its corporate name to InterNorth, Inc. and its natural gas operations are to be conducted under the name of Northern Natural Gas Company, Division of InterNorth, Inc.

Accordingly, the authorizations issued by this Commission and by the Federal Power Commission,* the jurisdictional applications pending before the Commission,* the FERC Gas Tariff on file, and any other records or proceedings relating to Northern are redesignated as those of Northern Natural Gas Company, Division of InterNorth, Inc., in lieu of Northern Natural Gas Company.

* Set forth in Appendix.

This action is taken pursuant to 18 CFR 375.302(s) of the Commission's rules.

Lois D. Cashell,

Acting Secretary.

[Docket No. CP80-148]

Northern Natural Gas Co., Division of InterNorth, Inc.; Petition To Amend

August 6, 1980.

Take notice that on July 8, 1980,[1] Northern Natural Gas Company, Division of InterNorth, Inc. (Petitioner), 2223 Dodge Street, Omaha, Nebraska 68102, filed in Docket No. CP80-148 a petition to amend the order issued February 14, 1980, in the instant docket pursuant to Section 7(c) of the Natural Gas Act as implemented by Section 157.7(b) of the Commission's Regulations (18 CFR 157.7(b)) by authorizing an increase in its budget authorization total cost limitation for the construction of certain gas facilities, all as more fully set forth in the petition to amend which is on file with the Commission and open to public inspection.

Petitioner states that the original $20,000,000 annual maximum limitation was reduced to $17,000,000 for 1980 in accordance with Order No. 56. It is further stated that Petitioner has to date scheduled construction projects which exhaust the total authorized limitation and that Petitioner can no longer compete for new gas supplies during the balance of the year in cases where a prompt connection is an essential part of negotiations. Petitioner maintains that unless its budget authorization is increased to $22,000,000 it would be at a disadvantage in acquiring new gas supplies during the remainder of 1980 and in providing new transportation service for other interstate pipelines.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before August 25, 1980, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10).

All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24334 Filed 8-11-80; 8:45 am]
BILLING CODE 6450-85-M

[1] The application was initially tendered for filing on July 8, 1980; however, the fee required by Section 159.1 of the Regulations under the Natural Gas Act (18 CFR 159.1) was not paid until July 10, 1980; thus the filing was not completed until the latter date.

[Docket No. ER80-577]

Pacific Gas & Electric Co.; Filing

August 6, 1980.

The filing Company submits the following:

Take notice that on August 1, 1980, Pacific Gas and Electric Company (PGandE) tendered for filing a contract dated May 19, 1980, entitled "Agreement for Sale of Electric Capacity and Energy by Pacific Gas and Electric Company to City of Redding" (Agreement). The Agreement provides for supplemental power deliveries from PGandE to City of Redding (Redding) in the event that Redding's current supplier, United States of America, Department of Energy (Department), is unable to satisfy Redding's full electric power requirements. Since PGandE has no direct electrical connection to Redding, the power is to be delivered to Department's interconnection point with PGandE's system near Tracy, California. The proposed effective date of the contract is September 21, 1980.

Copies of the filing were served upon City of Redding and the California Public Utilities Commission.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 29, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-558]

Pennsylvania-New Jersey-Maryland Interconnection; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that on July 8, 1980, the Pennsylvania-New Jersey-Maryland Interconnection (PJM) submitted for filing Schedule 8.03 to the NYPP–PJM Interconnection Agreement (Agreement) dated April 9, 1974. All of the parties to the Agreement have approved this filing, and have received copies thereof.

PJM further submits that Schedule 8.02 of the Agreement has expired by its own terms on December 31, 1978. Accordingly, PJM requests that Docket No. ER78-107 be terminated.

PJM requests that Section 35.13(b) of the Commission's Rules be waived to the extent that PJM has not complied with them. PJM further requests waiver of the 60-day notice requirements and an effective date of August 1, 1980.

Copies of this filing have been sent to the Regulatory Commissions of Pennsylvania, New Jersey, Maryland, Delaware, Virginia, New York, and the District of Columbia.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-557]

Philadelphia Electric Co.; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that Philadelphia Electric Company, on July 29, 1980 tendered for filing proposed changes in its FERC Electric Service Tariff, FERC No. 36. The proposed changes would increase revenues from jurisdictional sales and service by $1,845,515, based on the 12-month period ending December 31, 1980.

Copies of the filing were served upon the public utility's jurisdictional customers (other parties the public utility served, inter alia, state public service commissions, other government agencies, etc.).

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, D.C. 20426, in accordance with 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

[Docket No. ER80-558]

Philadelphia Electric Co.; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that Philadelphia Electric Company, on July 29, 1980 tendered for filing proposed changes in its FERC Electric Service Tariff, applicable for service to the Borough of Lansdale. The proposed changes would increase revenues from jurisdictional sales and service by $630,631, based on the 12-month period ending December 31, 1980.

Copies of the filing were served upon the Borough of Lansdale and the Pennsylvania Public Utility Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE, Washington, D.C. 20426, in accordance with 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-559]

Public Service Co. of Colorado; Filing

August 6, 1980.

The filing Company submits the following:

Take notice that Public Service Company of Colorado (PSCo) on August 1, 1980, tendered for filing an Energy Sales and Banking Agreement (Agreement) with Platte River Power Authority (Platte River).

PSCo states that the Agreement provides, *inter alia*, for exchanges of capacity and energy between the electric systems of PSCo and Platte River either directly or through the systems of other parties. The Agreement provides for establishing terms and conditions of such economy energy exchanges and banking agreement accounts.

PSCo states that copies of the filing were served upon all parties and affected state commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Regulations (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 29, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Public Service Company of Colorado; Proposed Tariff Change

August 6, 1980.

The filing Company submits the following:

Take notice that Public Service Company of Colorado (PSCo) on July 30, 1980, tendered for filing proposed changes in its FPC Electric Service Tariff. PSCo states that the proposed changes are the addition of new members to the Inland Power Pool.

The additional members to the Inland Power Pool are:

1. City of Colorado Springs
2. Basin Electric Cooperative
3. Tucson Electric Power Company
4. Public Service Company of New Mexico
5. Wyoming Municipal Power Agency

PSCo states that copies of the filing were served upon all parties to the Inland Power Pool Agreement and affected state commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such protests or petitions should be filed on or before August 27, 1980. Protests will be considered by the Commisison in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-570]

Public Service Co. of New Hampshire; Amendment to Power Contract

August 6, 1980.

The filing company submits the following:

Take notice that on July 31, 1980, Public Service Company of New Hampshire ("Public Service") tendered for filing amendments to paragraph C of Article IV of the power and transmission contract, dated June 30, 1959, as revised June 2, 1975, between Public Service and Central Maine Power Company ("Central Maine"). According to Public Service, these amendments reflect revisions being filed on July 31, 1980 by Yankee Atomic Electric Company ("Yankee") to Section 6 of the power contract between Yankee and its owner companies other than Central Maine providing for sale of the net output of Yankee's nuclear power plant at Rowe, Massachusetts.

According to Public Service, since Central Maine which owns 9.5 percent of Yankee's stock, is not located in a state adjoining Massachusetts it is not entitled to purchase electric energy directly from Yankee. Under the present contract between Public Service and Central Maine, Public Service purchases 16.5 percent of Yankee's net output and passes on 9.5 percent to Central Maine under payment provisions which are the same as those contained in the presently effective power contract between yankee and its owner companies other than Central Maine. Public Service states that the arrangement results in passing 9.5 percent of Yankee's cost of service on to Central Maine with Public Service acting as intermediary.

According to Public Service, the filed amendments incorporate the revisions that are necessary to reflect the revisions to Section 6 of the Yankee power contract filed on July 31, 1980 by Yankee.

Public Service requests that the amendments be permitted to become effective at the same time as Yankee's filing made on July 31, 1980. Yankee has requested an effective date of October 1, 1980.

Public Service states that the documents submitted on July 31, 1980 by Yankee include all the information required by the Commission's regulations to support the present filing, including revenue comparisons to determine the increase in charges to Central Maine. Public Service asks that such data be incorporated by reference as part of its filing. According to Public Service, the increase in charges to Central Maine for the 12 months ended September 30, 1980 would be $1,355,650. Copies of the filing were served on Central Maine and on the appropriate state regulatory authorities.

Any persons desiring to be heard or to make any protest with reference to said filing should, on or before August 25, 1980 file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, petitions to intervene or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Persons wishing to participate as a party in any hearing therein must file petitions to intervene in accordance with the Commission's Rules. The documents filed by Public Service Company of New Hampshire are on file with the Commission and available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-555]

Public Service Company of New Mexico; Filing

August 6, 1980

The filing Company submits the following:

Take notice that on July 23, 1980, Public Service Company of New Mexico (PSNM) submitted for filing the Inland Power Pool Agreement and the current Operations Agreement for the Inland Power Pool.

PSNM further submits that it is filing said Agreement because it has recently become a member of the Inland Power Pool.

A copy of this filing has been sent to the New Mexico Public Service Commission.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Section 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any persons wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Project No. 3113]

South San Joaquin Irrigation District; Application for Exemption for Small Conduit Hydroelectric Facility

August 6, 1980

Take notice that on July 7, 1980, South San Joaquin Irrigation District (District) filed an application under Section 30 of the Federal Power Act (ACT) [16 USC Section 823(a)], for exemption of a proposed hydroelectric project from requirements of Part I of the Act. The proposed Frankenheimer Power Plant (FERC Project No. 3113) would be located on the District's Main Canal approximately 1½ miles upstream of the Woodward Reservoir in Stanislaus County, California. Water is diverted into the main Canal from the Stanislaus River at Goodwin Diversion Dam, approximately 3 miles east of the proposed project. Correspondence with the Applicant should be directed to Mr. Noel Negley, Manager—Chief Engineer, South San Joaquin Irrigation District, 11011 East Highway, Manteca, California 95336.

Purpose of Project.—Project energy would be sold to a nearby power utility, the Turlock Irrigation District (TID), for use within the TID's electric service area.

Estimated Cost.—The cost of the project is estimated by the Applicant to be $8,175,000.

Project Description.—Applicant proposes to relocate approximately 10,000 feet of the existing canal to an alignment approximately 1,000 feet northernly of the present location, creating a head of 78 feet, and construct the proposed project that would consist of: (a) a concrete powerhouse containing a single generating unit with a rated capacity of 4,700 kW; and (b) a substation adjacent to the powerhouse housing a 5/17-kV transformer. The power plant would be remotely monitored and controlled from the TID's Control Center in Turlock, California and would produce approximately 18.7 million kilowatt-hours of energy per year.

Agency Comments.—The U.S. Fish and Wildlife Service and the California Department of Fish and Game are requested, pursuant to Section 30 of the Federal Power Act, to submit appropriate terms and conditions to protect any fish and wildlife resources. Other Federal, State, and local agencies that receive this notice through direct mailing from the Commission are requested to provide any comments they may have in accordance with their duties and responsibilities. No other formal requests for comments will be made. Comments should be confined to substantive issues relevant to the granting of an exemption. If an agency does not file comments within the time set below, it will be presumed to have no comments.

Comments, Protests, or Petitions To Intervene.—Anyone desiring to be heard or to make any protests about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR 1.8 or 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in Section 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests for other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's Rules. Any comments, protest, or petition to intervene must be filed on or before September 15, 1980. The Commission's address is: 825 North Capitol Street, N.E., Washington, D.C. 20426. The application is on file with the Commission and is available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24315 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-573]

Southwestern Public Service Co.; Proposed Tariff Change

August 6, 1980.

The filing Company submits the following:

Take notice that Southwestern Public Service Company (Southwestern), on July 31, 1980, tendered for filing proposed changes in its FERC Electric Service Tariffs as follows:

Rate Schedule FPC No. 74, Supplement No. 6, applicable to full requirement customer, Cochran Power and Light Company at Morton, Texas and at Whiteface, Texas.
Rate Schedule FPC No. 75, Supplement No. 6, applicable to full requirement customer, Community Public Service Company, Fort Worth, Texas, for service at Spearman, Texas and at Perryton, Texas.
Rate Schedule FERC No. 80, Supplement No. 4, applicable to partial requirement customer, City of Canadian, Texas.
Rate Schedule FERC No. 81, Supplement No. 2 to Supplement No. 1, applicable to partial requirement customer, City of Brownfield, Texas.
Rate Schedule FERC No. 82, Supplement No. 6 applicable to partial requirement customer, New Mexico Electric Service Company, Hobbs, New Mexico, and to Lea County Electric Cooperative, Inc., Lovington, New Mexico, jointly served as NML.
Rate Schedule FERC No. 83, Section 2 of Supplement No. 1, applicable to partial requirement customer, City of Floydada, Texas.

The proposed changes would increase revenues from jurisdictional sales and service by $647,443 for the full requirement customers and by $1,159,895 for the partial requirement customers based on the 12 month period ending August 31, 1981.

The reasons for the proposed increases in base rates are as follows: (1) in building coal fired generation plants to lower the overall cost of electricity, Southwestern has incurred increased capital costs, and (2) Southwestern has experienced increases in labor, material and other operating costs since the effective dates of the existing rate schedules.

Southwestern requests waiver of suspension of the proposed rate changes in recognition of its large capital investment incurred to replace gas-fired generation with coal-fired generation, allowing the rates to become effective, subject to refund, on October 1, 1980.

Copies of the filing were served on the affected customers, the Public Utility Commission of Texas and the Public Service Commission of New Mexico.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions and protests should be filed on or before August 27, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24316 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-565]

Southern Indiana Gas & Electric Co.; Proposed Tariff Change

August 6, 1980

The filing Company submits the following:

Take notice that Southern Indiana Gas and Electric Company (Southern Indiana) on July 31, 1980, tendered for filing, proposed changes in its FERC Electric Service Schedules:

(a) City of Tell City, Indiana—FERC Schedule No. 37, as supplemented.
(b) City of Huntingburg, Indiana—FERC Schedule No. 35, as supplemented.
(c) City of Boonville, Indiana—FERC Schedule No. 34, as supplemented.
(d) Town of Ferdinand, Indiana—FERC Schedule No. 36, as supplemented.

The proposed changes would increase revenues from juridictional sales and service by $987,694 based on the twelve (12) months period ending April 30, 1980.

The proposed schedules require a written contract between each wholesale customer and Southern Indiana cancelable only upon five (5) years notice and provide for a unilateral rate change application in the form authorized by FERC Order No. 541-A. Southern Indiana's existing wholesale electric service agreements provide for a

825 North Capital Street, N.E.,

become a party must file a petition to

2:00 p.m., on August 11, 1980, at the

unilateral change in rates.

The proposed schedules also contain a fuel adjustment clause, revised in accordance with FERC Order No. 517. Southern Indiana has previously filed such a revised clause with the Federal Power Commission on March 1, 1976.

Southern Indiana states that the proposed changes are necessary in order to meet the increased demands for Southern Indiana's jurisdictional and non-jurisdictional electric utility service and to permit Southern Indiana to enlarge and extend its generation and transmission facilities requiring the expenditure and investment of substantial sums of money in plant, properties and equipment. The concurrence of rising costs in every category including fuel, labor, taxes, supplies and materials and the substantially increased cost of procuring required construction funds is reducing Southern Indiana's income from its jurisdictional electric utility business to a level substantially below that which is essential for the rendition of adequate service and provide a reasonable return to Southern Indiana.

Copies of Southern Indiana's filings have been served upon all of Southern Indiana's jurisdictional all requirements customers to-wit:

1. City of Tell City, Indiana;
2. City of Huntingburg, Indiana;
3. City of Boonville, Indiana;
4. Town of Ferdinand, Indiana;

and upon the Public Service Commission of Indiana, Attn: Max W. Tucker, Secretary.

Any person desiring to be heard or to protest Southern Indiana's application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 27, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb

Secretary.

[FR Doc. 80-24317 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket Nos. TA80-2-7 and (PGA80-3)]

Southern Natural Gas Co.; Revision to PGA Rate Adjustment

August 1, 1980.

Take notice that on July 25, 1980, Southern Natural Gas Company tendered for filing Substitute Forty-Second Revised Sheet No. 4A to Sixth Revised Volume No. 1 of its FERC Gas Tariff to be effective on July 1, 1980.

Southern states that the purpose of the revised tariff sheets is to revise its July 1, 1980, PGA rate adjustment to reflect the price which it was authorized to pay Border Gas, Inc. on that date consistent with the Commission's June 30, 1980 letter order in this proceeding.

Southern states that copies of the filing have been mailed to all of its customers and affected state regulatory commissions.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, and 1.10). All such petitions or protests should be filed on or before August 15, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Acting Secretary.

[FR Doc. 80-24318 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. ER80-571]

The Toledo Edison Co.; Proposed Tariff Change

August 6, 1980.

The filing company submits the following:

Take notice that the Toledo Edison Company, on July 31, 1980, tendered for filing proposed changes in its FPC Electric Service Tariff, Original Volume No. 1 applicable to sales to Customers for Resale. The proposed changes would increase revenues from jurisdictional sales and service by $6,216,436 based on the twelve (12) month period ending December 31, 1980.

Toledo Edison states that in addition to an increase in rates, it proposes to combine the existing Municipal Resale Service Rate—Small and the existing Rural Electric Cooperative Resale Service Rate into a Resale Service Rate—Small. The proposed Municipal Resale Service Rate—Large and Resale Service Rate—Small have been modified by reducing the two demand blocks associated with the three part rate structures to a uniform Demand charge. The hours use differential and the Energy charge has been eliminated in favor of a uniform rate. The demand ratchet has been modified and an off-peak demand discount has been included. The transformer charge associated with the Resale Service Rate—Small has been increased. The base rate has been constructed to include a level of fuel costs reflective of present cost conditions.

Toledo Edison states that the additional revenue which would result from the proposed rates is needed to offset increased operating expenses and capital costs and the costs of facilities necessary to provide adequate and reliable electrical service to its jurisdictional customers.

Copies of the filing were served upon the public utility's fifteen (15) jurisdictional customers and the Public Utilities Commission of Ohio.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capital Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such protests or petitions should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

[Docket No. CI77-329, CP77-304, and CP64-97]

Texaco, Inc. and Sabine Pipe Line Co.; Extension of Time

August 6, 1980.

On July 24, 1980, Texaco, Inc. and Sabine Pipe Line Company filed a request for an extension of time to respond to the late petitions to intervene filed with the Commission on behalf of Senator Howard M. Metzenbaum, *et al.*, in the above-docketed proceeding. The motion states that additional time is needed because of a delay in the companies' receipt of the late-filed petitions to intervene and further, because of the prior commitments of counsel for Texaco which will require him to be out of town during the week prior to the deadline for receipt of responses.

Upon consideration, notice is hereby given that an extension of time for the filing of responses is granted to and including August 15, 1980.

[Docket No. RP80-123]

Transwestern Pipeline Co.; Proposed Changes in FERC Gas Tariff

August 1, 1980.

Take notice that Transwestern Pipeline Company (Transwestern) on July 23, 1980, tendered for filing as part of its FERC Gas Tariff, Original Volume No. 2, the following sheets representing revisions to Transwestern's Rate Schedule X-1:

Second Revised Sheet No. 2.
Fifth Revised Sheet No. 9.
Third Revised Sheet No. 10.
First Revised Sheet No. 10A.

Pursuant to a May 30, 1980 letter agreement between El Paso Natural Gas Company and Transwestern, a change is requested in Article IV of Rate Schedule X-1 entitled "Construction of Facilities" to provide for changes and additions regarding the payment date of invoices, the responsibility of changing meter charts and the responsibility of certain construction costs.

The proposed effective date of the tariff sheets is August 22, 1980.

A copy of this filing was served upon each party to the agreement.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 15, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Tucson Electric Power Co.; Filing Amendment No. 1 to the Tucson-Los Angeles 1979 Nonfirm Energy Agreement

August 4, 1980.

The filing Company submits the following:

Take notice that Tucson Electric Power Company ("Tucson") on July 29, 1980, tendered for filing Amendment No. 1 to the "Tucson-Los Angeles 1979 Nonfirm Energy Agreement" between Tucson and Los Angeles Department of Water and Power ("Los Angeles"). The primary purpose of this Amendment No. 1 is to extend the term of the Agreement by advancing the termination date from June 30, 1980 to December 31, 1981. Tucson states that copies of the filing were served upon Los Angeles.

Any person desiring to be heard or to make any application with reference to said Amendment should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426 in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make the protestants parties ot the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this Amendment are on file with the Commission and are available for public inspection.

Footnotes continued on next page

Take notice that on July 31, 1980, Vermont Electric Power Company, Inc. (VELCO) tendered for filing a rate schedule containing a letter amendment to its currently effective contract with New Bedford Gas and Edison Light Company (New Bedford) of New Bedford, Massachusetts, dated as of September 21, 1979.

VELCO states that the service to be rendered under this rate schedule consists of the sale of capacity and related energy from the Vermont Yankee unit for the estimated monthly amounts and periods as follows:

	7/1/80—10/31/80	11/1/80—12/31/80	3/1/81—3/31/81	4/1/81—4/30/81
MW..	10	30	25	65
MWH..	5,548	16,644	13,870	36,062
Dollar..	126,800	380,400	316,900	824,300

Charges for this power will be at VELCO's costs. Therefore, there will be no change in the overall rate of return of VELCO.

VELCO states that service under this rate schedule will commence on May 1, 1980, and will terminate on June 30, 1980.

Copies of the filing were served upon New Bedford Gas and Edison Light Company and the Vermont Public Service Board.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 27, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

provide the first opportunity in such proceeding to discuss Staff's data needs. *See,* United Gas Pipe Line Company, "Order Accepting Tariff Sheets For Filing, Subject To Conditions, And Suspending Effective Date, Subject To Refund And Investigation, Docket No. TA80-2-11 (PGA80-2, IPR80-2 & LFUT80-2), issued June 30, 1980.

[Project No. 3090]

Village of Lyndonville, Vt.; Application for Short-Form License (Minor) for a Constructed Project

August 5, 1980.

Take notice that an application was filed on March 19, 1980, by the Village of Lyndonville Electric Department, under the Federal Power Act, 16, U.S.C. 791(a) 825(r), for an existing water power project known as the Vail Hydroelectric Project, FERC Project No. 3090 located on the Passumpsic River, near the Town of Lyndon, in Caledonia County, Vermont. Correspondence with the Applicant should be directed to Kleinschmidt & Dutting, Consulting Engineers, 73 Main Street, Pittsfield, Maine 04967.

Purpose of the Project.—All project power is fed into the Applicant's transmission and distribution system for use by its electric customers.

Project Description.—The existing run-of-river project consists of: (1) a 96-foot long ogee-shaped concrete gravity dam with a maximum height of 15 feet above the river bed and topped by 16-inch flashboards; (2) a small reservior with a normal water surface elevation of 688.33 feet msl and maximum gross storage capacity of 23 acre-feet: (3) a trash rack and head gate section leading to; (4) a 28 by 32-foot concrete powerhouse containing one vertical 350-kW turbine-generator unit with a hydraulic capacity of approximately 285 cfs at a head of 20 feet; (5) an 0.8-mile long 2.5-kV transmission line and (6) appurtenant facilities. The average annual generation of the project is 2,400,000 kWh.

Agency Comments.—Federal, State, and local agencies that receive this notice through direct mailing from the Commission are requested to provide comments pursuant to the Federal Power Act, the Fish and Wildlife Coordination Act, the Endangered Species Act, the National Historic Preservation Act, the Historical and Archeological Preservation Act, the National Environmental Policy Act, Pub. L. No. 88-29, and other applicable statutes. No other formal requests for comments will be made.

Comments should be confined to substantive issues relevant to the issuance of a license. A copy of the application may be obtained directly from the Applicant. If any agency does not file comments within the time set below, it will be presumed to have no comments.

Competing Applications.—Anyone desiring to file a competing application must submit to the Commission, on or before September 12, 1980, either the competing application itself or a notice of intent to file a competing application. Submission of a timely notice of intent allows an interested person to file the competing application no later than January 12, 1981. A notice of intent must conform with the requirements of 18 CFR 4.33(b) and (c), (as amended 44 F.R. 61328, October 25, 1979). A competing application must conform with the requirements of 18 CFR, 4.33(a) and (d), (as amended, 44 F.R. 61328, October 25, 1979.)

Comments, Protests, or Petitions To Intervene.—Anyone desiring to be heard or to make any protest about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR 1.8 or 1.10 (1979). Comments not in the nature of a protest may also be submitted by conforming to the procedures specified in § 1.10 for protests. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but a person who merely files a protest or comments does not become a party to the proceeding. To become a party, or to participate in any hearing, a person must file a petition to intervene in accordance with the Commission's Rules. Any comments, protest, or petition to intervene must be filed on or before September 12, 1980. The Commission's address is: 825 North Capitol Street, N.E., Washington, D.C. 20426. The application is on file with the Commission and is available for public inspection.

[Docket No. ER80-547]

Virginia Electric & Power Co.;

August 4, 1980.

The filing Company submits the following:

Take notice that on July 25, 1980, Virginia Electric and Power Comapny (VEPCO) submitted for filing revised contract supplements for Crimora and Columbia Furnace Delivery Points. The revisions are being made pursuant to a request by Shenandoah Valley Electric Cooperative.

VEPCO states that the revised supplements supersede FERC Rate Schedule Nos. 84-39 and 84-21, dated June 4, 1976 and June 2, 1971, respectively. VEPCO requests that the new supplements become effective on the dates of connection of the new facilities, and further requests that the notice requirements be waived.

A copy of this filing has been mailed to the Virginia State Corporation Commission, the Shenandoah Valley Electric Cooperative, and the Southeastern Power Administraton.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8 or 1.10). All such petitions or protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

BILLING CODE 6450-85-M

[Docket No. ER80-578]

Virginia Electric & Power Co.; Filing

August 6, 1980.

The filing Company submits the following:

Take notice that on August 1, 1980, Virginia Electric and Power Company (VEPCO) tendered for filing a Contract Supplement dated May 14, 1980 to the Rate Contract between VEPCO and the Mecklenburg Electric Cooperative.

Said Supplement requests the Commission's authorization for connection of the new delivery point designated as Barnes Junction Delivery Point, located in Charlottee County, Virginia.

VEPCO requests an effective date for the new delivery point as that of the date of connection of the new facilities which is expected to occur sometime in August, 1980.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's rules of practice and procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 29, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

[FR Doc. 80-24328 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. EL80-35]

Wabash Valley Power Association, Inc., et al. v. Indiana & Michigan Electric Co.; Complaint

August 6, 1980.

The filing party submits the following:

Take notice that on July 24, 1980, Wabash Valley Power Association, Inc., Fruit Belt Electric Cooperative, Jay County Rural Electric Membership Corporation, Noble County Rural Electric Membership Corporation, Paulding-Putnam Electric Cooperative, Inc., United Rural Electric Membership Corporation, and Whitley County Rural Electric Membership Corporation (collectively referred to as Complainants) filed a complaint against Indiana and Michigan Electric Company (I&M).

The Complainants state that I&M has failed to consent to the assignment of certain power supply contracts, and has further failed to notify this Commission of the assignments. Moreover, the Complainants allege that I&M has had knowledge of the assignments since December 4, 1978. Furthermore, the Complainants state that the assignments are essential if they are to obtain necessary financing from the Rural Electrification Administration or the National Rural Utilities Cooperative Finance Corporation. Finally, the Complainants allege that I&M's failure to approve and file the assignments constitutes an anticompetitive action.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such petitions or protests should be filed on or before September 5, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-85-M

[Docket No. ER80-556]

Washington Water Power Co.; Filing

August 4, 1980.

The filing Company submits the following:

Take notice that on July 23, 1980, The Washington Water Power Company (Washington) tendered for filing copies of the Project Exchange Agreement (Contract No. 14-03-39216). This Agreement was executed by the Bonneville Power Administration (BPA). Washington Public Power Supply System (WPPSS) and Washington on February 6, 1973, and provides for Washington's share of WPPSS's Nuclear Project No. 1 to be assigned to BPA in exchange for firm energy made available to Washington from BPA.

Washington requests that the requirements of prior notice be waived and the effective date be made retroactive to July 1, 1980, adding that there would be no effect upon purchasers under other rate schedules.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before August 26, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois K. Cashell,

Acting Secretary.

[FR Doc. 80-24310 Filed 8-11-80; 8:45 am]

BILLING CODE 6450-85-M

[Docket No. RA80-61]

Westlake Union Service, Inc.; Filing of Petition for Review

August 6, 1980.

Take notice that Westlake Union Service, Inc. on July 2, 1980 filed a Petition for Review under 42 U.S.C. 4194(b) (1977 Supp.) from an order of the Secretary of Energy.

Copies of the petition for review have been served on the Secretary, Department of Energy, and all participants in prior proceedings before the Secretary.

Any person desiring to be heard with reference to such filing should on or before August 20, 1980 file a petition to intervene with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8). Any person wishing to become a party or to participate as a party must file a petition to intervene. Such petition must also be served on the parties of record in this proceeding and the Secretary of Energy through John McKenna, Office of General Counsel, Department of Energy, Room 5142, 12th and Pennsylvania Ave. NW., Washington, D.C. 20461. Copies of the petition for review are on file with the Commission and are available for public inspection at Room 1000, 825 North Capitol St. NE., Washington, D.C. 20426.

Kenneth F. Plumb,
Secretary.

[FR Doc. 80-24311 Filed 8-11-80; 8:45 am]
BILLING CODE 6450-85-M

[Docket No. ER80-567]

Wisconsin Electric Power Co.; Proposed Changes in Rates

August 6, 1980.

The filing Company submits the following:

Take notice that Wisconsin Electric Power Company on July 31, 1980 tendered for filing proposed changes in its rates and charges for sales for resale to its 21 wholeasale customers. The proposed increase is $5,644,050, or 15.7%, on a 1980 test year basis.

The Company states that the filing accomplishes several purposes in addition to raising the wholesale rate level. First, it introduces time-of-day rate design into the Company's wholesale rates. Second, it introduces rate schedules for a variety of types of services—some not currently taken—that the Company will make available to wholesale customers. Third, it revises and standardizes the format of the Company's rate schedules and terms and conditions of wholesale service. Fourth, it files a proposed new interconnection agreement with the Cities of Kaukauna and Menasha, Wisconsin, in accordance with Article 2.4 of the settlement agreement dated January 19, 1979 in Docket No. ER78-512 and approved by direction of the Commission on May 17, 1979.

The Company requests that the proposed changes become effective on October 1, 1980.

Copies of the filing have been served upon the Company's jurisdictional customers. Copies have also been mailed to the Michigan Public Service Commission and the Public Service Commission of Wisconsin.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capital Street, N.E., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice. All such protests should be filed on or before August 25, 1980. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Copies of the application are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,
Secretary.

[FR Doc. 80-24312 Filed 8-11-80; 8:45 am]
BILLING CODE 6450-85-M

[Docket No. ER 80-569]

Yankee Atomic Electric Co.; Filing of Amendment to Power Contract

August 6, 1980.

The filing company submits the following:

Take notice that on July 31, 1980, Yankee Atomic Electric Company ("Yankee") tendered for filing amendments to Section 6 of the power contract between Yankee and ten of its eleven owner companies for the sale of the net output of Yankee's nuclear powerplant at Rowe, Massachusetts. Yankee states that the eleven owner companies are: New England Power Company, Connecticut Light & Power Company, Boston Edison Company, Central Maine Power Company, Hartford Electric Light Company, Western Massachusetts Electric Company, Public Service Company of New Hampshire, Montaup Electric Company, New Bedford Gas and Edison Company, Cambridge Electric Company and Central Vermont Public Service Corporation. Yankee further states that Central Maine Power Company, not being located in a state adjoining Massachusetts, is not entitled to purchase electrical energy from Yankee and that Public Service Company of New Hampshire supplies power to Central Maine in amounts equivalent to its ownership percentage.

Yankee requests that the proposed amendments to Section 6 of the contract be permitted to become effective October 1, 1980. Yankee states that the amendments to Section 6 would provide for a decommissioning trust fund, a revision in the depreciation charges, a revision in the method of calculating the allowed return on the net rate base, and a clarification of the contract with respect to the leasing of fuel inventory. The proposed amendments to Section 6 of the power contract would, according to the Company's estimate result in a revenue increase of $14,270,000 for the 12 months ended September 30, 1980.

Yankee states that copies of the filing have been served upon each of the eleven owner-purchaser utilities and upon the appropriate state utility regulatory commissions.

Any persons desiring to be heard or to make any protest with reference to said filing should, on or before August 25, 1980, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, petitions to intervene or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 C.F.R. 1.8 or 1.10). All protests filed with the Commisison will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene in accordance with the Commisison's Rules. Copies of this application are on file with the Commission and available for public inspection.

Kenneth F. Plumb,
Secretary.

BILLING CODE 6450-85-M

ENVIRONMENTAL PROTECTION AGENCY

[OPTS-59022A; FRL 1566-1]

Approval of Test Marketing Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Under Section 5(h)(1) of the Toxic Substances Control Act (TSCA), EPA is granting an exemption from the premanufacture notification requirements of section 5 to a manufacturer for the test marketing of a new chemical substance identified by the generic name "copolymer of substituted ethenylbenzene and substituted ethenyl heterocycle" (TM 80-22).

FOR FURTHER INFORMATION CONTACT: George Bagley, Application Manager, Notice Review Branch, Premanufacturing Review Division (PTS-794), Office of Pesticides and Toxic Substances, EPA, Washington, D.C. 20460. (202) 426-3936.

SUPPLEMENTAL INFORMATION: Under section 5 of TSCA anyone who intends to manufacture or import a new chemical substance for commercial purposes in the United States must submit a notice to EPA before manufacture or import begins. A "new" chemical substance is any chemical substance that is not on the Inventory of existing substances compiled by EPA under Section 8(b) of TSCA. Section 5(a)(1) requires each PMN to be submitted in accordance with section 5(d) and any applicable requirement of section 5(b). Section 5(d)(1) defines the contents of a PMN and section 5(b)(1) contains additional reporting requirements for certain new chemical substances.

Section 5(h), "Exemptions", contains several provisions for exemptions from some or all of the requirements of section 5. In particular, section 5(h)(1) authorizes EPA, upon application, to exempt persons from any requirement of section 5(a) or section 5(b), to permit them to manufacture or process chemical substances for test marketing purposes. To grant an exemption, the Agency must find that the test marketing activities will not present any unreasonable risk of injury to health or the environment. EPA must either approve or deny the application within 45 days of its receipt, and the Agency must publish a notice of its disposition in the **Federal Register**. If EPA grants a test marketing exemption, the Agency may impose restrictions on the test marketing activities.

On April 28, 1980, EPA received an application for a test marketing exemption from the requirements of sections 5(a) and 5(b) of TSCA. A **Federal Register** notice published on May 19, 1980 (45 FR 32770), announced the receipt of the exemption application. The application was designated TM 80-22. The manufacturer claimed both its identity as confidential and the identity of the new chemical substance as confidential. Accordingly, EPA has identified the chemical substance by a generic name submitted by the manufacturer: "copolymer of substituted ethenylbenzene and substituted ethenyl heterocycle."

EPA has reviewed information supplied in the application as well as other information gathered by the Agency. Based upon this review, EPA has determined that the manner of manufacture, processing, use, transport and disposal, as described in the application, will not present any unreasonable risk of injury to human health or the environment during the test marketing phase. The Agency, therefore, grants the manufacturer an exemption for this chemical substance from the premanufacture reporting requirements for test marketing purposes. The exemption is effective immediately and is conditioned upon the manufacturer's adherence to the specified requirements for worker safety as stated in the test marketing exemption application.

Following is a discussion of relevant information about the substance for which the exemption application was submitted. Also addressed are the bases for the Agency's determination that manufacture, processing, use, transport and disposal of the substance during test marketing will not present an unreasonable risk of injury to health or the environment.

The manufacturer claimed the specific use confidential. Production of the new chemical substance for test marketing purposes will be accomplished in manufacturing facilities under the control of the group responsible for its process research and development.

In the application the manufacturer stated its intention to test market a maximum of 200 kilograms (kg) of this substance. During the test marketing period the substance itself will not be test market but rather incorporated into articles which will be test marketed and sent to one or more closely monitored test sites within the United States to test the response of selected end-users to the introduction of articles containing the new chemical substance.

During manufacture a total of 20 people will work in the area where this chemical will be produced, but generally no more than two employees at any time will be involved directly in the manufacture of this chemical. The only potential for human contact with the new chemical substance is skin contact with a solution containing this chemical. Where there is such potential during cleaning, packaging and filter chances, industrial hygiene requirements include worker's use of chemical goggles and rubber gloves. Duration of manufacture operations is estimated to be 34 eight-hour shifts.

A total of 26 people will work in the areas where this chemical will be processed and used, but no more than three will be directly involved in processing this substance at any one time. The only potential for human contact with the new chemical substance is skin contact with solutions containing it. Where there is such potential during transfer, cleaning, packaging and filter changes, industrial hygiene requirements include worker use of chemical goggles and rubber gloves. Duration of all processing operations is estimated to total 56 eight-hour shifts. During these process and use steps small quantities of the new chemical substance, along with other materials, become an integral part of article.

Spills and wastes from cleaning and filter-change operations during manufacturing and processing will, where feasible, be collected in approved containers and disposed of by a licensed disposal vendor. Where appropriate, the licensed vendor will separate the aqueous portion and either destroy the solids in a thermal oxidizer or dispose of them in an approved chemical landfill. Where collection is not feasible an appropriate dilution with water will be made before discharge to the site sewer, and from there it will move to a publicly owned treatment works (POTW).

The Agency believes that adherence by the manufacture to the precautionary procedures for safe handling cited above for manufacturing, processing and use of this new chemical substance will keep human exposure and environmental release to a minimum and the granting of this test marketing exemption is contingent upon the strict adherence to these safe handling procedures.

Data submitted by the manufacturer with the application indicate that the substance has a low degree of acute toxicity (oral LD_{50} 5 g/kg), is a mild irritant to the eye and is non-irritating to the skin. No data were available with regard to carcinogenicity, teratogenicity or other chronic effects. The Ames test for mutagenicity was negative. With regard to environmental effects, the Agency has found no reason to anticipate significant hazard to invertebrates, plants, fish, mammals, birds or microorganisms.

Because of the low level of concern regarding the toxicity of the substance and the anticipated human exposure and environmental release during test marketing, EPA has determined that the substance will not present any

unreasonable risk of injury to health or the environment as a result of the test marketing activities described by the manufacturer. The manufacturer is restricted to producing, in adherence with the safe handling practices identified above, no more than 200 kg of the substance to be used by its selected test group. This exemption is granted only for the manufacturer that submitted the TMEA 80–22.

A PMN for this substance was submitted on April 22, 1980. Receipt of the PMN by the Agency was acknowledged in the **Federal Register** on May 13, 1980 (45 FR 31489). If the Agency takes no regulatory action on the PMN under sections 5(e) or 5(f) of TSCA before 21 July, and does not extend the notification period under section 5(c) of TSCA, TSCA will no longer preclude unrestricted production of the substance.

Dated: August 5, 1980.

Douglas M. Costle,

Administrator.

[FR Doc. 80-24211 Filed 8-11-80; 8:45 am]

BILLING CODE 6560-01-M

[OPTS-59013A/59014A; FRL 1562-7]

Approval of Test Marketing Exemption Applications

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Under section 5(h)(1) of the Toxic Substances Control Act (TSCA), EPA is granting test marketing exemptions from the premanufacture notification requirements of section 5 to a manufacturer for two new chemical substances, identified by the generic names "polymer formed from phenol formaldehyde resin and diazonaphthalene sulfonyl chloride" (TM 80–14) and "salt of polymer of 4-substituted diphenylamine formaldehyde and polymer of 5-substituted-1,3-benzene-dicarboxylate, 1,4-cyclo-hexanedimethanol, ethylene glycol, E-caprolactone, tolylene-2,4 diisocyante, 2-butanedioic acid" (TM 80–16).

FOR FURTHER INFORMATION CONTACT: Kirk Maconaughey, Premanufacturing Review Division (PTS–794), Office of Pesticides and Toxic Substances, Environmental Protection Agency, Washington, D.C. 20460, 202–426–3936.

SUPPLEMENTARY INFORMATION: Under section 5 of TSCA, anyone who intends to manufacture or import a new chemical substance for commercial purposes in the United States must submit a notice to EPA before manufacture or import begins. A "new" chemical substance is any chemical substance that is not on the Inventory of existing substances compiled by EPA under Section 8(b) of TSCA. Section 5(a)(1) requires each PMN to be submitted in accordance with section 5(d) and any applicable requirement of section 5(b). Section 5(d)(1) defines the contents of a PMN and section 5(b) contains additional reporting requirements for certain new chemical substances.

Section 5(h), "Exemptions," contains several provisions for exemptions from some or all of the requirements of section 5. In particular, section 5(h)(1) authorizes EPA, upon application, to exempt persons from any requirement of section 5(a) or section 5(b), to permit them to manufacture or process chemical substances for test marketing purposes. To grant such an exemption, the Agency must find that the test marketing activities will not present any unreasonable risk of injury to health or the environment. EPA must either approve or deny the application within 45 days of its receipt, and the Agency must publish a notice of its disposition in the **Federal Register**. If EPA grants a test marketing exemption, the Agency may impose restrictions on the test marketing activities.

On February 20, 1980 EPA received two applications for test marketing exemptions from the requirements of sections 5(a) and 5(b) of TSCA. **Federal Register** notices published on March 21, 1980 (45 FR 18474 and 18478) announced the receipt of the exemption applications. The manufacturer claimed both its identity as confidential and the identity of the two new substances as confidential. Accordingly, EPA has identified the two chemical substances by generic names submitted by the manufacturer and has assigned identifying numbers to the two applications as follows: "polymer formed from phenol formaldehyde resin and diazonaphthalene sulfonyl chloride" (TM 80–14) and "salt of polymer of 4-substituted-1,3-benzene-dicarboxylate, 1,4-cyclo-hexanedimethanol, ethylene glycol, E-caprolactone, tolylene-2,4 diisocyanate, 2-butanedioic acid" (TM 80–16).

EPA has reviewed information supplied in each of the exemption applications as well as other information gathered by the Agency. Based upon these reviews, EPA has determined that the manner of production, use and disposal as described in each of the applications will not present any unreasonable risk of injury to health or the environment during the test market period. Therefore the Agency grants the manufacturer exemptions for these two chemical substances from the premanufacture reporting requirements for test marketing purposes. These exemptions are conditioned upon the manufacturer's adherence to the specified safety requirements for workers exposed to the substance. These requirements are stated in each test market exemption application. The exemptions are effective immediately and are granted only to the manufacturer who submitted the exemption applications.

Following is a discussion of relevant information about the two substances for which the exemption applications were submitted. Also discussed are the bases for the Agency's determination that manufacture, processing, use, transport and disposal of each substance for test marketing will not present an unreasonable risk of injury to health or the environment.

TM 80–14

The generic chemical identity proposed by the manufacturer is polymer formed from phenol formaldehyde resin and diazo naphthalene sulfonyl chloride. The manufacturer claimed the use confidential. The manufacturer provided the following generic use description: a thin photosensitive layer on supporting substrates. During test marketing, which is to be conducted approximately for a 10-week period, the company plans to manufacture five kilograms of the substance. Twenty-five customers will be provided with sheets of the polyester film containing the coated chemical substance. The application states that during manufacturing one employee will be exposed to the raw materials for up to one half-hour when introducing the starting materials into the reaction vessel. This same employee will be exposed to the dry solid for up to one-half hour when removing and handling the chemical prior to packaging. The manufacturing process itself will be carried out in a closed system. Exposure of workers to the raw materials will be minimized by the use of safety equipment provided by the company and by following standard industrial hygiene practices. Waste generated during the manufacturing process will be incinerated.

The application states that during the processing operation one person will be exposed to the solid for one-half hour when it is dissolved in an appropriate solvent prior to its addition to coating solutions. One employee will be exposed for up to one hour to the coating solution during the clean-up of this coating operation. After processing the PMN substance will be given to 25 customers for test marketing. While the number of employees who may be exposed to the substance after distribution may be potentially quite large, actual exposure per individual will be low. Workers handle the dried film which contains about 25 milligrams of the chemical substance per square foot. Since the substance is located between layers of other materials, persons using the substance will not be directly exposed to the test marketed substance.

EPA believes that the closed manufacturing process and the steps being taken by the company to limit exposure to the new chemical substance will provide adequate protection to those persons involved with the manufacturing and processing operations.

Test data supplied by this manufacturer indicate that the substance is of moderate acute toxicity with an LD_{50} in rats of <5 grams/kilogram. The results of the acute eye irritation test indicate that the substance is minimally irritating. The results of mutagenicity assays (Ames Assay) were negative as were the results of yeast recombination studies. The skin irritation study performed on this substance indicated that it was minimally irritating. The 20-day BOD to COD ratio of 0.013 indicated little or no biochemical oxidation of the subject material. It also showed that this material did not prevent microbiological respiration at the concentration level tested (100mg/1). The COD for the substance was 2,100,000 mg/kg and the 5-day BOD was 11,000 mg/kg. No information was submitted by the manufacturer regarding chronic toxicity of the substance.

After reviewing the results of the above tests, and considering the low production volume and low exposure to workers, EPA has determined that the manufacture and use of the polymer as a thin photosensitive layer on supporting substrates will not present any unreasonable risk of injury to health or the environment. Accordingly, effective immediately, EPA grants the manufacturer of the polymer formed from phenolformaldehyde resin and diazonaphthalane sulfonyl chloride an exemption for test marketing purposes with the following conditions:

(1) The manufacturer will manufacture no more than 5 kilograms of the chemical substance;

(2) The manufacturer will provide only 25 customers with sheets of the polyester film containing the substance, and will keep records of the identity of each receipient and the number of rolls provided to each recipient;

(3) The manufacturer will use the chemical substance only in the manner described in the application;

(4) Exposure of the substance to workers during manufacturing and processing will not increase significantly from that described in the application; and

(5) Exposure to employees, both during manufacturing, processing, use and distribution will not significantly increase from that described in the application.

This exemption is granted only to this manufacturer of this substance and for use in the manner described in the test market exemption application and in this notice.

TM 80–16

The manufacturer claimed the use confidential. The generic chemical identity proposed by the manufacturer is salt of: Polymer of: 4-substituted diphenyl amine (cationic portion), formaldehyde and; Polymer of: 5-substituted-1,3,benzene-dicarboxylate, 1,4-cyclohexane dimethanol, E-caprolactone, ethylene glycol (anionic portion), tolylene-2,4-diisocyanate, 2-butenedioic acid.

The intended generic use has been given as a resin. The test marketing period covers approximately an eight month period. The exact amount to be manufactured has been claimed confidential. The substance will be contained in a maximum of 75,000 articles during test marketing, and the total number of people exposed to articles containing this substance has been estimated to be approximately 250.

The application states that during manufacture two employees will be exposed to the starting materials of the subject substance and to the subject substance itself. The total duration of this exposure will be eight hours. According to the manufacturer standard industrial hygiene practices will be followed when manufacturing this substance, including the use of dust masks and gloves to protect workers from unnecessary exposure to the starting substances and finished substance. The workplace is well ventilated and has an on-site incinerator for disposal of liquid and solid wastes.

During processing operations one to four employees are exposed to the subject substance. Two employees will be involved for a period of up to 12 hours (dermal exposure) in manufacturing the final article which will contain this substance. Two employees will be involved in packaging operations for up to 12 hours (dermal exposure).

During the test marketing of the substance there will be a potential for exposure to approximately 240 workers. During the use of articles containing the test market substance the subject substance will not be used up entriely, and unused portions must be discarded. Dermal exposure to the substance may be significant during this disposal operation. However, as a result of the chemical reaction which takes place during use, a functional group on the cationic portion of the polymer (for which EPA has some health concerns), is destroyed. The destruction of this functional group allays EPA's concern regarding worker safety when exposed to the substance.

The manufacturer supplied test data on both the cationic and anionic portions of the polymer. The cationic portion was reported to be of moderate acute toxicity ($1.25 < LD_{50} < 2.5$g/kg in rats). Primary eye irritation studies conducted on this portion found it to be a severe irritant. When the same study was modified to include "washout" (flushing the treated eye with water) the primary eye irritation study resulted in mild to moderate irritation. In primary skin irritation and skin sensitization tests the substance was found to be non-irritating and non-sensitizing. The cationic portion of the polymer comprises 8 percent by weight of the subject substance. No carcinogenic/mutagenic/teratogenic (C/M/T) studies were performed on this portion nor were any chronic data submitted. Lacking information in these areas EPA hypothesized that the cationic portion of the polymer may function as an arylator possibly displaying mutagenic properties. However, the low production volume and the low concentration of this cationic fraction in the final substance, coupled with the fact that the suspect functional group will be destroyed in use, have allayed this concern.

Data also were reported on the anionic portion. An acute oral toxicity test in rats indicated that this anionic portion is of moderate acute toxicity ($LD_{50} > 5$g/kg.) In eye irritation and primary skin irritation studies the substance was found to be a slight to moderate irritant. Results were negative in both mutagenicity studies (Ames Assay) and in yeast recombination studies. No chronic toxicity information was submitted for this anionic portion.

EPA has determined that during the manufacturing process worker exposure is limited. In the areas of usage and potential customer exposure EPA's concern has been allayed by the fact the

substance is a high molecular weight polymeric salt. The Agency's decision to grant this exemption is based on the molecular weight of the substance, the low production volume, limited worker exposure and the results of toxicity testing. EPA concludes that no unreasonable risk will be presented by exposure to this high molecular weight polymer during the test marketing. As discussed earlier, EPA's concern for the ability of the cationic portion of this polymer to display mutagenic effects was dismissed when it became evident that the functional group of concern on that portion of the mulecule was destroyed during use.

For these reasons EPA has determined that the manufacture, processing, use, disposal, and transport of the salt of polymer 4-substituted diphenyl amine; formaldehyde and polymer of 5-substituted-1,3-benzene-dicarboxylate; 1,4-cyclohexane dimethanol; ethylene glycol; E-caprolactone; tolylene-2,4-diisocyanate and 2-butenedioic acid as a resin will not present any unreasonable risk of injury to health or the environment during this test marketing phase. Accordingly, effective immediately, EPA grants the manufacturer of this substance an exemption for test marketing purposes with the following conditions:

(1) The manufacturer will only use the chemical substance in the manner described in the application;

(2) Exposure of the substance to manufacturing and processing workers will not increase significantly from that described in the application.

This exemption is granted only to this manufacturer and for the use specified in the test market exemption application.

Dated: August 5, 1980.

Extension of Experimental Use Permits

The Environmental Protection Agency (EPA) has issued extensions experimental use permits to the following applicants. Such permits are in accordance with, and subject, to the provisions of 40 CFR Part 172, which defines EPA procedures with respect to the use of pesticides for experimental purposes.

476–EUP–73. Stauffer Chemical Co., 1200 S. 47th St., Richmond, CA 94804. This experimental use permit allows the use of 660 pounds of the remaining 1,280 pounds of the active ingredient *N*-(mercaptomethyl)phythalimide *S*-(*O,O*-dimethyl phosphorodithioate) (2,080 pounds originally authorized) on forestland to evaluate control of the western spruce budworm. A total of 750 acres are involved. The program is authorized only in the State of Idaho. The experimental permit was effective from May 30, 1977 to May 30, 1978. It is now effective from May 30, 1980 to May 30. 1981. The permit is extended with the limitation that chemical not be applied on ecosystems containing endangered species of fish. (PM 15, George LaRocca, Rm. E–329, 202/426–9480)

1471–EUP–60. This experimental use permit allows the use of 938 pounds of the fungicide tricyclazole (5-methyl-1,2,4-triazolo(3,4-*b*) benzothiazole) or rice to evaluate control of rice blast disease. A total of 1,500 acres are involved. The program is authorized only in the States of Arkansas, California, Louisiana, Mississippi, and Texas. This program was previously effective from May 26, 1978 to August 21, 1979. It is now effective from June 13, 1980 to August 21, 1981. A temporary tolerance for the residue of tricyclazole on rice has been established. (PM 21, Eugene Wilson, Rm. E–349, 202/755–1806)

1471–EUP–64. This experimental use permit allows the use of the remaining 205 pounds of the herbicide fluridone (1-methyl-3-phenyl-5-[3-trifluoromethyl)phenyl]-4 (1*H*)-pyridinone) on cotton to evaluate control of weeds. A total of 280 acres are involved. The program is authorized only in the States of Alabama, Arkansas, Arizona, California, Florida, Georgia, Louisiana, Mississippi, Missouri, New Mexico, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia. The permit was previously effective from July 16, 1979 to July 16, 1980. It is now effective from July 16, 1980 to July 16, 1981. A temporary tolerance for residues of active ingredient in or on cotton has been established. (PM 23, Robert Mountfort Rm. E–351, 202/755–1397)

1471–EUP–68. This experimental use permit allows the use of 13,650 pounds of the herbicide oryzalin (3,5-dinitro-N^4,N^4 dipropylsulfanilamide) in or on wheat to control weeds. A total of 13,650 acres are involved. The program is authorized only in the States of Alabama, Arkansas, Delaware, Florida, Georgia, Illinois, Indiana, Kansas, Kentucky, Maryland, Mississippi, Missouri, New Jersey, North Carolina, Ohio, Oklahoma, South Carolina, Tennessee, Texas, and Virginia. The program was previously effective from July 9, 1979 to July 9, 1980. It is now effective from July 9, 1980 to July 9, 1981.

1471–EUP–69. This experimental use permit allows the use of 19,080 pounds of herbicide oryzalin on wheat to control weeds. A total of 19,080 acres are involved. This program is authorized in the same States as the one above. The experimental use permit is effective from July 9, 1980 to July 9, 1981. Both this permit and the three above have been issued to Elanco Products Co., PO Box 1750, Indianapolis, IN 46206. (PM 25, Robert J. Taylor, Rm. E–359, 202/755–2196)

400–EUP–52. Uniroyal Chemical, Division of Uniroyal, Inc., 74 Amity Road, Bethany, CT 06525. This experimental use permit allows the use of the defoliant (2,3-dihydro-5,6-dimethyl-1,4-dithiin 1,1,4,4-tetraoxide) in or on cotton, potatoes, grapes, and sunflowers to evaluate defoliation. A total of 2,255 acres is involved. The program is authorized only in the States of Alabama, Arizona, Arkansas, California, Georgia, Illinois, Louisiana, Minnesota, Mississippi, Missouri, North Carolina, North Dakota, South Dakota, South Carolina, Tennessee, and Texas. The experimental use permit is effective from July 8, 1980 to July 8, 1981. The permit is being extended under the condition that all treated crops are destroyed or used for research purposes only. (PM 25, Robert J. Taylor, Rm. E–359, 202/755–2196)

Persons wishing to review the experimental use permits are referred to the designated Product Manager (PM), Registration Division (TS–767), Office of Pesticide Programs, EPA, 401 M Street SW., Washington, D.C. 20460. Inquiries regarding these permits should be directed to the contact persons given above. It is suggested that interested persons call before visiting the EPA Headquarters Office so that the appropriate file may be made available for inspection from 8:00 a.m. to 4:00 p.m. Monday through Friday, excluding holidays.

Issuance of Experimental Use Permits

The Environmental Protection Agency (EPA) has issued experimental use permits to the following applicants. Such permits are in accordance with, and subject to, the provisions of 40 CFR Part 172, which defines EPA procedures with respect to the use of pesticides for experimental purposes.

279–EUP–77. This experimental use permit allows the use of 879.1 pounds of the insecticide of permethrin (3-phenoxyphenyl)methyl (+) *cis-trans* 3-(2,2-dichloroethenyl) -2,2-dimethylcyclopropanecarboxylate) on almonds, apples, broccoli, Brussel sprouts, cabbage, cauliflower, celery, cherries, chyrsanthemums, grapes, mushrooms, peaches, pears, potatoes, sunflowers, sweetcorn, and tobacco (burley and flue-cured) to control insects. A total of 454 acres are involved. The program is authorized only in the States of Alabama, Arkansas, Arizona, California, Colorado, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, Montana, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Virginia, Washington, and Wisconsin. The program is effective from July 14, 1980 to July 14, 1981. The experimental use permit may be used under the special condition that all crops will be destroyed or used for experimental purposes.

279–EUP–80. This experimental use permit allows the use of 1,350 pounds of the insecticide permethrin on cotton to evaluate control of various insects. A total of 180 acres are involved. The program is authorized only in the States of Alabama, California, Mississippi, South Carolina, and Texas. The program is effective from July 14, 1980 and July 14, 1981. The use permit may be used under the special condition that all crops will be destroyed or used for experimental purposes.

279–EUP–81. This experimental use permit allows the use of 885 pounds of the insecticide permethrin on cotton to evaluate control of various insects. A total of 295 acres are involved. The program is authorized only in the States of Alabama, California, Mississippi, South Carolina, and Texas. The experimental use permit is effective July 14, 1980 to July 14, 1981. The experimental use permit may be used under the special condition that all crops will be destroyed or used for research purposes only. This permit and the two above have been issued to FMC Corporation, Agricultural Chemical Group, 2000 Market St., Philadelphia, PA 19103. (PM 17, Franklin D. R. Gee, Rm. E–341, 202/426–9417).

38586–EUP–1. Washington State University, College of Agriculture, Pullman, WA 99164. This experimental use permit allows the use of 2,800 pounds of the insecticide/nematocide aldicarb on hops to evaluate control of insects. A total of 200 acres are involved. The program is authorized only in the State of Washington. The program is effective from June 11, 1980 to June 11, 1981. A temporary tolerance for the residues of aldicarb on hops has been established. (PM 12, Jay Ellenberger, Rm. E–303, 202/426–2635).

Persons wishing to review the experimental use permits are referred to the designated Product Manager (PM), Registration Division (TS–767), Office of Pesticide Programs EPA, 401 M Street SW., Washington, D.C. 20460. Inquiries regarding these permits should be directed to the contact persons call before visiting the EPA Headquarters Office so that the appropriate file may be made available for inspection from 8:00 a.m. to 4:00 p.m. Monday through Friday, excluding holidays.

BILLING CODE 6560-01-M

[OPP–C31037; FRL 1566–4]

Sandoz, Inc.; Receipt of Application To Conditionally Register Pesticide Product Entailing Changed Use Pattern

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice publishes an application submitted by Sandoz, Inc. to conditionally register a pesticide product entailing a changed use pattern.

DATE: Written comments may be submitted on or before September 11, 1980.

ADDRESS WRITTEN COMMENTS TO: Franklin D. R. Gee, Product Manager (PM) 17, Office of Pesticide Programs, Rm. E–341, Registration Division (TS–767), Environmental Protection Agency, 401 M Street SW., Washington, D.C. 20460, 202/426–9417.

SUPPLEMENTARY INFORMATION: Sandoz, Inc., has submitted an application to EPA to conditionally register a pesticide product entailing a changed use pattern.

Notice of approval or denial of this application to register the pesticide product will be announced in the **Federal Register.** Except for such material protected by Section 10 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended (92 Stat. 819; 7 U.S.C. 136), the test data and other scientific information deemed relevant to the registration decision may be made available after approval under provisions of the Freedom of Information Act. The procedure for requesting such data will be given in the **Federal Register** if an application is approved. Notice of receipt of the application does not indicate a decision by the Agency on the application.

Application Received: EPA File Symbol No. 11273–17. Sandoz, Inc. Crop Protection, 480 Camino Del Rio South, Suite 240, San Diego, CA 92108. ELCAR. Active Ingredient: Polyhedral Inclusion Bodies of Heliothis Nuclear Virus 0.4 percent. Application proposes that registration of the product be amended to include in its presently registered use, the use to control larvae of *Heliothis zea*

V 45 AG 12 80 UMI

or *Heliothis virescens*, including all growing crops; including: beans, corn, lettuce, okra, pepper, sorghum, soybeans, tobacco, and tomatoes.

Interested persons are invited to submit written comments on this application. Comments may be submitted, and inquiries directed to the Product Manager. The comments must be received on or before September 11, 1980, and should bear a notation indicating the document control number "[C31037]" and the file symbol number. Comments received within the specified time period will be considered before a final decision is made; comments will be considered only to the extent possible without delaying processing of the application. The label furnished by the applicant, as well as all written comments filed pursuant to this notice, will be available for public inspection in the Product Manager's office from 8:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

(40 CFR 162.5 and 162.6)

Dated: August 4, 1980.

Douglas D. Campt,

Director, Registration Division, Office of Pesticide Programs.

BILLING CODE 6560-01-M

[PP OG2289/T252; FRL 1566-5]

Thiophanate-Methyl; Establishment of a Temporary Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: On June 5, 1980 EPA established temporary tolerances for the residues of the fungicide, thiophanate-methyl (dimethly[(1,2-phenylene) bis iminocarbonothioyl)] bis [carbanate], its oxygen analog dimethyl-4,4'-O-phenylene bis, and its benzimidazole-containing metabolites (calculated as thiophanate-methyl) in or on almonds and soybeans at 0.2 part per million (ppm).

FOR FURTHER INFORMATION CONTACT: Eugene M. Wilson, Product Manager (PM) 21, Registration Division (TS-767), Office of Pesticide Programs, Rm. E-305, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460, 202/755-2562.

SUPPLEMENTARY INFORMATION: Pennwalt Corporation, Pennwalt Bldg., 3 Parkway, Philadelphia, PA 19102, submitted a pesticide petition (PP OG2289) on October 29, 1979 to the EPA. The petition requested that temporary tolerances be established for the fungicide, thiophanate-methyl (dimethyl[(1,2-phylene) bis iminocarbonothioyl)] bis [carbanate], its oxygen analog dimethyl 4,4'-O-phenyl bis, and its benzimidazole-containing metabolites (calculated as thiophanate-methyl) in or on almonds and soybeans at 0.2 part per million.

These temporary tolerance would permit the marketing of the above raw agricultural commodities when treated in accordance with the experimental use permit which was issued under the Federal Insecticide, Fungicide, and Rodenticide Act (Pub. L. 80-104, 61 Stat. 163, as amended by Pub. L. 92-516, 86 Stat. 975; Pub. L. 94-140, 89 Stat. 754, Pub. L. 95-396, 92 Stat. 819; 7 U.S.C.; 136).

The scientific data reported and other relevant material have been evaluated, and it was determined that establishment of these temporary tolerances would protect the public health. These temporary tolerances were established on the condition that the experimental use permit be used with the following provisions:

1. The total amount of the fungicide to be used will not exceed the quantity authorized in the experimental use permit.

2. Pennwalt Corp. will immediately notify the Environmental Protection Agency of any findings from the experimental use that have a bearing on safety. The firm will also keep records of production, distribution, and performance and on request make the records available to any authorized officer or employee of the EPA or the Food and Drug Administration.

These temporary tolerances expire December 31, 1980. Residues not in excess of these temporary tolerances remaining in or on the above raw agricultural commodity after expiration date of these tolerances will not be considered actionable if the pesticide is legally applied during the term of, and in accordance with, the provisions of the experimental use permit and temporary tolerance. These tolerances may be revoked if the experimental use permit is revoked or if any scientific data or experience with this pesticide indicates such revocation is necessary to protect the public health.

(Sec. 408(j), 68 Stat. 561; (21 U.S.C. 346a(j))

Dated: August 4, 1980.

Assessment of Civil Penalty for Violation of Fuels and Fuel Additives Regulation; Region VII

AGENCY: Environmental Protection Agency, Region VII.

ACTION: Notice of final agency action.

SUMMARY: On May 7, 1980, the Regional Administrator for Region VII issued a final order assessing a civil penalty against Hudson Stations, Inc. for a violation of 40 CFR 80.22(f)(1). Section 80.22(f)(1) requires retailers to equip leaded gasoline pumps with nozzles of a certain minimum size to help prevent the introduction of leaded gasoline into vehicles equipped to operate on unleaded gasoline.

ADDRESS: Copies of the order are available for public inspection, upon request, at the following location: Environmental Protection Agency, Region VII, Office of Regional Counsel, 16th Floor, 324 East 11th Street, Kansas City, Missouri 64106.

FOR FURTHER INFORMATION CONTACT: John H. Morse, Office of Regional Counsel, Environmental Protection Agency, Room 1618, 324 East 11th Street, Kansas City, Missouri 64106 (816-374-2069).

SUPPLEMENTARY INFORMATION: Under Section 307(b)(1) of the Clean Air Act, judicial review of this action is available *only* by the filing of a petition for review in the United States Court of Appeals for the appropriate circuit within 60 days of August 12, 1980, date of publication in the **Federal Register**. Under section 307(b)(2) of the Clean Air Act, the requirements which are the subject of today's notice may not be challenged later in civil or criminal proceedings brought by EPA to enforce these requirements.

Dated: July 31, 1980.

Kathleen Q. Camin,

Regional Administrator.

[FRL 1566-3; PP 9G2211/T251]

American Cyanamid Co.; Establishment of a Temporary Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has established a temporary tolerance for the insecticide (±)cyano(3-phenoxyphenyl)methyl(+)-4-(difluoromethoxy)-alpha-(1-methylethyl)benzeneacetate in or on the raw agricultural commodity cottonseed at 0.1 part per million (ppm).

FOR FURTHER INFORMATION CONTACT: Franklin D. R. Gee, Product Manager (PM) 17, Registration Division (TS-767), Office of Pesticide Programs, Rm: E-341, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460, 202/426-2637.

SUPPLEMENTARY INFORMATION: American Cyanamid Company, Agricultural Research Division, P.O. Box 400, Princeton, NJ 08540, submitted a pesticide petition (PP 9G2211) to the EPA. The petition requested that a temporary tolerance be established for the insecticide (±)cyano(3-phenoxyphenyl)methyl(+)-4-(difluoromethoxy)-alpha-(1-methylethyl)benzeneacetate in or on the raw agricultrual commodity cottonseed at 0.1 ppm.

This temporary tolerance would permit the marketing of the above raw agricultural commodity when treated in accordance with an experimental use permit being issued under the Federal Insecticide, Fungicide, and Rodenticide Act, (Pub. L. 80-104, 61 Stat. 163, as amended by Pub. L. 92-516, 86 Stat. 975; Pub. L. 94-140, 89 Stat. 754, Pub. L. 95-396, 92 Stat. 819; 7 U.S.C. 136).

The scientific data reported and other relevant material were evaluated, and it was determined that establishment of a temporary tolerance would protect the public health. The temporary tolerance has been established on the condition that the experimental use permit be used with the following provisions:

1. The total amount of the insecticide to be used will not exceed the quantity authorized in the experimental use permit.

2. American Cyanamid will immediately notify the Environmental Protection Agency of any findings from the experimental use that have a bearing on safety. The firm will also keep records of production, distribution, and performance and on request make the records available to any authorized officer or employee of the EPA or the Food and Drug Administration.

This temporary tolerance expires on May 30, 1981. Residues not in excess of this temporary tolerance remaining in or on the above raw agricultural commodity after expiration of this tolerance will not be considered actionable if the pesticide is legally applied during the term of, and in accordance with the provisions of experimental use permit and temporary tolerance. These tolerance may be revoked if the experimental use permit is revoked or if any scientific data or experience with this pesticide indicate such revocation is necessary to protect the public health.

FEDERAL EMERGENCY MANAGEMENT AGENCY

Privacy Act of 1974; Addition of New Routine Use to an Existing System of Records

AGENCY: Federal Emergency Management Agency.

ACTION: Proposed addition of a new routine use to an existing FEMA system of records entitled, "National Flood Insurance Application and Related Documents Files—FEMA/FIA-2."

SUMMARY: The purpose of tnis proposal is to give notice that an additional routine use "To property loss reporting bureaus, state insurance departments, and insurance companies investigating fraud or potential fraud in connection with claims, subject to the approval of the Office of Inspector General, FEMA;" is being proposed to be added to the beginning of the first paragraph under "Routine uses" of the National Flood Insurance Application and Related Documents Files. On June 5, 1980, the Federal Emergency Management Agency published in the **Federal Register**, 45 FR 37890, a notice advising the public that this system was being transferred from the Department of Housing and Urban Development to the Federal Emergency Management Agency. This action was necessitated as a result of a reorganization that transferred functions of five existing agencies in four departments or parent agencies to the Federal Emergency Management Agency. The proposed routine use was merely an oversight when we published the system in the June 5 edition of the **Federal Register**. This particular routine use was included in the "Federal Crime Insurance Program," also published in the June 5 **Federal Register**, and was omitted from the "National Flood Insurance Application and Related Documents Files" system of records. The proposed routine use is compatible with the purposes for which the system was established, therefore, we are not required to file any reports with Congress or the Office of Management and Budget.

The following additional changes are being made to the "Routine use" portion of this system of records. After "Jonestown, Pennsylvania", the period should be changed to a comma. The second paragraph under "Routine use" has been revised to include only those routine uses in Appendix A that continue to apply to this system after the revision of the Appendix at 45 FR 51443, August 1, 1980.

In an effort to economize on the cost of publication in the **Federal Register**, we are publishing only the sections of the system of records affected by this notice. The remaining portions of the system can be viewed in the June 5 **Federal Register**, 45 FR 37890.

The Federal Emergency Management Agency should not be placed in a position of having to ignore information

relating to violations or potential

American Red Cross, the Federal

It is further ordered, that a copy of

Dated: August 7, 1980

relating to violations or potential violations of laws not within its jurisdiction when that information comes to the attention of the Federal Emergency Management Agency through the conduct of a lawful FEMA program or investigation. Nor, should the Federal Emergency Management Agency be placed in a position of non-cooperating with an agency involved in investigating fraud or potential fraud when we possess such pertinent information that could assist in the detection or apprehension of violators of laws adminstered by a state or local agency.

DATE: Any interested parties may submit written comments regarding this proposal. To be considered, comments must be received on or before September 11, 1980. Unless comments are received on or before that date, which would result in a contrary determination, the routine use will become effective as proposed without further notice on September 11, 1980.

ADDRESS: Address comments to the Rules Docket Clerk, Federal Emergency Management Agency, (Room 801), 1725 I Street, N.W., Washington, D.C. 20472. Comments received will be available for public inspection at the above address from 9 a.m. to 4 p.m. during normal working days.

FOR FURTHER INFORMATION CONTACT: Linda M. Hartford, Office of Public Affairs, (202) 634–6772. This is not a toll free number.

SUPPLEMENTARY INFORMATION: Based on the above reasons outlined under the Summary section, the Federal Emergency Management Agency finds it necessary to revise the routine use portion of the "National Flood Insurance Application and Related Documents Files."

FEMA/FIA–2

SYSTEM NAME:

National Flood Insurance Application and Related Documents Files.

FEDERAL MARITIME COMMISSION

[Independent Ocean Freight Forwarder License No. 1347]

C. E. Tolonen Co., Inc.; Order of Revocation

Section 44(c), Shipping Act, 1916, provides that no independent ocean freight forwarder license shall remain in force unless a valid bond is in effect and on file with the Commission. Rule 510.9 of Federal Maritime Commission General Order 4 further provides that a license will be automatically revoked or suspended for failure of a licensee to maintain a valid bond on file.

The bond issued in favor of C. E. Tolonen Co., Inc., 1000 Second Avenue, Seattle, WA 98114, FMC No. 1347, was cancelled effective July 27, 1980.

By letter dated July 3, 1980, C. E. Tolonen Co., Inc. was advised by the Federal Maritime Commission that Independent Ocean Freight Forwarder License No. 1347 would be automatically revoked or suspended unless a valid surety bond was filed with the Commission.

C. E. Tolonen Co., Inc. has failed to furnish a valid surety bond.

By virtue of authority vested in me by the Federal Maritime Commission as set forth in Manual of Orders, Commission Order No. 201.1 (Revised), section 5.01(d) dated August 8, 1977;

Notice is hereby given, that Independent Ocean Freight Forwarder License No. 1347 be and is hereby revoked effective July 27, 1980.

It is ordered, that Independent Ocean Freight Forwarder License No. 1347, issued to C. E. Tolonen Co., Inc. be returned to the Commission for cancellation.

It is further ordered, that a copy of this Order be published in the **Federal Register** and served upon C. E. Tolonen Co., Inc.

Robert G. Drew,

Director, Bureau of Certification and Licensing.

[Independent Ocean Freight Forwarder License No. 2124]

World Trade Transport Corp.; Order of Revocation

On July 18, 1980, World Trade Transport Corp., The World Trade Center, Suite 2532, Baltimore, MD 21202, voluntarily surrendered its Independent Ocean Freight Forwarder License No. 2124 for revocation.

Therefore by virtue of authority vested in me by the Federal Maritime Commission as set forth in Manual of Orders, Commission Order No. 201.1 (Revised), section 5.01(c), dated August 8, 1977;

It is ordered, that Independent Ocean Freight Forwarder License No. 2124 issued to World Trade Transport Corp., be and is hereby revoked effective July 18, 1980.

It is further ordered, that a copy of this Order be published in the **Federal Register** and served upon World Trade Transport Corp.

Robert G. Drew,

Director, Bureau of Certification and Licensing.

BILLING CODE 6730–01–M

Notice of Agreements Filed

The Federal Maritime Commission hereby gives notice that the following agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of each of the agreements and the justifications offered therefor at the Washington Office of the Federal Maritime Commission, 1100 L Street, N.W., Room 10218; or may inspect the agreements at the Field Offices located at New York, N.Y.; New Orleans, Louisiana; San Francisco, California; Chicago, Illinois; and San Juan, Puerto Rico. Interested parties may submit comments on each agreement, including requests for hearing, to the Secretary, Federal Maritime Commission, Washington, D.C., 20573, on or before September 2, 1980. Comments should include facts and arguments concerning the approval, modification, or disapproval of the proposed agreement. Comments shall discuss with particularity allegations that the agreement is unjustly discriminatory or unfair as between carriers, shippers, exporters, importers, or ports, or between exporters from the United States and their foreign competitors, or operates to the detriment of the commerce of the United States, or is contrary to the public interest, or is in violation of the Act.

A copy of any comments should also be forwarded to the party filing the agreements and the statement should indicate that this has been done.

AGREEMENT NO.: LM–1.

FILING PARTY: H. S. Thorne, President, Panama City Florida, Steamship Association, P.O. Box 1555, Panama City, Florida 32401.

SUMMARY: Agreement No. LM–1, which has been refiled for consideration by the Commission, constitutes the Articles of Incorporation and By-Laws of the Panama City Florida Steamship Association, Inc., (Association). The purposes of the Association are to: (1) acquire, preserve and disseminate information pertaining to the Port's ocean commerce and to promote the interest, decrease the risks and improve the methods in handling thereof; (2) promote the mutual welfare of the Association's members and the members' waterfront employees, to do any and all things to advance the interests of the Port and to increase the commerce thereof; (3) take over, carry on and continue the affairs of the unincorporated Association known as the Panama City Florida Steamship Association; (4) act upon request, as bargaining agent for any or all of its members with respect to labor contracts and disputes; (5) hold and exercise all such incidental powers that relate to the above purposes; and (6) engage in any and all lawful activities permitted under the laws of the State of Florida. Membership in the Association consists of persons, firms and corporations engaged in business as steamship agents and contracting stevedores and admission of new members is upon the unanimous vote of all members in good standing. Any member may be expelled from the Association with or without assigned cause after such member has been offered and opportunity to be heard but no member shall be expelled except pursuant to the approval of all of the other members of the Association.

AGREEMENT NO.: T–3516–3.

FILING PARTY: H. H. Wittren, Manager, Waterfront Real Estate, Port of Seattle, P.O. Box 1209, Seattle, Washington 98111.

SUMMARY: Agreement No. T–3516–3, between the Port of Seattle (Port) and Japan Line, Ltd., Kawasaki Kisen Kaisha, Ltd., Mitsui-O.S.K. Lines, Ltd., Nippon Yusen Kaisha, Ltd., Showa Line, Ltd., and Yamashita-Shinnihon Steamship Company, Ltd., (Lines) modifies the parties' basic agreement providing for the Port's lease to the Lines of certain premises at Terminal 37, Seattle, Washington.

The purpose of the modification is to increase the Lines' monthly amortization payments for final additional improvement costs and to provide for additional rental for the lease of four yard tractors.

AGREEMENT NO.: T–3808–1.

FILING PARTY: Robert W. Parkin, City Attorney, City of Long Beach, Harbor Administration Building, P.O. Box 570, Long Beach, California 90801.

SUMMARY: Agreement No. T–3808–1 between the City of Long Beach (City) and Pacific Coast Cement Corporation (Corp.) revises the compensation to be paid by Corp. to City for the use of certain facilities at the Port of Long Beach as provided in Agreement No. T–3808. The ground rent for Parcel I shall be $0.032 per square foot per month for the first five year period. For each successive five-year period the rent shall be a sum agreed upon by the City and the Corp. Corp. also will pay City per month $81,968.90 plus 1.058 percent of the actual cost in excess of $8,830,000 for improvements constructed or to be constructed by City on Parcel I for Corp.'s use.

AGREEMENT NO.: T–3915.

FILING PARTY: Antonio Zapater, 50 Isabel Street, P.O. Box 1350, Ponce, Puerto Rico 00731.

SUMMARY: Agreement No. T–3915, between Junta Administrativa de los Muelles Municipales de Ponce (Junta) and Carol Lines, a joint container service operated by Compagnie Generale Maritime, Hapag-Lloyd A.G., Thos. & Jas. Harrison Ltd. and Koninklijke Nederlandsche Stoomboot-Maatschappij B.V., (Carol), provides for Carol's lease of facilities and preferential building privileges at Pier 6, Municipal Piers of Ponce and adjacent container parking areas. Carol shall have a 36-hour preferential use of Pier 6 on the days indicated on their vessel ETA schedules. The agreement shall run for 1 year with options for additional 3 year periods. Carol shall pay $3,000 for the preferential rights at Pier 6; a fixed annual fee for mooring charges as per revelant tariff with a yearly guarantee of $42,000; for use of parking annual rent of $30,000; and wharfage charges as per

applicable tariff with minimum guarantee of $30,000 with charges exceeding said minimum being split 75 percent for Junta and 25 percent for Carol. Junta will provide for Carol one shoreside crane (40 LT) at a rental of $3,000 per 8-hour period and any time exceeding this period will be at the rate of $93.75 for every 15-minute period.

AGREEMENT NO.: T–3916.

FILING PARTY: David F. Anderson, Matson Navigation Company, 333 Market Street, San Francisco, California 94105.

SUMMARY: Agreement No. T–3916, between Matson Navigation Company (Matson), and its wholly-owned subsidiary Matson Terminals, Inc. (Terminals) is a memorandum of understanding wherein Terminals will perform, at cost, full terminal and or stevedoring services and administrative and general services for Matson at the port of Los Angeles and Oakland, California; Portland, Oregon; Seattle, Washington; Honolulu, Hawaii and Richmond, California. Matson shall reimburse Terminals for all costs incurred in the performance of the services provided for in the Agreement. The cost transfers will be made on the basis of experience rather than a fixed schedule. The Agreement will supersede, and terminate FMC Agreement No. T–2737, approved by the Commission on March 23, 1973.

AGREEMENT NO.: 10156–3.

FILING PARTY: John R. Attanasio, Esquire, Billig, Sher & Jones, P.C., 2033 K. Street, N.W., Washington, D.C. 20006.

SUMMARY: Agreement No. 10156–3, is an application between the Mediterranean/North Pacific Coast Freight Conference (Agreement No. 8090) and Johnson Scanstar Combined Service (Agreement No. 9973) to extend the terms and conditions of the presently approved agreement for a period of three years beyond the current expiration date of September 30, 1980, i.e., until September 30, 1983. In addition, Article 3 of the basic agreement has been amended to include authority to agree on inland rates from points in Northern Italy.

AGREEMENT NO.: 10333–2.

FILING PARTY: Charles F. Fischer, Chairman, Calcutta, Bangladesh/U.S.A. Pool Agreement, 25 Broadway, New York, New York 10004.

SUMMARY: Agreement No. 10333–2 modifies the pool agreement to (1) have a specific pool fund accountant (2) add pool shares for each carrier in each section and (3) increase pool reporting time to 4 weeks from the close of the reporting period.

By Order of the Federal Maritime Commission.

Dated: August 7, 1980.

Francis C. Hurney,

Secretary.

GENERAL ACCOUNTING OFFICE

Regulatory Reports Review; Receipt of Report Proposals

The following requests for clearance of reports intended for use in collecting information from the public were received by the Regulatory Reports Review Staff, GAO, on August 1, 1980 (FCC), and August 4, 1980 (CPSC). See 44 U.S.C. 3512 (c) and (d). The purpose of publishing this notice in the **Federal Register** is to inform the public of such receipts.

The notice includes the title of each request received; the name of the agency sponsoring the proposed collection of information; the agency form number, if applicable; and the frequency with which the information is proposed to be collected.

Written comments on the proposed CPSC and FCC requests are invited from all interested persons, organizations, public interest groups, and affected businesses. Because of the limited amount of time GAO has to review the proposed requests, comments (in triplicate) must be received on or before August 28, 1980, and should be addressed to Mr. John M. Lovelady, Senior Group Director, Regulatory Reports Review, United States General Accounting Office, Room 5106, 441 G Street NW., Washington, D.C. 20548.

Further information may be obtained from Patsy J. Stuart of the Regulatory Reports Review Staff, 202–275–3532.

Federal Communications Commission

The FCC is requesting an extension-without-change clearance of Form 405–A, Application for Renewal of Radio Station License and/or Notification of Change to License Information. Form 405–A is used by licensees when applying for renewal of radio station licenses without major modification in the Aviation, Marine, Public Safety, Industrial, Land Transportation, and Disaster Services. Sections 90.119(b), 81.37, 87.33, and 99.11(d) of the FCC's Rules are applicable for Form 405–A. The form is used for five purposes: (1) Renewal of license, (2) mailing address change notification, (3) licensee name change notification (without change to corporate structure), (4) vessel name change notification (without change to vessel official number), and (5) station closure notification. The FCC estimates approximately 35,000 applications are received annually and that respondent burden averages 10 minutes per application.

The FCC is requesting an extension-without-change clearance of Form 406, Application for Ground Station

Authorization in the Aviation Services. Form 406 is used when requesting a new license, modifying an existing license, renewing with modifications or requesting assignment of ground radio station authorization. Section 87.31 of the FCC Rules and Regulations are applicable for Form 506. The FCC estimates approximately 5,000 applications are filed annually and that respondent burden will average one and one-quarter hours per application.

The FCC is requesting an extension-without-change clearance of Form 430, Common Carrier and Satellite Radio Licensee Qualification Report. Form 430 is filed with applications for common carrier and satellite radio licenses and is a report of the applicant's general legal qualifications. The form will be filed initially with the application for a construction permit and will be updated thereafter on a yearly basis, unless there is a significant change in a carrier's position or an application for modification. The FCC estimates that approximately 3,615 reports are received annually and that respondent burden will average 2 hours per report.

The FCC is requesting an extension-without-change clearance of Form 435, Application for a New or Modified Common Carrier Microwave Radio Station Construction Permit Under Part 21. Form 435 is used by communications carriers to apply for facilities in the Point-to-Point Microwave Radio Service, the Multipoint Distribution Service, and the Local Television Transmission Service. These services are covered under Part 21, §§ 21.7, 21.13, and 21.15 of the FCC Rules and Regulations. The FCC estimates that approximately 3,000 applications are received annually and that respondent burden will average 2 hours per application.

The FCC requests an extension-without-change clearance of Form 480, Application for Civil Air Patrol Radio Station Authorization. Form 480 must be filed by applicants for a new, modification or renewal of a license for a land station used exclusively for communications of the Civil Air Patrol. Section 87.22 of the FCC Rules and Regulations applies to Form 480. The FCC estimates that approximately 2,000 applications are received annually and that respondent burden will average 45 minutes per application.

The FCC requests an extension-without-change clearance of Form 505, Application for Station License in the CB or R/C Service. Form 505 is required by Part 95, Subpart D of the FCC Rules and Regulations. Applicant's applying for a Citizens Band Service License or a Radio Control License must complete this form. Applications for a renewal or modification are filed on Form 505 also. The FCC estimates approximately 1,500,000 applications are received annually and that respondent burden will average 5 minutes per application.

The FCC requests an extension-without-change clearance of Form 610, Application for Individual Amateur Radio Station and/or Operator License. Form 610 is required by Part 97, §§ 97.11, 97.13, and 97.47 of the FCC Rules and Regulations. The form is used to apply for, renew, or modify an amateur radio station license. The FCC estimates approximately 300,000 applications are received annually and that respondent burden will average 5 minutes per application.

The FCC requests an extension-without-change clearance of Form 755, Application for Restricted Radiotelephone Operator Permit by an Alien. Form 755 is used by aliens to obtain a radio operator license. Public Law 93–505 enacted November 30, 1974, removed the restriction in the Communication's Act concerning licensing of aliens and alien-affiliated entities in the Safety and Special Experimental Radio Services. Prior to this action only aliens entitled to apply for a Restricted Radiotelephone Operator Permit were those who held FAA Pilot Certificates and used the permit in connection with piloting duties. This form is required under §§ 1.83(a)(1) and 13.11(a)(1)(ii) of the FCC Rules and Regulations. The FCC estimates that approximately 8,000 applications are filed annually and that the respondent burden will average one minute per application.

Consumer Product Safety Commission

The CPSC requests clearance of a new, voluntary, single-time questionnaire which will be sent to importers and manufacturers of carpets and rugs. The proposed survey questionnaire will be sent to a national probability sample of importers and manufacturers of carpets and rugs. The purpose of the survey is to evaluate the impact of the Commission's carpet and rug flammability standards upon industry. In addition, the survey will solicit suggestions for improving the standards. The evaluation is being conducted by the Division of Evaluation of the CPSC and the information collected will be used as a part of an overall assessment of actions taken under the Flammable Fabrics Act. CPSC expects the questionnaire to be mailed out upon GAO clearance and that the return date of the questionnaire from respondents will be 30 days thereafter. The CPSC estimates that the questionnaire will be sent to approximately 128 carpet and rug importers and manufacturers and that the average time needed for completion of the questionnaire will be 3 hours.

The CPSC requests clearance of a new, voluntary, single-time questionnaire which will be sent to importers and manufacturers of mattresses. The proposed survey questionnaire will be sent to a national probability sample of importers and manufacturers of mattresses. The purpose of the survey is to evaluate the impact of the Commission's mattress flammability standard upon industry. In addition, the survey will solicit suggestions for improving the standard. The evaluation is being conducted by the Division of Evaluation of the CPSC and the information collected will be used as a part of an overall assessment of actions taken under the Flammable Fabrics Act. The CPSC expects the questionnaire to be mailed out upon GAO clearance and that the return date of the questionnaire from respondents will be 30 days thereafter. The CPSC estimates the questionnaire will be sent to approximately 155 importers and manufacturers of mattresses and that the average time needed for completion of the questionnaire will be 3 hours.

Norman F. Heyl,

Regulatory Reports Review Officer.

BILLING CODE 1610–01–M

GENERAL SERVICES ADMINISTRATION

[F–80–13]

Delegation of Authority to the Secretary of Defense

1. *Purpose.* This delegation authorizes the Secretary of Defense to represent, in conjunction with the Administrator of General Services, the consumer interests of the executive agencies of the Federal Government in proceedings before the Kansas State Corporation Commission involving intrastate telecommunications service rates.

2. *Effective date.* This delegation is effective immediately.

3. *Delegation.*

a. Pursuant to the authority vested in me by the Federal Property and Administrative Services Act of 1949, 63 Stat. 377, as amended, particularly sections 201(a)(4) and 205(d) (40 U.S.C. 481(a)(4) and 486(d), authority is delegated to the Secretary of Defense to represent the consumer interests of the Federal executive agencies before the Kansas State Corporation Commission involving the application of the Southwestern Bell Telephone Company for an increase in its rates for intrastate telecommunications services. The authority delegated to the Secretary of Defense shall be exercised concurrently with the Administrator of General Services.

b. The Secretary of Defense may redelegate this authority to any officer, official, or employee of the Department of Defense.

c. This authority shall be exercised in accordance with the policies, procedures, and controls prescribed by the General Services Administration, and shall be exercised in cooperation with the responsible officers, officials, and employees thereof.

Dated: July 29, 1980.

Ray Kline,

Acting Administrator of General Services.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 80N–0271]

International Drug Scheduling Convention on Psychotropic Substances

Correction

In FR Doc. 80–21488, appearing at page 48254, in the issue of Friday, July 18, 1980, please make the following corrections on page 48255:

In the middle column, after the fourth line, there should have appeared some black space and then the date "March 26, 1980". This signifies the end and the date of the quoted notice from the World Health Organization (WHO). The following 24 lines were incorrectly set in small type, possibly creating the impression that they were part of the WHO notice. The material in the middle column, from the fifth line (beginning "Therefore, as required * * *") through the 28th line ("Convention.") should have been set in regular size type.

Consumer Participation; Open Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces a forthcoming consumer exchange meeting to be chaired by Hayward E. Mayfield, District Director, Nashville District Office, Nashville, TN.

DATE: The meeting will be held at 10:30 a.m., Tuesday, August 19, 1980.

ADDRESS: The meeting will be held at the Northside Senior Center, 104 E. Northside Dr., Jackson, MS 39206.

FOR FURTHER INFORMATION CONTACT: Jessica A. Parchman, Consumer Affairs Officer, Food and Drug Administration, 297 Plus Park Blvd., Nashville, TN 37217, 615–251–7127.

SUPPLEMENTARY INFORMATION: The purpose of this meeting is to encourage dialogue between consumers and FDA officials, to identify and set priorities for current and future health concerns, to enhance relationships between local consumers and FDA's Nashville District Office, and to contribute to the agency's policymaking decisions on vital issues.

Dated: August 5, 1980.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

Scientific Evaluation of Medical Technology

The National Center for Health Care Technology (Center) announces that it is beginning a scientific evaluation of the clinical effectiveness of bilateral lens calculation using A-scan ultrasound prior to cataract surgery. Based on this evaluation, a recommendation will be formulated to assist the Health Care Financing Administration (HCFA) in establishing Medicare reimbursement policy. Any person or group wishing to provide the Center with information relevant to this evaluation should do so in writing no later than 30 days from the day of this notice. To enable the Center's staff to give appropriate consideration to any literature references or analyses of clinical data, a written summary no longer than 10 pages should be attached to any such material submitted.

Written material should be submitted to: National Center for Health Care Technology, Room 17A–29, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

For further information contact: Pierre F. Renault, M.D., Associate Director for Medical and Scientific Evaluation, National Center for Health Care Technology, Room 17A–29, Parklawn Building, Rockville, Maryland 20857, (301) 443–4990.

Dated: August 6, 1980.

Wayne C. Richey, Jr.,

Acting Executive Secretary, Office of Health Research, Statistics, and Technology.

BILLING CODE 4110–85–M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Government National Mortgage Association

[Docket No. N–80–1017]

Guaranty of Mortgage-Backed Securities; Forms of Letters of Credit To Be Used in Mortgage-Backed Securities Program

AGENCY: Government National Mortgage Association, HUD.

ACTION: Notice.

SUMMARY: The Government National Mortgage Association, "GNMA," has established forms of letters of credit to be used in its Mortgage-Backed Securities Program. Only letters of credit in the prescribed forms are acceptable to GNMA as (1) collateral in GNMA's mark to market requirements and (2) collateral in GNMA's Construction Loan Securities Program.

FOR FURTHER INFORMATION CONTACT: Warren Lasko, Government National Mortgage Association, Department of Housing and Urban Development, 451 Seventh Street, S.W., Washington, D.C. 20410, (202) 755–8772. This is not a toll free number.

SUPPLEMENTARY INFORMATION: On June 13, 1980, the Government National Mortgage Association issued a Final Rule, published in the **Federal Register** at 45 FR 40556, amending regulations relating to the Mortgage-Backed Securities Program (24 CFR Part 390). The amendment, intended to reduce opportunities for abuses that have occurred in the trading of mortgage-backed securities, established rules governing the securities marketing and trading practices of issuers of securities guaranteed by GNMA.

One requirement of the Final Rule is that issuers of GNMA-guaranteed securites, with respect to certain forward market transactions, enter only into contracts which provide for at least weekly mark to market deposits of collateral with an independent financial institution. The marking to market of delayed delivery contracts involves the deposit of collateral by the party suffering an unrealized loss, when the current market price is measured against the contract price, in the amount of the unrealized loss. In response to

Tippecanoe County

Lane County

National Park Service

comments received, GNMA expanded the list of eligible collateral to include irrevocable, unconditional letters of credit in a form acceptable to GNMA, and issued by a banking institution supervised by the Comptroller of the Currency, the Federal Deposit Insurance Corporation, or the Federal Reserve Board.

By this publication, notice is given as to the forms of letters of credit acceptable to GNMA as collateral in its mark to market requirements, and in the Construction Loan Securities Program.

The prescribed forms, and instructions for their completion, will appear as Appendix 56 to the *GNMA Mortgage-Backed Securities Guide,* GNMA Handbook 5500.1. The Mortgage-Backed Securities Guide is available through GNMA's office in Washington, D.C.

The prescribed letters of credit are irrevocable, unconditional and, in the mark to market case, nontransferrable. Letters of credit which do not follow the prescribed forms precisely are not acceptable to GNMA and use of a nonconforming letter of credit will constitute a failure to comply with GNMA requirements. Incorporation by reference of the Uniform Customs and Practices for Documentary Credits will not be acceptable.

Issued at Washington, D.C., August 4, 1980.

Ronald P. Laurent,

President, Government National Mortgage Association.

BILLING CODE 4210-01-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[M 32820]

Montana; Opportunity for Public Hearing and Republication of Notice of Proposed Withdrawal

August 4, 1980.

The Water and Power Resources Service (formerly Bureau of Reclamation), U.S. Department of the Interior, on December 4, 1975, filed application serial No. M 32820 for a withdrawal in relation to the following described land:

Principal Meridian, Montana.

T. 7 N., R. 1 E.,
Sec. 26, NE¼, NE¼NW¼, S½NW¼.

The area described contains 280 acres in Broadwater County, Montana.

The applicant desires that the land be reserved as a continuous source of material and rock for construction, operation, and maintenance of waterfowl nesting islands and dust abatement structures in connection with the Canyon Ferry Unit, Helena-Great Falls Division, Pick Sloan Missouri Basin Program.

A notice of the proposed withdrawal was published in the **Federal Register** on January 5, 1976, Vol. 41, Page 784, FR Document No. 76-15.

Pursuant to section 204(h) of the Federal Land Policy and Management Act of 1976, 90 Stat. 2754, notice is hereby given that an opportunity for a public hearing is afforded in connection with the pending withdrawal application. All interested persons who desire to be heard on the proposed withdrawal must file a written request for a hearing with the State Director, Bureau of Land Management, P.O. Box 30157, Billings, Montana 59107, on or before September 20, 1980. Notice of the public hearing will be published in the **Federal Register,** giving the time and place of such hearing. The hearing will be scheduled and conducted in accordance with BLM Manual Sec. 2351.16 B. All previous comments submitted in connection with the withdrawal application have been included in the record and will be considered in making a final determination on the application.

In lieu of or in addition to attendance at a scheduled public hearing, written comments or objections to the pending withdrawal application may be filed with the undersigned authorized officer of the Bureau of Land Management on or before September 20, 1980.

The above-described lands are temporarily segregated from the operation of the public land laws, including the mining laws, to the extent that the withdrawal applied for, if and when effected, would prevent any form of disposal or appropriation under such laws. Current administrative jurisdiction over the segregated lands will not be affected by the temporary segregation. In accordance with section 204(g) of the Federal Land Policy and Management Act of 1976, the segregative effect of the pending withdrawal application will terminate on October 20, 1991, unless sooner terminated by action of the Secretary of the Interior.

All communications (except for public hearing requests) in connection with the pending withdrawal application should be addressed to the Chief, Branch of Lands and Minerals Operations, Bureau of Land Management, Department of the Interior, P.O. Box 30157, Billings, Montana 59107.

Edgar D. Stark,

Acting Chief, Branch of Lands and Minerals Operations.

BILLING CODE 4310-03-M

National Park Service

Flood Hazard Mitigation Plan, Willow Beach, Lake Mead National Recreation Area, Arizona-Nevada; Intent To Prepare Environmental Impact Statement

Notice is hereby given that, in accordance with the National Environmental Policy Act of 1969, the U.S. Department of Interior, National Park Service has begun preparation of an Environmental Impact Statement to analyze impacts of various alternatives for the Mitigation of Flood Hazards and for future management of the Willow Beach developed area on Lake Mohave within Lake Mead National Recreation Area.

The statement will assess potential environmental impacts associated with the development of mitigation measures including the effects on access and circulation, overnight accommodations, visitor services, facilities, and management.

Alternatives which will be evaluated both by the Park Service and the public include no action, total facility relocation, partial relocation and revision of facilities, and restructured use alternatives.

This project commenced in March, 1977 with a series of Flood Hazard Studies. From those studies, the previously identified alternatives were developed. The Draft Environmental Statement will be released for public and agency review the Fall of 1980.

All interested agencies, organizations, or individuals are invited to submit comments or suggestions for consideration in the preparation of the Draft Environmental Impact Statement. The availability of the document will be announced in the **Federal Register** and additional public comments will be solicited. Those who desire to submit comments or suggestions should submit them to Donald Tiernan, Pacific Northwest/Western Team, Denver Service Center, National Park Service, 755 Parfet Street, P.O. Box 25287, Denver, Colorado 80225 on or before September 15, 1980.

Dated: August 5, 1980.

Howard H. Chapman,

Regional Director, Western Region.

BILLING CODE 4310-70-M

Wind Cave National Park; Intention To Negotiate a Concessions Contract

Pursuant to the provisions of Section 5 of the Act of October 9, 1965 (79 Stat. 969; U.S.C. 20), public notice is hereby given that thirty (30) days after the date

of publication of this notice, the Department of the Interior, through the Rocky Mountain Regional Director, proposes to negotiate a concession contract with Mr. Carl Oberlitner, authorizing him to continue to provide food and merchandise facilities and services for the public at Wind Cave National Park, for a period of five (5) years from January 1, 1982 through December 31, 1986.

An assessment of the environmental impact of this proposed action has been made and it has been determined that it will not significantly affect the quality of the environment, and that it is not a major Federal action having a significant impact on the environment under the National Environmental Policy Act of 1969. The environmental assessment may be reviewed in the Office of the Superintendent, Wind Cave National Park, Hot Springs, South Dakota 57747.

The foregoing concessioner has performed his obligations to the satisfaction of the Secretary under an existing permit which expires by limitation of time on December 31, 1981, and therefore, pursuant to the Act of October 9, 1965, as cited above is entitled to be given preference in the negotiation of a new contract. This provision, in effect, grants Mr. Carl Oberlitner, the present satisfactory concessioner, the right to meet the terms of responsive offers for the proposed contract and a preference in the award of the contract, if, thereafter, the offer of Mr. Carl Oberlitner is substantially equal to others received. The Secretary is also required to consider and evaluate all proposals received as a result of this notice. Any proposal to be considered and evaluated must be submitted on or before September 11, 1980.

Interested parties should contact the Superintendent, Wind Cave National Park, Hot Springs, South Dakota 57747, for information as to the requirements of the proposed contract.

Dated: May 28, 1980.

James B. Thompson,

Acting Regional Director, Rocky Mountain Region.

BILLING CODE 4310-70-M

INTERSTATE COMMERCE COMMISSION

[Ex Parte No. 311]

Expedited Procedures for Recovery of Fuel Costs

Decided: August 5, 1980.

In our decisions of May 13, 20, 27, June 3, 10, 17, 24, July 1, 8, 15, 22, and 29, 1980, a 13-percent surcharge was authorized on all owner-operator traffic, and on all truckload traffic whether or not owner-operators were employed. We ordered that all owner-operators were to receive compensation at this level.

The weekly figures set forth in the appendix for transportation performed by owner-operators and for truckload traffic is 13.4-percent. We are authorizing that the 13-percent surcharge for this traffic remain in effect, and that all owner-operators are to receive compensation at this level.

No change is authorized in the 2.3-percent surcharge on less-than-truckload (LTL) traffic performed by carriers not utilizing owner-operators, the 1.3-percent surcharge for United Parcel Service, nor in the 5.0-percent surcharge authorized for the bus carriers.

Notice shall be given to the general public by mailing a copy of this decision to the Governor of each State and to the Public Utilities Commissions or Boards of each State having jurisdiction over transportation, by depositing a copy in the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., for public inspection and by delivering a copy to the Director, Office of the Federal Register for publication therein.

It is ordered: This decision shall become effective Friday 12:01 a.m., August 8, 1980.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis and Gilliam. Chairman Gaskins absent and not participating.

Agatha L. Mergenovich,

Secretary.

Appendix.—*Fuel Surcharge*

Base Date and Price Per Gallon (Including Tax)

January 1, 1979.....63.5¢

Date of Current Price Measurement and Price Per Gallon (Including Tax)

August 4, 1980.....114.0

	Transportation performed by—			
	Owner operator (1)	Other (2)	Bus carriers (3)	UPS (4)
Average percent fuel expense (including taxes) of total revenue	16.9	2.9	6.3	3.3
Percent surcharge developed	13.4	2.3	5.0	[1]2.1
Percent surcharge allowed	13.0	2.3	5.0	[2]1.3

[1] The percentage surcharge developed for UPS is calculated by applying 81 percent of the percentage increase in the current price per gallon over the base price per gallon to the UPS average percent of fuel expense to revenue figure as of January 1, 1979 (3.3 percent).

[2] The developed surcharge figure is reduced 0.8 percent to reflect fuel related increases already included in the UPS rates.

BILLING CODE 1505-01-M

Permanent Authority Decisions; Decision-Notice

The following applications, filed on or after March 1, 1979, are governed by Special Rule 247 of the Commission's *Rules of Practice* (49 CFR 1100.247). These rules provide, among other things, that a petition for intervention, either in support of or in opposition to the granting of an application, must be filed with the Commission within 30 days after the date notice of the application is published in the **Federal Register.** Protests (such as were allowed to filings prior to March 1, 1979) *will be rejected.* A petition for intervention without leave must comply with Rule 247(k) which requires petitioner to demonstrate that it (1) holds operating authority permitting performance of any of the service which the applicant seeks authority to perform, (2) has the necessary equipment and facilities for performing that service, and (3) has performed service within the scope of the application either (a) for those supporting the application, or, (b) where the service is not limited to the facilities of particular shippers, from and to, or between, any of the involved points.

Persons unable to intervene under Rule 247(k) may file a petition for leave to intervene under Rule 247(l) setting forth the specific grounds upon which it is made, including a detailed statement of petitioner's interest, the particular facts, matters, and things relied upon, including the extent, if any, to which petitioner (a) has solicited the traffic or business of those supporting the application, or, (b) where the identity of those supporting the application is not included in the published application notice, has solicited traffic or business identical to any part of that sought by applicant within the affected marketplace. The Commission will also consider (a) the nature and extent of the property, financial, or other interest of the petitioner, (b) the effect of the decision which may be rendered upon petitioner's interest, (c) the availability of other means by which the petitioner's interest might be protected, (d) the extent to which petitioner's interest will be represented by other parties, (e) the extent to which petitioner's participation may reasonably be expected to assist in the development of a sound record, and (f) the extent to which participation by the petitioner would broaden the issues or delay the proceeding.

Petitions not in reasonable compliance with the requirements of the rule may be rejected. An original and one copy of the petition to intervene shall be filed with the Commission indicating the specific rule under which the petition to intervene is being filed, and a copy shall be served concurrently upon applicant's representative, or upon applicant if no representative is named.

Section 247(f) provides in part, that an applicant which does not intend to timely prosecute its application shall promptly request that it be dismissed, and that failure to prosecute an application under the procedures of the Commission will result in its dismissal.

If an applicant has introduced rates as an issue it is noted. Upon request, an applicant must provide a copy of the tentative rate schedule to any protestant.

Further processing steps will be by Commission notice, decision, or letter which will be served on each party of record. *Broadening amendments will not be accepted after the date of this publication.*

Any authority granted may reflect administrative acceptable restrictive amendments to the service proposed below. Some of the applications may have been modified to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.gs., unresolved common control, unresolved fitness questions, and jurisdictional problems) we find, preliminarily, that each common carrier applicant has demonstrated that its proposed service is required by the present and future public convenience and necessity, and that each contract carrier applicant qualifies as a contract carrier and its proposed contract carrier service will be consistent with the public interest and the transportation policy of 49 U.S.C. § 10101. Each applicant is fit, willing, and able properly to perform the service proposed and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulation. Except where specifically noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

MC 200 (Sub-468F), filed June 23, 1980. Applicant: RISS INTERNATIONAL CORPORATION, P.O. Box 100, 215 W. Pershing Road, Kansas City, MO 64141. Representative: H. Lynn Davis (same as applicant). INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–85]

Certain Slide Fastener Stringers, and Machines and Components Thereof for Producing Such Slide Fastener Stringers; Commission Hearing on the Presiding Officer's Recommendation and on Relief, Bonding and the Public Interest, and of the Schedule for Filing Written Submissions

AGENCY: U.S. International Trade Commission.

ACTION: The Scheduling of Oral Argument and Briefing for Investigation No. 337–TA–85, Certain Slide Fastener Stringers, and Machines and Components Thereof for Producing Such Slide Fastener Stringers.

Notice is hereby given that the presiding officer has filed her recommended determination of

complainant's request for a temporary exclusion order on July 31, 1980. She has also certified the evidentiary record to the Commission for its consideration. Interested persons may obtain copies of the presiding officer's recommendation (and all other public documents) by contacting the Office of the Secretary to the Commission, 701 E Street, N.W., Washington, D.C. 20436.

COMMISSION HEARING: The Commission will hold a hearing beginning at 10:00 a.m., e.d.t., on August 15, 1980, in the Commission's Hearing Room (Room 331), 701 E Street, N.W., Washington, D.C. 20436, for two purposes. First, the Commission will hear oral argument on the presiding officer's recommendation that temporary exclusion order should not issue under section 337(f) of the Tariff Act of 1930, as amended. Second, the Commission will hear presentations concerning appropriate relief, bonding and the public-interest factors for consideration in the event that the Commission determines that there is reason to believe that there is a violation of section 337. These matters will be heard on the same day in order to facilitate the completion of this investigation within time limits established under law and to minimize the burden of this hearing upon the parties. The procedures for each portion of the hearing follows.

ORAL ARGUMENT: A party to the Commission's investigation or an interested federal agency wishing to present to the Commission an oral argument concerning the presiding officer's recommendation will be limited to 20 minutes. In addition, such party or agency may present oral argument of up to 10 minutes on the questions of relief, bonding, and the public interest. The oral arguments will be held in this order: Complainant, Respondent, interested agencies, and Commission investigative staff. The complainant may reserve up to 5 minutes of its time for rebuttal. The issues of relief, bonding, and public interest are more fully described below.

RELIEF: If the Commission finds that there is reason to believe that a violation of section 337 has occurred, it may issue (1) an order which could result in the temporary exclusion from entry of Certain Slide Fastener Stringers, and Machines and Components Thereof for Producing Such Slide Fastener Stringers into the United States or (2) an order which could result in requiring the respondent to cease and desist from alleged unfair methods of competition or unfair acts in the importation and sale of such Slide Fastener Stringers and Machines and Components Thereof for Producing Such Slide Fastener Stringers. Accordingly, the Commission is interested in what relief, if any, should be ordered.

BONDING: If the Commission finds that there is reason to believe that a violation of section 337 has occurred and orders some form of relief, the president has up to 60 days to approve or disapprove the Commission's report. During this period the Certain Slide Fastener Stringers, and Machines and Components Thereof for Producing Slide Fastener Stringers would be entitled to enter the United States under a bond determined by the Commission and prescribed by the Secretary of the Treasury. Accordingly, the Commission is interested in what bond, if any, should be assessed.

PUBLIC INTEREST: If the Commission concludes that there is reason to believe that a violation of section 337 has occurred and orders some form of relief, it must consider the effect of that relief upon the public. Accordingly, the Commission is interested in the effect of any exclusion or cease and desist order upon (1) the public health and welfare, (2) competitive conditions in the U.S. economy, (3) the production of like or directly competitive articles in the United States, and (4) U.S. consumers.

WRITTEN SUBMISSIONS: The Commission requests that written submissions of four types be filed in connection with these proceedings before the Commission.

1. *Briefs on the presiding officer's recommendation.* Parties to the Commission's investigation, interested agencies, and the Commission investigative staff are encouraged to file briefs concerning exceptions to the presiding officer's recommendation. Briefs must be served by hand on all parties of record to the Commission's investigation on or before the date they are filed with the Secretary. Statements made in briefs should be supported by references to the record. Persons with the same positions on the issues are encouraged to consolidate their briefs, if possible. Briefs must be filed no later than the close of business on August 7, 1980. Parties are encouraged to consolidate the filing of exceptions to the presiding officer's recommended determination and alternative findings of fact and conclusions of law under section 210.54 of the Rules with this briefing requirement in order to eliminate duplicative filings. The filing date for such exceptions and alternative findings and conclusions is also August 7, 1980.

2. *Reply briefs to briefs on the presiding officer's recommendation.* Parties to the Commission's investigation, interested agencies, and the Commission investigative staff are encouraged to file reply briefs to the briefs of opposing parties concerning exceptions to the presiding officer's recommendation in order to give greater focus to the issues. Reply briefs must be filed no later than the close of business August 12, 1980.

3. *Post-hearing briefs.* Parties to the Commission's investigation, interested agencies and the Commission investigative staff may be asked to respond to questions in writing or to brief particular issues in more detail during the August 15, 1980 hearing. Such responses and additional briefing should be incorporated in post-hearing briefs. Post-hearing briefs, must be filed no later than the close of business on August 20, 1980.

4. *Requests to participate in the hearing.* Written requests to appear at the Commission hearing must be filed by August 12, 1980.

ADDITIONAL INFORMATION: The original and 19 true copies of all briefs and written comments and any written request to participate must be filed with the Secretary to the Commission. Any person desiring to discuss confidential information, or to submit a document (or a portion thereof) to the Commission in confidence, must request *in camera* treatment. Such request should be directed to the Chairman of the Commission and must include a full statement of the reasons why the Commission should grant such treatment. Documents or arguments reflecting confidential information approved by the Commission for *in camera* treatment will be treated accordingly. All nonconfidential written submissions will be open to public inspection at the Secretary's Office. Notice of the Commission's investigation was published in the Federal Register of June 13, 1980 (45 FR 40242).

By order of the Commission.
Issued: August 7, 1980.

Kenneth R. Mason,
Secretary.

BILLING CODE 7020-02-M

DEPARTMENT OF JUSTICE

Proposed Consent Decree In Action To Enjoin Discharge of Hazardous Waste

In accordance with Departmental Policy, 28 CFR 50.7, 38 FR 19029, notice is hereby given that on August 1, 1980, a proposed Consent Decree in *United States* v. *Automated Industrial Disposal*

and Salvage Co., Inc.; and Tipton Investment Service Co. was lodged with the United States District Court for the Eastern District of Tennessee, Northeastern Division. The proposed decree would require Defendants to immediately abate and remove all pollution from the surrounding waters, groundwater, and soil which is attributable to the operation at the Cedar Creek Site near Bristol, Tennessee.

The Department of Justice will receive for thirty (30) days from the date of publication of this notice, written comments relating to the proposed judgment. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, D.C. 20530, and refer to *United States* v. *Automated Industrial Disposal and Salvage Co., Inc.; and Tipton Investment Service Co.*, D.O.J. Docket No. 90-7-1-14.

The proposed consent decree may be examined at the Office of the Clerk, U.S. District Court, Federal Building, Summer Street and Main Street, Greenville, Tennessee, office of the United States Attorney, Court House Building, Greenville, Tennessee 37743, at the Region IV Office of the Environmental Protection Agency, Enforcement Division, Legal Branch, 345 Courtland Street, Atlanta, Georgia 30365 and at the Hazardous Waste Section, Land and Natural Resources Division, Department of Justice (Room 1644), Ninth Street and Pennsyvania Avenue, N.W., Washington, D.C., 20530. A copy of the proposed consent decree may be obtained in person or by mail from the Hazardous Waste Section, Land and Natural Resources Division, Department of Justice.

Angus Macbeth,

Deputy Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Proposed Consent Decree In Action To Obtain Injuctive Relief To Abate an Imminent and Substantial Endangerment Presented by Disposal or Hazardous Wastes

In accordance with Departmental Policy, 28 CFR 50.7, 38 FR 19029, notice is hereby given that on August 1, 1980, a proposed consent decree in *United States* v. *North Eastern Phamaceutical & Chemical Co., Inc., et al.* (Civil No. 80-5066-CV-SW) was lodged with the United States District Court for the Western District of Missouri, Southwestern Division. The proposed decree would require Syntex Agribusiness, Inc., to undertake remedial work, including destruction and/or effective permanent disposal of hazardous wastes and other contaminated materials presently buried on a small farm near Aurora, Missouri, and to reimburse the United States for up to $100,000.00 in expenses associated with investigating and securing the site.

The Department of Justice will receive for thirty (30) days from the date of publication of this notice, written comments relating to the proposed judgment. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, D.C. 20530, and refer to *United States* v. *North Eastern Pharmaceutical & Chemical Co., Inc. et al.* D.J. Ref. 90-7-1-8.

The proposed consent decree may be examined at the office of the United States Attorney, 549 U.S. Courthouse, 811 Grand Avenue, Kansas City, Missouri 64106, at the Region VII Office of the Environmental Protection Agency, Enforcement Division, 324 East 11th Street, Kansas City, Missouri 64106, and at the Hazardous Waste Section, Land and Natural Resources Division, Department of Justice (Room 1644), Ninth Street and Pennsylvania Avenue, N.W., Washington, D.C., 20530. A copy of the proposed consent decree may be obtained in person or by mail from the Hazardous Waste Section, Land and Natural Resources Division, Department of Justice. In requesting a copy, please enclose a check in the amount of $1.90 (10 cents per page reproduction charge) payable to the Treasurer of the United States.

Angus Macbeth,

Deputy Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Antitrust Division

United States v. Lauhoff Grain Co. and Krause Milling Co.; Proposed Final Judgment and Competitive Impact Statement

Notice is hereby given pursuant to the Antitrust Procedures and Panalties Act, 15 U.S.C. § 16(b) through (h), that a proposed Final Judgement and a Competitive Impact Statement (CIS) have been filed with the United States District Court for the District of Kansas in *United States of America* v. *Lauhoff Grain Company and Krause Milling Company*, Civil Action No. 78-1123. The Complaint in this case alleges that the two dry corn milling industry defendants conspired with each other to rig bids and allocate contracts for the sale of a blended food known as corn-soya milk (CSM) products to the Commodity Credit Corporation, an agency of the U.S. Department of Agriculture, in violation of Section 1 of the Sherman Act. The proposed Final Judgment enjoins the defendants for ten years from entering into, continuing or renewing any agreement, understanding, combination or conspiracy to rig bids or allocate contracts for the sale of blended fortified foods. The proposed Judgment also enjoins any communications by Krause or Lauhoff with any seller of blended foods concerning price or other terms of sale prior to communication of such information to the public or trade generally, except in the course of bona fide purchase and sale transactions. The proposed Judgment requires defendants to take affirmative action for a period of five years to apprise management personnel of the companies of the requirements of the proposed Judgment and the possible consequence of its violation. The CIS describes the terms of the Judgment and the background of the action.

Public comment is invited within the statutory 60-day comment period and should be directed to John L. Burley, Assistant Chief, Midwest Office, Antitrust Division, Department of Justice, Room 2634, 219 South Dearborn Street, Chicago, Illinois 60604, (telephone: (312) 353-7538). Such comments and responses thereto will be published in the **Federal Register** and filed with the Court.

Dated: July 14, 1980.

Joseph H. Widmar,

Director of Operations, Antitrust Division.

U.S. District Court, District of Kansas

United States of America, Plaintiff, v. *Lauhoff Grain Company*, and *Krause Milling Company*, Defendants.

Civil Action No. 78-1123.

Filed: July 14, 1980.

Stipulation

It is stipulated by and between the undersigned parties, by their respective attorneys, that:

1. The parties consent that a Final Judgment in the form hereto attached may be filed and entered by the Court, upon the motion of any party or upon the Court's own motion, at any time after compliance with the requirements of the Antitrust Procedures and Penalties Act (15 U.S.C. § 16), and without further notice to any party or other proceedings, provided that plaintiff has not withdrawn its consent, which it may do at any time before the entry of the proposed Final Judgment by serving notice thereof on defendants and by filing that notice with the Court.

2. In the event plaintiff withdraws its consent or if the proposed Final Judgment is not entered pursuant to this Stipulation, this Stipulation shall be of no effect whatever and the making of this Stipulation shall be without prejudice to the plaintiff and defendants in this and any other proceeding.

Dated: July 14, 1980.

For the plaintiff: Sanford M. Litvack, *Assistant Attorney General;* Joseph H. Widmar, *Director of Operations;* John L. Burley, Allyn A. Brooks, James J. Kubik, Diane C. Lotko-Baker, Mark S. Prosperi, *Attorneys, Department of Justice*, Room 2634, Everett M. Dirksen Bldg., Chicago, Illinois 60604, (312) 353-7283.

For the Defendant Krause Milling Company: David J. Cannon, Esq., *Michael, Best & Friedrich*, 250 East Wisconsin Avenue, Milwaukee, Wisconsin 53202, (414) 271-6560.

For the Defendant Lauhoff Grain Company: Harold J. Bressler, Esq., *McDermott, Will & Emery*, 111 West Monroe Street, Chicago, Illinois 60603, (312) 372-2000.

U.S. District Court, District of Kansas

United States of America, Plaintiff, v. *Lauhoff Grain Company*, and *Krause Milling Company*, Defendants.

Civil Action No. 78-1123.

Filed: July 14, 1980.

Final Judgment

Plaintiff, United States of America, having filed its complaint herein on March 27, 1978 and its amended complaint on July 28, 1978 and defendants Lauhoff Grain Company ("Lauhoff") and Krause Milling Company ("Krause") having appeared and filed their Answers to the Amended Complaint denying the material allegations thereof and raising affirmative defenses, plaintiff having dismissed Counts Two and Three of its amended complaint against, and by agreement with, defendants Lauhoff and Krause, by their respective attorneys, and plaintiff and defendants Lauhoff and Krause by their respective attorneys each having consented to the entry of this Final Judgment without trial or adjudication of any issue of fact or law herein, and without this Final Judgment constituting evidence against or an admission by any party hereto with respect to any such issue;

Now, Therefore, before the taking of any testimony, without trial or adjudication of any issue of fact or law herein, and without this Final Judgment constituting any evidence or admission by any party with respect to any such issue, and upon consent of the parties aforesaid, it is hereby

Ordered, Adjudged, and Decreed with respect to Count One of plaintiff's amended complaint as to defendants Lauhoff and Krause as follows:

I

This Court has jurisdiction of the subject matter of this action and of each of the parties consenting hereto. Count One of the amended complaint states a claim upon which relief may be granted against defendants Lauhoff and Krause under Section 1 of the Sherman Act (15 U.S.C. § 1).

II

As used in this Final Judgment:

(A) "blended foods" means any soy fortified sorghum grits, soy fortified bulgur, soy fortified rolled oats, soy fortified corn meal, corn-soy-blend, corn-soya-milk, instant corn-soya-milk, sweetened instant corn-soya-milk, instant soy fortified corn meal, sweetened instant soy fortified corn meal, soy fortified bread flour, whey soy drink mix, wheat protein concentrate blend, wheat soy blend and sweetened wheat soy blend, and soy fortified rice;

(B) "government agency" means any department, division, agency, branch or instrumentality of the United States, and any State or municipality;

(C) "person" means any individual, partnership, firm, corporation, association, or other business or legal entity.

III

The provisions of this Final Judgment shall apply to defendants Lauhoff and Krause and to each of their officers, directors, agents, employees, subsidiaries, successors and assigns, and to all other persons in active concert or participation with any of them who shall have received actual notice of this Final Judgment by personal service or otherwise.

IV

Defendants Lauhoff and Krause are enjoined and restrained from entering into, adhering to, maintaining, enforcing or furthering, directly or indirectly, any contract, combination or conspiracy with any other person to:

(A) Fix, determine, establish, maintain or stabilize the prices, discounts or other terms or conditions for the sale of blended foods to any person, government agency or foreign government;

(B) Submit noncompetitive, collusive, or rigged bids on contracts for the sale of blended foods to any person, government agency or foreign government;

(C) Allocate contracts, rotate or divide markets, customers or territories, with respect to sales of blended foods to any person, government agency or foreign government; and

(D) Communicate to or exchange with any other person manufacturing or selling blended foods any terms or conditions of sale including but not limited to any actual or proposed price, price component, price change, discount, total quantity, incremental price or quantity, or freight rate, at or upon which blended foods are to be, or have been, sold to any person, before such information is available to the public.

Subparagraphs (A) and (D) of this Section IV shall not apply to prices, discounts, or any other terms or conditions of purchase or sale, or necessary communications relating thereto, offered by either defendant Lauhoff or Krause to any person or offered by any person to either defendant Lauhoff or Krause in negotiating for, entering into or carrying out a bona fide sale or purchase or proposed sale or proposed purchase of blended foods either between defendant Lauhoff or Krause and such other person or where such other person is acting as a purchasing or selling agent or group buying or selling representative on behalf of any third person.

V

Defendants Lauhoff and Krause shall furnish to the plaintiff a copy of each audit of their bidding procedures required by paragraph (c) of the Order of the Commodity Credit Corporation Debarring Officer regarding defendants Lauhoff and Krause issued on December 17, 1976, and any other written notifications or interpretations of that Order.

VI

For a period of five (5) years from the date of entry of this Final Judgment, defendants Lauhoff and Krause shall preserve all written price computations and other written calculations perfomed by defendants subsequent to March 27, 1978, in the preparation of any bid on blended foods.

VII

Defendants Lauhoff and Krause are ordered and directed:

(A) To furnish, within sixty (60) days after the entry of this Final Judgment, a copy of this Final Judgment to each of its officers and directors, and to each of its employees and agents who have any responsibility for preparing, reviewing or submitting bids on blended foods;

(B) To furnish a copy of this Final Judgment to each successor to such officers, directors, employees or agents described in Section VII (A) hereof within sixty (60) days after such successor becomes employed or associated with either defendant Lauhoff or Krause;

(C) To obtain a receipt from each person to whom a copy of this Final Judgment has been furnished pursuant to Sections VII (A) and (B) hereof, and to maintain said receipts so long as this Final Judgment is effective;

(D) To establish a program for dissemination of, education as to, and compliance with this Final Judgment, for each individual to whom a copy of the Final Judgment has been furnished pursuant to Section VII (A) and (B) hereof and for each corporate employee and agent having responsibilities in connection with or authority over the establishment of prices, discounts or other terms or conditions of sale of blended foods, advising them of its and their obligations under this Final Judgment.

(E) To furnish to plaintiff within one hundred and twenty (120) days of the entry of this Final Judgment, and thereafter upon request by plaintiff for a period of five (5) consecutive years from the date of its entry, an annual account of all steps defendant has taken since the prior account to discharge its obligations under this Section VII and to include with said account copies of all written directives issued during the prior year with respect to compliance with the terms of this Final Judgment.

VIII

Defendants Lauhoff and Krause shall require, as a condition of the sale or disposition of all, or substantially all, of the assets used in the production and sale of blended foods, that the acquiring party agree to be bound by the provisions of this Final Judgment, and that such agreement be filed with the Court.

IX

For the purpose of determining or securing compliance with this Final Judgment, and subject to any legally recognized privilege, from time to time:

(A) Duly authorized representatives of the Department of Justice shall, upon written request of the Attorney General or of the Assistant Attorney General in charge of the Antitrust Division, and on reasonable notice to a defendant made to its principal office, be permitted:

(1) Access during office hours of such defendant to inspect and copy all books, ledgers, accounts, correspondence, memoranda and other records and documents in the possession or under the control of such defendant, who may have counsel present, relating to any matters contained in this Final Judgment; and

(2) Subject to the reasonable convenience of such defendant and without restraint or interference from it, to interview under oath officers, employees and agents of such defendant, who may have counsel present, regarding any such matters.

(B) Upon the written request of the Attorney General or of the Assistant Attorney General in charge of the Antitrust Division made to a defendant's principal office, such defendant shall submit such written reports, under oath if requested, with respect to any of the matters contained in this Final Judgment as may be requested.

No information or documents obtained by the means provided in this Section IX shall be divulged by any representative of the Department of Justice to any person other than a duly authorized representative of the Executive Branch of the Untied States except in the course of legal proceedings to which the United States is a party, or for the purpose of securing compliance with this Final Judgment, or as otherwise required by law.

(C) If at the time information or documents are furnished by any defendant to plaintiff, such defendant represents and identifies in writing the material in any such information or documents to which a claim of protection may be asserted under Rule 26(c)(7) of the Federal Rules of Civil Procedure, and such defendant marks each pertinent page of such maerial, "Subject to claim of protection under Rule 26(c)(7) of the Federal Rules of Civil Procedure," then 10 days notice shall be given by plaintiff to such defendant prior to divulging such material in any legal proceeding (other than a grand jury proceeding) to which such defendant is not a party.

X

Jurisdiction is retained by this Court for the purpose of enabling any of the parties to this Final Judgment to apply to this Court at any time for such further orders and directions as may be necessary or appropriate for the construction or carrying out of this Final Judgment, for the modification of any of the provisions thereof, for the enforcement of compliance therewith, and for the punishment of violations thereof.

XI

This Final judgment shall be in effect for a period of ten years from the date of its entry by this Court.

XII

Entry of this Final Judgment is in the public interest.

Dated:

_____,

United States District Judge.

U.S. District Court, District of Kansas

United States of America, Plaintiff v. *Lauhoff Grain Company*, and *Krause Milling Company*, Defendants

Civil No. 78-1123.

Filed: July 14, 1980.

Competitive Impact Statement

Pursuant to Section 2(b) of the Antitrust Procedures and Penalties Act [15 U.S.C. § 16(b)], the United States hereby submits this Competitive Impact Statement relating to the proposed consent judgement submitted for entry in this civil antitrust proceeding.

I

Nature of the Proceeding

On March 27, 1978 the United States filed a civil complaint under Section 4 of the Sherman Act [15 U.S.C. § 4], alleging that the defendants, Krause Milling Company (hereinafter "Krause") and Lauhoff Grain Company (hereinafter "Lauhoff"), had violated Section 1 of the Sherman Act [15 U.S.C. § 1]. The Complaint alleged that, beginning in early 1970 and continuing until late 1976, defendants and various co-conspirators engaged in a combination and conspiracy in unreasonable restraint of interstate trade and commerce, the substantial terms of which were: (a) to allocate between the defendants contracts awarded by the Commodity Credit Corporation (hereinafter CCC), an agency of the United State Department of Agriculture, for the total volume of corn-soya-milk products, various types of blended foods purchased by the CCC under the Food For Peace Program; and (b) to submit rigged, collusive and non-competitive bids to the CCC for the above-described contracts.

On July 26, 1978 the United States filed a First Amended Complaint in which the above-described violation of Section 1 of the Sherman Act was realleged as Count One. In addition, Count Two alleged a violation of the False Claims Act [31 U.S.C. §§ 231–233] and Count Three alleged actual damages under Section 4A of the Clayton Act [15 U.S.C. § 15(a)]. Counts Two and Three of the First Amended Complaint, seeking money damages for alleged overcharges suffered by the United States as a result of the alleged conspiracy, have been previously settled and compromised by the United States with the defendants Lauhoff and Krause without adjudication of any issue of fact or law. The attached final judgment provides injunctive relief against defendants Krause and Lauhoff under Count One.

A federal grand jury indictment against the same corporate defendants and one individual defendant, Charles A. Krause, president of Krause Milling Company, was also filed in the District of Kansas on March 27, 1978. The indictment alleged a criminal felony violation of Section 1 of the Sherman Act arising out of the same conspiracy alleged in this case. All defendants in the criminal case entered pleas of *nolo contendere* and were sentenced by District Judge Earl E. O'Connor on November 13, 1978. The sentences were as follows:

Lauhoff Grain Company—$450,000 fine.

Krause Milling Company—$450,000 fine.

Charles A. Krause—2 years custody of the Attorney General, 6 months to be served with the remainder suspended; $25,000 fine.

Entry by the Court of the proposed consent judgment will terminate the remaining portions of this civil action against Krause and Lauhoff, except insofar as the Court will retain jurisdiction over the matter for possible further proceedings which may be required to interpret, modify or enforce the judgement, or to punish alleged violations of any of the provisions of the judgment.

II

Description of Practices Involved in the Alleged Violation

The defendants are grain millers which manufacture corn-soya-milk products (CSM), high protein blended food products, which are sold to the CCC under the "Food For Peace Program" (Title II of the Agricultural Trade Development and Assistance Act of 1954, as amended). The CCC ships the product to foreign countries for distribution by relief organizations to undernourished people and to victims of war, famine and a variety of natural disasters. Defendants' total sales of CSM products during the period of the alleged conspiracy amounted to about $280 million.

The Government would have been prepared to prove at trial that representatives of defendants entered into an agreement in early 1970 to allocate the total purchases of CSM products monthly by the CCC between their two companies on the basis of 55 percent of the quantity to be purchased from Lauhoff and 45 percent to be purchased from Krause. This allocation was to be accomplished through a series of phone calls on the occasion of each bid during which the prices and quantities to be bid by each company would be discussed and agreed upon. Bids were then submitted to the CCC containing the prearranged prices and quantities which each company had agreed to submit. This alleged bid rigging and contract allocation agreement continued until November, 1976 when grand jury subpoenas *duces tecum* were served upon the defendants.

According to the Complaint, the alleged conspiracy had the following effects:

(a) Prices of CSM products sold to the CCC under the Food For Peace Program were fixed, maintained, and established at artifical and non-competitive levels;

(b) Competition in such sales was restrained, suppressed and eliminated; and

(c) The United States Government was denied the benefits of free and open competition in the purchase of CSM products.

Defendants, in their formal pleadings filed in the case, denied all of the allegations in the Government's Complaint and were prepared to dispute the evidence to be offered by the Government at a trial.

III

Explanation of the Proposed Final Judgment

The United States and the defendants Krause and Lauhoff have stipulated that the proposed final judgment, which is in a form negotiated by the parties, may be entered by the Court at any time after compliance with the Antitrust Procedures and Penalties Act. The stipulation between the parties provides that there has been no admission by any party with respect to any issue of fact or law. Under the provisions of Section 2(e) of the Antitrust Procedures and Penalties Act, entry of the proposed judgment by the Court is conditioned upon a determination by the Court that the judgment is in the public interest.

A. *Prohibited Conduct.* The proposed judgment will prohibit Krause and Lauhoff for ten years from entering into or adhering to any agreement with any person to fix or maintain the prices or other terms or conditions for the sale of blended foods to any third party. The judgment also prohibits the submission of non-competitive, collusive, or rigged bids on contracts for the sale of blended foods to any person. Also forbidden is any agreement by Krause or Lauhoff to allocate contracts, rotate or divide markets, customers, or territories with respect to sales of blended foods. The judgment also prohibits Krause and Lauhoff, by agreement or individually, from communicating or exchanging with any other person any information on prospective prices, quantities, freight rates, discounts or other terms and conditions for the sale of blended foods, before such prices or other terms are made available to the public or trade generally, except in the course of bona fide purchase and sales transactions.

B. *Required Conduct.* To ensure that all bids to the Government are made without collusion or agreement, the proposed judgment requires defendant Krause and Lauhoff to furnish the Government a copy of any audit of their bidding procedures for CCC sales prepared in accordance with any Order of the CCC entered as a result of debarment proceedings conducted by CCC against Krause and Lauhoff. To permit monitoring of compliance with the provisions relating to competitive bidding, defendants Krause and Lauhoff are also required, over a five-year period, to preserve all written price computations and other calculations actually performed in connection with the submission of bids to public agencies.

For the purpose of notifying all necessary employees regarding the prohibitions of the judgment, defendants Krause and Lauhoff are each required, within 60 days, to serve a copy of the judgment on each of their respective directors and officers, and upon each of their employees or agents who have any responsibility for preparing, reviewing, or submitting bids on blended foods. If new employees are hired in these positions in the future, Krause and Lauhoff must also serve a copy of the judgment on these new employees. The judgment applies not only to the defendant corporations but also to their officers, directors, employees, and agents who have actual notice of the judgment. Requiring the defendants Krause and Lauhoff to give such notice to their responsible personnel serves two purposes: it enables the affected employees to know what activities are prohibited, and it permits prosecution for criminal contempt of those employees who disregard the provisions of the judgment. Krause and Lauhoff are also required to establish a reasonable program for those persons having duties in regard to establishment of prices, discounts, or other terms or conditions of sale of blended foods advising them of the company's obligations under the judgment.

Under the proposed judgment, the Department of Justice is given access for ten years to the files and records of the defendants Krause and Lauhoff in order to examine such records for compliance or noncompliance with the judgment. The Department is also granted access to interview employees of the defendants Krause and Lauhoff to determine whether defendants are complying with the judgment.

C. *Effect of the Proposed Judgment on Competition.* The relief encompassed in the proposed consent judgment is designed to prevent a recurrence of any of the activities alleged in the Complaint. The prohibitory language of the judgment will ensure that all pricing decisions on blended foods are made independently by the individual competitors. The judgment contains sufficient record-keeping requirements and access to defendants' records to allow the Department to adequately monitor defendants' activities in the future.

In addition, Krause will be dismissed as a defendant in another related civil case. A second civil complaint virtually identical in form to the complaint in the captioned case, was filed July 26, 1978, and seeks damages and injunctive relief in three counts against Krause Milling Company and ADM Milling Co., with respect to a different product, soy-fortified sorghum grits (SFSG). That case was entitled *United States* v. *Krause Milling Company and ADM Milling Co.*, 78 C 1122 (D. Kansas). Counts Two and Three, the damage counts, in that case have been previously settled with both ADM and Krause. A stipulated final judgment was entered on September 20, 1979 providing injunctive relief under Count One against ADM nearly identical to the relief which will be provided against Krause and Lauhoff in the attached decree. The Department of Justice and Krause have stipulated to a dismissal of Count One seeking injunctive relief in the *Krause-ADM* case, which dismissal shall be effective upon entry of the final judgment in the captioned *CSM* case. An additional decree against Krause in the *Krause-ADM* case would thus be identical to the decree against Krause in the captioned case, and would be repetitious and unnecessary. The single proposed decree against Krause prohibits all of the illegal acts alleged in the complaints in both cases.

Accordingly, it is the opinion of the Department of Justice that the proposed judgment is fully adequate to prevent any future antitrust violations by the defendants Krause and Lauhoff. It is also the view of the Department that disposition of the case without additional litigation is appropriate in view of the fact that the proposed judgment includes the form and scope of relief equal to that which might be obtained after a full hearing on the issues in both civil cases at a trial.

IV

Remedies Available to Potential Private Litigants

Section 4 of the Clayton Act (15 U.S.C. 15) provides that any person who has been injured as a result of conduct prohibited by the antitrust laws may bring suit in federal court to recover three times the damages such person has suffered, as well as costs and reasonable attorney fees. Since the CCC, an agency of the United States Department of Agriculture, was the only purchaser of blended foods, there are no potential private plaintiffs who have suffered any equitable or monetary damage as a result of the alleged violation in this case. Hence, no potential private litigants exist who have standing to sue under Section 4 of the Clayton Act in this matter.

V

Procedures Available for Modification of the Proposed Judgment

As provided by the Antitrust Procedures and Penalties Act, any person believing that the proposed judgment should be modified may submit written comments to John L. Burley, Department of Justice, Antitrust Division, Room 2834, 219 South Dearborn Street, Chicago, Illinois 60604, within the 60-day period provided by the Act. The comments and the government's responses to them will be filed with the Court and published in the **Federal Register**. All comments will be given due consideration by the Department of Justice, which remains free to withdraw its consent to the proposed judgment at any time prior to its entry if it should determine that some modification of the judgment is necessary in the public interest. The proposed judgment itself provides that the Court will retain jurisdiction over this action, and that the parties may apply to the Court for such orders as may be necessary or appropriate for the modification or enforcement of the judgment.

VI

Alternatives to the Proposed Consent Judgment

This case does not involve any unusual or novel issues of fact or law which might make litigation a more desirable alternative than the entry of the negotiated consent judgment. The proposed judgment contains virtually all the relief which was requested in the Complaint.

VII

Other Materials

No materials and documents of the type described in Section 2(b) of the Antitrust Procedures and Penalties Act (15 USC 16(b)) were considered in formulating this proposed judgment.

John L. Burley, *Attorney, Department of Justice.*

BILLING CODE 4410-01-M

DEPARTMENT OF LABOR

Employment and Training Administration

Employment Transfer and Business Competition Determinations Under the Rural Development Act; Applications

The organizations listed in the attachment have applied to the Secretary of Agriculture for financial assistance in the form of grants, loans, or loan guarantees in order to establish or improve facilities at the locations listed for the purposes given in the attached list. The financial assistance would be authorized by the Consolidated Farm and Rural Development Act, as amended, 7 USC 1924(b), 1932, or 1942(b).

The Act requires the Secretary of Labor to determine whether such Federal assistance is calculated to or is likely to result in the transfer from one area to another of any employment or business activity provided by operations of the applicant. It is permissible to assist the establishment of a new branch, affiliate or subsidiary, only if this will not result in increased unemployment in the place of present operations and there is no reason to believe the new facility is being established with the intention of closing down an operating facility.

The Act also prohibits such assistance if the Secretary of Labor determines that it is calculated to or is likely to result in an increase in the production of goods, materials, or commodities, or the availability of services or facilities in the area, when there is not sufficient demand for such goods, materials, commodities, services, or facilities to employ the efficient capacity of existing competitive commercial or industrial enterprises, unless such financial or other assistance will not have an adverse effect upon existing competitive enterprises in the area.

The Secretary of Labor's review and certification procedures are set forth at 29 CFR Part 75. In determining whether the applications should be approved or denied, the Secretary will take into consideration the following factors:

1. The overall employment and unemployment situation in the local area in which the proposed facility will be located.

2. Employment trends in the same industry in the local area.

3. The potential effect of the new facility upon the local labor market, with particular emphasis upon its potential impact upon competitive enterprises in the same area.

4. The competitive effect upon other facilities in the same industry located in other areas (where such competition is a factor).

5. In the case of applications involving the establishment of branch plants or facilities, the potential effect of such new facilities on other existing plants or facilities operated by the applicant.

All persons wishing to bring to the attention of the Secretary of Labor any information pertinent to the determinations which must be made regarding these applications are invited to submit such information in writing within two weeks of publication of this notice. Comments received after the two-week period may not be considered. Send comments to: Administrator, Employment and Training Administration, 601 D Street, N.W., Washington, D.C. 20013.

Signed at Washington, D.C. this 6th day of August 1980.

Earl T. Klein,
Director, Office of Program Services.

Applications Received During the Week Ending August 9, 1980

Name of applicant and location of enterprise	Principal product or activity
U.S. Seating Co., Inc., Topton, Berks County, Pa.	Manufacture of transportation seating.
Arkansas Ethanol Corporation Helena, Ark.	Production of anhydrous ethanol for gasohol.
Warren Seibert Flippin, Ark	Multiple drilling and tapping spindles and components.
Intox Labs, Inc., Pulaski County, Ark.	Non-Clinical toxicological testing.

BILLING CODE 4510-30-M

Mine Safety and Health Administration

[Docket No. M-80-81-M]

Domtar Industries, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Domtar Industries, Inc., Sifto Salt Division, P.O. Box 7212, Montreal, Canada, H3C 3M3 has filed a petition to modify the application of 30 CFR 57.21-46 (gassy mines—ventilation) to its Cote Blanche Mine located in St. Mary Parish, Louisiana, in accordance with section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petitioner is mining domal salt. Rooms and pillars are large, and the strata is relatively impermeable to gas.

2. The petitioner states that its mine is less prone to blowouts (gas outbursts) than any other domal type salt mine declared gassy, both in numbers and magnitude of blowouts. Blowout cavities are oriented vertically, and they can be identified and avoided. Blowout avoidance has been demonstrated to be particularly successful at the petitioner's mine.

3. As an alternative to the application of 30 CFR 57.21-46, the petitioner proposes to place crosscuts at intervals in excess of 100 feet between entries and rooms. In areas where shaft pillars and drill hole pillars already exist, they may continue to be utilized on centerlines in excess of 100 feet.

4. The size of pillars would have to be sacrificed to comply with the standard, the petitioner states. Considering the enormous volume of the rooms and openings, smaller pillars would diminish rather than enhance the safety of miners.

5. A number of safeguards are listed as follows:

a. A minimum of eight methane monitor sensing devices will be located in the mine. At least one of these will be placed to effectively monitor any area to be blasted.

b. Blasting will be done by a competent person with all miners on the surface.

c. Before reentering the mine, monitors located on the surface will provide miners with verification of blast effectiveness and of methane concentrations detected by underground sensors. In addition, competent persons will monitor exhaust air from the mine. Mine crews and nonpermissible equipment will not enter active workings if the methane concentration is 1.0 percent or more.

d. All mobile equipment, either permissible or nonpermissible, taken past the last open crosscut shall have a working methane monitor installed, with both visible and audible warnings.

e. All drills, undercutters and personnel carriers beyond the last open crosscut shall be maintained in a permissible condition.

f. Nonpermissible equipment will not be permitted in entries where drilling or undercutting is in progress.

6. The petitioner alleges that in conjunction with other requested modifications, the proposed modification will guarantee miners no less protection than that afforded by the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before September 11, 1980. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Dated: July 31, 1980.

BILLING CODE 4510-43-M

[Docket No. M-80-88-M]

Domtar Industries, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Domtar Industries, Inc., Sifto Salt Division, P.O. Box 7212, Montreal, Canada, H3C 3M3 has filed a petition to modify the application of 30 CFR 57.21-95 (gassy mines—explosives) to its Cote Blanche Mine located in St. Mary Parish, Louisiana, in accordance with section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petitioner is mining domal salt. Rooms and pillars are large, and the strata is relatively impermeable to gas.

2. The petitioner states that its mine is less prone to blowouts (gas outbursts) than any other domal type salt mine declared gassy, both in numbers and magnitude of blowouts. Blowout cavities are oriented vertically, and they can be identified and avoided. Blowout avoidance has been demonstrated to be particularly successful at the petitioner's mine.

3. As an alternative to the application of 30 CFR 57.21-95, the petitioner proposes to continue using Ammonium Nitrate Fuel Oil (AN-FO) explosives without stemming.

4. When blasing faces and benches, all personal would be out of the mine before electrically detonating the explosives.

5. A number of safeguards are listed as follows:

a. A minimum of eight methane monitor sensing devices will be located in the mine. At least one of these will be placed to effectively monitor any area to be blasted.

b. Blasting will be done by a competent person with all miners on the surface.

c. Before reentering the mine, monitors located on the surface will provide miners with verification of blast effectiveness and of methane concentrations detected by underground sensors. In addition, competent persons will monitor exhaust air from the mine. Mine crews and nonpermissible equipment will not enter active workings if the methane concentration is 1.0 percent or more.

d. All mobile equipment, either permissible or non-permissible, taken past the last open crosscut shall have a working methane monitor installed, with both visible and audible warnings.

e. All drills, undercutters and personnel carriers beyond the last open crosscut shall be maintained in a permissible condition.

f. Nonpermissible equipment will not be permitted in entries where drilling or undercutting is in progress.

6. The petitioner alleges that in conjuction with other requested modifications, the proposed modification will guarantee miners no less protection than that afforded by the standard.

BILLING CODE 4510-43-M

[Docket No. M-80-79-M]

Domtar Industries, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Domtar Industries, Inc., Sifto Salt Division, P.O. Box 7212, Montreal, Canada, H3C 3M3 has filed a petition to modify the application of 30 CFR 57.21-30 (gassy mines—ventilation) to its Cote Blanche Mine located in St. Mary Parish, Louisiana, in accordance with section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petitioner is mining domal salt. Rooms and pillars are large, and the strata is relatively impermeable to gas.

2. The petitioner states that its mine is less prone to blowouts (gas outbursts) than any other domal type salt mine declared gassy, both in numbers and magnitude of blowouts. Blowout cavities are oriented vertically, and they can be identified and avoided. Blowout avoidance has been demonstrated to be particularly successful at the petitioner's mine.

3. As an alternative to the application of 30 CFR 57.21-30, the petitioner proposes to use permissible auxiliary fans to thoroughly ventilate faces wherever drilling or undercutting is taking place, even though recirculation cannot be totally avoided. When such large rooms are involved it is impossible to totally eliminate recirculation, the petitioner says.

4. A number of safeguards are listed as follows:

a. A minimum of eight methane monitor sensing devices will be located in the mine. At least one of these will be placed to effectively monitor any area to be blasted.

b. Blasting will be done by a competent person with all miners on the surface.

c. Before reentering the mine, monitors located on the surface will provide miners with verification of blast effectiveness and of methane concentrations detected by underground sensors. In addition, competent persons will monitor exhaust air from the mine. Mine crews and nonpermissible equipment will not enter active workings if the methane concentration is 1.0 percent or more.

d. All mobile equipment, either permissible or non-permissible, taken past the last open crosscut shall have a working methane monitor installed, with both visible and audible warnings.

e. All drills, undercutters and personnel carriers beyond the last open crosscut shall be maintained in a permissible condition.

f. Nonpermissible equipment will not be permitted in entries where drilling or undercutting is in progress.

5. The petitioner alleges that in conjuction with other requested modifications, the proposed modification will guarantee miners no less protection than that afforded by the standard.

BILLING CODE 4510-43-M

[Docket No. M-80-83-M]

Domtar Industries, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Domtar Industries, Inc., Sifto Salt Division, P.O. Box 7212, Montreal, Canada, H3C 3M3 has filed a petition to modify the application of 30 CFR 57.21–53 (gassy mines—ventilation) to its Cote Blanche Mine located in St. Mary Parish, Louisiana, in accordance with section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition is mining domal salt. Rooms and pillars are large, and the strata is relatively impermeable to gas.

2. The petitioner states that its mine is less prone to blowouts (gas outbursts) than any other domal type salt mine declared gassy, both in numbers and magnitude of blowouts. Blowout cavities are oriented vertically, and they can be identified and avoided. Blowout avoidance has been demonstrated to be particularly successful at the petitioner's mine.

3. As an alternative to the application of 30 CFR 57.21–53, the petitioner proposes to use broken salt and fire resistant brattice as an alternative to the five solid stoppings listed as acceptable materials by MSHA, because slat and fire resistant brattice are appropriate materials for protecting against potential air leakage into the ventilation system.

4. A number of safeguards are listed as follows:

a. A minimum of eight methane monitor sensing devices will be located in the mine. At least one of these will be placed to effectively monitor any area to be blasted.

b. Blasting will be done by a competent person with all miners on the surface.

c. Before reentering the mine, monitors located on the surface will provide miners with verification of blast effectiveness and of methane concentrations detected by underground sensors. In addition, competent persons will monitor exhaust air from the mine. Mine crews and nonpermissible equipment will not enter active workings if the methane concentration is 1.0 percent or more.

d. All mobile equipment, either permissible or nonpermissible, taken past the last open crosscut shall have a working methane monitor installed, with both visible and audible warnings.

e. All drills, undercutters and personnel carriers beyond the last open crosscut shall be maintained in a permissible condition.

f. Nonpermissible equipment will not be permitted in entries where drilling or undercutting is in progess.

5. The petitioner alleges that in conjunction with other requested modifications, the proposed modification will guarantee miners no less protection than that afforded by the standard.

BILLING CODE 4510-43-M

[Docket No. M-80-86-M]

Domtar Industries, Inc.; Petition for Modification of Application of Mandatory Safety Standard

Domtar Industries, Inc., Sifto Salt Division, P.O. Box 7212, Montreal, Canada, H3C 3M3 has filed a petition to modify the application of 30 CFR 57.21–79 (gassy mines—equipment) to its Cote Blanche Mine located in St. Mary Parish, Louisiana, in accordance with section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petitioner is mining domal salt. Rooms and pillars are large, and the strata is relatively impermeable to gas.

2. The petitioner states that its mine is less prone to blowouts (gas outbursts) than any other domal type salt mine declared gassy, both in numbers and magnitude of blowouts. Blowout cavities are oriented vertically, and they can be identified and avoided. Blowout avoidance has been demonstrated to be particularly successful at the petitioner's mine.

3. As an alternative to the application of 30 CFR 57.21–79, the petitioner proposes to use non-permissible distribution boxes in working areas.

4. The petitioner claims that permissible distribution boxes are needed only in areas where methane-liberating activities are in progess.

5. A number of safeguards are listed as follows:

a. A minimum of eight methane monitor sensing devices will be located in the mine. At least one of these will be placed to effectively monitor any area to be blasted.

b. Blasting will be done by a competent person with all miners on the surface.

c. Before reentering the mine, monitors located on the surface will provide miners with verification of blast effectiveness and of methane concentrations detected by underground sensors. In addition, competent persons will monitor exhaust air from the mine. Mine crews and nonpermissible equipment will not enter active workings if the methane concetration is 1.0 percent or more.

d. All mobile equipment, either permissible or nonpermissible, taken past the last open crosscut shall have a working methane monitor installed, with both visible and audible warnings.

e. All drills, undercutters and personnel carriers beyond the last open crosscut shall be maintained in a permissible condition.

f. Nonpermissible equipment will not be permitted in entries where drilling or undercutting is in progress.

6. The petitioner alleges that in conjunction with other requested modifications, the proposed modification will guarantee miners no less protection than that afforded by the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before September 11, 1980. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Dated: July 31, 1980.

[Docket No. M-80-105-C]

Eastern Associated Coal Corp.; Petition for Modification of Application of Mandatory Safety Standard

Eastern Associated Coal Corporation, 1728 Koppers Building, Pittsburgh, Pennsylvania 15219 has filed a petition to modify the application of 30 CFR 75.305 (weekly examinations for hazardous conditions) to its Federal No. 1 Mine located in Marion County, West Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. Portions of the mine's main return airways are abandoned areas, unsafe for travel due to flooding or massive falls caused by deterioration of the draw slate top.

2. Because of flooding, the walls and ribs are so deteriorated that installation of additional roof supports still proves to be an inadequate means of support.

3. Although these portions of the main return airways are unsafe for travel, they still allow sufficient air to pass to ventilate the mine.

4. The deteriorated conditions of the airways have made it exceedingly hazardous to conduct weekly ventilation and methane tests in at least one entry of each return aircourse in its entirety as required by the standard.

5. Rehabilitation of the airways would expose miners to serious hazards from potential falls of roof and rib.

6. As an alternative method to complying with the standard, petitioner proposes to:

(a) Establish and maintain in a safe condition six special ventilation checkpoints to be examined by a qualified person;

(b) Make weekly air quantity and methane readings at each checkpoint;

(c) Record the results on a date board located at each station;

(d) Investigate immediately any increase in methane above 2.0% in any airway; any increase in carbon monoxide of .50% or more; or change in any quantity of air (increase or decrease) by 10% when compared to the last reading at that checkpoint; and

(e) Report any changes immediately to the mine foreman and ventilation foreman.

7. Petitioner states that the proposed alternate method will provide no less protection to the miners than that afforded by the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before September 11, 1980. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. BILLING CODE 4510-43-M

[Docket No. M-80-99-C]

Zephyr Mining Co.; Petition for Modification of Application of Mandatory Safety Standard

Zephyr Mining, Route 1, Box 7M, Pineville, Kentucky 40977, has filed a petition to modify the application of 30 CFR 75.1719 (illumination) to its Gil-Way Mine located in Knox County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. The petition concerns the illumination of roof bolting machines being used in the mine.

2. Illumination provided for the roof bolters would result in a diminution of safety for the miners affected. Illumination would interfere with the miners' ability to communicate with their cap lamps and would cause discomforting glare to the jack setters or timbermen.

3. For these reasons, petitioner requests a modification of the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before September 11, 1980. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

BILLING CODE 4510-43-M

Occupational Safety and Health Administration

Maryland State Standards; Approval

1. *Background.* Part 1953 of Title 29, Code of Federal Regulations, prescribes procedures under Section 18 of the Occupational Safety and Health Act of 1970 (hereinafter called the Act) by which the Regional Administrator for Occupational Safety and Health (hereinafter called the Regional Administrator), under a delegation of authority from the Assistant Secretary of Labor for Occupational Safety and Health (hereinafter called the Assistant Secretary) (29 CFR § 1953.4), will review and approve standards promulgated pursuant to a State plan which has been approved in accordance with Section 18(c) of the Act and 29 CFR Part 1902. On July 65, 1973, notice was published in the **Federal Register** (38 FR 17834) of the approval of the Maryland State plan and the adoption of Subpart "O" to Part 1952 containing the decision.

The Maryland State plan provides for the adoption of Federal standards as State Standards after public hearing. Sections 1952.210–.214 of Subpart "O" set forth the State's schedule for the adoption of Federal standards. By letter dated April 24, 1979, from Commissioner Harvey A. Epstein, Maryland Division of Labor and Industry, to David H. Rhone, Regional Administrator, and incorporated as part of the plan, the State submitted State standards comparable to 29 CFR 1910.1019(e), .1000 and .1018 pertaining to Occupational Exposure to Inorganic Arsenic, as published in the **Federal Register** (43 FR 19624), dated May 5, 1978. These standards, which are contained in COMAR 09.12.31, Maryland Occupational Safety and Health Standards, were promulgated after public hearing held August 2, 1978, pursuant to Article 41, § 256F(e), Annotated Code of Maryland.

2. *Decision.* Having reviewed the State submission in comparison with the Federal standards, it has been determined that the State standards are identical to the Federal standards and accordingly should be approved.

3. *Location of supplement for inspection and copying.* A copy of the standards supplement, along with the approved plan, may be inspected and copied during normal business hours at the following locations: Office of the Regional Administrator, 3535 Market Street, Suite 2100, Philadelphia, Pennsylvania 19104; Office of the Commissioner of Labor and Industry, 203 East Baltimore Street, Baltimore, Maryland 21202; and the Technical Data Center, Room N2439, Third Street and Constitution Avenue, N.W., Washington, D.C. 20210.

4. *Public participation.* Under 29 CFR 1953.2(c), the Assistant Secretary may prescribe alternative procedures to expedite the review process or for other good cause which may be consistent with applicable laws. The Assistant Secretary finds that good cause exists for not publishing the supplement to the Maryland State plans as a proposed change and making the Regional Adminstrator's approval effective

immediately upon publication for the following reasons:

1. The standards are identical to the Federal standards which were promulgated in accordance with Federal law including meeting requirements for public participation.

2. The standards were adopted in accordance with the procedural requirements of State law and further participation would be unnecessary.

This decision is effective August 12, 1980.

(Sec. 18, Pub. L. 91-596, 84 Stat. 1608 (29 U.S.C. 667))

Signed at Philadelphia, Pennsylvania this 21st day of May, 1979.

David H. Rhone,

Regional Administrator.

[FR Doc. 80-24250 Filed 8-11-80; 8:45 am]

BILLING CODE 4510-26-M

Wyoming State Standards; Approval

1. *Background.* Part 1953 of Title 29, Code of Federal Regulations prescribes procedures under Section 18 of the Occupational Safety and Health Act of 1970 (hereinafter called the Act) by which the Regional Administrator for Occupational Safety and Health (hereinafter called the Regional Administrator) under a delegation of authority from the Assistant Secretary of Labor for Occupational Safety and Health (hereinafter called the assistant Secretary) (29 CFR 1953.4) will review and approve standards promulgated pursuant to a State Plan which has been approved in accordance with Section 18(c) of the Act and 29 CFR Part 1902. On May 3, 1974, notice was published in the **Federal Register** (39 FR 15394) of the approval of the Wyoming Plan and the adoption of Subpart BB to Part 1952 containing the decision.

The Wyoming Plan provides for the adoption of Federal standards as State standards after public hearings. Section 1953.23(a)(2) of 29 CFR provides that when ever a Federal standard is promulgated, the State must adopt or promulgate a standard or standard change which will make the State standard at least as effective as the Federal standard or change within six months of the Federal promulgation or change. In response to Federal standard changes, the State has submitted by letter dated June 13, 1979 from Donald D. Owsley, Health and Safety Administrator, to Curtis A. Foster, Regional Adminstrator, stating that the State of Wyoming will not incorporate as part of the plan, State standards comparable to 29 CFR 1910.1043 Occupational Exposure to Cotton Dust, which was published in **Federal Register** June 23, 1978 (43 FR 27350), June 30, 1978 (43 FR 29473), August 8, 1978 (43 FR 35032), and December 5, 1978 (43 FR 56893). These standards are not an issue in the State of Wyoming and will not be contained in the Wyoming Occupational Safety and Health Rules and Regulations for General Industry. This decision was made by the Wyoming Legislative Management Council on June 7, 1979, pursuant to Section 27-278 Wyoming Status 1957 as amended 1973.

2. *Decision.* Having reviewed the State decision, it has been determined that there is no need for the State of Wyoming to incorporate 29 CFR 1910.1043 as part of the plan. There currently are no worksites in the State where employees are exposed to the hazard covered by this standard. In the event of further activity in the State which would be covered, enforcement of the standard will be the responsibility of Federal OSHA, until such time as the State adopts the standards.

3. *Location of supplements for inspection and copying.* A copy of the letter, along with the approved plan, may be inspected and copied during normal business hours at the following locations: Office of the Regional Administrator, Occupational Safety and Health Administration, Room 1554, Federal Building, 1961 Stout Street, Denver, Colorado 80294; the Occupational Health and Safety Department, 200 East Eighth Avenue, Cheyenne, Wyoming 82001; and the Technical Data Center, Room N2439R, 3rd and Constitution Ave., N.W., Washington, D.C. 20210.

4. *Public participation.* Under § 1953.2(c) of 29 CFR Part 1953, the Assistant Secretary may prescribe alternative procedures to expedite the review process or for other good cause which may be consistent with applicable laws. The Assistant Secretary finds good cause at this time, under the present occupational circumstances in Wyoming, to exempt the Wyoming Occupational Health and Safety Program from the adoption of the Standard Occupational Exposure to Cotton Dust 29, CFR 1910.1043.

This decision is effective August 12, 1980.

(Sec. 18, Pub. L. 91-596, 84 Stat. 1606 (29 U.S.C. 667))

Signed at Denver, Colorado, this 29th day of June 1979.

Curtis A. Foster,

Regional Administrator.

BILLING CODE 4510-26-M

Office of the Secretary

[TA-W-7390 and 7391]

Bethlehem Mines Corp., Cambria Division, Mine #73 and Mine #77, Ebensburg, Pa.; Negative Determination Regarding Application for Reconsideration

By an application dated June 30, 1980, the United Mine Workers of America requested administrative reconsideration of the Department of Labor's Negative Determination Regarding Eligibility to Apply for Worker Adjustment Assistance in the case of former workers mining metallurgical coal at Mines #73 and #77 of the Cambria Division of the Bethlehem Mines Corporation, Ebensburg, Pennsylvania. The determination was published in the **Federal Register** on June 6, 1980 (45 FR 38181).

Pursuant to 29 CFR 90.18(c), reconsideration may be granted under the following circumstances:

(1) if it appears on the basis of facts not previously considered that the determination complained of was erroneous;

(2) If it appears that the determination complained of was based on mistake in the determination of facts previously considered; or

(3) if, in the opinion of the Certifying Officer, a misinterpretation of facts or of the law justifies reconsideration of the decision.

The union claims that imports of steel and coke have contributed importantly to the closing of Mines #73 and #77 of Bethlehem Mines Corporation. The petitioner further believes the stockpiling of coke by Bethlehem has played a role in the closing of the mines.

The Department's review shows that workers in Mines #73 and #77 of the Bethlehem Mines Corporation did not meet the increased import criterion or the "contributed importantly test" of the Trade Act of 1974. Nearly all the coal produced by the two mines was shipped to Bethlehem Steel's Johnstown plant where it was converted into coke used in steel-making. Steel imports do not provide a basis for certifying the coal miners. U.S. imports of carbon steel bars, alloy steel bars, carbon steel wire rod, and carbon steel wire decreased absolutely and relative to domestic shipments in 1979 compared to 1978. These four products together accounted for about 75 percent of the Johnstown plant's outside shipments during the first quarter of 1980. Imports of coke do not provide a basis for certifying the coal miners. Although a small amount of coke was used by the Johnstown plant in 1979, Bethlehem's imports of coke decreased in 1979 compared to 1978. Bethlehem imported no coke in the first quarter of 1980. Further, coal production at Mines #73 and #77 increased in 1979 compared to 1978. While the Johnstown plant maintained an inventory of Coke, this inventory is related to production at the plant. There is no indication of stockpiling for future use. Given the 1979 decline in aggregate and company imports of coke, the Department does not regard the inventory claim as germane to the union's petition for adjustment assistance.

Conclusion

After review of the application and the investigative file, I conclude that there has been no error or misinterpretation of fact or misinterpretation of the law which would justify reconsideration of the Department of Labor's prior decision. The application is, therefore, denied.

Signed at Washington, D.C., this 4th day of August 1980.

C. Michael Aho,

Director, Office of Foreign Economic Research.

BILLING CODE 4510-28-M

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, has instituted investigations pursuant to Section 221(a) of the Act and 29 CFR 90.12.

The purpose of each of the investigations is to determine whether absolute or relative increases of imports of articles like or directly competitive with articles produced by the workers' firm or an appropriate subdivision thereof have contributed importantly to an absolute decline in sales or production, or both, of such firm or subdivision and to the actual or threatened total or partial separation of a significant number or proportion of the workers of such firm or subdivision.

Petitioners meeting these eligibility requirements will be certified as eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act in accordance with the provisions of Subpart B of 29 CFR Part 90. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

Pursuant to 29 CFR 90.13, the petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than August 22, 1980.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than August 22, 1980.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

Signed at Washington, D.C. this 4th day of August 1980.

Harold A. Bratt,

Acting Director, Office of Trade Adjustment Assistance.

[FR Doc. 80-24272 Filed 8-11-80; 8:45 am]

BILLING CODE 4510-28-M

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, has instituted investigations pursuant to Section 221(a) of the Act and 29 CFR 90.12.

The purpose of each of the investigations is to determine whether absolute or relative increases of imports of articles like or directly competitive with articles produced by the workers' firm or an appropriate subdivision thereof have contributed importantly to an absolute decline in sales or production, or both, of such firm or subdivision and to the actual or threatened total or partial separation of a significant number or proportion of the workers of such firm or subdivision.

Petitioners meeting these eligibility requirements will be certified as eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act in accordance with the provisions of Subpart B of 29 CFR Part 90. The investigations will further relate, as appropriate, to the determination of the date on which total or partical separations began or threatened to begin and the subdivision of the firm involved.

Pursuant to 29 CFR 90.13, the petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than August 22, 1980.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than August 22, 1980.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

Signed at Washington, D.C. this 28th day of July 1980.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards Subcommittee on Consideration of Class 9 Accidents; Meeting

The ACRS Subcommittee on Construction of Class 9 Accidents will hold a meeting on August 28, 1980 in room 1046, 1717 H St., NW, Washington, DC to discuss hydrogen generation and control methods with degraded core conditions. Notice of this meeting was published July 25, 1980.

In accordance with the procedures outlined in the **Federal Register** on October 1, 1979, (44 FR 56408), oral or written statements may be presented by members of the public, recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and Staff. Persons desiring to make oral statements should notify the Designated Federal Employee as far in advance as practicable so that appropriate arrangements can be made to allow the necessary time during the meeting for such statements.

The entire meeting will be open to public attendance.

The agenda for subject meeting shall be as follows:

Thursday, August 28, 1980
8:30 a.m. until the conclusion of business.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, will exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC Staff, their consultants, and other interested persons regarding this review.

Further information about topics to be discussed, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the cognizant Designated Federal Employee, Mr. Gary Quittschreiber (telephone 202/634-3267) between 8:15 a.m. and 5:00 p.m., EDT.

Dated: August 7, 1980.

John C. Hoyle,
Advisory Committee Management Officer.

BILLING CODE 7590-01-M

[Dockets Nos. 50-317 and 50-318]

Baltimore Gas & Electric Co.; Issuance of Amendments to Facility Operating Licenses

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendments Nos. 43 and 26 to Facility Operating Licenses Nos. DPR-53 and DPR-69, issued to Baltimore Gas and Electric Company, which revised Technical Specifications for operation of the Calvert Cliffs Nuclear Power Plant, Units Nos. 1 and 2. The amendments are effective as of the date of issuance.

The amendments update the Appendix A and B Technical Specifications to include revisions to the Organization Charts and Safety Committee membership to reflect the new organization.

The application for the amendments complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of the amendments was not required since the amendments do not involve a significant hazards consideration.

The Commission has determined that the issuance of these amendments will not result in any significant environmental impact and that pursuant to 10 CFR § 51.5(d)(4) an environmental impact statement, or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of these amendments.

For further details with respect to this action, see (1) the application for amendment dated July 24, 1979, as supplemented June 24, 1980, (2) Amendments Nos. 43 and 26 to Licenses Nos. DPR-53 and DPR-69, and (3) the Commission's letter dated July 31, 1980. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C., and at the Calvert County Library, Prince Frederick, Maryland. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear

Regulatory Commission, Washington, D.C., 20555, Attention: Director, Division of Licensing.

Dated at Bethesda, Maryland, this 31st day of July, 1980.

For the Nuclear Regulatory Commission.

Robert A. Clark,

Chief, Operating Reactors Branch No. 3, Division of Licensing.

BILLING CODE 7590-01-M

[Docket No. 50-331]

Iowa Electric Light & Power Co., et al.; Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 62 to Facility Operating License No. DPR-49 issued to Iowa Electric Light and Power Company, Central Iowa Power Cooperative, and Corn Belt Power Cooperative, which revises the Technical Specifications for operation of the Duane Arnold Energy Center, located in Linn County, Iowa. The amendment was effective from July 7, 1980 to July 14, 1980.

The amendment modifies the Technical Specifications to permit interim operation with one recirculation loop out of service.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR 51.5(d)(4) an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action, see (1) the application for amendment dated July 7, 1980, (2) Amendment No. 62 to License No. DPR-49, and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. and at the Cedar Rapids Public Library, 426 Third Avenue, S.E., Cedar Rapids, Iowa 52401. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Licensing.

Dated at Bethesda, Maryland this 31st day of July 1980.

For the Nuclear Regulatory Commission.

BILLING CODE 7590-01-M

Screening Committee for Technical Vacancies on the Licensing Board Panel; Meeting

Notice is hereby given in accordance with Section 10 of the Federal Authority Committee Act that the NRC's Screening Committee for Technical Vacancies on the Licensing Board Panel will meet in closed session on August 26, 1980. The meeting will begin at 9:00 a.m. and will be held at East-West Towers, 4350 East-West Highway, Room 415, Bethesda, Maryland 20014. The purpose of the meeting will be to discuss the qualifications of candidates for part-time positions as technical members of the Atomic Safety and Licensing Board Panel.

I have determined in accordance with subsection 10 (d) of Public Law 92-463 that it necessary to close this meeting in order to protect information, the disclosure of which would constitute an unwarranted invasion of personal privacy, Sec. 5 U.S.C. 552b(c)(6). Separation of non-exempt factual information from exempt information is not considered practical.

For further information contact Charles J. Fitti, Assistance Executive Secretary, Atomic Safety and Licensing Board Panel, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555. (Telephone (301) 492-7814).

Dated in Washington, D.C., this 6th day of August 1980.

John C. Hoyle,

Advisory Committee Management Officer.

BILLING CODE 7590-01-M

[Docket Nos. 50-361 and 50-362]

Southern California Edison Co., et al.; Negative Declaration Supporting Amendments No. 2 to CPPR-97 and CPPR-98 Relating to Change in Ownership Interests, San Onofre Nuclear Generating Station, Units 2 and 3

The U.S. Nuclear Regulatory Commission (the Commission) has reviewed the request for amendments to Construction Permits CPPR-97 and CPPR-98 relating to changes in ownership interests in the San Onofre Nuclear Generating Station, Units 2 and 3, located in San Diego County, California. The construction permits are issued to the Southern California Edison Company and San Diego Gas and Electric Company. The amendments would include the City of Riverside and the City of Anaheim as co-owners of the facility with the present owners.

In accordance with 10 CFR Part 51, the Commission's Division of Licensing has prepared an environmental impact appraisal (EIA) for the amendment. The Commission has concluded that an environmental impact statement for this action is not warranted, because there will be no adverse environmental impacts affecting the quality of the human environment attributable to the proposed action that would be in addition to those impacts evaluated in the Commission's Final Environmental Statement-Construction Permit Stage for San Onofre Generating Station, Units 2 and 3, issued in March 1973. A negative declaration is, therefore, appropriate.

The environmental impact appraisal is available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C., and the local public document room located at the Mission Viejo Branch Library, 24851 Chrisanta Drive, Mission Viejo, California. A copy of the EIA may be obtained upon request, addressed to the U.S. Nuclear Regulatory Commission, Washington D.C. 20555, Attention: Director, Division of Licensing.

Dated at Bethesda, Maryland, this 5th day of August 1980.

A. Schwencer,

Acting Chief, Licensing Branch No. 3, Division of Licensing.

[FR Doc. 80-24239 Filed 8-11-80; 8:45 am]

BILLING CODE 7590-01-M

[Dockets Nos. 50-361 and 50-362]

Southern California Edison Co. and San Diego Gas & Electric Co., San Onofre Nuclear Generating Station, Units 2 and 3; Order Extending Construction Completion Dates

Southern California Edison Company and San Diego Gas and Electric Company are the holders of Construction Permits Nos. CPPR-97 and CPPR-98 issued by the Atomic Energy Commission[1] on October 18, 1973 for the San Onofre Nuclear Generating Station. These facilities are presently under construction at the applicants' site at Camp Pendleton, San Diego County, California. By letter dated March 31, 1978, Southern California Edison Company filed a request for an extension of the latest construction completion dates for the facilities to June 1, 1980 for Unit 2 and to June 1, 1981 for Unit 3. This request was granted by the Commission's Order dated December 28, 1978.

On April 23, 1980, Southern California Edison Company filed a request for another extension of the latest construction completion dates for the San Onofre 2 and 3 facilities. This request is to extend the latest completion dates to April 15, 1981 for Unit 2 and June 15, 1982 for Unit 3. The most recent extension was requested because construction has been delayed due to (1) late delivery and extensive rework of large pipe supports, (2) lack of available pipefitter welders, and (3) late and out of sequence deliveries of pipe spool.

This action involves no significant hazards consideration, good cause has been shown for the delay, and the requested extension is for a reasonable period, the bases for which are set forth in the staff evaluation. The preparation of an environmental impact statement for this particular action is not warranted because there will be no significant environmental impact attributable to the Order other than that which has already been predicted and described in the Commission's Draft Environmental Statement-Construction Permit Stage for the San Onofre Nuclear Generating Station, Units 2 and 3, published in November 1972 and the Final Environmental Statement-Construction Permit Stage published in March 1973. A Negative Declaration and an Environmental Impact Appraisal have been prepared and are available, as are the above stated documents, for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. 20555 and at the local public document room established for the San Onofre Nuclear Generating Station, Units 2 and 3 at the Mission Viejo Branch Library, 24851 Chrisanta Drive, Mission Viejo, California 92676.

It is hereby ordered that the latest completion date for CPPR-97 be extended from June 1, 1980 to April 15, 1981 and the latest date for CPPR-98 be extended from June 1, 1981 to June 15, 1982.

Date of issuance: August 5, 1980.

For the Nuclear Regulatory Commission.

R. A. Purple,

Deputy Director, Division of Licensing.

BILLING CODE 7590-01-M

[1] Effective January 20, 1975, the Atomic Energy Commission became the Nuclear Regulatory Commission and permits in effect on that day continued under the authority of the Nuclear Regulatory Commission.

Footnotes continued on next page

Footnotes continued from last page

[Dockets Nos. 50-361 and 50-362]

Southern California Edison Co. and San Diego Gas & Electric Co., San Onofre Nuclear Generating Station, Unit Nos. 2 and 3; Negative Declaration Supporting: Extension of Construction Permit Nos. CPPR-97 and CPPR-98 Expiration Dates

The U.S. Nuclear Regulatory Commission (the Commission) has reviewed the Southern California Edison Company and San Diego Gas and Electric Company (permittees) request to extend the expiration dates of the construction permits for the San Onofre Nuclear Generating Station, Units Nos. 2 and 3 (CPPR-97 and CPPR-98) which are located in San Diego County in the State of California. The permittees requested an extension to the permits through April 15, 1981 for CPPR-97 and through June 15, 1982 for CPPR-98, to allow for completion of construction of the facilities.

The Commission's Division of Licensing has prepared an environmental impact appraisal relative to these changes to CPPR-97 and CPPR-98. Based on this appraisal, the Commission has concluded that an environmental impact statement for this particular action is not warranted because there will be no significant environmental impact attributable to the proposed action other than that which has already been described in the Commission's Final Environmental Statement-Construction Permit Stage or evaluated in the environmental impact appraisal.

The environmental impact appraisal is available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. and at the Mission Viejo Branch Library, 24851 Chrisanta Drive, Mission Viejo, California.

Dated at Bethesda, Maryland, this 5th day of August 1980.

BILLING CODE 7590-01-M

[Docket Nos. 50-361 and 50-362]

Southern California Edison., et al.; Issuance of Amendments to Construction Permits

Notice is hereby given that the U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 2 to Construction Permit No. CPPR-97 and Amendment No. 2 to Construction Permit No. CPPR-98. The amendment reflects the addition of two new co-owners of the San Onofre Nuclear Generating Station, Units 2 and 3 (the facility). Initially, the construction permits were issued to Southern California Edison Company and San Diego Gas and Electric Company. Amendment No. 2 adds as co-owners the City of Riverside and the City of Anaheim. Southern California Edison Company has sole responsibility for the design and construction of the facility, which is located in San Diego County, California.

The application for the amendments complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the amendments.

Prior public notice of the amendments was not required since the amendments do not involve a significant hazards consideration.

For further details with respect to this action, see (1) the application for amendment dated July 17, 1979, and supplemental information dated June 16, 1980, (2) Amendment No. 2 to Construction Permit No. CPPR-97, (3) Amendment No. 2 to Construction Permit No. CPPR-98, (4) the Commission's related Safety Evaluation, (5) the Environmental Impact Appraisal and (6) the Negative Declaration supporting the amendments to the construction permits. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C., and at the Mission Viego Branch Library, 24851 Chrisanta Drive, Mission Viejo, California. In addition, a copy of the above items (2), (3), (4), (5) and (6) may be obtained upon request, addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Licensing, Office of Nuclear Reactor Regulation.

Dated at Bethesda, Maryland this 5th day of August 1980.

For the Nuclear Regulatory Commission.

A. Schwencer,

BILLING CODE 7590-01-M

[Docket No. 50-280]

Virginia Electric & Power Co.; Issuance of Amendment tp Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 59 to Facility Operating License No. DPR-32, issued to Virginia Electric and Power Company (the licensee), which revised license conditions related to operation of the Surry Power Station, Unit No. 1 (the facility) located in Surry County, Virginia. This amendment is effective as of the date of issuance.

This amendment permits Surry Unit 1 to be operated for six months of equivalent (reactor coolant above 350° F) operation from May 11, 1980. Before additional operation beyond that approved by this amendment is permissible, steam generator tube inspection and further Commission approval is required.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR 51.5(d)(4) an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action, see (1) the application for amendment dated May 16, 1980 and the licensee's submittal dated April 15, 1980, (2) Amendment No. 59 to License No. DPR-32 and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. and at the Swem Library, College of William and Mary, Williamsburg, Virginia. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Licensing.

Dated at Bethesda, Maryland, this 28th day of July, 1980.

[Docket No. 50-280]

Virginia Electric & Power Co.; Availability of Final Environmental Statement for the Surry Power Station, Unit No. 1

Pursuant to the National Environmental Policy Act of 1969 and the United States Nuclear Regulatory Commission's regulations in 10 CFR Part 51, notice is hereby given that the Final Environmental Statement prepared by the Commission's Office of Nuclear Reactor Regulation, related to steam generator repairs to the Surry Power Station, Unit No. 1, which are being proposed by the Virginia Electric and Power Company, is available for inspection by the public in the Commission's Public Document Room at 1717 H Street, N.W., Washington, D.C., and in the Swem Library, College of Williams and Mary, Williamsburg, Virginia. That document concludes that the proposed repair will not significantly affect the quality of the human environment and that the impacts from the repairs are outweighed by its benefits.

The notice of availability of the Draft Environmental Statement for the Surry Power Station, Unit No. 1, and request for comments from interested persons was published in the **Federal Register** on March 24, 1980 (45 FR 19105). The comments received from Federal, State, and local agencies and interested members of the public have been included as Appendix E to the Final Statement.

Copies of the Final Environmental Statement (NUREG-0892) may be purchased at current rates, from the National Technical Information Service, Springfield Virginia 22161, (703) 557-4650.

Final unclassified NUREG-series documents are also available directly from NRC to those with deposit accounts with the Superintendent of Documents, U.S. Government Printing Office (see 44 FR 46005, August 6, 1979). To place orders call (301) 492-7333 or write: ATTN: Publications Sales Manager, Division of Technical Information and Document Control, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

Dated at Bethesda, Maryland, this 31st day of July 1980.

For the Nuclear Regulatory Commission.

OFFICE OF MANAGEMENT AND BUDGET

President's Commission for a National Agenda for the Eighties; Meeting

August 7, 1980.

AGENCY: Office of Management and Budget.

ACTION: Notice of meeting

SUMMARY: Pursuant to Pub. L. 92-463, notice is hereby given for an outreach event and meeting of the staff of Panel IV (Government and Social Justice) of the President's Commission for a National Agenda for the Eighties, scheduled August 22, 1980 in the LBJ Library, University of Texas, Austin, Texas. The outreach event is scheduled for 9:00 a.m. to 5:00 p.m., and the panel meeting is scheduled to 12:00 noon to 1:00 p.m.

The purpose of both will be to discuss civil rights in the eighties.

Available seats will be assigned on a first-come basis.

The meeting will be open to the public.

FOR FURTHER INFORMATION CONTACT: President's Commission for a National Agenda for the Eighties, Office of Administration, 744 Jackson Place, Northwest, Washington, D.C. 20036, (202) 275-0616.

Brenda Mayberry,

Budget and Management Officer.

President's Committee on the International Labor Organization

Meeting

In accordance with Section 10(a) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is hereby given of a meeting of the President's Committee on the ILO:

Name: President's Committee on the International Labor Organization.

Date: September 17, 1980.

Time: 10:00 a.m.

Place: Department of Labor, Third & Constitution Ave., N.W., Room S-2508, Washington, D.C. 20210.

This meeting will be closed to the public under the authority of Section 10(d) of the Federal Advisory Committee Act. During its closed session, the Committee will discuss national security matters.

All communications regarding this Committee should be addressed to: Mr. James H. Quackenbush, Counselor to the Committee, Department of Labor, Third & Constitution Ave., N.W., Room S-5307, Washington, D.C. 20210, telephone (202) 523-6251.

Dated: August 6, 1980.

Ray Marshall,

Secretary of Labor.

BILLING CODE 4510-28-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 11287; 811-1478]

First National Securities Corp.; Proposal To Terminate Registration

August 6, 1980.

In the matter of First National Securities Corporation, 42 Virginia Avenue, Indianapolis, Indiana 46204 (811-1478).

Notice is hereby given that the Commission proposes, pursuant to Section 8(f) of the Investment Company Act of 1940 ("Act"), to declare by order on its own motion, that First National Securities Corporation ("Fund"), registered under the Act as a closed-end, non-diversified management investment company, has ceased to be an investment company as defined in the Act.

Information contained in the files of the Commission indicates that the Fund was organized under the laws of the State of Indiana on May 31, 1963, and registered under the Act on March 3, 1967. The Fund did not file a registration statement pursuant to the Securities Act of 1933 to make a public offering of shares of its capital stock. In addition, the Fund has not filed those annual and periodic reports required by Section 30 of the Act since the date of its registration under the Act. Furthermore, the files of the Commission indicate that the last communication the Commission had with the Fund was on February 29, 1968. Finally, communications sent to the Fund's last known address by the staff of the Commission have been returned as undeliverable. Thus, it appears that the Fund is not currently engaged in the business of an investment company.

Section 8(f) of the Act provides, in pertinent part, that whenever the Commission, on its own motion or upon application, finds that a registered investment company has ceased to be an investment company it shall so declare by order, which may be made upon appropriate conditions if necessary for the protection of investors, and upon the taking effect of such order, the registration of such company shall cease to be in effect.

Notice is further given that any interested person may not later than September 2, 1980, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reasons for such request and the issues, if any, of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail upon the Fund at the address stated above. Proof of such service (by affidavit or, in the case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0-5 of the Rules and Regulations promulgated under the Act, an order disposing of the matter will be issued as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing, or advice as to whether a hearing is ordered, will receive any notices and orders issued in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Shirley F. Hollis,

Assistant Secretary.

44 Wall Street Equity Fund, Inc. and Forty Four Sales, Inc.; Filing of Application for an Exemption To Permit an Offer of Exchange

August 6, 1980.

In the matter of The 44 Wall Street Equity Fund, Inc. and Forty Four Sales, Inc., 150 Broadway, New York, New York 10038 (812-4690).

Notice is hereby given that The 44 Wall Street Equity Fund, Inc. ("Fund"), an open-end, non-diversified management investment company registered under the Investment Company Act of 1940 ("Act"), and Forty Four Sales, Inc. ("Sales"), principal underwriter for the Fund (collectively the "Applicants"), filed an application on June 10, 1980, for an order of the Commission (1) pursuant to Section 11(a) of the Act to permit the Fund to offer its shares for certain shares of the Reserve Fund, Inc. ("Reserve"), and (2) pursuant to Section 6(c) of the Act to exempt Applicants from the provisions of Section 22(d) of the Act and the rules thereunder to the extent necessary to permit such an offer of exchange. All interested persons are referred to the application on file with the Commission for a statement of the representations contained therein, which are summarized below.

Sales, as principal underwriter for the Fund, will maintain a continuous public offering of the shares of the Fund at their net asset value plus a sales charge, following the effective date of the Fund's registration statement on Form N-1 under the Securities Act of 1933, which has been filed with the Commission.

On purchases of less than $10,000 the maximum sales charge is 8.50%, which is reduced on larger purchases. There is no sales charge imposed on the reinvestment of dividends and capital gains from shares of the Fund. The application states that Reserve, an open-end investment company registered under the Act, invests primarily in short-term money market instruments.

Applicants propose to permit a Reserve shareholder to exchange shares of Reserve acquired either (1) by investing the net proceeds from a redemption of shares of the Fund and held for such shareholders in the 44 Wall Street Equity Fund Exchange Account ("Account") in the name of such shareholder at Reserve or (2) by the reinvestment of income dividends and capital gains distributions paid on all Reserve shares held in such Account, for shares of the Fund, in either case without the imposition of the customary sales charge described in the prospectus of the Fund (hereinafter referred to as the "Switch Privilege"). Reserve shares acquired in any other manner than as described above would not qualify for the Switch Privilege. Reserve imposes no sales or administrative charge in connection with the sale of its shares. A $5 service fee will be charged by The Bank of New York, the custodian and transfer agent for the Fund, for each

redemption by telephone, telegraph or overseas cable.

According to the application, the participant in an Account would be able to exercise his Switch Privilege at any time by instructing Reserve to redeem shares of Reserve in his Account and apply the redemption proceeds to the acquisition of shares of the Fund. No charge on the exchange of Reserve shares for shares of the Fund will be imposed by Reserve or the Applicants. The Switch Privilege will not be available to the proceeds from a redemption of Reserve shares which are paid directly to the investor or at his direction to any person other than the Fund. The Fund and Reserve have reserved the right to limit further the number of exchanges pursuant to the Switch Privilege which any investor may make within a certain period. The Switch Privilege will be subject to termination by the Fund or by Reserve on not less than six months prior written notice to holders of Accounts, except for cause, in which event the Switch Privilege in respect of that Account is subject to immediate termination. An investor maintaining an Account will receive the current prospectus of both Reserve and the Fund provided the investor remains entitled to the Switch Privilege. The Switch Privilege will lapse for an investor if his account balance of shares of the Fund shows a zero balance for a period of two consecutive years.

Section 11(a) provides, in part, that it shall be unlawful for any registered open-end company or any principal underwriter for such a company to make or cause to be made an offer to the holder of a security of such company or any other open-end investment company to exchange his security for a security in the same or another such company on any basis other than the relative net asset values of the respective securities to be exchanged, unless the terms of the offer have first been submitted to and aproved by the Commission. Section 22(d) of the Act provides, in pertinent part, that no registered investment company or principal underwriter thereof shall sell any redeemable security issued by such company to any person except at a current offering price described in the prospectus.

Applicants state that, because any investor eligible for the Switch Privilege will have been an investor in shares of the Fund and will continue to receive current prospectuses of the Fund while he holds the Account with Reserve, no additional sales efforts will be incurred by Sales in connection with the reacquisition of shares of the Fund. Applicants contend that it is fair and equitable that no sales charge should be imposed on the investor in connection with his reacquisition of shares of the Fund. Applicants represent that the $5 service charge will defray the administrative costs involved in each exchange. It is asserted that the Switch Privilege will not enable any investor to avoid payment of the applicable sales charge on his original investment in shares of the Fund.

Section 6(c) of the Act provides, in part, that the Commission, by order upon application, may conditionally or unconditionally exempt any person, security, or transaction, or any class of persons, securities, or transactions from any provisions of the Act and the Rules promulgated thereunder, if and to the extent such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

Notice is further given that any interested person may, not later than August 28, 1980, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request, and the issues, if any, of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail upon Applicants at the address stated above. Proof of such service (by affidavit or, in the case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0–5 of the Rules and Regulations promulgated under the Act, an order disposing of the application will be issued as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing, or advice as to whether a hearing is ordered, will receive any notices and orders issued in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Shirley F. Hollis,

Assistant Secretary.

BILLING CODE 8010–01–M

[File No. 500–1]

Panacolor Inc.; Order of Suspension of Trading

July 14, 1980.

It appearing to the Securities and Exchange Commission that Panacolor, Inc. has failed to file with the Commission its Annual Report on Form 10–K for the year ending December 31, 1979 and its most recent Quarterly Report on Form 10–Q for the period ended March 31, 1980 and that, as a result, there is a lack of current adequate and accurate public information about the operations and financial condition of Panacolor, Inc., the Commission is of the opinion that the public interest and the protection of investors require a summary suspension of trading in the securities of Panacolor, Inc.

Therefore, it is ordered, pursuant to Section 12(k) of the Securities Exchange Act of 1934, that trading in such securities on a national securities exchange or otherwise is suspended, for the period from 11:30 a.m. on July 14, 1980 through July 23, 1980.

By the Commission.

Shirley F. Hollis,

Assistant Secretary.

SMALL BUSINESS ADMINISTRATION

Presidential Advisory Committee on Small and Minority Business Ownership; Public Meeting

The Presidential Advisory Committee on Small and Minority Business Ownership, located in Washington, D.C., will hold a public meeting at 9:30 a.m. until 4:30 p.m., Monday, September 15, 1980, at the Great Western Financial Corporation, 10th Floor Conference Room, 8484 Wilshire Boulevard, Beverly Hills, California 90211, to discuss such business as may be presented by the Committee members. The meeting will be open to the interested public from 3:00–4:00 p.m. Space, however, is limited. The remainder of the meeting will be closed pursuant to 5 U.S.C. 552b(c)(4), in order that the Committee can discuss confidential contractual information.

Persons wishing to present written statements should notify Mr. Milton Wilson, Jr., Director, Office of Capitol Ownership Development, Small Business Administration, Room 317, 1441 L Street, N.W., Washington, D.C. 20416, (202) 653–6528, in writing or by telephone no later than August 29, 1980.

Dated: August 5, 1980.

Michael B. Kraft,

Deputy Advocate for Advisory Councils.

BILLING CODE 8025–01–M

Solid Capital Corp.; Applicant

[Application No. 09/09–5267]

An application for a license to operate as a small business investment company under Section 301(d) of the Small Business Investment Act of 1958, as amended (the Act) (15 U.S.C. 661 *et seq.*), has been filed by Solid Capital Corporation (Applicant), with the Small Business Administration (SBA) pursuant to 13 CFR 107.102 (1980).

The officers, directors and stockholders of the Applicant are as follows:

Kirby Kwok, President, Director, General Manager (20 percent stockholder), 358—27th Avenue, San Francisco, California 94121.

Lusing Ty, Chief Financial Officer, Director, (25 percent stockholder), 826 Crocus Drive, San Leandro, California 94578.

Cecilia K. Kwok, Secretary, Director, (3 percent stockholder), 358—27th Avenue, San Francisco, California 94121.

James L. Murphy, (9 percent stockholder), 197 Desmond Street, San Francisco, California 94134.

Margaret R. Murphy, (7 percent stockholder), 197 Desmond Street, San Francisco, California 94134.

The Applicant, a California corporation, with its principal place of business at 652 Kearny Street, Suite 122, San Francisco, California 94108, will begin operations with $500,000 of paid-in capital and paid-in surplus derived from the sale of 101 shares of common stock.

The Applicant will conduct its activities primarily in the State of California.

Applicant intends to provide assistance to all qualified socially or economically disadvantaged small business concerns as the opportunity to profitably assist such concerns is presented.

As a small business investment company under Section 301(d) of the Act the Applicant has been organized and chartered solely for the purpose of performing the functions and conducting the activities contemplated under the Small Business Investment Act of 1958, as amended, from time to time, and will provide assistance solely to small business concerns which will contribute to a well-balanced national economy by facilitating ownership in such concerns by persons whose participation in the free enterprise system is hampered because of social or economic disadvantages.

Matters involved in SBA's consideration of the Applicant include the general business reputation and character of the proposed owners and management, and the probability of successful operation of the Applicant under their management, including adequate profitability and financial soundness, in accordance with the Small Business Investment Act and the SBA Rules and Regulations.

Notice is hereby given that any person may, on or before August 27, 1980, submit to SBA written comments on the proposed Applicant. Any such communication should be addressed to the Associate Administrator for Investment, Small Business Administration, 1441 L Street, N. W., Washington, D. C. 20416.

A copy of this notice shall be published in a newspaper of general circulation in San Francisco, California.

[Catalog of Federal Domestic Assistance Program No. 59.011, Small Business Investment Companies.)

Dated: August 4, 1980.

Michael K. Casey,

Associate Administrator for Investment.

BILLING CODE 8025–01–M

[Proposed License No. 06/06–0237]

Zenith Capital Corp.; Application for a License To Operate as a Small Business Company

Notice is hereby given that an application has been filed with the Small Business Administration pursuant to § 107.102 of the Regulations governing small business investment companies (13 CFR 107.102 (1980)), under the name of Zenith Capital Corp., Suite 218, 5150 North Shepherd, Houston, Texas 77018, for a license to operate as a small business investment company (SBIC) under the provisions of the Small Business Investment Act of 1958, as amended (the Act), (15 U.S.C. 661 *et seq.*), and the Rules and Regulations promulgated thereunder.

The proposed officers, directors and shareholders of the Applicant are as follows:

Jerry E. Finger, President, Treasurer, Director, 318 Timberwilde, Houston, Texas 77024.

Andrew L. Johnston, Vice President, Secretary, Director, 3215 Tangley, Houston, Texas 77005.

J. Steven Winston, Director, P.O. Box 10816, Houston, Texas 77018.

Republic National Bank of Houston, 75 percent shareholder.

Colonial National Bank, 15 percent shareholder.

Willowbrook National Bank, 10 percent shareholder.

Republic National Bancshares, a Texas bank holding company, owns the following shares of the three banks: Republic National Bank of Houston (98.6 percent); Colonial National Bank (100 percent); and, Willowbrook National Bank (100 percent.)

The holding company has approximately 485 beneficial owners; the only individual owning 10 percent or more of the equity securities of the holding company is Jerry E. Finger who owns 52 percent.

There will be one class of stock authorized: One million shares of common stock. Initially, only 505,000 shares will be issued with a resultant private capital of $505,000. Applicant proposes to conduct its operations principally in the State of Texas.

Matters involved in SBA's consideration of the application include the general business reputation and character of shareholders and management, and the probability of successful operation of the new company in accordance with the Act and Regulations.

Notice is further given that any person may, on or before August 27, 1980, submit to SBA, in writing, comments on the proposed licensing of this company. Any such communications should be addressed to: Associate Administrator for Investment, Small Business Administration, 1441 "L" Street, N.W., Washington, D.C. 20416.

A copy of this notice shall be published by the Applicant in a newspaper of general circulation in Houston, Texas.

DEPARTMENT OF STATE

[Public Notice 720]

Bureau of Oceans and International Environmental and Scientific Affairs; Environmental Impact Statement

AGENCY: Department of State.

ACTION: Notice of Intent to Prepare an Environmental Impact Statement.

SUMMARY: The Department, in conjunction with the Office for Micronesian Status Negotiations, plans to prepare a draft environmental impact

statement (DEIS) for the Compact of

Series—No. 24–80, dated July 31, 1980

Sunshine Act Meetings

Federal Register

statement (DEIS) for the Compact of Free Association and its subsidiary Agreements. The President, with the approval of both Houses of Congress, proposes concluding a Compact of Free Association between the Government of the United States and the Governments of Palau, the Marshall Islands and the Federated States of Micronesia (consisting of Yap, Truk, Ponape and Kosrae). These three areas are now separately administered entities within the Trust Territory of the Pacific Islands (TTPI). The Compact embodies a new political relationship known as "free association," a concept without precise precedent either in international practice or in United States Constitutional law. In brief, the Compact envisions the termination by the United States of its authority and responsibility as Administering Authority over the United Nations strategic trust known as the TTPI. The DEIS will review the provisions of the Compact, assess alternatives to the proposed action and address the environmental effects of implementing the Compact and such alternatives.

A public meeting will be held at the Department of State, Room 1107, 21st and C Streets, N.W., on August 28, 1980 from 10:00–12:00 A.M. to discuss the scope of the DEIS. This meeting will be chaired by Ambassador Peter Rosenblatt, the President's Personal Representative for Micronesian Status Negotiations.

Copies of the DEIS will be made available for agency and public comment upon publication. Requests for copies of the DEIS and summaries of the public meeting should be addressed to:

Lt. Col. Albert V. Short, Office for Micronesian Status Negotiations, Main Interior Building, Suite 3356, Washington, D.C. 20240 (202/343–9143) or

Irene F. Dybalski, Office of Environment and Health, Room 7820, Department of State, Washington, D.C. 20520 (202/632–0287).

Donald R. King,

Director, Office of Environment and Health.

DEPARTMENT OF THE TREASURY

[Public Debt Series—No. 24–80]

Treasury Notes; Series A–1990

August 7, 1980.

The Secretary announced on August 6, 1980, that the interest rate on the notes designated Series A–1990, described in Department Circular—Public Debt Series—No. 24–80, dated July 31, 1980, will be 10¾ percent. Interest on the notes will be payable at the rate of 10¾ percent per annum.

Gerald Murphy,

Acting Fiscal Assistant Secretary.

Supplementary Statement

The announcement set forth above does not meet the Department's criteria for significant regulations and, accordingly, may be published without compliance with the Departmental procedures applicable to such regulations.

22. Docket 37585, (Internacional de Aviacion, S.A. (Inair) v. Aerolineas Nacionales del Ecuador, S.A. (Andes Airlines) and Trans-Panama, S.A.) Motion for review of BCP's dismissal of third-party complaint. (Memo No. 9851, OGC)

STATUS:

1–4 (closed)
5–22 (open)

PERSON TO CONTACT: Phyllis T. Kaylor, the Secretary (202) 673–5068.

SUPPLEMENTARY INFORMATION: Items 1, 2, 3, and 4 concern strategy and positions that have been or may be taken by the United States regarding these cases.

Public disclosures, particularly to foreign governments, of opinions, evaluations, and strategies relating to the issues could seriously compromise the ability of the United States Delegation to achieve agreements which would be in the best interest of the United States. Accordingly, the following Members have voted that the meeting on these items would involve matters the premature disclosure of which would be likely to significantly frustrate implementation of proposed agency action within the meaning of the exemption provided under 5 U.S.C. 552b (c)(9)(b) and 14 CFR Section 3106.5(i)(2) and that any meeting on these items should be closed.

Chairman Marvin S. Cohen.
Member Elizabeth E. Bailey.
Member Gloria Schaffer.

NUCLEAR REGULATORY COMMISSION.

TIME AND DATE: Thursday, August 14, 1980.

PLACE: Commissioners conference room, 1717 H Street NW., Washington, D.C.

STATUS: Open.

MATTERS TO BE CONSIDERED:

10 a.m.

Discussion of Draft Programmatic Environmental Impact Statement On Decontamination and Waste Disposal at TMI (approximately 1½ hours, public meeting).

2 p.m.

1. Briefing on Hydrogen Control in the Sequoyah Containment (approximately 1½ hours, public meeting.
2. Affirmation Session (approximately 10 minutes), (public meeting).
—Physical Protection of Category II Material in Transit (tentative).
—Burton FOIA Appeal.
3. Time Reserved for Discussion & Vote on Affirmation Items (if required) (public meeting).

CONTACT PERSON FOR MORE INFORMATION: Walter Magee (202) 634–1410.

AUTOMATIC TELEPHONE ANSWERING SERVICE FOR SCHEDULE UPDATE: (202) 634–1498.

Those planning to attend a meeting should reverify the status on the day of the meeting.

August 7, 1980.
Roger M. Tweed,
Office of the Secretary.

PAROLE COMMISSION

Parole Commissioners, National Commissioners—the Commissioners presently maintaining Offices at Washington, D.C. Headquarters).

TIME AND DATE: Friday, Augsut 1, 1980, at 9:30 a.m.

PLACE: Room 826A, 320 First Street NW., Washington, D.C. 20537.

STATUS: Closed pursuant to a vote to be taken at the beginning of the meeting.

MATTERS TO BE CONSIDERED: Referrals from Regional Commissioners of approximately 7 cases in which inmates of Federal prisons have applied for parole or are contesting revocation of parole or mandatory release.

CONTACT PERSONS FOR MORE INFORMATION: Linda Wines Marble, Analyst (202) 724–3094.

PAROLE COMMISSION.

TIME AND DATE: 9:30 a.m.–5:30 p.m., Monday, August 25 and Tuesday, August 26, 1980.

PLACE: Room 818, 320 First Street NW., Washington, D.C. 20537.

STATUS: Closed pursuant to a vote to be taken at the beginning of the meeting.

MATTERS TO BE CONSIDERED: Appeals to the Commission of approximately 13 cases decided by the National Commissioners pursuant to a reference under 28 CFR § 2.17 and appealed pursuant to 28 CFR § 2.27. These are all cases originally heard by examiner panels wherein inmates of Federal Prisons have applied for parole or are contesting revocation of parole or mandatory release.

CONTACT PERSONS FOR MORE INFORMATION: Linda Wines Marble, Analyst (202) 724–3094.

POSTAL SERVICE.
(Board of Governors)

Notice of meeting:

The Board of Governors of the United States Postal Service, pursuant to its Bylaws (39 CFR 7.5) and the Government in the Sunshine Act (5 U.S.C. § 552b), hereby gives notice that it intends to hold a meeting at 9:30 A.M. on Friday, August 15, 1980, at Postal Service Headquarters, 475 L'Enfant Plaza, S.W., Washington, D.C. 20260. As explained in the following paragraph, the meeting is closed to the public. The Board expects to discuss the matters in the agenda which is set forth below. Requests for information about the meeting should be addressed to the Secretary of the Board, Louis A. Cox, at (202) 245–4632.

Each of the two items on the agenda will consist of continuations of discussions that were commenced at the Board's meeting of August 4 and 5, 1980. On that occasion the members of the Board unanimously reaffirmed their earlier determinations under the Sunshine Act that their discussions of these matters should be closed to public observation. The meeting is expected to be attended by the following persons: Governors Wright, Hardesty, Allen, Camp, Ching, and Sullivan; Postmaster General Bolger; Deputy Postmaster General Benson; Counsel to the Governors Califano; Secretary of the Board Cox; and Senior Assistant Postmaster General Finch.

Agenda

1. Continuation of consideration of the Postal Rate Commission's April 8, 1980, Recommended Decision upon Reconsideration of the Electronic Mail Classification Proposal, 1978 (Commission Docket No. MC78–3).
2. Continuation of consideration of a Written Statement of the Decision of the Governors to approve the Postal Rate Commission's Recommended Decision of May 16, 1980, concerning Red Tag Proceeding, 1979 (Commission Docket No. MC79–3).

Louis A. Cox,
Secretary.

RAILROAD RETIREMENT BOARD.

TIME AND DATE: 10:30 a.m., August 14, 1980.

PLACE: Board's meeting room, eighth floor, headquarters building, 844 Rush Street, Chicago, Illinois, 60611.

STATUS: The entire meeting will be open to the public.

MATTERS TO BE CONSIDERED:

(1) OPM survey of Bureau of Unemployment and Sickness Insurance.
(2) Registration requirements for unemployment insurance.
(3) Travel allowances.
(4) Reports on Congressional bills (OMB).
(5) Appeal from referee's denial of widow's insurance annuity, Ruth Partin.

CONTACT PERSON FOR MORE INFORMATION: R. F. Butler, Secretary of the Board, COM No. 312–751–4920, FTS No. 387–4920.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

A List of Substances Which May Be Candidates for Further Scientific Review and Possible Identification, Classification, and Regulation as Potential Occupational Carcinogens

AGENCY: Occupational Safety and Health Administration, Labor.

ACTION: Publication of a list of substances which may be candidates for further scientific review.

SUMMARY: OSHA is today publishing a list of substances which may be considered candidates for further scientific review and possible identification, classification, and regulation as potential occupational carcinogens. This listing of substances which is required by the OSHA standard for the identification, classification, and regulation of potential occupational carcinogens does not mean that OSHA has determined that a substance on the list is carcinogenic or that regulatory action on the substance is necessary, nor is such a listing intended as a preclassification warning. It is OSHA's view that the compilation and publication of the list of substances accomplishes the following: informs the public at the very first step in OSHA's standard-setting process that a substance is a candidate for closer scientific review; makes available to the public the data base for substances OSHA is considering for further scientific review; reduces the number of substances to be subjected to such a review; guides the research community in focusing its resources on those substances for which there is a need for testing and further research; stimulates early public comment regarding the availability and appropriateness of new or additional scientific data; and, overall, assists OSHA in its setting of priorities and selecting of substances for regulation.

DATE: All comments and requests for relevant data must be received in the Docket Office by October 14, 1980.

ADDRESSES: Comments on the Candidate List and requests for relevant data should be mailed to the Docket Office, Room S6212, Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20210 (202/523/7894).

FOR FURTHER INFORMATION CONTACT: Mr. James F. Foster, Department of Labor, OSHA Office of Public Affairs, Room N3641, 200 Constitution Avenue, NW., Washington, D.C., 20210 (202/523-8151).

SUPPLEMENTARY INFORMATION:

A. Background Information:

One of the most critical health problems which OSHA must deal with today is the prevention of occupationally-related cancers. Moreover, OSHA recognizes its obligation to minimize the inherent social and economic impact of these dreaded diseases, and since 1970 has initiated rulemaking proceedings on the following occupational carcinogens: asbestos, "fourteen carcinogens," vinyl chloride, coke oven emissions, arsenic, benzene, acrylonitrile, and beryllium. More recently, OSHA proposed on October 4, 1977 (42 FR 54148) a general standard to assist in expediting the identification, classification, and regulation of potential occupational carcinogens. Extensive public comments were submitted and a lengthy hearing was held on the proposal. Then on January 22, 1980, OSHA promulgated its general standard for the identification, classification, and regulation of potential occupational carcinogens, the "Cancer Standard" (45 FR 5002, January 22, 1980). The first action to be taken by OSHA in following the procedures set forth by the Cancer Standard is the publication of this list of substances which are candidates for further scientific review.

B. The List of Substances Which Are Candidates for Further Scientific Review:

(1) *Discussion of the List of Candidate Substances in the Proposal:* The proposed regulation included OSHA's definition and criteria for classification of a potential occupational carcinogen. The proposal also included a statement of OSHA's intent of "devising its own system for the orderly, systematic classification of the large number of potential carcinogens already identified by NIOSH" (42 FR 54169, October 4, 1977). In addition, OSHA solicited public comment as to how to best handle the 1500 to 2000 substances for which some evidence of carcinogenicity existed, according to the National Institute for Occupational Safety and Health (NIOSH)'s list of "suspected carcinogens" (HEW Publication No. 77-149, December, 1976). OSHA received many requests from the public that it prepare a preliminary version of the list of candidate substances. OSHA complied with these requests and subsequently released such a tentative list for public comment in 1978. That list is available in the OSHA Docket Office.

A large number of participants also urged OSHA to adopt a specific screening process for "suspected carcinogens" and suggested a variety of screening procedures to be used by OSHA. After extensive review and deliberation of the various screening procedures submitted, OSHA selected those which it considered the most effective. By combining these selected procedures, OSHA has developed what it believes to be a most efficient three-step screening and priority-setting process. The three-steps are:

Step No. 1—publication of a list of substances which may be candidates for further scientific reviews;

Step No. 2—publication of two priority lists, one for Category I and one for Category II substances; and

Step No. 3—selection of one or more substances from the priority lists for full scientific review with a view to subsequent rulemakings.

(2) *Procedures Stated in the Cancer Standard Final Rule concerning the List of Candidate Substances:* After a thorough and conscientious analysis of the Hearing Record (see the discussion at 45 FR 5207-5211, January 22, 1980), OSHA arrived at the screening procedure it would use and this procedure has been followed in the compilation of this list of candidate substances—the first step in OSHA's screening process.

(a) Substances for which there was some evidence of carcinogenicity would be drawn from such well-known lists as the NIOSH Registry of Toxic Effects of Chemical Substances (RTECS), the U.S. Public Health Service, Publication No. 149, the Environmental Protection Agency (EPA)'s Inventory of Chemical Substances, the Monographs of the International Agency for Research on Cancer (IARC), and the Annual Report of the Secretary of the United States Department of Health and Human Services (HHS) to the President and Congress. These compiled substances would be verified as being present in the American workplace by using the EPA's Pesticides-Registered Active Ingredients List, the National Occupational Hazard Survey (NOHS), the EPA Inventory of Chemical Substances, the Food and Drug Administration (FDA)'a Food Additives List, and the FDA's Approved Drug Products List. The substances which are found in American workplaces and for which there is some evidence of carcinogenicity will be subjected to a brief scientific review.

(b) A "brief scientific review" has been interpreted to mean a review by senior government scientists of a sufficient quantity of available literature to determine whether or not a substance should be subject to a more thorough scientific review under the Cancer Standard. Based on the more detailed review a determination may then be made as to whether a substance meets OSHA's definition of a potential occupational carcinogen (29 CFR 1990.103 (45 FR 5283, January 22, 1980)).

(c) Only positive data would be considered for the substances which would be subjected to a brief scientific review. OSHA believes that consideration of all available scientific evidence (positive and non-positive) should be done in the later stages of classification.

(d) Substances on this list will not be tentatively classified into Category I or Category II at this early screening stage. Such categorization will be made only after a more extensive scientific review.

(e) The candidate list will be made public and will be updated annually.

OSHA emphasized in the Cancer Standard Final Rule that the inclusion of a substance on the candidate list did not signify a scientific determination that the substance was a potential occupational carcinogen, nor was it to be considered as a preclassification warning. Most importantly, the candidate list carries no regulatory effect. By the same token, the exclusion of a substance from the candidate list does not mean that a substance is non-carcinogenic. The candidate list includes substances that OSHA believes require a more detailed scientific review to determine whether they should be identified and classified as potential occupational carcinogens. The publication of the candidate list has several benefits. For instance, in conjunction with EPA's Carcinogen Assessment Group (CAG) "List of Carcinogens," it informs all interested parties as to which substances OSHA is reviewing for possible identification and classification as potential occupational carcinogens.

EPA's CAG List includes substances which were reviewed extensively by CAG and considered by CAG as having "substantial evidence of carcinogenicity." OSHA also reviewed many of these substances and will make available to interested parties the data base it used for each substance. Although at this stage of review OSHA has not reached a conclusion as to the potential carcinogenicity of these substances, it respects EPA's evaluation. Therefore, in a spirit of inter-agency co-ordination and co-operator, consistent with the objectives of the IRLG, OSHA has referenced EPA's CAG List of Carcinogens rather then relisting on the candidate list those substances OSHA reviewed. The substances from EPA's CAG List which OSHA reviewed will be considered for listing on the OSHA priority lists.

Publication of the candidate list also stimulates employers and employees, as well as the general public to comment on the available scientific data and to inform OSHA of additional relevant data concerning any substance on the candidate list. OSHA further believes that the scientific community will benefit from the publication of the candidate list because it will help to identify the substances for which additional research may be appropriate. These conclusions are reflected in 29 Code of Federal Regulations (CFR) 1990. 121 (45 FR 5284, 5285, January 22, 1980)) which requires the Secretary to publish a candidate list annually. The list published below is issued pursuant to those requirements.

(3) *Utilization of the List of Candidate Substances in the Priority Setting Process:* The compilation and publication of the candidate list is only the first step in the screening of toxic substances which might be potential occupational carcinogens. The second step in OSHA's screening procedure involves the application of several priority factors (29 CFR 1990. 131-132, 45 FR 5285, January 22, 1980) primarily to the list of candidate substances, as well as to EPA's CAG List, in order to screen out those substances which should be more seriously considered for regulation. In other words, OSHA is attempting to identify and classify "the worst first" in the most efficient and effective way. Some of the factors that may be considered by OSHA in its priority setting are: (a) The estimated number of exposed workers, (b) the estimated levels of workers' exposure, (c) the molecular similarity of the substance to a known carcinogen, and (d) the availability of safe substitute substances (45 FR 5210, 5285, January 22, 1980). That group of substances which remains after the application of the priority factors will then be considered for placement on the priority lists. At this point in the screening process, OSHA intends to perform a thorough analysis of all available scientific data relevant to the potential carcinogenicity of a substance. Two priority lists will be published and, subsequently, updated approximately every six months, one list for Category I candidates and one, for Category II candidate substances.

The third step in OSHA's screening procedure will be selecting those substances from the priority lists that are, in fact, potential occupational carcinogens and are to be regulated on a substance-by-substance basis as outlined in the Cancer Policy (45 FR 5284, January 22, 1980).

Diethylamine, 2,2'-dichloro-N-methyl-, hydrochloride Syn: Mechlorethamine hydrochloride	55-86-7**
m-Dioxan-4-ol, 2,6-dimethyl-, acetate Syn: Acetomethoxan	828-00-2**
Diphenylamine, 4-nitroso- Syn: p-Nitroso-N-phenylaniline	156-10-5**
Diphenylamine, N-nitroso- Syn: Diphenylnitrosamine	86-30-6**
Ethane, 1,2-bis (chloromethoxy)- Syn: Ethylene glycol bis (chloromethyl) ether	13483-18-6**
Ethane, 1,1-dichloro-2,2-bis(p-chlorophenyl)- Syn: TDE	72-54-8**
Ethane, 1,1-dichloro-2,2-bis(p-ethylphenyl)- Syn: p,p'-Ethyl-DDD	72-56-0**
Ethanol, 2-hydrazino- Syn: beta-Hydroxyethylhydrazine	109-84-2**
Ether, 2,4-dichlorophenyl p-nitrophenyl Syn: 2,4-Dichloro-1-(4-nitrophenoxy)benzene	1836-75-5**
Ethylene, bromo- Syn: Vinyl bromide	593-60-2**
Ethylene, 1,1-dichloro-2,2-bis(p-chlorophenyl)- Syn: p,p'-DDE	72-55-9**
Fluoren-9-one, 2,4,7-trinitro- Syn: 2,4,7-Trinitro-9H-fluoren-9-one	129-79-3**
Fluorene, 2-nitro- Syn: 2-Nitro-9H-fluorene	607-57-8**
2-Furaldehyde, 5-nitro-, semicarbazone Syn: Nitrofurazone	59-87-0**
Hydrazine, 1,2-dimethyl-, dihydrochloride Syn: sym-Dimethylhydrazine dihydrochloride	306-37-6**
Hydrazine, methyl- Syn: Hydrazomethane	60-34-4**
Hydrazine methyl-, sulfate(1:1) Syn: Methylhdrazine monosulfate	302-15-8**
Hydrazine, monohydrate Syn: Hydrazine hydrate	7803-57-8**
Hydrazine, phenyl-, monohydrochloride Syn: Phenylhydrazine hydrochloride	59-88-1**

UMI 0 8 2 1 G A 5 4 V

Hydrazine, sulfate (1:1) Syn: Hydrazine hydrogen sulfate	10034-93-2**
Hydroxylamine, N-nitroso-N-phenyl-, ammonium salt Syn: Cupferron	135-20-6**
Imidazole-4-carboxamide, 5-(3,3'-dimethyl-1-triazeno)- Syn: Dacarbazine	4342-03-4**
Isophthalonitrile, tetrachloro- Syn: m-Tetrachlorophthalonitrile	1897-45-6**
1,3,4-Metheno-1H-cyclobuta(cd)pentalene, 1,1a,2,2,3,3a,4,5,5,5a,5b,6-dodecachlorooctahydro- Syn: Mirex	2385-85-5**
2-Naphthylamine, N,N-bis(2-chloromethyl) Syn: Naphthylamine mustard	494-03-1**
Peroxyacetic acid Syn: Peracetic acid	79-21-0**
Phenol, 4-amino-2-nitro- Syn: C.I. 76555	119-34-6**
m-Phenylenediamine, 4-chloro- Syn: 4-Chlorophene-1,3-diamine	5131-60-2**
o-Phenylenediamine, 4-chloro- Syn: 4-Chloro-1,2-benzenediamine	95-83-0**
o-Phenylenediamine dihydrochloride Syn: 1,2-Benzenediamine dihydrochloride	615-28-1**
p-Phenylenediamine, 2-nitro- Syn: C.I. 76070	5307-14-2**
Phosphoric acid, 2-chloro-1-(2,4,5-trichlorophenyl)vinyl dimethy ester Syn: Tetrachlorvinphos	961-11-5**
Phosphoric acid, trimethyl ester Syn: Methyl phosphate	512-56-1**
Phosphoric triamide, hexamethyl- Syn: HMPA	680-31-9**
Picolinic acid, 4-amino-3,5,6-trichloro- Syn: Picloram	1918-02-1**
Piperazine, 1,4-dinitroso- Syn: N-N'-Dinitrosopiperazine	140-79-4**
Propane, 2,2-bis(p-(2,3-epoxypropoxy)phenyl)- Syn: Bisphenol A diglycidyl ether	1675-54-3**
Propane, 2-nitro- Syn: Isonitropropane	79-46-9**
Pyridine, 2,6-diamino-3-(phenylazo)-, monohydrochloride Syn: Phenazopyridine hydrochloride	136-40-3**
Quinoline Syn: 1-Azanaphthalene	91-22-5**
Quinoline, 8-nitro- Syn: No synonym	607-35-2**

Semicarbazide Syn: Carbamylhydrazine	57-56-7**
Semicarbazide monohydrochloride Syn: Carbamylhydrazine hydrochloride	563-41-7**
Semicarbazide, 1-phenyl- Syn: Cryogenenine	103-03-7**
4,4'-Stilbenediol, alpha,alpha'-diethyl-, dipropionate, (E)- Syn: Diethylstilbestrol dipropionate	130-80-3**
Strobane Syn: Terpene polychlorinate	8001-50-1**
Succinic acid, mono (2,2-dimethylhydrazide) Syn: Daminozide	1596-84-5**
Sulfanilamide, N'-(5-methyl-3-isoxazolyl)- Syn: Sulfamethoxazole	723-46-6**
Sulfuric acid, diethyl ester Syn: Ethyl sulfate	64-67-5**
Tellurium, tetrakis(diethyldithiocarbamato)- Syn: Ethyl tellurac	20941-65-5**
Terphenyl, chlorinated Syn: PCT	61788-33-8**
Thiazole, 2-amino-5-nitro- Syn: Entramin	121-66-4**
p-Toluamide,N-isopropyl-alpha-(2-methyl-hydrazino)-monohydrochloride Syn: Procarbazine hydrochloride	366-70-1**
Toluene-2,4-diamine Syn: m-Toluenediamine	95-80-7**
o-Toluidine Syn: 1-Amino-2-methylbenzene	95-53-4**
o-Toluidine, 5-chloro- Syn: 1-Amino-3-chloro-6-methylbenzene	95-79-4**
p-Toluidine, alpha, alpha, alpha-trifluoro-2,6-dinitro-N,N-dipropyl- Syn: Trifluralin	1582-09-8**
Uracil, 2-thio- Syn: 2-Mercapto-4-hydroxypyrimidine	141-90-2**
Urea, 3-(p-Chlorophenyl)-1,1-dimethyl- Syn: Monuron	150-68-5**
Urea, 1,3-diethyl-2-thio- Syn: N,N'-Diethylthiourea	105-55-5**
Urea, 1,1,3,3-tetramethyl-2-thio- Syn: TMTU	2782-91-4**
Urea, 1,1,3-trimethyl-2-thio- Syn: N,N,N'-Trimethylthiourea	2489-77-2**

Part III

Department of Energy

Economic Regulatory Administration

Powerplant and Industrial Fuel Use Act of 1978

DEPARTMENT OF ENERGY

Economic Regulatory Administration

10 CFR Parts 500, 501, and 504

[Dockets Nos. ERA-R-78-19 C, F, and G]

Powerplant and Industrial Fuel Use Act of 1978; Existing Facilities: Definitions; Administrative Procedures; Prohibition Against Increased Use of Petroleum; Electric Utility System Compliance Option; Statutory Prohibitions; Findings and Procedures for Prohibition Rules and Orders; and Criteria for Petitions for Exemptions From Applicable Prohibitions

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Final rule.

SUMMARY: The Economic Regulatory Administration (ERA) of the Department of Energy (DOE) is issuing this final rule to implement certain provisions of Titles I, III, IV, V, and VII of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act), which apply to existing powerplants and existing major fuel burning installations (MFBIs). This final rule establishes the definitions, administrative procedures and criteria applicable to:

(1) ERA proceedings by which prohibitions are imposed pursuant to Title III of FUA;

(2) Petitions for exemptions by owners and operators of existing powerplants and existing MFBIs ("existing facilities") from the prohibitions contained in, or imposed by ERA pursuant to Title III of the Act;

(3) Applications by owners or operators of existing powerplants for permits for the increased use of petroleum under Title IV of the Act; and

(4) Applications by owners or operators of existing powerplants for approval of System Compliance Plans under Title V of the Act.

EFFECTIVE DATE: This final rule shall become effective on October 14, 1980.

FOR FURTHER INFORMATION CONTACT:

William L. Webb (Office of Public Information), Economic Regulatory Administration, Department of Energy, 2000 M Street, N.W., Room B-110, Washington, D.C. 20461 (202) 653-4055.

Stephen M. Stern, Division of Coal and Alternate Fuels Regulation, Economic Regulatory Administration, Department of Energy, 2000 M Street, N.W., Room 7002, Washington, D.C. 20461 (202) 653-3217

Robert L. Davies, Office of Fuels Conversion, Economic Regulatory Administration, Department of Energy, 2000 M Street, N.W., Room 3128, Washington, D.C. 20461 (202) 653-3649.

G. Randolph Comstock, Office of the General Counsel, Department of Energy, Room 6G-087—Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585 (202) 252-2967.

SUPPLEMENTARY INFORMATION:

I. Background

II. Discussion of Comments and Rules Adopted

A. Administrative Procedures and Sanctions

1. Subpart E—Prohibition Rules and Orders. Prohibitions by order—existing facilites

B. Prohibition Against The Increased Use of Petroleum

C. Statutory Prohibitions

D. Electric Utility System Compliance Option

E. Findings and Procedures for Prohibitions by Order (Case-By-Case)

1. Technical Capability.
2. Substantial Physical Modification.
3. Substantial Reduction in Rated Capacity.
4. Financial Feasibility.
5. Prohibition Against Excessive Use of Petroleum or Natural Gas in Mixtures.

F. Criteria for Petitions for Exemptions From Applicable Prohibitions

1. Subpart C—General Requirements for Exemptions.
   a. General requirement cost calculation.
   b. No alternative power supply.
   c. Terms and conditions.
2. Subpart D—Temporary Exemptions for Existing Facilities.
   a. Lack of alternate fuel supply.
   b. Site limitations.
   c. Inability to comply with applicable environmental requirements.
   d. Future use of synthetic fuels.
   e. Use of innovative technologies.
   f. Retirement exemption.
   g. Reliability exemption.
   h. Peakload powerplant exemption.
3. Subpart E—Permanent Exemptions for Existing Facilities.
   a. Lack of alternate fuel supply.
   b. Site limitations.
   c. State or local requirements.
   d. Fuel mixtures.
   e. Emergencies.
   f. Permanent peakload powerplants.
   g. Use of natural gas by powerplants with capacity of less than 250 million BTU's per hour.
   h. Use of liquefied natural gas.
   i. Scheduled equipment outages.

III. Procedural Matters

I. Background

ERA published proposed rules for existing facilities on January 29, 1979 (44 FR 5808). Comments were solicited on the proposals and public hearings were held in Boston, Massachusetts; Salt Lake City, Utah; Tampa, Florida; and Lexington, Kentucky.

On May 15, June 20, and July 23, 1979, ERA issued interim rules on definitions, administrative procedures, prohibitions against increased use of petroleum, findings and procedures for prohibition rules and orders, and exemption criteria for existing facilities, as well as the electric utility system compliance option available to existing powerplants. (44 FR 28530, 28594, 36002 and 43176). ERA solicited written comments on these interim rules over an extended period of time and has considered the various comments received. ERA also reviewed the interim rules in light of its actual experience in implementing the regulatory program.

On May 30, 1980, ERA issued a final rule setting forth the definitions, administrative procedures, prohibitions and criteria for exemptions for new facilities under Title II of FUA. 45 FR 38276 and 38302 (June 6, 1980).

This final rule sets forth definitions, administrative procedures, statutory prohibitions, findings and procedures for prohibition rules and orders, and criteria for exemptions applicable to existing facilities under Titles I, III and VII of FUA. The rule also contains provisions relating to applications for permits for the increased use of petroleum under Title IV and for approvals of electric utility system compliance plans under Title V of the Act.

In preparing the final rule, several parts of the interim rule that were applicable to existing facilities have been deleted or combined with other parts. Former Parts 504 (Existing Electric Powerplants) and 506 (Existing Major Fuel Burning Installations) have been consolidated and appear in this final rule as Part 504, Existing Facilities. Notably, the requirement for a Fuels Decision Report (Part 502 of the interim rule) has been deleted, effective August 5, 1980. 45 FR 38276 at 38280 (June 6, 1980). Essential information and evidentiary requirements previously required by Part 502 are now incorporated as general requirements for exemptions under Subpart C of Part 504 and as evidentiary requirements applicable to individual exemptions under Subparts D and E of Part 504.

II. Discussion of Comments and Rules Adopted

A discussion of the more significant comments and suggestions received on the interim rules, as well as the major changes ERA has adopted, appears below. Except in a few instances, if an issue has been addressed earlier by ERA in the preambles to the relevant interim rules on existing facilities or to the final rule on new facilities, the same issue will not be addressed again here. The appropriate previous preamble discussions are incorporated herein by reference. 44 FR 28530 (May 15, 1979); 44 FR 28594 (May 15, 1979); 44 FR 28950 (May 17, 1979); 44 FR 36002 (June 20, 1979); 44 FR 43176 (July 23, 1979); 45 FR 38276 and 45 FR 38302 (June 6, 1980).

Considerable effort has been made to simplify, reorganize, and shorten the text of this rule, as well as to reduce both evidentiary and reporting requirements associated with many of the exemptions authorized by the Act. This effort was undertaken in response to public comments which are referred to in this and previous preambles. Other changes have been made by ERA in the interest of regulatory simplification.

A. Part 501—Administrative Procedures and Sanctions

1. *Subpart E—Prohibition Rules and Orders.* a. *Prohibitions by order—existing facilities (§ 501.51).* Interim rule §§ 501.51 and 501.52, which contained a description of the administrative procedures applicable to the issuance of prohibition orders to existing powerplants and existing MFBIs, respectively, have been replaced by § 501.51, existing facilities, of the final rule.

Certain commenters were concerned that § 501.31 of the interim rule (relating to the submission of written comments) provided for at least a 45 day comment period for a proposed prohibition order whereas §§ 501.51(b)(3) and 501.52(b)(3) (relating to procedures for the issuance of prohibition orders) provided for at least a three month period. ERA has revised § 501.31 in the final rule to refer to § 501.51(b)(3) (Prohibitions by Order—Existing Facilities) to provide for the three month period. Additionally, § 501.33(b) of the interim rule (relating to requests for a public hearing) has been revised to refer to § 501.51(b)(6) so as to make clear that a 45 day period will be available for interested persons to request a public hearing after publication of the tentative staff analysis.

It was suggested by some commenters that the three month comment periods provided for in connection with the issuance of prohibition orders be extended to 120 or 180 days. We have decided not to adopt these suggestions; however, it should be noted that ERA has discretion under §§ 501.51(b)(3) and 501.51(b)(5) to grant extensions upon request by a petitioner and an appropriate showing of need.

Certain commenters suggested that all evidence upon which ERA proposes to rely in deciding to issue a final prohibition order should be served upon all interested parties with an opportunity to respond by comment or in a public hearing. ERA believes that the provisions for a public hearing and comment on the tentative staff analysis provide a prohibition order recipient and all other interested persons a sufficient opportunity to respond to all pertinent issues. ERA believes, however, that the informal procedures authorized by Section 701 of FUA allow it to consider the whole record in determining whether or not to issue a final order, including information received and analyses made subsequent to the close of the public comment period. All information relied upon by ERA in making its determinations will be in the public record. In addition, in cases where a public hearing has been conducted, the hearing record will remain open for 14 days following the hearing. Participants at the hearing may submit additional written statements during that period which will be made a part of the administrative record and will be served by the presiding officer upon those parties listed on the service list.

Many commenters suggested that ERA should, upon issuance of a final prohibition order, immediately stay that order to allow an order recipient to petition for an exemption. This matter was addressed in the preamble to the interim rule, 44 FR 43178 (July 23, 1979). Such an approach would be unnecessarily protracted. The Conference Report accompanying FUA makes it clear at page 82 that a final order shall not be issued if the powerplant or MFBI would be eligible for an exemption if one had been requested. For ERA to properly analyze whether an exemption is available, ERA believes it must request that a proposed order recipient both identify and furnish evidence pertaining to eligibility for any appropriate exemptions. Under this rule, a proposed order recipient has the option of waiving this right as a defense to an order. However, it is evident, that by providing that an exemption showing could be employed in the nature of an affirmative defense to a prohibition order, Congress did not expect a prohibition order to be stayed where an order recipient chooses to wait and petition for an exemption only after the order is finalized.

Certain commenters believe that ERA has shifted the burden of proof to the proposed order recipient. As stated in the preamble to the interim rules, ERA does not believe that requiring the proposed order recipient to furnish evidence to ERA so it can make the required findings relieves ERA of the ulimate burden of proving the basis for the final prohibition order, 44 FR 43178 (July 23, 1979). ERA may, where appropriate, subpoena the necessary evidence if not provided by a proposed order recipient (see § 501.40 of the final rule) in order to make the findings required by FUA.

Other commenters on the interim rule requested that ERA issue prohibition orders based upon an adjudicatory hearing, with an opportunity to present and rebut evidence and to cross-examine witnesses. ERA has previously responded to this comment in the preamble to the interim rule, 44 FR 28536 (May 15, 1979), and the final rule applicable to Definitions and Administrative Procedures, 45 FR 38279 (June 6, 1980). Further, the Conference Report to FUA states that the adjudicatory provisions of 5 U.S.C. §§ 554 and 556 do not apply to FUA hearings on proposed prohibition orders.

It has been suggested that the final rule provide a reasonable time for an order recipient to comply with the requirements of a prohibition order. ERA agrees and has revised the procedures for issuing a prohibition order (§§ 501.51(c) (2) and (3)) to provide that any final order will include a schedule to ensure compliance with the prohibition order.

Certain commenters suggested that an environmental impact statement or an environmental assessment should be prepared prior to issuance of a proposed prohibition order and that there should be clear guidelines for determining what type of environmental report is required. ERA believes that the guidelines which DOE has issued to comply with the National Environmental Policy Act of 1969 (NEPA) are complete and that further standards are unnecessary. Under the guidelines, the requirements for NEPA compliance are determined on a case-by-case basis. ERA may, in its discretion, hold a combined hearing on an environmental report and a tentative staff anaylsis, if warranted. As required by NEPA, a 45 day comment period will be available to respond to a draft environmental report.

Certain commenters have suggested that ERA must provide a full rationale for its decision to proceed at the time it issues its notice of intention to proceed with a prohibition order. ERA believes that this demonstration is more appropriate in the tentative staff analysis after the staff has had an opportunity to analyze all material in the record up to that time. ERA believes that the notice of intention to proceed should outline the comments received,

the defenses raised, and the exemptions requested.

Some commenters have suggested that the final rule provide for a conference prior to the time ERA actually issues a proposed prohibition order. Since ERA, as a matter of practice, usually provides advance notice and an opportunity to request a conference to a proposed order recipient, ERA believes that a change in the regulations is unnecessary.

Certain commenters suggested that ERA provide a mechanism by which the owner or operator of a facility may request that a proposed prohibition order be issued. ERA agrees and has added § 501.51(d) to allow such a request. However, any order will be issued in ERA's sole discretion.

B. Prohibition Against the Increased Use of Petroleum (§ 504.1)

Section 405 of the Act directs DOE to prohibit by rule all existing powerplants which used coal or another alternate fuel as a primary energy source in 1977, from increasing their use of petroleum above that base year amount unless a permit is issued by ERA authorizing such use.

Several commenters stated that ERA exceeded its authority by requiring a showing that the petitioner first meet the criteria for an exemption under Title III of FUA (subparts C, D, and E of this Part) before a permit is issued for reasons relating to an inability to comply with Clean Air Act requirements because of environmental, financial, or physical limitations. Section 405 of the Act requires that the duration of a permit for increased use of petroleum be limited to the minimum period of time necessary to permit compliance with the Clean Air Act or to prevent impairment of reliability of service. In determining for what period an applicant will be unable to comply with requirements of the Clean Air Act, ERA will employ the criteria for pertinent exemptions under Title III. However, where an applicant establishes that the applicable exemptions criteria are met, a Section 405 permit rather than an exemption will be granted.

Another commenter stated that ERA exceeded its statutory authority in requiring a compliance plan designed to minimize the use and duration of such petroleum use, as well as estimates of quantity and rate of petroleum use. The commenter asserted that Section 405 of FUA does not include a "terms and conditions" provision similar to Section 314 of Title III of the Act. ERA believes that such a compliance plan is authorized by the Act to conserve the use of petroleum by limiting the duration of a permit.

A commenter stated that the Section 405 prohibition may force a utility to burn petroleum in less efficient units not subject to the prohibition. It was recommended that the definition of primary energy source be modified to permit petroleum or natural gas use when a powerplant loses its coal capability due to an equipment outage to avoid using petroleum or natural gas in less efficient units. ERA notes that the prohibitions of FUA are unit specific and Section 405 does not permit ERA to adopt a system-wide approach to the prohibition on increased use of petroleum. Equipment outage is not one of the listed criteria upon which a utility may base its petition for a permit to avoid the prohibition. However, Sections 103(a)(15)(B) and 404 of the Act, as implemented by Subpart M of the FUA regulations, permit the use of petroleum or natural gas, notwithstanding any of the prohibitions of the Act, in emergency situations or to alleviate or prevent unanticipated equipment outages.

C. Statutory Prohibitions (§ 504.3)

Section 301 of the Act imposes certain prohibitions on the use of natural gas by existing electric powerplants unless an exemption has been granted.

One commenter alleged that it is unclear under the interim rule how to determine the period of time a powerplant may burn natural gas pursuant to Section 301(a)(3) of the Act before an exemption is required. It was recommended that ERA average the proportion of permitted natural gas use over a three year period. ERA disagrees with this view. Section 301(a)(3) references a calendar year as the period of time during which the gas is to be used.

Another commenter stated that, in implementing FUA Section 301(a)(3), ERA should provide some flexibility to the prohibition which applies on a calendar year basis. The comment noted that even despite the best of planning, unanticipated outages do occur. ERA notes that provisions for dealing with emergencies are found in Subpart M of the regulations implementing the Act.

After reviewing one comment, ERA has made clear in the final rule that the prohibitions of FUA Sections 301(a) (2) and (3) apply unless, and to the extent that, a system compliance plan has been approved by ERA pursuant to Title V of the Act.

D. Electric Utility System Compliance Option (§ 504.4)

Section 501 of the Act authorizes utilities which own or operate powerplants subject to the prohibitions under Title III of the Act to elect to be covered by a system compliance plan. If ERA has approved such a plan the utility will be considered in compliance with the applicable prohibitions.

Many commenters stated that ERA has no authority under Section 501 of the Act to revoke a plan, even for material noncompliance, and that ERA is limited to the enforcement remedies under Title VII, Subtitle C, of the Act. ERA recognizes that revocation is an extraordinary remedy to be exercised only in cases of material non-compliance. ERA noted in the preamble to the interim rule, 44 FR 36002 (June 20, 1979), that it intends to develop, on a case-by-case basis, sanctions under Section 723(a) of the Act, for violation of an approved plan that include enforcement actions, short of revocation, which will insure compliance.

Some commenters stated that ERA had set too restrictive a formula in § 504.4(b)(5) for permissible natural gas consumption in peakload and intermediate load powerplants, and one commenter suggested that ERA permit a case-by-case analysis of natural gas consumption permitted in each system as of January 1, 1995. ERA believes the formula it has established best serves the purposes of the Act to reach the permitted natural gas use levels as of January 1, 1995. ERA also believes that such a case-by-case analysis would be too cumbersome.

Additionally, commenters stated that the Act does not require peakload and intermediate load powerplants to be identified at the time of submission of a system compliance plan. Such a requirement, it was asserted, would place greater restriction on companies willing to use the system compliance option than on companies seeking individual exemptions. ERA has modified the rule accordingly. However, ERA encourages utilities to indicate which of the powerplants identified pursuant to § 504.4(b)(1) are most likely to be peakload or intermediate load powerplant as of January 1, 1995. Such information will help ERA in analyzing system compliance plans submitted for approval.

Many comments stated that ERA exceeded its statutory authority in § 504.4(b)(9) of the interim rule by requiring submission of a fuel conservation plan to minimize petroleum consumption. These

commenters indicated that Section 501 of the Act contemplated that heavily gas dependent utilities would switch to petroleum. While ERA recognizes this potential development, ERA believes it has inherent authority under the terms and conditions provision of Section 501(h) of the Act to require conservation plans which limit petroleum or natural gas consumption.

Several commenters stated that ERA exceeded its statutory authority in § 504.4(k) of the interim rule with respect to limiting pre-1990 natural gas consumption. Another commenter stated that for pre-1990 natural gas consumption, a utility should have the option of implementing a "balloon" reduction rather than a straight-line reduction.

ERA believes it has authority under Section 501(h) of the Act to establish pre-1990 natural gas use on an individual utility basis. ERA previously noted in the preamble to the interim rule, 44 FR 36002 (June 20, 1979), that in appropriate cases, ERA may even provide for the use of natural gas in excess of the statutory 1974–1976 base period proportion.

Another commenter stated that §§ 504.4(d) (3) and (4) of the interim rule do not make clear whether ERA is incorporating the evidentiary criteria of interim rule § 504.37 (emergency purposes) and interim rule § 504.38 (peakload powerplants) before natural gas consumption may exceed the 20% volume limitation. ERA believes the present regulatory language is clear that the emergency or peakload use must be within the meaning of the referenced regulatory sections. In reviewing the request, ERA will determine whether the additional natural gas is needed for emergency purposes or peakload, within the meaning of §§ 504.57 and 504.58, respectively, of the final rule.

One commenter suggested that the regulations implementing Section 501 of the Act provide for the transfer of allowable natural gas usage between utilities. ERA will consider the advisability of such transfers on a case-by-case basis.

E. Findings and Procedures for Prohibitions by Order (Case-by-Case) § 504.6

Interim rule §§ 504.5 and 506.2, relating to how ERA can prohibit electric powerplants and MFBIs from using petroleum or natural gas as a primary energy source have been replaced by final rule § 504.6.

A number of commenters criticized the fact that the interim rules provided one standard of technical capability to burn an alternate fuel for new facilities and another one for existing facilities. It was pointed out that the standard for new facilities requires that all appurtenances, including pertinent fuel handling and storage facilities and pollution control equipment, be in place, while the standard for existing facilities focuses on the ability of the unit, from the point of fuel intake, to sustain combustion of that alternate fuel and to maintain heat transfer. ERA believes that different standards for new and existing facilities are appropriate, since in the case of new facilities FUA prohibits the construction of new powerplants without the capability to use coal or any other alternate fuel as a primary energy source. As a general rule, existing facilities not now using alternate fuels, may lack storage or fuel handling facilities or pollution control equipment. If the criteria for determining technical capability of existing facilities were to require the presence of such appurtenant facilities, the authority to issue prohibition orders contained in Sections 301(b) and 302(a) of FUA would be vitiated.

Other commenters criticized ERA's interpretation of "technical capability" to mean the ability to burn an alternate fuel, arguing that "technical capability" should involve consideration of a unit's *real* capability to use an alternate fuel, including the presence of fuel handling and storage facilities and pollution control equipment. These arguments were addressed in depth in the preamble to the interim rule, 44 FR 43179 (July 23, 1979), and ERA has not been persuaded to modify this interpretation.

Another commenter asserted that ERA has shifted the burden of proving technical capability to the petitioner despite the language of the Conference Report that the Secretary make a finding of real capability before issuing a prohibition order. ERA disagrees with this assertion. The burden of making the finding must be distinguished from the information gathering function, in which the recipient must participate.

With respect to the substantial physical modification and derating criteria, some commenters asserted that they had been so narrowly defined that the only effective criteria for issuing a prohibition order was financial feasibility.

Section 504.6(d) of the final rule indicates that physical modifications made to the unit will be considered "substantial" where warranted by the magnitude and complexity of the engineering task or where the modification would impact severely upon operations at the site. Significant alterations, such as are set out in footnote 5 to § 504.6(d), will be considered independently of any financial feasibility criteria.

The same commenters assert that by incorporating the "substantially exceeds" concept of the cost calculation into the financial feasibility criteria, an unduly harsh test was created. ERA previously expressed its view on this matter in the preamble to the interim rule. 44 FR at 43181 (July 23, 1979). There it was stated that "(a) formula that compares the costs of burning imported petroleum provides a presumptive measure of the financial feasibility of conversion. The provisions of the cost exemption enable such comparison. . . ." We find no reason to deviate from the essential conceptual approach set out in the foregoing quotation. ERA is, however, proposing to revise the cost calculation (45 FR 42190, June 23, 1980) which it will use as a presumptive test of financial feasibility until a final cost calculation rule is adopted.

A few commenters, referring to the technical capability finding required by Sections 301(b)(2) or 302(a)(2) of FUA, have concluded that ERA's discussion erroneously limits the substantial modification and derating findings of these sections to units which "previously had" technical capability. This was not ERA's intention. These statutory findings are applicable both to units which currently have, as well as those which previously had, technical capability to utilize an alternate fuel.

A commenter urged that a technical capability finding should not be made where a unit is utilizing or burning an alternate fuel to its maximum ability or fuel availability, or both. ERA has discretion, as prescribed by FUA, Section 302(a), in issuing a prohibition order. In exercising this discretion, ERA will take into account whether the unit is already utilizing an alternate fuel. Additionally, ERA has the authority under Title III of FUA, in appropriate circumstances, to accommodate situations where an existing facility seeks to use a mixture of alternate fuels and oil or natural gas.

1. *Technical Capability (§ 504.6(c)).* Interim rule §§ 504.5(d) and 506.2(d) relating to how ERA will assess "technical capability" for electric powerplants and MFBIs, respectively, have been replaced by final rule § 504.6(c) covering all existing facilities.

ERA has responded to several comments that a unit designed to burn natural gas also "has" the technical capability to burn medium BTU gas from coal. The final rule now makes clear that a unit designed to burn natural gas shall be presumed to have the technical capability to burn medium BTU gas from

V 45 A G 12 80 UMI

coal, but that this presumption is rebuttable upon submission of convincing evidence to the contrary.

2. *Substantial Physical Modification (§ 504.6(d)).* Interim rule §§ 504.5(e) and 506.2(e), relating to how ERA will assess "substantial physical modification" for electric powerplants and MFBIs, respectively, have been replaced by final rule § 504.6(d) covering all existing facilities.

One commenter suggested that ERA restructure its test for substantial physical modification to include two categories: (1) certain modifications which will always meet the "substantial" test and (2) those which may or may not meet the test. ERA acknowledges that this approach would facilitate its implementation of the order issuing provisions of FUA and would also provide the interested public with some certainty as to which modifications will always be regarded as substantial. However, ERA believes that due to the unique nature of various physical modifications, such a categorization is not practical. ERA will consider each case individually on its own merits.

3. *Substantial Reduction in Rated Capacity (§ 504.6(e)).* Interim rule §§ 504.5(f) and 506.2(f) relating to how ERA will assess "substantial reduction" in rated capacity for electric powerplants and MFBIs, respectively, have been replaced by final rule § 504.6(e) for all existing facilities.

ERA initially proposed that any derating less than 25 percent attributable to conversion to an alternate fuel would not be considered to be a substantial reduction in a unit's rated capacity. After considering these comments, ERA adopted in the interim rule (§§ 504.5(f) and 506.2(f)) a presumption that a derating of less than 10 percent was not substantial. *See* discussion in preamble, 44 FR at 43180 (July 23, 1979). ERA received many comments critical of this approach. Several commenters suggested that any derating in excess of 10 percent was a substantial derating and should prevent issuance of a prohibition order. Others suggested that deratings of less than 10 percent should be evaluated on a case-by-case basis.

After consideration of the comments on the interim rule, ERA has determined to adopt a presumption that (1) a derating of less than 10 percent will not be judged substantial unless convincing evidence to the contrary is submitted in rebuttal, and (2) a derating of 10 percent or more, but less than 25 percent, will be considered by ERA on a case-by-case basis. A derating of 25 percent or more will automatically be regarded as substantial.

ERA believes it is important to permit rebuttal of the presumptive threshold for a derating of less than 10 percent. This procedure will allow ERA to take into account, for example, small industrial operations with one or two boilers where even a small derating of one unit could contribute to a significant reduction in output.

One commenter suggested that ERA should adopt a two step approach in which the impact on the unit would first be considered. If a substantial derating of the unit were found, the prohibition order proceeding would be terminated. If the impact of the derating on the unit were not clear, ERA would be allowed to consider the impact of the derating on the plant site. Other commenters were critical of ERA's stated intention (§ 504.5(f)(2) of the interim rule) to consider the impact of the reduction in available capacity on the system as well as on the unit itself. ERA has determined, for purposes of the final rule, to consider only the impact of the reduction in rated capacity on the individual unit, unless the potential order recipient presents compelling evidence that consideration of the impact of the reduction in available capacity on the system is appropriate.

Criticism was also expressed with respect to a case-by-case assessment of the impact of a derating exceeding 10 percent of a unit's rated capacity. This procedure was characterized as unreasonable since consideration would be focused on a threshold percentage and permanent operational burdens would be compared with factors that are temporary, such as excess capacity. ERA believes, as now structured, the final rule eliminates this criticism since ERA will consider only the impact on the individual unit unless urged to do otherwise by the owner or operator of the unit.

Because of ERA's statement in the interim rule of its intention to consider reductions in rated capacity affecting utility systems where the unit involved is a powerplant, some commenters felt that it was ERA's intention to encroach upon the state regulatory authorities by making its own determinations of the capacity requirements for particular utility systems. ERA believes these views to be based upon a misunderstanding of its intention. In any case, the issue is moot because ERA intends to make this assessment only on a unit specific basis.

Several commenters asked that ERA consider other factors indirectly associated with conversion such as purchasing emission offsets in "nonattainment" areas. Because ERA will address derating on a unit specific basis, such factors are not appropriate for consideration in assessing derating. Such factors will be considered by ERA in connection with the financial feasibility finding required by § 504.6(a) and described in § 504.6(g) of these regulations.

4. *Financial Feasibility (§ 504.6(f)).* Interim rule §§ 504.5(g) and 506.2(g) relating to how ERA will determine "financial feasibility" for electric powerplants or MFBIs, respectively, have been replaced by final rule § 504.6(f) for all existing facilities.

Under this final rule, as in the interim rule, ERA will presume that it is financially feasible to use an alternate fuel as a primary energy source if, by using the general cost calculation to be adopted later (*see* 45 FR 42190, June 23, 1980) and the firm's cost of capital instead of a specified discount rate, it can be shown that the cost of using the alternate fuel does not substantially exceed the cost of using imported petroleum. ERA will use either the firm's cost of capital or a specified discount rate whichever is more favorable to the potential order recipient.

A number of commenters indicated that it was inappropriate for ERA to equate the "substantially exceeds" cost calculation with the financial feasibility test pertaining to the prohibition order issuance process. These commenters expressed concern that ERA would thereby shift the burden of proof on the financial feasibility finding to the potential order recipient, who must then seek to rebut it. The commenters were especially concerned over what they perceived to be ERA's grafting of a cost test intended to be used for "fuels decisions" onto the financial feasibility determination associated with prohibiting the use of oil or natural gas by existing facilities. It was suggested that a "one-on-one" test, to determine whether the cost of using an alternate fuel as a primary energy source exceeds the cost of using imported petroleum as the primary energy source, would be appropriate for making the financial feasibility finding.

Other commenters objected to the complexity of the economic analysis that will be involved in this assessment. They asked that ERA give equitable consideration to all factors that affect financial feasibility for a particular unit and that any economic analysis required contain only one cash flow comparison. In the preamble to the interim rule, 44 FR 43180 (July 23, 1979), ERA discussed in detail its reasons for proposing the formula approach to the financial feasibility finding, including why it believes the use of the "substantially exceeds" criteria is both appropriate and applicable to this finding. To the extent that such discussion is applicable to the comments received on the interim rule's financial feasibility finding, ERA does not believe it is necessary to repeat it here. However, ERA feels that it is important to make two relevant observations regarding the use of the "substantially exceeds" cost calculation in its determinations of financial feasibility.

First, it must be stressed that the financial feasibility determination that may result from application of the general cost calculation is only a presumption; it may be rebutted by a potential order recipient. ERA will take into account other relevant factors pertaining to the firm's financial situation, when such factors are introduced by the potential order recipient.

Second, ERA calls attention to the fact that the cost calculation methodology employed in making this finding under the interim rule was revoked by ERA, effective June 17, 1980, 45 FR 40966 (June 17, 1980). A new cost calculation methodology was proposed in a Notice of Proposed Rulemaking published on June 23, 1980 (45 FR 42190). Accordingly, the foregoing discussion of the cost calculation to be used in assessing financial feasibility is subject to change depending on the methodology finally adopted.

ERA included a methodology in Appendix I of the interim rule for computing a firm's own cost of capital for use in the presumptive portion of the financial feasibility finding. Essentially, it required a computation of the real after-tax weighted average marginal cost of capital. The equity portion of the cost of capital is computed with the capital asset pricing model. One of the parameters required to use this model is the mean excess return, which measures the return relative to the risk free rate of return, on the *Standard and Poor's* (S&P) 500 composite index.

ERA used data for a five year period to determine the mean excess return on the S&P composite index. Several commenters stated that five years was not enough and suggested that ERA use a longer, more stable period such as was used by Ernst & Whinney to determine the mean real after-tax weighted average marginal cost of capital.[1] One commenter recommended that ERA use the same period as that used by Ernst & Whinney.

After considering these comments, ERA has decided to use the same period that Ernst & Whinney used in its study. Therefore, the mean excess return on the S&P 500 which will be used in Appendix I is the mean as computed by Ibbotson and Sinquefield[2] for the years 1926–1976—9.2%.

One commenter noted that the risk-free rate of return used in the regression equation should be corrected so that it is not the bank discount rate. ERA notes that this observation is correct and has provided an equation that may be used to make this correction, and to convert the annual yield to a monthly yield. The derivation of the equation which corrects the yield is contained in technical Appendix II of the Ernst & Whinney study referenced above.

Several commenters stated that the previous year's GNP deflater should not be used as the expectation of inflation to adjust the nominal cost of capital to the real cost of capital. One commenter stated that the rate of inflation as computed over the equipment's useful life should be used. Another stated that a weighted average of several years inflation should be used. ERA does agree that another indicator of inflation could be a better measure of inflation expectation and is studying the matter. However, until ERA can identify a specific indicator which is clearly superior to the previous year's GNP deflater, ERA will continue to use the previous year's GNP deflater.

ERA has accumulated some experience using Appendix I and has observed that the data called for is not always available. Therefore, ERA is now expanding the potential sources of data and will allow the use of an alternate methodology when the capital structure does not consist of debt, preferred equity or common equity (*e.g.*, a university).

Other commenters suggested that ERA limit its consideration of financial feasibility to the market response to a *bona fide* attempt by the company to raise capital at a reasonable cost, as well as to consideration of the total capital needs of the company.

Another commenter took exception to limiting consideration of ability to raise capital for conversion to the same criteria applicable to the lack of capital availability exemption. (*See* § 503.35 of the Final Rule for New Facilities, 45 FR at 38317 (June 6, 1980)). The exemption criteria referred to measure capital availability on a parent firmwide level, over a five year period. Another commenter maintained that ERA was not authorized to employ a parent firm approach in measuring financial feasibility for issuance of a prohibition order. That approach, according to the commenter, might result in issuance of a prohibition order even where an MFBI could demonstrate that compliance would require the termination of certain manufacturing activities.

ERA notes that the parent firm approach accords with the approach adopted in the final rule for new facilities for exemptions for lack of capital availability (45 FR 38317 (June 6, 1980)). ERA finds no basis under FUA for restricting the scope of its evaluation of capital availability to a subsidiary firm. Such a narrow interpretation could make the statutory financial feasibility standard dependent upon internal corporate organizational and accounting practices; a result which we do not believe Congress intended.

ERA also observes that in addressing a financial issue in a different context, with respect to the "substantial financial penalty" test for classification of a facility as new or existing under section 103 of FUA, Congress explicitly directed DOE to consider financial impacts relative to the person owning, controlling or operating the facility, including the parent company. We believe that this approach is instructive in regard to our assessment of the financial impacts upon a company of conversion to the use of alternate fuels under Title III of the Act.

Various commenters asked that ERA reevaluate its position that utilities can raise the necessary capital for unit conversions through rate relief from appropriate regulatory authorities. These commenters argue that this policy will operate to effectively eliminate the capital availability component of the financial feasibility test, as ERA will always find that adequate capital can be obtained under this assumption. ERA has decided to retain this approach since it is consistent with the regulations adopted for new facilities for an exemption based on a lack of capital availability (45 FR 38316, June 6, 1980), when dealing with large utilities. However, for small utilities, ERA will consider the impact of raising additional capital upon the potential order recipient's customers in connection with the financial feasibility finding.

A commenter urged that ERA's financial feasibility standard of "loss of production" (§ 506.2(g)(3) of the interim rule) be broadened to include measurement of loss of profits that may result because of substantial conversion

[1] Ernst & Whinney, *Costs of Capital and Rates of Return for Industrial Firms and Class A&B Electric Utility Firms*, June 1979.

[2] Ibbotson, R. E. and R. A. Sinquefield, *Stocks, Bonds, Bills, and Inflation*, Charlottesville, Va. The Financial Analysts Research Foundation, 1977, cited by Ernst & Whinney, *Costs of Capital and Rates of Return for Industrial firms and Class A&B Electric Utility Firms*, June 1979. Pgs. 3–6.

costs, overall production delays, downtime and other expenses stemming from conversion of an existing MFBI. ERA will consider any relevant factors presented by the potential order recipient in connection with calculating the cost test, if they bear upon the competitive viability of the site or loss of production at the site during the period required for the conversion. This will include expenses associated with downtime but will not include tenuous and difficult to quantify items, such as foregone opportunities and lost profits resulting from downtime. ERA notes that such expenses would have been incurred had the firm voluntarily converted the unit, and that, in fact, many firms have already incurred such losses voluntarily. A paragraph (B) has been added to § 504.6(f)(3) to clarify ERA's position on this issue.

5. *Prohibition Against Excessive Use of Petroleum or Natural Gas in Mixtures (§ 504.7).* Interim rule §§ 504.6(h) and 506.2(h) relating to the manner by which ERA will prohibit the excessive use of petroleum or natural gas in mixtures by existing electric powerplants and MFBIs, respectively, have been combined and redesignated as § 504.7 in the final rule for all existing facilities. As in the case of the interim rule, this section substantially tracks the corresponding statutory language. ERA intends to issue a Notice of Proposed Rulemaking to establish criteria and a specific process for the issuance of prohibition orders pursuant to this section.

F. Criteria for Petitions for Exemptions from Applicable Prohibitions

1. *Subpart C—General Requirements For Exemptions.* a. *General requirement cost calculation (§ 504.12).* Numerous comments were received with respect to the cost calculation employed in §§ 504.12 and 506.12 of the interim rule. The cost calculation was to be used by petitioners in petitioning for an exemption based upon the cost of operating a unit to burn an alternate fuel.

After considering these comments ERA revoked §§ 504.12 and 506.12 of the interim rule, effective June 17, 1980 (45 FR 40966), and proposed a new rule with respect to the cost calculation for public comment, 45 FR 42190 (June 23, 1980).

b. *No alternative power supply (§ 504.13).* Several comments were received suggesting that the determination of "reasonable cost" under Section 313 of the Act should (1) be independent of any cost calculation associated with the "substantially exceeds" cost test under Section 312 of the Act and (2) should not rely upon the price of imported petroleum. ERA agreed with similar comments received prior to publication of the interim rule for new facilities, 44 FR 28960 (May 17, 1979), and revised the pertinent reasonable cost test at that time. ERA also addressed comments which criticized the comparison to the cost of imported petroleum in the preamble to the final rule for new facilities, 45 FR 38303 (June 6, 1980), and will not address them here.

One comment stated that the consultative role of the FERC had been reduced to a mere formality. Through inadvertance, the statutory provision for consultation with FERC was omitted from the proposed rule, 44 FR 5808 (January 29, 1979), but was subsequently added to the interim rule, 44 FR 28960 (May 17, 1979). The interim rule and this final rule restate the language of the statutory provision.

c. *Terms and conditions (§ 504.17).* A number of comments criticized ERA for suggesting that the terms and conditions of an exemption might require existing facilities to use specified liquid or gaseous alternate fuel, 44 FR 43185 (July 23, 1979). Commenters expressed concern that such a requirement might necessitate significant modification of an existing unit. However, ERA does not intend to impose as a term or condition for an exemption a future requirement that an alternate fuel be used, when available, if such a requirement would necessitate substantial modification to the unit.

2. *Subpart D—Temporary Exemptions for Existing Facilities.* a. *Lack of alternate fuel supply (§ 504.31).* Interim rule §§ 504.21 and 506.21 relating to temporary exemptions due to a lack of an alternate fuel supply for existing powerplants and MFBIs, respectively, have been replaced by final rule § 504.31 for all existing facilities.

In order to treat existing facilities in a manner comparable to new facilities with respect to this exemption, ERA has created an alternative evidentiary submission applicable to MFBIs which will be operated less than 600 hours per year, such as auxiliary units for powerplants. In such cases, the petitioner will be granted an exemption based on (1) a certification that the use of the unit will be so limited and (2) a compliance plan as required by § 504.17.

b. *Site limitations (§ 504.32).* Interim rule §§ 504.22 and 506.22 relating to how ERA will assess site limitations with respect to powerplants and MFBIs, respectively, have been replaced by final rule § 504.32 for all existing facilities.

To correct an inadvertent omission in the interim rule and to make clear that ERA will consider environmental site limitations, the eligibility section for this exemption has been redrafted to conform to the exact language of FUA Sections 103(a)(16)(D) and (a)(16)(E) with respect to facilities necessary to assure compliance with environmental requirements.

One commenter urged that the filing requirements for this exemption be reduced to enable a petitioner to obtain a site limitation exemption with a minimal showing where it is obvious that the exemption is warranted, and further suggested that certain categories of site limitations such as lack of adequate land be recognized, without further showing, as probable grounds for exemption. Because a petitioner is required to take action to eliminate the site limitation by the end of the temporary exemption period, ERA believes it is appropriate to ask that the petitioner indicate the nature of the physical limitation and describe the steps to be taken to overcome the limitation. Examples of the kind of evidence that may be submitted in satisfaction of these requirements are listed in the rule as a guide. The showing required in a particular case will depend on the applicable facts. ERA intends to take a flexible approach with regard to the requirements of this and all other exemptions.

c. *Inability to comply with applicable environmental requirements (§ 504.33).* Interim rule §§ 504.23 and 506.23 relating to temporary exemptions based on environmental requirements for powerplants and MFBIs, respectively, have been replaced by final rule § 504.33 for all existing facilities.

One commenter pointed out the difficulty in performing the extensive modeling which may be required in order to quality for the environmental exemption within the three-month period ordinarily permitted in a prohibition order proceeding [*See*, § 501.51(b)(5)]. ERA recognizes this difficulty, but has concluded that it would be inappropriate to reduce the evidentiary requirements for this exemption, as suggested by the commenter. ERA will, however, be very flexible in considering requests for extensions of the three-month period, as provided for in § 501.51(b)(5). ERA will also consider waiving or reducing the evidentiary requirements, where appropriate.

d. *Future use of synthetic fuels (§ 504.34).* Interim rule §§ 504.24 and 506.24 relating to temporary exemptions based on the future use of synthetic fuels by powerplants and MFBIs, respectively, have been replaced by final rule § 504.34 for all existing facilities.

In response to a number of comments, ERA has substantially reduced the requirements for the synthetic fuels exemption by the adoption of a certification procedure. This procedure will allow a petitioner to certify that he is unable to comply with the applicable prohibitions by use of a synthetic fuel derived from an alternate fuel until the end of the proposed exemption period, but will comply by use of such fuel as a primary energy source in the unit by the end of the period. The compliance plan contemplated by this exemption has been split into "preliminary" and "final" compliance plans. The preliminary plan is to be submitted with the petition and must demonstrate the petitioner's good faith commitment to use a synthetic fuel. This exemption may be granted on the basis of a preliminary plan, but it will not become effective until ERA approves the final plan. The final plan must contain copies of binding contracts for the purchase of the synthetic fuel and a list of milestones leading to synthetic fuel use.

One commenter urged ERA to provide that the recipient of a temporary exemption based on future use of synthetic fuels may receive another exemption if, at the end of the temporary exemption period, the synthetic fuel is unavailable at a reasonable cost. While it may be appropriate in extraordinary circumstances to consider any other exemption for which a petitioner may be eligible if the synthetic fuel intended to be used is unavailable at the end of the exemption period, ERA does not believe that an express provision for such a possibility is necessary. Any material change in circumstances over the course of the exemption period will, of course, be given consideration if necessary in the case of this and all other exemptions.

e. *Use of innovative technologies (§ 504.36).* Interim rule §§ 504.25 and 506.25 relating to temporary exemptions based on the use of innovative technologies by powerplants and MFBIs, respectively, have been replaced by final rule § 504.36 for all existing facilities.

This temporary exemption is now a certification exemption requiring the petitioner to certify that he will comply with the applicable prohibitions at the end of the proposed exemption period by the adoption of an innovative technology for the use of an alternate fuel as a primary energy source. Like the synthetic fuels exemption discussed above, the compliance plan requirement for this exemption has been split into "preliminary" and "final" plans. An order granting this exemption will not become effective until ERA approves the final compliance plan. Since ERA also must decide whether or not the technology proposed to be used is innovative, ERA encourages the petitioner to request a conference, before either a proposed prohibition order is issed or an exemption petition is filed to discuss plans to use the proposed technology.

f. *Retirement exemption (§ 504.38).* Interim rule §§ 504.27 and 506.26 pertaining to a temporary retirement exemption for a powerplant or MFBI, respectively, have been replaced by final rule § 504.38 for all existing facilities.

In response to the suggestions of commenters, the requirements for this exemption have been substantially reduced by the adoption of a certification procedure requiring a petitioner to submit (1) a duly executed certification that the facility will permanently cease operation at the expiration of the temporary exemption period and (2) a compliance plan as required under § 504.17. In addition, to correct an inadvertant omission in interim rule § 504.27(d), pertaining to the duration of the temporary retirement exemption, the corresponding final rule provision has been written to conform with the Act.

g. *Reliability exemption (§ 504.39).* Interim rule § 504.26 relating to a temporary exemption for a powerplant necessary to maintain reliability of service has been replaced by final rule § 504.39.

ERA received a number of comments criticizing the loss of load probability (LOLP) test for this exemption as an unreliable and inaccurate measure of reliability. Criticism also was directed at the components of the test. It was argued that the LOLP analysis cannot properly be computed for an electrical region because LOLP evaluations are not made for power supply areas, but rather are intended only for areas that are centrally planned and dispatched.

Some smaller utilities also complained that the data required to perform these calculations on an electric region basis are not available to them. ERA still believes that LOLP, on a regional basis, is a valid measure of future reliability of service. However, appropriate will be made to take account of the petitioner's special circumstances. For the purposes of this temporary exemption for existing powerplants (and also for the reliability of service demonstration required for the permanent exemption for existing peakload powerplants (§ 504.58)), ERA has adopted a simpler criterion, based on a reserve margin. Petitioners may elect to use this criterion or to propose an alternate criterion, such as LOLP. Under this test reliability is considered to be impaired if, in the absence of the existing facility, the projected annual peakload reserve margin during the first year for which the exemption is sought will be less than 15 percent. This reserve margin must be calculated on the basis of the electric region, or if more appropriate, the electric control area. Utilities that are dependent on hydroelectric sources for at least 20 percent of their supply are considered to have a reliability impairment if, under normal water conditions, the electric regions' reserve margin is less than 20 percent in the absence of the existing facility. This higher threshold is intended to compensate for the reduction in hydro power availability during dry years.

One commenters suggested that if a petitioner believes that he can show a probable impairment of reliability on any basis that he chooses, § 311(g) of the Act authorizes that petitioner to file for an exemption with or without ERA concurrence. ERA believes the reserve margin criterion will be acceptable to most petitioners. ERA strongly recommends that a petitioner confer with ERA before submitting a petition based on a different criterion, although such a conference is not mandatory.

Another commenter contends that a utility should be free to continue to use an exempt unit for the most sensible use rather than, as required by interim rule § 504.24(d), solely to prevent an actual reliability impairment. ERA does not intend that a powerplant operating under this exemption be the "last dispatched," since this would increase the use of less efficient powerplants. For the purposes of this exemption, a "reliability impairment" is a condition existing over a period of months or years, and does not depend on hour-by-hour changes in load or supply availability. During years of reliability impairment, ERA would expect the exempt unit to be used sensibly, that is, in accordance with normal dispatch procedures. However, when the period of impairment ends, the operation of the facility can no longer be justified on a reliability basis, and its use in the normal dispatch order would no longer be permitted under this exemption.

h. *Temporary peakload powerplant exemption (§ 504.40).* Interim rule § 504.29 relating to a temporary peakload exemption for an existing powerplant has been replaced by final rule § 504.40.

The evidentiary requirements for this exemption have been substantially

reduced. The petitioner must certify that the powerplant is to be operated solely as a peakload powerplant and to meet peakload demand for the period of the exemption. The certification also must set forth the design capacity of the unit and its maximum allowable generation in kilowatt hours for each 12 month period of operation. Finally, the petitioner must submit a compliance plan in accordance with § 504.17. The additional requirement contained in the interim rule to describe petroleum and gas use and conservation measures taken or intended to be taken has been deleted.

3. *Subpart E—Permanent Exemptions for Existing Facilities.* a. *Lack of alternate fuel supply (§ 504.51).* Interim rule §§ 504.31 and 506.21 relating to permanent exemptions due to a lack of an alternate fuel supply for existing powerplants and MFBIs, respectively, have been replaced by final rule § 504.51 for all existing facilities.

In order to treat existing facilities in a manner comparable to new facilities with respect to this exemption, ERA has created an alternative evidentiary submission applicable to MFBIs which will be operated less than 600 hours per year, such as auxiliary units for powerplants. In such cases, the petitioner will be granted an exemption: (1) based on a certification that the use of the unit will be so limited; and (2) that the use of a mixture of petroleum or natural gas and an alternate fuel for which an exemption would be available is not economically or technically feasible.

b. *Site limitations (§ 504.52).* Interim rule §§ 504.32 and 506.32 relating to the basis for an exemption due to site limitations for a powerplant or MFBI, respectively, have been replaced by final rule § 504.52 for all existing facilities.

One commenter expressed concern that ERA, contrary to the terms of Section 312(a) of the Act, required all six of the exemplary site limitations contained in the interim rule be satisfied in order to qualify for the exemption. ERA believes that § 504.32 clearly provides, consistent with Section 312(a) of the Act, that a demonstration of any one of the limitations would be sufficient to qualify for an exemption.

c. *State or local requirements (§ 504.54).* Interim rule §§ 504.34 and 506.34 pertaining to State and local requirements as a basis for exemptions by powerplants or MFBIs, respectively, have been replaced by final rule § 504.54 for all existing facilities.

One commenter indicated that paragraphs (2) and (5) of § 506.34(a) of the interim rule were redundant. ERA agrees and has accordingly deleted paragraph (5).

Another commenter suggested that ERA should waive a utility's responsibility to comply with State or local requirements if it is refused an exemption. Otherwise, according to the commenter, a utility might receive a final prohibition order, but be unable to obtain requisite local permits for conversion. ERA believes that the anticipation of any such conflict is speculative at this time, and should not be a part of this rulemaking.

Another comment suggested that ERA should consider the reasonableness of compliance with State or local requirements without resort to the cost calculation. ERA notes that Section 312(b) of the Act requires a demonstration, where the State or local requirement is under a building code or nuisance or zoning law, that no other exemption could be granted for the petitioner's facility. The phrase "no other exemption" includes the cost-related exemptions which incorporate the cost calculations. ERA, therefore, is bound by the Act to require petitioners, in such instances, to examine the availability of other exemptions, including the cost-related exemptions.

One comment suggested that the sole discretionary criterion under FUA for granting this exemption is whether the State or local requirement was expressly designed to evade FUA. ERA can find no support in the Act for such a restrictive interpretation of its authorities with respect to this exemption.

Finally, one commenter expressed concern that §§ 504.34(b)(4) of the interim rule, which requires a description of activities the petitioner had been involved in after April 20, 1977, pertaining to enactment of the State or local requirement, constituted an unjustified intrusion into the affairs of private operators. ERA believes that the information sought is necessary to its determination of whether or not there have been any collusive practices with respect to enactment of the requirement.

d. *Fuel mixtures (§ 504.56).* Interim rules §§ 504.36 and 506.36 relating to criteria for a fuel mixtures exemption for powerplants and MFBIs, respectively, have been replaced by final rule § 504.56 for all existing facilities.

ERA received a comment suggesting that it should consider that the term "reasonable level of fuel efficiency," as used in Section 312(d) of the Act, refers to optimum system-wide efficiency rather than to minimum fuel efficiency in the unit using the mixture. The fuel mixtures exemption in FUA is unit specific. ERA does not believe that it has the authority to introduce a system-wide approach into the statutory criteria for this exemption.

ERA received comments suggesting that it should recognize in its final rule the language contained in Section 312(d)(3) of FUA permitting the grant of a mixtures exemption allowing a greater percentage of natural gas in existing powerplants, where it is to be burned together with a synthetic fuel derived from municipal or agricultural waste. In response to the comment, ERA will propose a rule implementing the provisions of Section 312(d)(3) of the Act.

ERA has simplified the evidentiary requirements for exemptions where installations proposed to use a mixture containing 25 percent or less natural gas or petroleum. For such cases, ERA has established a certification alternative where the petitioner need only certify that annual use of natural gas or petroleum will be 25 percent or less.

Standard terms and conditions have been established for the certification alternative. These include (1) a 25 percent limit on oil and gas use: (2) insulation and maintenance requirements; and (3) required use of only the lowest grade (*i.e.*, quality) of petroleum available and feasible.

e. *Emergencies (§ 504.57).* Interim rules § 504.37 and 506.37 relating to exemption for emergency use by powerplants and MFBIs, respectively, have been replaced by final rule § 504.57 for all existing facilities.

ERA has simplified the criteria and the procedures for requesting this permanent exemption. The final rule requires a certification that (1) the operation of a unit under the exemption wil occur only in accordance with the definition of emergency; and (2) use of mixtures is not economically or technically feasible.

The final rule also requires that an annual report describing the energy use and a breakdown of monthly fuel consumption be filed at the end of each 12-month period from the effective date of the exemption.

Standard terms and conditions have been established in the case of petitions for emergency exemptions. These include (a) a requirement that operation of the unit will occur only in accordance with the definition of "emergency"; (b) insulation and maintenance requirements; and (c) required use of only the lowest grade (*i.e.*, quality) of petroleum available and feasible.

ERA received one comment recommending deletion of the mixtures requirement for this exemption, since only limited quantities of fuel are involved. Under Section 313(a) of the Act, the Secretary may grant an emergency exemption only where the petitioner has fulfilled the requisite mixtures showing.

One commenter suggested that ERA should expand the definition of "emergency", for utilities, to cover all situations in which system load cannot be met by a combination of available system generation and emergency purchases from adjoining utilities. ERA believes that the emergency exemption together with the emergency provisions of §§ 501.191 and 501.192 of the Final Rule, 44 FR 38298 (June 6, 1980), will cover emergency situations where a utility would be unable to meet system load.

Finally, ERA has modified the evidentiary requirements for this exemption, in response to comments that Section 763 of the Act excludes the grant or denial of this exemption from the NEPA requirement to prepare an environmental impact statement, by deleting the requirement to submit an environmental analysis.

f. *Permanent peakload powerplants (§ 504.58).* Interim rule § 504.38 has been replaced by final rule § 504.58.

One commenter opposed ERA's standard for demonstrating the technical infeasibility of modifying a powerplant to permit compliance with the prohibitions of the Act, which incorporates the technical capability tests in § 504.5 of the interim rule. Technical infeasibility must be a less demanding standard, according to the commenter, since if the two tests are identical, no powerplant found technically capable of burning an alternate fuel in a final prohibition order, can be found technically infeasible of modification and thus eligible for a peakload exemption. In response to this comment, ERA has recognized in this final rule that the term "technical feasibility" encompasses a broader scope than "technical capability." Accordingly, ERA will consider any pertinent evidence on a case-by-case basis that it is technically infeasible to modify a facility to comply with applicable prohibitions of the Act, even where technical capability may exist.

ERA received one comment that the evidentiary requirements of § 504.38(b)(5–7) are substantive and exceed those in the proposed rule. ERA has decided to delete these requirements from the final rule.

ERA received a number of comments concerning use of the LOLP standard for calculating reliability of service. In response to the comments, ERA has modified the reliability test for a permanent peakload exemption.

In lieu of the LOLP standard, ERA has adopted a reserve margin test, and has modified the evidentiary requirements for the exemption accordingly. This test is discussed at greater length above, in the preamble discussion under the heading "reliability exemption."

ERA notes that a petitioner may use an alternative test for meeting the impairment of reliability criterion. In any such case, ERA would review the test employed on a case-by-case basis. ERA strongly recommends that any petitioner seeking to utilize an alternative reliability test, first present such test at a prepetition conference for ERA review and concurrence.

One commenter suggested that the test to determine "unreasonable expense" under this exemption should be a one-to-one economic comparison of the real cost of using oil compared to the real cost of converting to coal. ERA notes that the method for demonstrating unreasonable expense under this final rule is discretionary with the petitioner.

One commenter, indicating that a combustion turbine utilizing such technologies as compressed air energy storage can operate in the range of 1,500 to 2,500 full load hours per year using the equivalent amount of oil as a conventional combustion turbine operating well below the 1,500 hour level, recommended that ERA, in order to encourage such technologies, should define the statutory peakload generation ceiling in terms of hours of equivalent oil use without such technologies. ERA does not believe that the definition of "peakload powerplant" in Section 103(a)(18)(A) of the Act permits it to interpret the peakload exemption in this manner. ERA does wish to encourage compressed air energy storage but believes this may be done more appropriately through the mixtures exemption (§ 504.56).

g. *Use of natural gas by powerplants with capacity of less than 250 million BTU's per hour (§ 504.60).* Interim rule § 504.40 has been replaced by final rule § 504.60.

ERA has simplified the criteria and procedures for requesting this permanent exemption. The final rule requires a certification that (1) the powerplant has a design capability of consuming any fuel or fuel mixture at a fuel heat input rate of less than 250 million Btu's per hour; (2) the unit was a baseload powerplant on April 20, 1977; (3) the powerplant is not capable of burning solid coal, and no suitable coal derivative is available; and (4) use of mixtures is not economically or technically feasible.

ERA believes, that for purposes of this exemption, a certification with respect to a lack of coal burning capability will constitute a demonstration that the powerplant is not capable of consuming coal without substantial physical modification or substantial derating of the unit.

Standard terms and conditions have been established, including (1) a requirement that this exemption may only apply to prohibitions under section 301 of FUA and prohibitions established by final rules or orders issued before January 1, 1990; and (2) insulation and maintenance requirements.

h. *Use of liquefied natural gas (§ 504.61).* Interim rule § 504.41 has been replaced by final rule § 504.61.

In response to comments received by ERA, and to clarify ERA's intent, the final rule has been modified to require that the LNG to be used under the exemption must be produced outside the "contiguous" United States, rather than "Continental" United States.

i. *Scheduled equipment outages (§ 504.62).* Interim rule § 506.39 has been replaced by final rule § 504.62.

In the interim rule ERA stated that if the annual scheduled outages did not exceed 21 days, the petitioners would not have to conduct an alternate fuels search. Upon consideration of comments, ERA has modified the regulations so that if projected use of the proposed unit does not exceed an average of 28 days per year over any three-year period, the petitioner need only submit a certification with certain specified terms, including infeasibility of use of a fuel mixture. If total use exceeds this level of use, the evidentiary requirements have been left substantially unchanged.

Standard terms and conditions have been established in the case of petitions for scheduled outage exemptions which are obtained by certification. These include (a) a maximum limit on use of the unit for scheduled outages purposes only; (b) insulation and maintenance requirements; (c) required use of only the lowest grade (*i.e.*, quality) of petroleum feasible and available; and (d) any terms and conditions which ERA deems necessary for ERA to fulfill its environmental obligations.

ERA notes that, as discussed in the preamble to its final rule for new facilities, 45 FR 38302, 38304 (June 6, 1980), the environmental reporting requirement for the certification alternative for this exemption has been changed to reflect DOE's anticipated proposal to categorize such actions as normally not requiring further analysis for NEPA purposes.

III. Procedural Matters

A Final Environmental Impact Statement (FEIS) was prepared pursuant to the National Environmental Policy Act. A Final Regulatory Analysis relating to the final rule, as contemplated by Executive Order No. 12044, was published on June 23, 1980 (45 FR 42190). The FEIS may be obtained from ERA, 2000 M Street, NW., Room B-110, Washington, D.C. 20461, (202) 653-4055.

These final rules must be submitted to the Office of Management and Budget (OMB) for clearance under the provisions of the Federal Reports Act. Any data submitted in compliance with provisions of the final rule may require revision or additions as a result of OMB's action.

(Department of Energy Organization Act, Pub. L. 95-91, 91 Stat. 565 (42 U.S.C. 7101 *et seq.*), Powerplant and Industrial Fuel Use Act of 1978, Pub. L. 95-620, 92 Stat. 3289 (42 U.S.C. 8301 *et seq.*); E.O. 12009, 43 FR 46267, September 15, 1977)

In consideration of the foregoing, §§ 504.35 and 506.35 (Cogeneration) remain in effect until superseded. Parts 500 and 501, as amended, and the remainder of Part 504, as revised, of Subchapter E of Chapter II, Title 10 of the Code of Federal Regulations, titled "Alternate Fuels", are adopted in final, applicable to existing facilities, effective on October 14, 1980. The remainder of Part 506 is deleted, effective on October 14, 1980.

Issued in Washington, D.C., August 1, 1980.

Hazel R. Rollins,

Administrator, Economic Regulatory Administration.

Sec.

* * * * *

500.2 Definitions.

PART 501—ADMINISTRATIVE PROCEDURES AND SANCTIONS

Subpart C—Written Comments, Public Hearings and Conferences During Administrative Proceedings

§ 501.31 Written comments.

* * * * *

(b) *Existing facilities.* Except as may be provided elsewhere in these regulations, ERA shall provide a period of at least 45 days for submission of written comments concerning a proposed prohibition rule or order or a petition for an exemption or permit. This period shall commence in the case of a petition for an exemption on the day after publication of the notice of acceptance in the **Federal Register** in accordance with § 501.63(a). In the case of a proposed prohibition rule or order, ERA shall also provide for a period of at least 45 days for submission of written comments concerning a tentative staff analysis. This period shall commence on the day after publication of the notice of availability of the tentative staff analysis in the **Federal Register.** The period may be extended by ERA in accordance with § 501.5. See § 501.51(b) of this part with respect to the comment periods applicable to prohibitions by order to existing facilities and the extension of such comment periods. Written comments shall be filed in accordance with § 501.7.

§ 501.33 Requests for a public hearing.

* * * * *

(b) *Existing facilities.* In the case of a petition for an exemption from a prohibition imposed either by the Act or by a final rule or order issued by ERA to an existing facility under Title III of FUA, or a petition for an exemption or permit, if applicable, any interested person may submit a written request that ERA convene a public hearing in accordance with section 701 of FUA within 45 days after the notice of the filing of a petition is published in the **Federal Register.** In the case of a proposed prohibition rule or order, the 45 day period in which to request a public hearing shall commence upon the publication of the notice of availability of the tentative staff analysis. This time limit may be extended at the discretion of ERA. Any request for a public hearing must include a description of the requesting party's interest in the issue or issues involved, and an outline of the anticipated content of the proposal to be made. The request should, to the extent possible, identify any witnesses that are intended to be called at the hearing and include, if possible, a summary of their anticipated testimony, and questions to be posed.

Subpart E—Prohibition Rules and Orders

§ 501.51 Prohibitions by order—existing facilities.

(a) ERA may prohibit by order the use of petroleum or natual gas as a primary energy source or in amounts in excess of the minimum amount necessary to maintain reliability of operation consistent with reasonable fuel efficiency in an existing facility if:

(1) That facility has not been identified as a member of a category subject to a final prohibition rule at the time of the issuance of such order;

(2) The requirements of § 504.6 have been met;

(3) The owner or operator of the facility has not demonstrated that an exemption would have been granted to the facility if the prohibition had been established by rule. If the facility would have been granted a temporary exemption, however, ERA may issue a final order which will take effect at such time as the temporary exemption would have terminated; and

(4) In any case in which an order is not issued by reason of paragraph (a)(3) of this section, or in which the effective date of such order is delayed under such paragraph, ERA shall take such steps as may be necessary to assure the facility involved complies with the same requirements (including provisions of section 314(a) of FUA) as would have been applicable if an exemption had been granted based upon the grounds for which the order is not issued or the effective date is delayed.

(b) *Notice of order and public participation.*

(1) ERA may hold a conference with the proposed order recipient prior to issuing the proposed order.

(2) Pursuant to section 701 of FUA, prior to the issuance of a final order to an existing facility, ERA shall publish a proposed order in the **Federal Register,** together with a statement of the reasons for the order. In the case of a proposed order that would prohibit the use of petroleum or natural gas as a primary energy source, the finding required by Section 301(b)(1) of the Act in the case of a powerplant or the finding required by Section 302(a)(1) of the Act in the case of an installation shall be published with such proposed order.

(3) ERA shall provide a period for the submission of written comments of at least three months after the date of the proposed order. During this period, the recipient of the proposed order and any other interested person must submit any evidence relating to each of the findings that ERA is required to make under Section 301(b) of the Act in the case of a powerplant or the findings required by Section 302(a) of the Act in the case of an installation. A proposed order recipient will not be allowed to submit evidence relating to the findings which it did no submit during this three month period unless materials submitted after the period (i) could not have been submitted during the period through the exercise of due diligence, (ii) address material changes in fact or law occurring after the close of the period, or (iii) consist of amplification or rebuttal occasioned by the subsequent course of the proceeding. The order recipient must, during this period, identify any exemptions for which the unit in question may qualify, but the recipient need not during this period submit evidence attempting to demonstrate qualifications for the exemption. An extension of the three month time period may be granted in ERA's discretion.

(4) Subsequent to the end of the comment period, ERA will issue a notice of whether ERA intends to proceed with the prohibition order proceeding.

(5) An owner or operator of a facility that may be subject to an order may demonstrate prior to issuance of a final prohibition order that the facility would qualify for an exemption if the prohibition had been established by rule. Such demonstration shall be submitted within three months of the issuance of the notice of intention to proceed with the prohibition order. ERA will not delay the issuance of a final prohibition order or stay the effective

on a schedule that minimizes the need to

(ii) A certification from the

compliance for an indeterminate period of

date of such an order for the purpose of determining whether a proposed order recipient qualifies for a particular exemption unless the demonstration of qualification is submitted prior to or during the second three-month period, or unless materials submitted after the period (i) could not have been submitted during the period through the exercise of due diligence, (ii) address material changes in fact or law occurring after the close of the period, or (iii) consist of amplification or rebuttal occasioned by the subsequent course of the proceeding. An extension of this time period may be granted in ERA's discretion.

(6) Subsequent to the end of the second three month period, ERA will, if it intends to issue a final prohibition order, prepare and issue a notice of availability of a tentative staff analysis. Interested persons wishing a hearing must request a hearing within 45 days after issuance of the notice of availability of the tentative staff analysis. During this 45 day period, interested persons may also submit written comments on the tentative staff analysis.

(7) If a hearing has been requested, ERA shall provide interested persons with an opportunity to present oral data, views and arguments at a public hearing held in accordance with Subpart C of this Part. The hearing will consider the findings which ERA must make in order to issue a final prohibition order and any exemption for which the proposed order recipient submitted its demonstration in accordance with subparagraph (5) above.

(8) Upon request by the recipient of the proposed prohibition order, the combined public comment periods provided for in this section may be reduced to a minimum of 45 days from the time of publication of the proposed order.

(9) ERA may terminate a prohibition order proceeding at any time prior to the date upon which a final order shall become effective. Should ERA terminate the proceeding, it will notify the proposed order recipient, and publish a notice in the **Federal Register**.

(c) *Record and decision to issue a final order.* (1) ERA's record will consist of all relevant evidence presented at the public hearing, the written comments, and any other relevant information in the possession of ERA and made a part of the record of the proceeding. ERA will base its determination to issue an order on consideration of the whole record or those parts thereof cited by a party and supported by and in accordance with reliable, probative and substantial evidence.

(2) ERA shall include in the final order a written statement of the pertinent facts, a statement of the basis upon which the final order is issued, a recitation of the conclusions regarding the required findings and qualifications for exemptions. The final order shall state the effective date of the prohibition contained therein. If it is demonstrated that the facility would have been granted a temporary exemption, the effective date of the prohibition contained in the final order shall be delayed until such time as the temporary exemption would have terminated. If it is demonstrated that a facility will need a period of time to comply with the final order, the effective date of the prohibition contained in the final order may be delayed, in ERA's discretion, so as to allow an order recipient to comply with the final order.

(3) ERA will enclose with a copy of the final order, where appropriate, a schedule of steps that should be taken by a stated date (a compliance schedule) to ensure that the affected facility will be able to comply with the prohibitions stated in the order by the effective date of the prohibition contained in the final order. The compliance schedule may require the affected person to take steps with regard to a unit 60 days after service of the final order.

(4) A copy of the final order and a summary of the basis therefore will be published in the **Federal Register**. The order will become effective 60 days after publication in the **Federal Register**.

(d) *Request for order.*

(1) A proceeding for issuance of a prohibition order to a specific unit may be commenced by ERA, in its sole discretion, in response to a request for an order filed by the owner or operator of a facility.

(2) A petition requesting ERA to commence a prohibition order proceeding should include the following information for all units to be covered by the prohibition order:

(i) A statement of the reasons why the owner or operator is seeking the issuance of a prohibition order; and

(ii) Sufficient information from which ERA may make the findings required by Section 301(b) of FUA in the case of a powerplant and Section 302(b) of FUA in the case of an installation.

(3) If ERA determines to accept the request, ERA shall publish a proposed order in the **Federal Register** together with a statement of the reasons for the order. The proceeding for issuance of the prohibition order shall thereafter continue in the same manner as proceedings commenced by ERA on its own initiative.

§ 501.52 [Reserved]

PART 504—EXISTING FACILITIES

Subpart A—Restriction on the Increased Use of Petroleum

§ 504.1 Prohibition against the increased use of petroleum.

(a) *Prohibition.* No existing electric powerplant, which during 1977 used an alternate fuel as a primary energy source, may use petroleum as a primary energy source in any calendar year in excess of the "base year amount" unless ERA issues a permit authorizing such increased use. The "base year amount" means the quantities of petroleum used in the powerplant as a primary energy source during calendar year 1977.

(b) *Policy note.* (1) Section 405 of the Act directs ERA by rule to restrain the use of petroleum by powerplants which burned an alternate fuel in 1977. Section 405 also directs ERA to establish, by rule, a procedure whereby powerplants may be permitted increased use of petroleum. Such permit shall be issued where the powerplant cannot comply with the requirements of the Clean Air Act without the permit and the increased use of petroleum is necessary to prevent an impairment of reliability of service. For example, where an electric powerplant requires a reasonably predictable time period to install pollution control equipment before returning to the use of an alternate fuel, ERA may issue a limited duration permit to use more petroleum as necessary to prevent impairment of reliability. In some cases, however, an electric powerplant may be unable to return to the use of an alternate fuel for an indeterminate period of time, or even permanently. Therefore, ERA, in implementing Section 405 of the Act, has designed two alternate procedures. Under either procedure the applicant should provide the information necessary to enable EPA, the appropriate State regulatory agency, and ERA to make their decisions.

(2) The Act directs ERA to limit the duration of the permit allowing increased oil consumption above the base year amount to the period it determines is necessary to carry out the statutory mandate. In order to make this determination as to duration, ERA needs to know when an existing powerplant either will be able to resume the use of an alternate fuel, or will no longer need to use petroleum to avoid impairment of reliability of electric service notwithstanding that it cannot burn an alternate fuel.

(3) ERA encourages applicants to plan for any interruption of alternate fuel use on a schedule that minimizes the need to burn increased amounts of petroleum and invites informal discussion prior to applying for a permit as to the duration of such increased use.

(c) *Temporary interruptions necessary to comply with the Clean Air Act and prevent impairment of reliability of service.*

Note.—Examples contemplated under this subsection would include those cases where it is necessary to install pollution control equipment, arrange for the delivery of suitable fuel, or bring other units in the applicant's system on line.

(1) *Eligibility.* Existing electric powerplants which are subject to the prohibition imposed by this rule, but which will be able to comply after a temporary interruption are eligible for a permit if:

(i) The powerplant used an alternate fuel as a primary energy source during 1977;

(ii) The applicant has applied for a variance or other waiver from EPA or the State air pollution control agency to continue the use of an alternate fuel, and a decision with regard to that application has been rendered;

(iii) EPA or the appropriate State air pollution control agency has certified that (A) the powerplant cannot comply with the requirements of the Clean Air Act, including any applicable implementation plan as defined in Section 110(d) of the Clean Air Act, without issuance of a permit to use petroleum above the base year amount, and (B) the applicant has established the duration of the need for increased petroleum in order to comply;

(iv) The appropriate State regulatory authority has certified that the increased use of petroleum is necessary to prevent impairment of reliability of electric service in that State; and

(v) The powerplant's operation will be in compliance with the prohibition imposed by this rule by the expiration of the permit.

(2) *Evidence of certification.* The application for a permit must include the following in order to make the demonstration required by this section:

(i) A certification from EPA or the appropriate State air pollution control agency stating that the powerplant cannot comply with the requirements of the Clean Air Act, including any applicable implementation plan as defined in Section 110(d) of the Clean Air Act, without the issuance of such a permit to use petroleum above the base year amount, and that the applicant has established the duration of need for increased petroleum in order to comply; and

(ii) A certification from the appropriate State regulatory authority stating that the increased use of petroleum by the powerplant is necessary to prevent impairment of reliability of service.

(3) *Evidence of duration.* The duration of any permit to increase the use of petroleum granted under this subsection shall be the minimum reasonable length of time necessary to comply with the requirements of the Clean Air Act without impairment of reliability of electric service. To assist ERA in determining this period of time, the applicant must submit to ERA along with the application the following statements:

(i) A compliance plan indicating how and in what time period the applicant plans to comply. The compliance plan must include the following:

(A) A specific schedule of milestones for bringing the powerplant back into compliance with the applicable environmental requirements;

(B) What steps will be taken to minimize use of petroleum and duration of such use; and

(C) The quantity of petroleum the applicant estimates is required and an estimate of the rate of use by month.

(ii) A statement of why the powerplant is unable to burn an alternate fuel in compliance with the Clean Air Act;

(iii) A statement showing whether the applicant attempted to get a variance or other waiver from EPA or the State agency from applicable environmental requirements and if that waiver was denied; and

(iv) The basis, to the extent known to the applicant, for the State agency's reliability certification, including the data and analysis considered, the extent to which the State authority considered reliability in the applicant's electric region, and any other factors bearing on reliability which were considered.

(4) *Limitation on duration of permit.* ERA shall issue the permit for the increased use of petroleum only for the quantity and duration it determines is necessary after review and evaluation of the information set out above. ERA reserves the right to require whatever additional information may be necessary to enable it to make a determination as to duration.

(d) *Indeterminate cessations due to inability to comply with environmental requirements and prevent impairment of reliability of electric service.*

Note.—Examples contemplated under this section would include those cases where a financial or physical limitation would preclude a powerplant from coming into compliance for an indeterminate period of time.

(1) *Eligibility.* In addition to the criteria enumerated in subparagraphs (c)(1)(i), (ii), (iii), and (iv) above, existing electric powerplants which are subject to the prohibition imposed by this rule, but which are unable to comply with the Clean Air Act requirements after a temporary interruption, are eligible for a permit if they will be unable for specified reasons set out in (d)(2)(ii) to comply with the prohibition imposed by this rule for an indeterminate period of time.

(2) *Evidence of certification.* In addition to the evidence enumerated in subparagraphs (c)(2)(i) and (ii) above, an application for a permit must include the following:

(i) A statement to the extent such information is available to the applicant, of the basis for the State agency's certification, including the data and analysis considered and the extent to which it considered the reliability of the applicant's electric region; and

(ii) A showing in accordance with subparts C, D, and E of this Part that the powerplant would qualify for an exemption for reasons relating to its inability to comply with Clean Air Act requirements because of environmental, financial or physical limitations.

(3) *Statement.* A statement indicating which fuels were presented for consideration to the agency which certified with regard to the Clean Air Act, and to the extent known by the applicant, why they were rejected as a method of compliance.[1]

(4) *Evidence of duration.* The duration of any permit to increase the use of petroleum granted under this subsection shall not exceed the demonstrated need. Such duration shall be for the period the powerplant would qualify for an exemption, up to and including the remaining lifetime of the powerplant, or for the period of time that will be required to eliminate any impairment of reliability of electric service, whichever period is less.

(5) *Limitation on duration of permit.* ERA may issue a temporary permit under this subsection to enable the applicant to demonstrate it would qualify for an exemption under Title III of FUA for reasons relating to the inability to comply with Clean Air Act requirements. ERA reserves the right to require additional information necessary for a determination of duration.

[1] ERA encourages the applicant to request a pre-permit conference be held with EPA and ERA to discuss alternate fuel use strategies and to decide which fuels may be feasible.

(e) *Environmental Protection Agency procedures.* [Reserved]

Subpart B—Prohibitions and System Compliance Option

§ 504.2 Purpose and scope.

Section 504.3, below, sets forth the statutory prohibitions imposed by the Act upon existing powerplants. The prohibitions in this subpart apply to all existing electric powerplants as defined by § 500.2, unless, and to the extent that, ERA has either granted a temporary or permanent exemption, or approved a system compliance plan under Title V of the Act. Any person who owns, controls, rents, leases or operates an existing powerplant which is subject to the prohibitions may be subject to sanctions provided by the Act or these regulations.

§ 504.3 Statutory prohibitions (powerplants).

(a) Section 301(a)(1) of the Act prohibits the use of natural gas as a primary energy source by an existing electric powerplant on or after January 1, 1990, unless, and to the extent that, ERA has either granted a temporary or permanent exemption or approved a system compliance plan under Title V of the Act.

(b) Section 301(a)(2) of the Act prohibits the use of natural gas as a primary energy source in any existing electric powerplant before January 1, 1990, unless it used natural gas as a primary energy source any time during calendar year 1977, unless, and to the extent that, ERA has either granted a temporary or permanent exemption, or approved a system compliance plan under Title V of the Act.

(c) Section 301(a)(3) of the Act prohibits the use of natural gas as a primary energy source by any existing electric powerplant, in any calendar year before 1990, in greater proportion than the average yearly proportion of natural gas which:

(1) The powerplant used as a primary energy source in calendar year 1974 through 1976; or

(2) If the powerplant began operations on or after January 1, 1974, the powerplant used as a primary energy source during the first two calendar years of its operation, unless, and to the extent that, ERA has either granted a temporary or permanent exemption from the prohibition or approved a system compliance plan under Title V of the Act.

(d) Any prohibition against the use of natural gas on or after January 1, 1990, will be stayed while any petition filed for an exemption is resolved. The stay will include the time required for judicial review. Such petition for exemption may be filed at any time after May 8, 1979, the effective date of FUA, but it must be filed at least one year before the date the prohibition is first to take effect.

§ 504.4 Electric utility system compliance option.

(a) *General.* Section 501 of the Act provides for an electric utility system compliance option. An existing powerplant will be considered in compliance with any prohibition under Title III of the Act relating to the use of natural gas if ERA has issued an order approving a system compliance plan including such powerplant. No exemption, except an emergency exemption, for use of natural gas will be available for those powerplants which are covered or which have ever been covered by an approved plan.

(b) *Requirements for approval.* To qualify, the utility operating the existing powerplant must provide the information requested and demonstrate to the satisfaction of ERA its commitment to the following terms.

(1) Identification of all powerplants owned or operated by the utility, and an indication of those which would or could be subject to prohibitions under Title III (Existing Facilities) of the Act relating to the use of natural gas if a plan for the utility system were not approved;

(2) Identification of those powerplants covered in (b)(1) of this section that the utility believes would be likely to be entitled to an exemption if a plan were not approved;

(3) A commitment that if a plan is approved the utility will not thereafter use natural gas or petroleum as a primary energy source in any new baseload powerplant;

(4) A commitment that if a plan is approved, the utility will not use natural gas on and after January 1, 1990, in excess of (i) 20 percent of the base period usage of natural gas adjusted for emergency or peakload purposes, if applicable, or, if lower (ii) the utility's minimum peakload requirement adjusted for emergency or peakload purposes, if applicable;

(5) A commitment that if a plan is approved, the utility will not on or after January 1, 1995, use natural gas except in peakload or intermediate load powerplants identified in (b)(1) above and the volumes of gas consumed in those powerplants will not exceed 75 percent of the amount permitted under (b)(4) above;

(6) A commitment that on and after January 1, 2000, the utility will not use natural gas as a primary energy source unless ERA grants it a temporary extension for emergency or peakload purposes under subsection (h) of this section;

(7) A commitment that upon approval of the system compliance plan the utility will obtain natural gas used by the system only under the provisions of (i) a contract which the utility executed prior to November 9, 1978, other than under an extension or renewal of the contract on or after November 9, 1978; (ii) a contract which the utility executed on or after November 9, 1978, but only if the contract has been approved by ERA; or (iii) an extension or renewal occurring on or after November 9, 1978, of a contract entered into before November 9, 1978, but only if the extension or renewal has been approved by ERA;

(8) A 10-year forecast, to be revised and extended annually, which provides support for a conclusion by ERA that the commitments in the system compliance plan will be met. The forecast should include demand for electricity, construction plans and a financial plan; and

(9) A plan for use of fuel conservation measures that will minimize the utility system's natural gas and petroleum consumption.

(c) *Deadline for submission.* The period for submission of the complete system compliance plan expired on August 1, 1980.

(d) *Calculations of 1990 natural gas volumes for § 504.4(b)(4)(i).* For purposes of § 504.4(b)(4)(i), volumes of natural gas are the sum of the following:

(1) Twenty percent of the natural gas used in calendar year 1976 by the utility's powerplants that were placed in service on or before January 1, 1976;

(2) Ten percent of the natural gas used in the first 24 months of service by the utility's powerplants which were placed in service after January 1, 1976, and before May 8, 1979;

(3) Natural gas volumes for emergency purposes within the meaning of § 504.57 of these regulations, to the extent that such volumes exceed the volumes of natural gas enumerated in (1) and (2) above, if ERA has approved use of the volumes for such purposes;

(4) Natural gas volumes for peakload purposes within the meaning of Section 504.58 of these regulations, to the extent that such volumes exceed the volume of natural gas enumerated in (1) and (2) above, if ERA has approved use of the volumes for such purposes; and

(5) Natural gas volumes, if ERA has approved use of the volumes for such purposes, required (i) because of delays which occurred, despite diligent good faith efforts in the construction of powerplants which will use a primary energy source other than natural gas, or (ii) because without increased volumes reliability of service would be impaired.

(e) *Calculation of volumes for adjusted minimum peakload requirements for § 504.4(b)(4)(ii).* For purposes of Section 504.4(b)(4)(ii), volumes of natural gas are the sum of the following:

(1) The volume of natural gas required to produce 17.1 percent of the total electricity generated by the utility in 1990;

(2) Natural gas volumes, for emergency purposes within the meaning of Section 504.57 of these regulations, to the extent that such volumes exceed the volume of natural gas enumerated in (1) above, if ERA has approved use of the volumes for such purposes, and

(3) Natural gas volumes, for peakload purposes within the meaning of Section 504.58 of these regulations, to the extent that such volumes exceed the volume of natural gas enumerated in (1) above, if ERA has approved use of the volumes for such purposes.

(f) *ERA approval of natural gas contracts for § 504.4(b)(7).* ERA will approve any contract, or contract extension or renewal, for purposes of subsection (b)(7) with respect to any plan, if it determines that the electric utility which submitted such plan has demonstrated that the quantities available under such contract, or extension or renewal, do not exceed those which are necessary to meet the requirements of the powerplants under such plan. ERA will not approve any contract, or extension or renewal, which provides for the delivery of such natural gas after December 31, 1999, unless ERA has approved the use of such natural gas under subsection (h) below.

(g) *Fuel conservation measures for § 504.4(b)(9).* Fuel conservation measures include generation efficiency measures which conserve natural gas and petroleum by increasing the efficiency of the generation process. A utility may present plans for any other activity, service, or investment that would result in lower consumption of natural gas and petroleum as primary energy sources.

(h) *Temporary extension for § 504.4(b)(6).* ERA may grant an extension of up to 5 years of the limitation in § 504.4(b)(6) with respect to the use of natural gas if the utility demonstrates that such gas is needed for:

(1) Emergency purposes consistent with Section 504.57 of these regulations; or

(2) Peakload purposes consistent with Section 504.58 of these regulations.

(i) *Evidence.* To submit an adequate plan for review by ERA the utility must include in the plan at least the following, in order to make the demonstration required by this section:

(1) A ten year forecast of the utility's construction plans, financial plans, and electric demand with sufficient detail to conclude that the commitments in the plan will be carried out;

(2) A schedule for an orderly progression to meet the commitments for the years 1995 and 2000;

(3) A description of meetings, correspondence, and understandings or agreements reached, if any, with appropriate state regulatory authorities regarding the commitments contained in the plan; and

(4) A description of the planned petroleum and natural gas conservation measures, including their practicability, effectiveness, cost, anticipated savings, and implementation steps.

(j) *Reporting.* The utility must annually update the information contained in its plan, including progress on implementing the proposed conservation measures.

(k) *Terms and conditions.* ERA will condition approval of a system compliance plan on such terms and conditions as ERA determines to be appropriate, including the permissible level of natural gas use prior to 1990 and the use of effective fuel conservation measures which are practicable and consistent with the purposes of the Act.

(l) *Plan revision.* A system compliance plan may be revised for substantially changed circumstances supported by clear and convincing evidence. A revision to a system compliance plan may be proposed by the utility or by ERA on its own motion. No proposed revision will be effective without the utility's approval and the approval of ERA.

(m) *Plan revocation.* ERA reserves the right to revoke a system compliance plan at any time on the basis of the utility's material noncompliance with such plan.

(n) *Incorporation of Parts 500 and 501.* The administrative and definitional provisions contained in 10 CFR Parts 500 and 501, are incorporated by reference herein, and shall be applicable to the extent that they do not conflict with any of the provisions of this section.

§ 504.5 Purpose and scope.

Section 504.6 below sets forth the prohibitions that ERA, pursuant to Title III of FUA, may impose upon existing facilities. The prohibitions may be made to apply to existing electric powerplants and existing major fuel burning installations, as defined in § 500.2, unless an exemption is granted by ERA under Subparts D and E of this Part or a system compliance plan is approved by ERA under Subpart B of this Part. Any person who owns, controls, rents or leases an existing facility may be subjected to the prohibitions imposed by and the sanctions provided for in the Act or these regulations, if ERA can make the findings required by Sections 301 (b) and (c) and 302 (a) and (b) of the Act.

§ 504.6 Prohibitions by order (case-by-case).

(a) ERA may prohibit, by order, the use of natural gas or petroleum as a primary energy source in an existing facility if ERA finds that:

(1) The unit currently has, or previously had, the technical capability to use an alternate fuel as a primary energy source;

(2) The unit has this technical capability now, or it could have the technical capability without:

(i) A substantial physical modification of the unit; or

(ii) A substantial reduction in the rated capacity of the unit; and

(3) It is financially feasible for the unit to use an alternate fuel as its primary energy source.

(b) ERA must make a proposed finding regarding the technical capability of a unit to use alternate fuel as identified in subsection (a)(1) above prior to the date of publication of the notice of the proposed prohibition. ERA will publish this finding in the **Federal Register** along with the notice of the proposed prohibition.

(c) *Technical capability.* (1) ERA will consider "technical capability"on a case-by-case basis. In making this assessment, ERA will consider the characteristics of the unit itself and will not ordinarily consider the nature or absence of appurtenances outside the unit. ERA's major concern is the ability of the unit, from the point of fuel intake to physically sustain combustion of a given fuel and to maintain heat transfer.[2]

(2) ERA considers that a unit "had" the technical capability to use an alternate fuel if the unit was once able to burn that fuel (regardless of whether the unit was expressly designed to burn that fuel or whether it ever actually did burn it), but is no longer able to do so at

[2] For example, ERA will examine the furnace configuration and ash removal capability but will not normally consider the need to install pollution control equipment as a measure of technical capability. Furthermore, ERA will not conclude that the absence of fuel handling equipment, such as conveyor belts, pulverizers, or unloading facilities, bears on the issue of a unit's "technical capability" to burn an alternate fuel.

the present due to temporary or permanent alterations to the unit itself.[3]

(3) A unit "has" the technical capability to use an alternate fuel if it can burn an alternate fuel, notwithstanding the fact that adjustments must be made to the unit beforehand or that pollution control equipment may be required to meet air quality requirements.[4]

(d) *Substantial physical modifications.* ERA will make its determination on whether a physical modification to a unit is "substantial" on a case-by-case basis. ERA will consider physical modifications made to the unit as "substantial" where warranted by the magnitude and complexity of the engineering task or where the modification would impact severly upon operations at the site.[5] ERA will not, however, assess physical modification on the basis of cost or the installation of pollution control or fuel handling equipment.

(e) *Substantial reduction in rated capacity.* (1) ERA regards a unit's derating of 25 percent or more, as a result of converting a unit from oil or gas to an alternate fuel, as substantial.

(2) ERA will presume that a derating of less than 10 percent, as a result of converting a unit from oil or gas to an alternate fuel, is not substantial unless convincing evidence to the contrary is submitted in rebuttal.[6]

(3) ERA will assess units for which a derating is claimed of 10 percent or more, but less than 25 percent, on a case-by-case.

(4) In assessing whether a unit's derating is not substantial, ERA will consider the impact of a reduction in rated capacity of the unit taking into consideration all necessary appurtenances such as air pollution control equipment required to burn an alternate fuel in compliance with applicable environmental requirements. However, the potential order recipient may raise the following impacts on derating in rebuttal, if under paragraph (2), or case-by-case, if under paragraph (3).

(A) for an existing powerplant, on the site at which the unit is located and on the system as well as on the unit itself; and

(B) for an existing installation, on the site at which the unit is located as well as on the unit itself.[7]

(f) *Financial feasibility.* (1) ERA will presume that it is financially feasible for a unit to use an alternate fuel as its primary energy source if the cost of using an alternate fuel does not substantially exceed the cost of using imported petroleum as calculated using the general cost calculation described in § 504.12 of the regulations. However, in making this calculation, either the firm's real cost of captial [8] or the discount rate required in § 504.12 of this rule may be used as the discount rate—whichever results in a finding more favorable to the proposed order recipient.

(2) The proposed order recipient may seek to rebut the presumption in paragraph (f)(1), above, with evidence that, despite good faith efforts, it is unable to raise the capital that would be necessary for the conversion, or that for some other economic or finanical reason, conversion is not financially feasible. The standard for assessing capital availability will be identical to that specified in § 503.35(a)(2) of the new facilities regulations (inability to obtain adequate capital).

(3) In making this finding, ERA will consider the following:

(i) for an existing powerplant, the financial impact of the conversion, including other conversions which are or may be imposed upon the utility system by the Act; and

(ii) for an existing installation, any relevant factor presented by the proposed order recipient which bears upon the competitive viability of the site or loss of production, if any, at the site during the period required for the conversion.

§ 504.7 Prohibitions against excessive use of petroleum or natural gas in mixtures.

(a) If ERA finds that it is technically and financially feasible for a unit to use a mixture of petroleum or natural gas and alternate fuel as its primary energy source, ERA may prohibit, by order, the use in that unit of petroleum or natural gas, or both, in amounts exceeding the minimum amount necessary to maintain the reliability of operation consistent with maintaining reasonable fuel efficiency of the mixture. (For installations, such minimum amount determined by ERA shall not be less than 25 percent.)

(b) In making the technical feasibility finding required by § 301 (b) and (c) of the Act and paragraph (a), above, ERA may weigh "physical modification" or "derating of the unit," but these considerations, by themselves, will not control the technical feasibility finding. A technical feasibility finding might be made notwithstanding the need for substantial physical modification. The economic consequences of a substantial physical modification are taken into account in determining financial feasibility.

Note.—The authority of ERA implemented under this section should not be confused with the two other fuel mixture provisions of these regulations. One is the general requirement that petitioners for permanent exemptions demonstrate that the use of a mixture of natural gas or petroleum and an alternate fuel is not economically or technically feasible (*See* § 504.15). The second is the permanent fuel mixtures exemption itself (See § 504.56).

Subpart C—General Requirements for Exemptions

§ 504.10 Purpose and scope.

This subpart establishes the general requirements necessary to qualify for either a temporary or permanent exemption from the prohibitions set out under this Part and establishes the methodology for calculating the cost of using an alternate fuel and the cost of using imported petroleum.

§ 504.11 Contents of petition.

Before ERA will accept a petition for either a temporary or permanent exemption to a statutory prohibition or from a final prohibition rule or order, the petition must include all of the evidence and information required to obtain an exemption in Parts 501 and 504. In the case of a temporary or permanent exemption to a proposed prohibition order or rule, the petitioner must submit adequate information to demonstrate eligibility for an exemption if the order or rule were finalized.

[3] For example, a unit which at one time burned solid coal but which could no longer do so because its coal firing ports and sluicing channels had been cemented over, would be classified as having "had" the technical capability to use coal. (The question of whether it again "could have" such capability without "substantial physical modification" is a separate and additional question.)

[4] A unit designed to burn natural gas shall be presumed to have the technical capability to burn a synthetic fuel such as medium Btu gas from coal (assuming such gas is available unless convincing evidence to the contrary is submitted in rebuttal). Also a unit designed to burn oil may, depending upon the chemical characteristics, be a unit that "has" the technical capability to burn liquefied coal. The fact that certain adjustments may be necessary does not render this a "hypothetical" as opposed to a "real" capability. Even an oil fired unit converting from the use of #2 distillate to #6 residual oil may be required to adjust or replace burner nozzles and add soot blowers.

[5] Significant alternations affecting the furnace configuration or a complete respacing of the tubes would likely fall into this category. A combination of modifications involving changes required for bottom ash removal, related construction and engineering work, and other modifications to the boiler, other than furnace configuration or tube spacing may, in some circumstances, cause modifications to be considered substantial.

[6] For example, units that are the subject of a prohibition order will not have installed any operating air pollution control equipment sufficient to burn coal in compliance with applicable environmental equipments. The installation and use of air pollution control equipment alone can, in many cases, produce a derating. Moreover, the shift to coal itself will, because of differences in energy density and fuel flow characteristics, typically involve some derating.

[7] For example, the proposed order recipient may claim and ERA may find that the derating of a unit is substantial if, due to the lack of excess capacity, the derating produces an appreciable effect upon the operations of the site at which the unit is located, if an MFBI, or upon the site and the system of the unit, if a powerplant.

[8] For the purposes of these regulations, the firm's real cost of capital will be computed according to the procedures outlined in Appendix I.

§ 504.12 [Reserved]

§ 504.13 No alternative power supply—general requirement for certain permanent exemptions for existing powerplants.

(a) *Application.* (1) Section 312 of the Act provides for a permanent exemption due to certain State or local requirements and for intermediate load powerplants. To qualify for one of these exemptions, Section 313(b) requires a demonstration that despite reasonable good faith efforts, there is no alternative supply of electric power available within a reasonable distance at a reasonable cost without impairing short-run or long-run reliability of service.

(2) In making the determination as to whether the petitioner has satisfied this requirement, ERA will consider:

(i) In the case in which a final order has been issued, only the first year in which the petitioner proposes to use petroleum or natural gas;

(ii) In the case in which the petitioner proposes to use natural gas in excess of a statutory prohibition, only the first year in which the petitioner proposes to use the excess natural gas; or

(iii) In the case in which only a proposed order has been issued, only the first year after a date on which the order could reasonably be expected to become effective.

(3) If the petitioner is unable to demonstrate that there is no alternative supply of power during the appropriate period, ERA will conclude that the absence of the existing powerplant will not impair short-term reliability of service, and as a result may deny the exemption request. Such action would not impair long-term reliability of service, since the petitioner may submit a new petition one year later.

(b) *Criteria.* ERA will determine that there is no alternative supply of power if a petitioner demonstrates all of the following:

(1) A reasonable effort has been made to reduce the need for the power from the existing powerplant by implementing within the system whatever conservation measures are available to encourage or assist customers in implementing cost-effective conservation measures. In judging whether a conservation measure is cost effective, the cost of providing such capacity or energy by conservation should be compared with the life cycle cost of capacity or energy from the existing powerplant, including capital, operation and maintenance expenses, and fuel based on imported petroleum prices.

(2) A reasonable effort has been made to purchase firm power for the appropriate year of operation to cover all or part of the projected shortfall at a cost that is less than 10 percent above the annualized cost of generating power from the existing plant, including the capital, operation and maintenance expenses, and fuel at imported petroleum prices.

(3) Despite these efforts, (i) the reserve margin in the petitioner's electric region in the absence of the existing plant would fall below 20 percent during the appropriate year of operation; or (ii) the reserve margin will be greater than 20 percent and it can be demonstrated that reliability of service would be impaired. In such case, the demonstration must be related to factors not included in the calculation of reserve margin such as transmission constraints.

(c) *Evidence.* The petition must include the following evidence in order to make the demonstration required by this section:

(1) The estimated peak demand for the system and the coincident peak demand for the electric region for the appropriate year of operation of the existing plant;

(2) The corresponding capacity projections, as well as any existing commitments by the system to purchase or sell power during that year;

(3) Evidence that firm power contracts have been solicited for the appropriate year of operation, via letters to all potential sources (including non-utility sources) within or contiguous to the electric region, and also via advertisements;

(4) A calculation of the delivered cost of the firm purchased power offered in response to the solicitation, along with a detailed description of the method by which the annual cost of the purchased power is determined. Where relevant, the FERC Tariff Identifications intended as the basis for the purchase power contracts under negotiation (including the service schedules and/or exhibits which would apply to these contracts) should be provided;

(5) A calculation of the cost of power from the existing powerplant during the appropriate year of operation. The petitioner may select the method of calculation, provided that the resulting cost may be meaningfully compared with the cost of purchased power. The calculation must include expenses due to capital, operations and maintenance, and fuel at imported petroleum prices. The petitioner may include cost effects of the economic dispatch of powerplants. The number of kilowatt hours being compared from the existing powerplant and the purchased power should be the same;

(6) A description of the measures that have been taken prior to the appropriate year of operation to reduce energy losses within the petitioner's own system, to improve the operational reliability of its existing non-oil or gas-fired plants, to improve its ability to meet peak demand without additional capacity, and to encourage or assist its customers in implementing cost-effective conservation measures;

(7) Estimates of the kilowatt and kilowatt-hour savings that would result from the conservation measures; and

(8) A calculation of the net capacity shortfall in the appropriate year of operation (compared to a 20 percent reserve margin) if the existing powerplant is not utilized, but all the reasonable purchase and conservation opportunities referred to above are pursued with reasonable good faith effort.

(d) *FERC consultation.* ERA will forward a copy of any petition for which a showing is required under this section to the Federal Energy Regulatory Commission (FERC) promptly after it is filed with ERA. ERA will also consult with FERC before making a finding on "no alternative supply of power" in the case of a petition for an intermediate load powerplant or state or local requirements exemption after the issuance of a final prohibition order.

§ 504.14 [Reserved]

§ 504.15 Use of mixtures—general requirement for certain permanent exemptions.

(a) *Application.* Except in the case of a permanent exemption for peakload powerplants, use of LNG by certain powerplants, certain state or local requirements, and installations served by certain international pipelines, ERA will not consider a petition for any permanent exemption provided for in Section 312 of the Act to be complete, adequate, or acceptable for filing unless the petition contains a demonstration satisfactory to ERA that the petitioner has considered the use of a mixture for which an exemption under § 504.56 of these regulations would be available.

Note.—Section 313 of FUA states as a requisite for granting a fuels mixture exemption that the petitioner must demonstrate that use of a mixture of natural gas or petroleum would not be economically or technically feasible. To rectify this

provision, ERA has deleted the fuels mixture exemption from this requirement.

(b) *Demonstration.* ERA will deny any of the exemptions listed above unless the petitioner demonstrates that use of such a mixture is not economically or technically feasible in the unit for which the petitioner is requesting an exemption. The following evidence must be submitted to ERA in order to make the demonstration required by this section:

(1) For any mixture for which an exemption under § 312(d) of the Act would be available, were it required, evidence that the petitioner would be eligible for a general use exemption; or

(2) Use of a mixture is not economically feasible. To make an adequate demonstration, a petitioner may select the manner of presenting the economic infeasibility of use of the mixture considered. The following detailed information is required: description of the mixtures considered, detailed capital costs, annual operations and maintenance expenses, maximum projected utilization factor, and fuel costs of oil and natural gas as outlined in Section 504.12; or

(3) Use of a mixture is not technically feasibile. To make an adequate demonstration, a petitioner may select the manner of presenting the technical infeasibility of use of the mixture considered. The following detailed information is required: description of the mixture considered; description of the type of unit for which the exemption is being requested, *e.g.*, boilers, combined cycle units, combustion turbines or internal combustion engines; and a technical explanation of the factors which preclude the use of any mixture in that type of unit.

§ 504.16 Use of fluidized bed combustion not feasible—general requirement for certain permanent exemptions.

(a) *ERA finding.* Except in the case of a permanent exemption for peakload powerplants, use of LNG by certain powerplants, and installations served by certain international pipelines, or certain State or local requirements, ERA my deny permanent exemptions authorized under Section 312 of the Act if ERA finds on a site-specific or generic basis that use of a method of fluidized bed combustion of an alternate fuel is economically and technically feasible.

(b) *Demonstration.* If ERA has made such a finding, ERA will deny a petitioner's request for exemption unless it is demonstrated that the use of a method of fluidized bed combustion is not economically or technically feasible. The petition or any supplement thereto required by ERA must include the following evidence:

(1) If use of a method of fluidized bed combustion were to be required, evidence that the petitioner would be eligible for a general permanent exemption; or

(2) Use of a method of fluidized bed combustion is not technically or economically feasible due to design or special circumstances.

§ 504.17 Terms and conditions; compliance plans.

(a) *Terms and conditions generally.* A petitioner must comply with the terms and conditions of an exemption granted under the Act by ERA, including terms and conditions requiring the use of effective fuel conservation measures.

(b) *Compliance plans for temporary exemptions.* (1) A duly executed compliance plan shall accompany a petition for a temporary exemption. The compliance plan shall include at least the following:

(i) A detailed schedule of progressive events and the dates upon which the events are to take place indicating how compliance with the applicable prohibitions will occur;

(ii) Evidence of binding contracts for fuel, or facilities for the production of fuel, which are required for petitioner to comply with the applicable prohibitions of the Act; and

(iii) Any other documentary evidence which indicates an ability to comply with the applicable prohibitions.

(2) The exemption shall not be effective until the compliance plan is approved by ERA.

(3) *Revisions of compliance plans.* If the petition is granted, an updated duly certified compliance plan must be submitted to ERA:

(i) At the end of each 12-month period from the effective date of the exemption;

(ii) Within one month of an alteration of any milestones in the compliance plan, together with the reasons for the alteration and its impact upon the scheduling of all other milestones in the plan; and

(iii) At any time ERA, in its discretion, determines that a revised compliance plan may be necessary.

(c) *Enforcement.* An exemption is subject to termination upon the violation of any provision of the Act or noncompliance with any provision of an exemption, including any pertinent terms and conditions.

§ 504.18 Conservation measures.

In the case of—(1) temporary and permanent exemptions for lack of alternate fuel supply (except for installations operated less than 600 hours, and opting for the certification alternative therefor), site limitations, and environmental requirements; (2) permanent exemptions for state or local requirements, cogeneration, fuel mixtures (except for installations using mixtures containing less than 25 percent oil or natural gas, and opting for the certification alternative therefor), peakload, intermediate load, use of LNG, scheduled equipment outages (except for installations used 28 days per year or less and opting for the certification alternative therefor), and international pipelines; and (3) temporary exemptions for public interest, and reliability, a petition must identify, describe, and document any conservation measures which have been taken, or for which studies have been undertaken, to minimize the use of oil or gas. This description should identify any conservation goals for the unit under consideration, and for the facility at which the unit is located, and in the case of powerplants, for the utility system. The description of these measures should be detailed and should include comparative consumption figures, identification of conservation equipment or techniques, proposed manner of use, proposed date of use, cost, and expected benefits and problems. Conservation measures entail either reduction in consumption of oil and gas or increased efficiency in the utilization of oil and gas. Such measures can range from housekeeping measures to replacement of inefficient units and also could include the use of mixtures of gas and oil and alternate fuels and new more efficient technologies.

§ 504.19 Petroleum and natural gas consumption.

In the case of permanent exemptions for lack of alternate fuel supply (except for installations operated less than 600 hours and opting for the certification alternative therefor), site limitations, environmental requirements, state or local requirements, cogeneration, fuel mixtures (except for installations using mixtures containing less than 25 percent oil or natural gas, and opting for the certification alternative therefor), peakload, intermediate load, use of LNG, scheduled equipment outages (except for installations used 28 days per year or less and opting for the certification alternative therefor), and international pipelines, a petition must include the following:

(a) For each unit located at the facility, its nameplate and net dependable capacity;

(b) Current and projected (through 1990) annual fuel consumption for each unit, by fuel type and unit of measure, at the facility; and

(c) Retirement plans for existing oil- and gas-fired units at the facility.

§ 504.20 Environmental impact analysis.

(a) In the case of permanent exemption for cogeneration, scheduled equipment outages (except for installations used 28 days per year or less and opting for the certification alternative therefore), state or local requirements, or intermediate load powerplants; in order to enable ERA to comply with the National Environmental Policy Act of 1969 (NEPA), a petition must include the following information:

(1) A description of the facility, including the site location, and surroundings, the facility's current operations, its fuel capability, and its pollution control systems and equipment (including those systems and equipment necessary for all fuel scenarios considered);

(2) A description of the existing environment, including air, water, and land resources;

(3) A description of the direct and indirect environmental impacts of the proposed action including impacts of alternative fuel scenarios; and

(4) Regulatory requirements governing the facility, including a description of Federal, State and local requirements for air, water, noise and solid waste disposal which must be met for each fuel considered.

Note.—Material which has been prepared pursuant to any Federal, State, or local requirement for environmental information for this unit or site may be incorporated by reference and appended to the petition. Guidelines issued by ERA for environmental reports should be used in preparing this analysis. 44 FR 63740 (November 5, 1979). These guidelines, which are also available in the ERA public document room, have been designed to ensure that environmental reports follow the format prescribed by Council on Environmental Quality final regulations implementing NEPA. The guidelines are subject to discussion at a prepetition conference and to modification according to the facts of a particular case.

(b) For a permanent exemption relating to scheduled equipment outages of 28 days per year or less, the information below is to be submitted in lieu of the information required by subsection (a) above. However, submission of the following information merely establishes a rebuttable presumption that the grant or denial of the exemption would have no significant environmental impact. ERA may, in individual cases, during the course of the administrative proceeding, determine that additional environmental information is required. In such cases, the petitioner may be required to submit any or all of the information described in subparagraph (a) above.

(1) A certification that the unit is operating in compliance with all applicable environmental requirements, as evidenced by possession of the permits and approvals required by, but not limited to, the Clean Air Act, the Clean Water Act, the Rivers and Harbors Act, the Coastal Zone Management Act, the Safe Drinking Water Act, the Resource Conservation and Recovery Act, and that the unit will continue to operate in compliance under the exemption; and

(2) Information required by the following environmental checklist, certified by the petitioner to be accurate:

Environmental Checklist for FUA Certification Exemptions

Instructions

All questions are to be answered by placing a check in the appropriate box. N/A represents not applicable. Although it is not required, the petitioner may elaborate on any question in writing on a separate sheet of paper.

	Yes	No	N/A
(1) Is the facility located in, or does it affect, a wetland (Protection of Wetlands Executive Order No. 11990)?			
(2) Is the facility located in, or does it affect, a 100-year old floodplain (Floodplain Management Executive Order No. 11988)?			
(3) Does the facility affect a designated wild, scenic, or recreation river (Wild and Scenic Rivers Act)?			
(4)(A) Is the facility located within a county in which critical habitat for threatened or endangered species are known to exist (Endangered Species Act)?			
(4)(B) Has a qualified biologist determined that the facility does not affect any species on the Threatened and Endangered Species list?			
(5) Is the facility located on, or does it affect land that has been classified as, prime or unique farmland or rangeland by the U.S. Department of Agriculture?			
(6) Is the facility located on, or does it affect, historical, archaeological, or cultural resources that have been designated pursuant to the National Historic Preservation Act?			

§ 504.21 Fuels search.

In the case of permanent exemptions for lack of alternate fuel supply (except for installations operated less than 600 hours and opting for the certification alterative therefore), site limitations, environmental requirements, state or local requirements, intermediate load, scheduled equipment outages (except for installations used 28 days per year or less and opting for the certification alternative therefore), a petitioner must perform a fuels search by examining the use of alternate fuels as a primary energy source for the unit for which the exemptions requested and for the site at which the unit is located. In submitting a petition the petitioner must demonstrate that it would qualify for an exemption under the Act for each of the fuels examined. The minimum number of alternate fuels which the petitioner will be required to examine in this fuel search may be ascertained prior to the submission of a petition at a prepetition conference held in accordance with Part 501.

Subpart D—Temporary Exemptions for Existing Facilities

§ 504.30 Purpose and scope.

(a) This subpart implements the provisions contained in Section 311 of the Act with regard to temporary exemptions for existing facilities.

(b) This subpart sets forth the criteria and standards for petitioning for temporary exemptions for existing facilities.

(c) All petitions for temporary exemptions for existing facilities must be submitted in accordance with the procedures and requirements set out in Parts 501 and 504 of this rule.

§ 504.31 Lack of alternate fuel supply.

(a) *Eligibility.* Section 311(a)(1) of the Act provides for a temporary exemption due to the unavailability of an adequate and reliable supply of an alternate fuel at a cost which does not substantially exceed the cost of imported petroleum. To qualify for this exemption, a petitioner must demonstrate to the satisfaction of ERA that:

(1) A diligent good faith effort has been made to obtain an adequate and reliable supply of an alternate fuel of the quality and quantity necessary to conform to the design and operational requirements of the existing facility;

(2) For the period of the proposed exemption, the cost of using such alternate fuel would substantially exceed the cost of using imported petroleum as a primary energy source as defined in § 504.12 (Cost Calculation) of this rule; and

(3) Petitioner will comply with the applicable prohibitions at the end of the proposed exemption period.

(b) *Evidence required in support of a petition.* Petitioner must include the following evidence in his petition in order to make the demonstration required by this section:

§ 504.34 Future use of synthetic fuels.

(b) *Evidence required in support of*

(1) An analysis of the alternate fuels considered for use;

(2) A detailed description of the design requirements specified for the existing facility, including capacity, alternate fuel capability, and all other pertinent specifications;

(3) A description of the range of specific fuel characteristics of each of the fuels which can be used by the existing facility;

(4) Evidence that petitioner sought to obtain the full range of alternate fuels which could be used by the existing facility, including bid requests and/or advertisements for supply contracts and all responses thereto, as well as any other arrangements petitioner undertook to make in order to secure current supplies;

(5) Evidence of the contracts or other arrangements petitioner has made to ensure a reliable and adequate supply of an alternate fuel at the end of the proposed exemption period;

(6) All data necessary to compute the cost calculation formula contained in § 504.12;

(7) Compliance plan as required under § 504.17; and

(8) Conservation measures as required under § 504.18;

(c) *Certification alternative for installations.* If the MFBI for which this exemption is required will be operated less than 600 hours on an annual basis, the petitioner may substitute the following information in lieu of the requirements in paragraph (b) of this section:

(1) A duly executed certification that the unit will be operated less than 600 hours annually during the period of the exemption; and

(2) Compliance plan as required under § 504.17.

(d) *Duration.* This temporary exemption, taking into account any extensions or renewals, may not exceed 10 years.

§ 504.32 Site limitations.

(a) *Eligibility.* Section 311(a)(2) of the Act provides for a temporary exemption due to a site limitation. To qualify for this exemption, a petitioner must demonstrate that one or more of the following specific physical limitations relevant to the location or operation of the existing facility using an alternate fuel as a primary energy source exist which, despite diligent good faith efforts, cannot be overcome before the end of the proposed exemption period:

(1) Alternate fuels would be inaccessible because of a specific physical limitation;

(2) Transportation facilities for alternate fuels would be unavailable;

(3) Adequate land or facilities for handling, using or storing an alternate fuel would be unavailable;

(4) Adequate land or facilities for the control or disposal of wastes from the unit, including pollution control equipment or devices necessary to assure compliance with applicable environmental requirements, would be unavailable;

(5) Adequate and reliable supply of water, including water for use in compliance with applicable environmental requirements, would be unavailable; or

(6) Other site limitations which would not permit the location or operation of the existing facility using an alternate fuel at the site.

(b) *Evidence required in support of a petition.* A petition must include the following evidence in order to make the demonstration required by this section:

(1) Evidence that the site limitation is a physical one, rather than a limitation imposed by a requirement of Federal, State, or local law, which could be the basis of a permanent exemption under § 504.54 (State or local requirements);

(2) Evidence that alternative means for overcoming the specific site limitation were considered, with a detailed description of the efforts made to ovecome the site limitation;

(3) Evidence of the equipment or space requirements for which the site limitation is claimed; and

(4) Evidence of contracts or other arrangements which have been made to ensure that the site limitation will be overcome and that the petitioner will comply with the applicable prohibitions at the end of the proposed exemption period.

Note.—For the purposes of paragraph (b), examples of the type of evidence which may be submitted to establish a site limitation include:

(i) Detailed documentation of impediments (including rights-of-way problems) such as site diagrams, maps of the surrounding areas and other items essential to the showing of a site limitation;

(ii) Identification of transportation facilities relevant to the specific site of the existing facility and a demonstration why existing transportation facilities cannot be utilized or new facilities cannot be constructed;

(iii) Description of general efforts made, including copies of bid requests and advertisements, to secure:

(A) Alternative transportation facilities;

(B) Alternative fuel storage facilities;

(C) Waste control and disposal equipment.

(iv) Identification of potential alternate fuel storage locations within a reasonable geographic area surrounding the facility;

(v) Detailed scale site plans of the entire facility, including those areas not directly involved with the specific unit;

(vi) A specific listing of all equipment necessary and not currently available to properly handle alternate fuel;

(vii) Documentation of price offerings from bona fide suppliers, indicating lead times for purchase and installation of required ancillary storage or handling equipment;

(viii) Specific listing of any equipment necessary and not currently available to properly control and dispose of waste;

(ix) Identification of potential alternate waste disposal locations within a reasonable geographic area surrounding the facility;

(x) A description of efforts made to secure off-site disposal areas, including the cost of acquisition of the sites, transportation facilities and waste handling equipment involved in their use.

(5) Compliance plan as required under § 504.17; and

(6) Conservation measures as required under § 504.18.

(c) *Duration.* This temporary exemption, taking into account any extensions and renewals, may not exceed 5 years.

§ 504.33 Inability to comply with applicable environmental requirements.

(a) *Eligibility.* Section 311(a)(3) of the Act provides for a temporary exemption due to an inability to comply with applicable environmental requirements. To qualify for this exemption, a petitioner must demonstrate that despite diligent good faith efforts:

(1) It is unable to comply with the applicable prohibitions without violating applicable Federal or State Environmental requirements; and

(2) It will comply with the applicable prohibitions and with applicable environmental requirements by the end of the temporary exemption period.

Note.—(i) For purposes of considering an exemption under this section, ERA's decision will be based solely on an analysis of the petitioner's ability to physically comply with applicable environmental requirements. The petitioner should focus on those conditions or circumstances which make compliance during the temporary exemption period physically impossible. The cost of compliance is not relevant, but cost-related considerations may be presented as part of a demonstration submitted under § 504.31 (lack of alternate fuel supply).

(ii) Prior to submitting an exemption petition, it is recommended that the petitioner request a meeting with ERA and EPA or the appropriate State or local regulatory agency to discuss options for operating the facility using an alternate fuel in compliance with applicable environmental requirements.

(b) *Evidence required in support of a petition.* A petition must include the following evidence in order to make the demonstration required by this section:

(1) An examination of the environmental compliance at the facility, including an analysis of the petitioner's ability to comply with applicable standards and criteria when the facility uses both the proposed fuel and all alternate fuels which would provide the basis for the exemption. All such analyses must be based on accepted analytical techniques, such as air quality modeling, and must reflect the current conditions of the area which would be affected by the facility. The petitioner is responsible for obtaining the necessary data to accurately characterize these conditions. Environmental compliance must be examined in the context of the available pollution control equipment which would provide the maximum possible reduction of pollution. The analysis must contain: (i) requests for bids and other inquiries made and responses received by the petitioner concerning the availability and performance of pollution control equipment; (ii) contracts signed, if any, for an alternate fuel supply and for the purchase and installation of pollution control equipment; or (iii) other comparable evidence such as technical studies documenting the effectiveness of equipment available to meet applicable requirements;

(2) An examination of the regulatory options available to the petitioner in seeking to achieve environmental compliance. This must include an analysis of the availability of offsets, if needed, and the potential for securing variances and State Implementation Plan revisions, as appropriate. The analysis must illustrate and document any efforts to locate, identify, and acquire offsets, including agreements made with the state or other companies for acquisition of offsets. If an agreement to acquire offsets is conditioned upon the grant of a variance, or upon State Implementation Plan revision, a letter from the appropriate state agency indicating when a proceeding, if any, to effectuate the agreement will take place must be submitted to ERA. The analysis must contain any correspondence initiated or received by the petitioner concerning these regulatory options and all technical studies relied upon;

(3) Any other documentation which demonstrates an inability to comply with applicable environmental requirements;

(4) Compliance plan as required under § 504.17; and

(5) Conservation measures as required under § 504.18.

(c) *Duration.* This temporary exemption, taking into account any extensions and renewals, may not exceed 5 years.

§ 504.34 Future use of synthetic fuels.

(a) *Eligibility.* Section 311(b) of the Act provides for a temporary exemption based upon the future use of synthetic fuels. To qualify for this exemption, a petitioner must certify that:

(1) It will comply with the applicable prohibitions at the end of the proposed exemption period by the use of a synthetic fuel derived from an alternate fuel as a primary energy source in the unit; and

(2) It is unable to comply with the applicable prohibitions by the use of a synthetic fuel derived from an alternate fuel until the end of the proposed exemption period.

(b) *Evidence required in support of a petition.* The following evidence must be included in the petition in order to make the demonstration required by this section:

(1) A duly executed certification that the petitioner is not able to comply with the applicable prohibitions by use of a synthetic fuel derived from an alternate fuel until the end of the proposed exemption period but will comply by the use of such fuel as a primary energy source in the unit by the end of the proposed exemption period;

(2) A description of the synthetic fuel which the petitioner proposes to use; and

(3) A preliminary compliance plan, including to the extent available the information required under § 504.17.

(c) *Final compliance plan.* Before this exemption may become effective, the petitioner must submit and ERA must approve a final compliance plan as required by § 504.17.

(d) *Duration.* This temporary exemption may be granted for a period of up to 5 years, and taking into account any extentions and renewals, may not exceed 10 years.

§ 504.35 Cogeneration.

* * * * *

§ 504.36 Use of innovative technologies.

(a) *Eligibility.* Section 311(c) of the Act provides for a temporary exemption based upon the use of innovative technologies. To qualify for this exemption, a petitioner must certify that he will comply with the applicable prohibitions at the end of the proposed exemption period by adoption of a technology for the use of an alternate fuel which ERA determines to be an innovative technology.

Note.—ERA recommends that, before submitting a petition for this exemption, the petitioner request a pre-petition conference with ERA to discuss the requirements for this exemption.

(b) *Evidence required in support of the petition.* The following evidence must be included in the petition in order to make the demonstration required by this section:

(1) A duly executed certification that the petitioner will comply with the applicable prohibitions at the end of the proposed exemption period by the adoption of an innovative technology for the use of an alternate fuel as a primary energy source in the unit;

(2) A complete description of the innovative technology petitioner proposes to use, including explanation of its innovative characteristics, detailed design and engineering specifications, an a description of the fuel characteristics of the alternate fuels which can be used with the innovative technology; and

(3) A preliminary compliance plan, including to the extent possible the information required under § 504.17.

(c) *Final compliance plan.* Before this exemption may become effective, the petitioner must submit and ERA must approve a final compliance plan as required by § 504.17.

(d) *Duration.* This temporary exemption may be granted for a period of up to 5 years, and taking into account any extensions and renewals, may not exceed 10 years.

§ 504.37 Public interest.

(a) *Policy note.* (1) Generally, the use of alternate fuels in lieu of petroleum and natural gas is in the public interest. Under certain circumstances, however, other considerations may be relevant to a determination of the public interest, and to accommodate these considerations, ERA will grant this temporary exemption where the petitioner is unable to comply immediately with the prohibitions of the Act, where the public interest would be better served by the granting of the petition, and where the petitioner will be in compliance with the applicable prohibitions at the end of the exemption period.

(2) One of the cases where ERA intends to grant this exemption is where the petitioner needs the temporary use of a natural gas or petroleum fired unit until the on-going construction of an alternate fuel fired unit or the modification of an existing unit is completed. However, in determining the appropriate basis on which to grant such an exemption, ERA may consider the petitioner's ability to use a mixture in the unit.

(b) *Eligibility.* Section 311(e) of the Act provides for a temporary public interest exemption. To qualify for this

exemption, a petitioner must demonstrate that:

(1) It will comply with the applicable prohibitions at the end of the proposed exemption period; and

(2) The granting of the exemption will be in accord with the purposes of the Act and will be in the public interest.

(c) *Evidence required in support of a petition.* A petition must include the following evidence in order to make the demonstration required by this section:

(1) Substantial evidence to corroborate the eligibility requirements identified above;

(2) Compliance plan as required under § 504.17; and

(3) Conservation measures as required under § 504.18.

(d) *Duration.* This temporary exemption, taking into account any extensions and renewals, may not exceed 5 years.

§ 504.39 Retirement

(a) *Eligibility.* Section 311(d) of the Act provides for a temporary exemption for units to be retired. To qualify for this exemption, a petitioner must certify that the unit will be retired at the end of the proposed exemption period.

(b) *Evidence required in support of the petition.* The following evidence must be included in the petition in order to make the demonstration required by this section:

(1) A duly executed certification that the unit will permanently cease operation at the expiration of the exemption period; and

(2) Compliance plan as required under § 504.17.

(c) *Duration.* This temporary exemption, taking into account any extensions and renewals, may not exceed 5 years and, in the case of a powerplant permitted to use natural gas, may not extend beyond December 31, 1994.

(d) *Restriction.* In the event that this temporary exemption is granted, the exempt unit will not be eligible to receive any other exemption under Title III, Subtitle B of the Act.

§ 504.38 Temporary exemption for powerplants where necessary to maintain reliability of service.

(a) *Eligibility.* Section 311(g) of the Act provides for a temporary exemption for powerplants where necessary to maintain reliability of service. To qualify for this exemption, a petitioner must demonstrate that it is not capable of complying with the applicable prohibitions without an impairment of reliability of service as defined in paragraph (b) of this section.

(b) *Impairment of reliability of service*

(1) For purposes of subsection (a) above, power system reliability will be considered impaired if the projected annual peakload reserve margin during the first 12-month period beginning on the first day of the month following the effective date of the exemption will be 15 percent or less in the absence of the existing facility after considering all available resources including contracts for firm purchases and sales. The reserve margin must be calculated on the basis of the electric region or an appropriate electric control area.

(2) A utility system which has at least 20 percent dependence on hydroelectric sources for its firm power will qualify for a temporary reliability exemption if the projected annual peakload reserve margin of the electric region or appropriate electric control area is 20 percent or less in the absence of the existing facility, assuming average water conditions, during the first 12-month period beginning the first day of the month following the effective date of the exemption.

(3) The petitioner may choose to argue that the case for impaired reliability is supportable by criteria other than in (1) and (2) above. If so, ERA recommends that such an argument be presented in a pre-petition conference for ERA concurrence.

Note.—As a basis for justifying the use of an alternate criterion, ERA will generally require a ten-year reliability analysis document that discusses the following:

(i) Projected loads;

(ii) Expected resources;

(iii) Power transfer capability from neighboring utilities;

(iv) Expected fuel requirements;

(v) Existing and planned contracts for purchases and sales;

(vi) Forced outage and partial operation limitations on an average basis; and

(vii) Local area security concerns.

(c) *Evidence required in support of petition.* A petition must include the following evidence in order to make the demonstration required by this section:

(1) All data and sources of information used in determining the reserve margins;

(2) A description of the method and assumptions used for projecting capacity and demand for the system and for the electric region or electric control area;

(3) The strategy planned for ending the period of reliability impairment, including a description of the measures expected to be taken to reduce demand and/or to increase supply of power from sources other than the plant for which the exemption is being requested that are either alternate fuel-fired or qualify for other exemptions;

(4) A calculation of the expected date of termination of the period of impairment. Several alternate termination dates may be specified, each corresponding to a different combination of major events that are beyond the control of the petitioner (such as delays in construction of a new plant by a different utility in his electric region);

(5) Compliance plan as required under § 504.17;

(6) Conservation measures as required under § 504.18; and

(7) Any additional evidence that the petitioner believes is relevant to its case.

(d) *Terms and conditions.* The exemption period will extend from the effective date of the exemption until the earliest date when the period of impairment is expected to end. ERA, at the time it grants this exemption, will specify the expected termination date of the exemption period. If circumstances beyond the control of the petitioner, which could not reasonably be anticipated at the time the petition is filed, cause a reliability impairment either at the end of this period or at any subsequent time, the petitioner may be permitted to continue or recommence operation. If continuation or recommencement of operation beyond the termination date is requested, appropriate reliability analyses must be submitted for ERA approval.

(e) *Foreclosure of other exemptions.* Notwithstanding any other provision of this rule or of the Act, an exemption under this Part (other than a permanent peakload powerplant exemption under § 504.58 for the use of petroleum) may not be granted for any powerplant for which an exemption under this section has been granted.

(f) *Duration.* This temporary exemption may be granted for a period of up to 5 years, and taking into account extentions or renewals, may not exceed 10 years and, if natural gas use is permitted, may not extend beyond December 31, 1994.

§ 504.40 Temporary peakload powerplants.

(a) *Eligibility.* Section 311(f) of the Act provides a temporary exemption for existing peakload powerplants which use natural gas or petroleum as a primary energy source. To qualify for this exemption, a petitioner must certify to ERA that the powerplant will be operated solely as a peakload powerplant and to meet peakload demand for the period of the exemption.

(b) *Evidence required in support of a petition.* The following evidence must be included in the petition in order to make the demonstration required by this section:

(1) A duly executed certification by the petitioner that the powerplant is to be operated solely as a peakload powerplant and to meet peakload demand for the period of the exemption. The certification must set forth both the design capacity of the powerplant and its maximum allowable generation in kilowatt hours for each 12-month period of operation as a peakload powerplant. The first such period shall begin on the first day of the month following the effective date of the exemption; and

(2) Compliance plan as required under § 504.17.

(c) *Liability for operating in excess of exemption.* The operation of a peakload powerplant which has been granted this exemption in excess of that allowed by the exemption shall be subject to penalties under Title VII, Subtitle C of the Act unless it is demonstrated that the powerplant meets the criteria set forth in Section 721(c) of the Act.

(d) *Duration.* This temporary exemption, taking into account any extensions or renewals, may not exceed 5 years and, if use of natural gas is permitted, may not extend beyond December 31, 1994.

(e) *Reporting requirement.* If the petition is granted, petitioner must, at the end of each 12-month period of the proposed exemption, report to ERA. The first such period shall begin on the first day of the month following the effective date of the exemption. If applicable, upon reaching the maximum number of kilowatt hours of permitted generation within the 12-month period, petitioner must report the name, location, and design capacity of the exempted unit, the number of hours of operation permitted by the exemption, and the number of hours of actual operation.

Subpart E—Permanent Exemptions for Existing Facilities

§ 504.50 Purpose and scope.

(a) This subpart implements the provisions contained in Section 312 of the Act with regard to permanent exemptions for existing facilities.

(b) This subpart establishes the criteria and standards which owners or operators of existing facilities who petition for a permanent exemption must meet to sustain their burden of proof under the Act.

(c) All petitions for permanent exemptions for existing facilities shall be submitted in accordance with the procedures set out in Part 501 and the applicable requirements of Part 504 of these regulations.

§ 504.51 Lack of alternate fuel supply.

(a) *Eligibility.* Section 312(a)(1)(A) of the Act provides for permanent exemption due to lack of an alternate fuel supply at a cost which does not substantially exceed the cost of using imported oil. To qualify for this exemption, a petitioner must demonstrate to the satisfaction of ERA that:

(1) The petitioner has made a good faith effort to obtain an adequate and reliable supply of an alternate fuel for use as a primary energy source of the quality and quantity necessary to conform to design and operational requirements of the existing facility; and

(2) The cost of using such a supply would substantially exceed the cost of using imported petroleum as a primary energy source, as defined in § 504.12 (Cost Calculation) of these regulations during the remaining useful life of the existing facility.

(b) *Evidence required in support of the petition.* The following evidence must be submitted by petitioner in order to make the demonstration required by this section:

(1) A description of the detailed design requirements specified for the existing facility, including capacity, alternate fuels capability, and all other pertinent specifications;

(2) A description of the range of specific fuel characteristics of all the fuels which can be used by the existing facility;

(3) Evidence that petitioner has sought the full range of alternate fuels which could be used by the existing facility, including bid requests, advertisements for supply contracts, all responses received, and other arrangements attempted to secure supplies;

(4) All data necessary to compute the cost calculation formula contained in § 504.12;

(5) A description of the analysis of the alternate fuels the petitioner considered;

(6) Conservation measures, as required under § 504.18;

(7) Petroleum and natural gas consumption, as required under § 504.19;

(8) Use of mixtures, as required under § 504.15;

(9) Use of fluidized bed combustion not feasible, as required under § 504.16; and

(10) Fuels search, as required under § 504.21.

(c) *Certification alternative for installations.* If the MFBI for which this exemption is being requested will be operated less than 600 hours on an annual basis, the petitioner may submit the following information in lieu of the requirements of paragraph (b) of this section. A duly executed certification that:

(1) The unit will be operated less than 600 hours annually; and

(2) Use of a mixture of petroleum or natural gas and an alternate fuel for which an exemption would be available is not economically or technically feasible.

(d) *Terms and conditions.* (1) Standard terms and conditions. By petitioning for an exemption under subsection (c) of this section, the petitioner accepts, upon grant of the exemption, the following terms and conditions:

(i) The unit will be operated less than 600 hours annually;

(ii) All steam pipes will be insulated and all steam traps properly maintained;

(iii) The quality of any petroleum to be burned in the unit will be the lowest grade available, technically feasible, and capable of being burned consistent with applicable environmental requirements; and

(iv) Petitioner shall report annually the hours of use and the fuel consumption in the previous calendar year for the unit.

§ 504.52 Site limitations.

(a) *Eligibility.* Section 312(a)(1)(B) of the Act provides for a permanent exemption due to site limitations. To qualify for this exemption, a petitioner must demonstrate that one or more of the following specific physical limitations relevant to the location or operation of the existing facility using an alternate fuel as a primary energy source, exists which, despite good faith efforts, cannot reasonably be expected to be overcome within five years after the date the exemption is expected to take effect:

(1) Alternate fuels would be inaccessible as a result of a specific physical limitation;

(2) Transportation facilities for alternate fuels would be unavailable;

(3) Adequate land or facilities for handling, using or storing an alternate fuel would be unavailable;

(4) Adequate land or facilities for controlling and disposing of wastes would be unavailable, including pollution control equipment or devices necessary to assure compliance with applicable environmental requirements;

(5) Adequate and reliable supply of water would be unavailable, including water for use in compliance with applicable environmental requirements; or

(6) Other site limitations which would not permit the location or operation of

V 4 5 A G 1 2 8 0 UMI

the existing facility using an alternate fuel at the site.

(b) *Evidence required in support of the petition.* A petitioner must include in the petition the following in order to make the demonstration required by this section:

(1) Evidence that the site limitation is a physical limitation, and not a requirement of Federal, State or local law which could be the basis of an exemption under § 504.54 (state or local requirements);

(2) Evidence that alternative means for overcoming the specific site limitations were considered, with a detailed description of the efforts made to overcome the site limitations;

(3) Evidence of the equipment or space requirements for which the site limitation is claimed;

Note.—For the purposes of subsection (b), examples of kinds of evidence which may be submitted to establish a site limitation include:

(i) Detailed documentation of impediments (including rights-of-way problems) such as site diagrams, maps of the surrounding areas and other items essential to the showing of a site limitation;

(ii) Identification of transportation facilities relevant to the geographic site of the existing facility and demonstration why existing transportation facilities cannot be utilized or new transportation facilities constructed;

(iii) Identification of potential alternate waste disposal locations within a reasonable geographic area surrounding the unit;

(iv) A description of efforts made to secure off-site disposal areas, including the cost of acquisition of the sites, transportation facilities and waste handling costs involved in their use;

(v) General efforts made, and copies of bid requests and advertisements to secure:

(A) Waste control and disposal equipment;

(B) Alternative fuel storage facilities; and

(C) Alternative transportation facilities.

(vi) Identification of potential alternate fuel storage locations within a reasonable geographic area surrounding the facility;

(vii) Detailed scale site plans of the entire facility which include those areas not directly involved with a specific facility;

(viii) A specific listing of all equipment necessary and not currently available to properly handle alternate fuels;

(ix) Documentation of price offerings from bona fide suppliers, indicating lead times for purchase and installation of required ancillary storage or handling equipment; or

(x) Specific listing of any equipment necessary and not currently available to properly control and dispose of waste.

(4) Use of mixtures as required under § 504.15;

(5) Use of fluidized bed combustion not feasible as required under § 504.16;

(6) Conservation measures as required under § 504.18;

(7) Petroleum and natural gas consumption as required under § 504.19; and

(8) Fuels search as required under § 504.21.

§ 504.53 Inability to comply with applicable environmental requirements.

(a) *Eligibility.* Section 312(a)(1)(C) of the Act provides for a permanent exemption due to the inability to comply with applicable environmental requirements. To qualify for this exemption, a petitioner must demonstrate that despite deligent good faith efforts it will be unable, within 5 years of the date the exemption is requested to take effect, to comply with the applicable prohibitions without violating applicable Federal or state environmental requirements.

Note.—(1) For purposes of considering an exemption under this section, ERA's decision will be based solely on an analysis of the petitioner's capacity to physically achieve applicable environmental requirements. The cost of compliance is not relevant, but cost-related considerations may be presented as part of a demonstration submitted under § 504.51 (Lack of alternate fuel supply).

(2) Prior to deciding to submit an exemption petition under this section, it is recommended that the petitioner request a meeting with ERA and EPA or the appropriate state or local regulatory agency to discuss options for operating the facility utilizing an alternate fuel in compliance with the applicable environmental requirements.

(b) *Evidence required in support of a petition.* The petitioner must include in the petition the following evidence in order to make the demonstration required by this section:

(1) An examination of the environmental compliance of the facility, including an analysis of its ability to meet applicable standards and criteria when using both the proposed fuel and all alternate fuels which would provide the basis for the exemption. All such analysis must be based on accepted analytical techniques, such as air quality modeling, and must reflect current conditions of the area which would be affected by the facility. The petitioner is responsible for performing necessary sampling and collecting sufficient data to accurately characterize these conditions. Environmental compliance must be examined in the context of available pollution control equipment which would provide the maximum possible reduction of pollution. The analysis must contain: (i) requests for bids and other inquiries made and responses received by the petitioner concerning the availability and performance of pollution control equipment; or (ii) other comparable evidence such as technical studies documenting efficiency of equipment to meet applicable requirements;

(2) An examination of the regulatory options available to the petitioner in seeking to achieve environmental compliance. This must include an analysis of the availability of offsets, if needed, and the potential for securing variances and SIP revisions, as appropriate. The analysis must illustrate and document any efforts to locate and identify available offsets, and to secure variances and SIP revisions. The analysis must contain any correspondence initiated or received by the petitioner concerning these regulatory options and all technical studies relied upon;

(3) Any other documentation which demonstrates an inability to comply with applicable environmental requirements;

(4) Use of mixtures as required under § 504.15;

(5) Use of fluidized bed combustion not feasible as required under § 504.16;

(6) Conservation measures as required under § 504.18;

(7) Petroleum and natural gas consumption as required under § 504.19; and

(8) Fuels search as required under § 504.21.

§ 504.54 State or local requirements.

(a) *Eligibility.* Section 312(b) of the Act provides for a permanent exemption due to certain state or local requirements. To qualify a petitioner must demonstrate that:

(1) With respect to the site of the existing facility, the operation of such facility using an alternate fuel is not feasible because of a state or local requirement;

(2) If such state or local requirement is under a building code or nuisance or zoning law, no other exemption could be granted for such facility;

(3) The petitioner has in good faith attempted unsuccessfully to obtain a variance from the state or local requirement or has demonstrated why none is available; and

(4) The granting of the exemption would be in the public interest and would be consistent with the purposes of the Act.

(b) *Evidence required in support of a petition.* A petition must include the following information in order to make the demonstration required by this section:

(1) A copy of the pertinent state or local requirement with its citation and its legislative history;

(2) The identification and location of the administrative body which implements the requirement;

(3) A description of the petitioner's attempts to obtain a variance from the

requirements or an explanation of why none is available;

(4) A description and dates of any activities the petitioner was involved in pertaining to the enactment of the requirement;

(5) A description of equipment, procedures, and the advance planning time necessary to comply with the requirement;

(6) A detailed description of why compliance with the state or local requirement is not feasible;

(7) The impact upon the petitioner and/or the local community, if any, should the petition be denied;

(8) An explanation of the reasons why granting this exemption would be in the public interest;

(9) An analysis of why the petitioner cannot qualify for any other exemption, if the state or local requirement is under a building code or nuisance or zoning law;

(10) For powerplants, no alternative power supply as required under § 504.13;

(11) Conservation measures as required under § 504.18;

(12) Petroleum and natural gas consumption as required under § 504.19;

(13) Environmental impact analysis as required under § 504.20; and

(14) Fuels search as required under § 504.21.

§ 504.55 Cogeneration. [Reserved]

§ 504.56 Permanent exemption for certain fuel mixtures containing natural gas or petroleum.

(a) *Eligibility.* Section 312(d) of the Act provides for a permanent exemption for certain fuel mixtures. To qualify for this exemption, a petitioner must demonstrate that:

(1) The petitioner proposes to use a mixture of natural gas or petroleum and an alternate fuel as a primary energy source; and

(2) The amount of petroleum or natural gas proposed to be used in the mixture will not exceed the minimum percentage of the total annual Btu heat input of the primary energy sources needed to maintain operational reliability of the unit consistent with maintaining a reasonable level of fuel efficiency.

(b) *Minimum percentage.* In the case of MFBIs, if the exemption is granted, ERA will not require that the percentage of petroleum or natural gas used in the mixture be less than 25 percent of the total annual Btu heat input of the primary energy sources used by an installation.

(c) *Evidence required in support of a petition.* A petition must include the following information in order to make the demonstration required by this section:

(1) A complete description of the fuel mixture, component elements of the mixture, and the percentage and quantity of each component to be utilized;

(2) The design specifications of the unit for which the exemption is requested;

(3) An engineering assessment of the minimum percentages of petroleum or natural gas needed to maintain operational reliability consistent with a reasonable level of fuel efficiency;

(4) Use of fluidized bed combustion not feasible as required under § 504.16;

(5) Information regarding conservation measures as required under § 504.18; and

(6) Data on petroleum and natural gas used as required under § 504.19.

(d) *Certification alternative for use of mixture containing less than 25 percent petroleum or natural gas by an installation.* If an installation will use a mixture containing less than 25 percent petroleum or natural gas, the petitioner may, in lieu of the requirements of subsection (c) above, substitute the following information:

(1) A duly executed certification stating that the amount of petroleum or natural gas proposed to be used in the mixture will not exceed 25 percent of the total annual Btu heat input of the primary energy sources of the installation; and

(2) A description of the fuel mixture, component elements, and percentage and quantity of each component to be utilized.

(e) *Terms and conditions.* By petitioning for an exemption pursuant to subsection (d), the petitioner accepts, upon grant of the exemption, the following terms and conditions:

(1) The amount of petroleum or natural gas to be used in the mixture will not exceed 25 percent of the total annual Btu heat input of the primary energy sources of the installation;

(2) All steam pipes will be insulated and all steam traps properly maintained; and

(3) The quality of any petroleum to be burned in the unit will be the lowest grade available, which is technically feasible, and capable of being burned consistent with applicable environmental requirements.

(f) *Solar mixtures.* ERA will grant a permanent mixtures exemption for the use of a mixture of solar energy (including wind, tide, and other intermittent sources) and petroleum or natural gas, where:

(1) Solar energy will account for at least 20 percent of the total annual Btu heat input of the primary energy sources of the unit; and

(2) The petitioner proposes an acceptable plan to ERA which—

(i) Meets the evidence requirements set forth in paragraphs (c) (1) and (2) of this section; and

(ii) Contains a compliance plan prepared in accordance with § 504.17 of these regulations.

(g) *Reporting requirement.* If an exemption is granted, the petitioner must submit a duly executed annual report to ERA certifying that the affected unit has used no more than the percentage of oil or natural gas specified in the exemption order.

§ 504.57 Emergency purposes.

(a) *Eligibility.* Section 312(e) of the Act provides for a permanent exemption for emergency purposes. To qualify for this exemption, a petitioner must demonstrate he will operate and maintain the existing facility for emergency purposes only.

(b) *Definition.* For the purposes of this permanent exemption, an emergency exists when:

(1) Operation of an oil or gas fired installation or the non-electric generating operation of a cogenerating facility is necessary for:

(i) Plant protection;

(ii) The preservation of human health; or

(iii) Continued facility production which otherwise would be reduced due to an interruption of alternate fuel supplies, equipment failures, or temporary environmental restrictions; or

(2) For a powerplant, an operating electric utility would be required to curtail noninterruptible electric supply to its industrial customers.

(c) *Evidence required in support of a petition.* A petition submitted under this section shall include the following certifications executed by a duly authorized officer of the company:

(1) Operation under the provisions of this exemption will occur only in accordance with the definition of emergency in accordance with subsection (b) of this section; and

(2) Use of a mixture, for which an exemption would be available is not technically or economically feasible in the unit.

(d) *Reporting requirements.* At the end of each 12-month period from the effective date of the exemption, the petitioner must report to ERA the number of days of use and the amount of fuel used under this exemption by month. The petitioner must also describe the emergency conditions that required the operation of the unit.

V 45 AG 12 80 UMI

Terms and conditions. By petitioning for an exemption under this section, the petitioner accepts, upon grant of the exemption, the following terms and conditions:

(1) Operation of the facility will occur only when there is an emergency as defined in this section;

(2) All steam pipes must be insulated and all steam traps properly maintained; and

(3) The quality of any petroleum to be burned in the unit will be the lowest grade available, which is technically feasible, and capable of being burned consistent with applicable environmental requirements.

§ 504.58 Permanent peakload powerplants.

(a) *Eligibility.* (1) Section 312(f) of the Act provides for a permanent exemption for peakload powerplants if a petitioner proposes to use petroleum or natural gas as a primary energy source in a peakload powerplant. To qualify for this exemption, a petitioner must certify to ERA that:

(i) The powerplant will be operated solely as a peakload powerplant and to meet peakload demand for the remaining life of the powerplant;

(ii) A denial of the petition is likely to result in an impairment of reliability of service as measured by the reserve margin test described in paragraphs (a)(2) and (3), or pursuant to paragraph (a)(3) of this section; and

(iii) Modification of the powerplant to permit compliance with applicable prohibitions—

(A) Is technically infeasible; or

(B) Would result in an unreasonable expense.

(2) The petitioner should calculate reliability of service utilizing the reserve margin test. Under this test, the petitioner must demonstrate that the projected annual peakload reserve margin, calculated on the basis of the electric region or an appropriate electric control area, during the first 12-month period beginning on the first day of the month following the effective date of the exemption sought, will be 15 percent or less in the absence of the existing facility after considering all available resources including contracts for firm purchases and sales.

(3) If the petitioner is dependent on hydroelectric sources for more than 20 percent of its firm power, it must demonstrate that, under average water conditions, the projected annual peakload reserve margin in its electric region or appropriate electric control area is 20 percent or less in the absence of the existing facility during the first 12-month period beginning on the first day of the month following the effective date of the exemption sought.

(4) The petitioner may choose to argue that the case of impaired reliability is supported by evidence other than that described in paragraph (a)(2) or (a)(3) of this section. If so, ERA recommends that the petitioner present this argument and the justification therefor, in a prepetition conference for ERA concurrence.

(5) ERA will consider compliance with the applicable prohibitions to be technically infeasible if the facility is not "technically capable" of burning an alternate fuel, and if the facility does not have or has not previously had the technical capability to use an alternate fuel pursuant to § 504.6 of these regulations. Where the facility is technically capable of burning an alternate fuel, ERA will consider, on a case-by-case basis, appropriate evidence that it is technically infeasible to modify the facility to comply with applicable prohibitions.

(b) *Evidence required in support of a petition.* A petition must include the following information in order to make the demonstration required by this section:

(1) A certification by a duly authorized officer of the electric utility which will operate the powerplant stating that the unit is to be operated solely as a peakload powerplant and to meet peakload demand for its remaining life;

Note.—The certification must (i) specifically set forth the design capacity of the unit and the maximum allowable generation of the powerplant in kilowatt hours according to the definition of peakload powerplant in § 500.2 of these regulations for each 12 months of operation as a peakload powerplant; and (ii) specifically state that the powerplant is to be operated solely to meet peakload demand for its remaining life.

(2) The estimated peak demand for the system and the coincident peak demand for the electric region for the appropriate year of operation of the existing plant;

(3) The corresponding capacity projections, as well as any existing commitments by the system to purchase or sell power during that year;

(4) A description of the method and assumptions used by the petitioner for projecting the demand for its system and for its electric region;

(5) Petitioner's explanation why modification of the powerplant to permit compliance with applicable prohibitions is technically infeasible;

(6) Petitioner's explanation why modification of the powerplant to permit compliance with applicable prohibitions would result in unreasonable expense;

(7) Any other evidence that the petitioner believes is relevant to its case, such as:

(i) Evidence that the reliability advantages of coordination on an electrical region basis cannot be achieved to an extent sufficient to remove the "impairment of reliability," the reasons for this deficiency, and an estimate of when such coordination could be implemented in the petitioner's region; or

(ii) Evidence that the petitioner's system has a unique situation that requires the use of different reliability criteria.

(8) An explanation, including all data relied upon, of how the petitioner has calculated impaired reliability;

(9) Conservation measures as required by § 504.18; and

(10) Petroleum and natual gas consumption as required by § 504.19.

(c) *Liability for operating in excess of exemption.* The operation of a peakload powerplant which has been granted this exemption in excess of that allowed by the exemption shall be subject to penalties under Title VII, Subtitle C of the Act, unless the powerplant meets the criteria set forth in section 721(c) of the Act.

(d) *Reporting requirement.* If the petition is granted, petitioner must report to ERA, at the end of each 12-month period from the effective date of the exemption and, if applicable, upon reaching the maximum number of kilowatt hours of permitted generation within each 12-month period, the name, location, and design capacity of the exempted unit, the number of hours of operation permitted by the exemption, and the number of hours of actual operation.

§ 504.59 Intermediate load powerplants.

(a) *Eligibility.* Section 312(g) of the Act provides for an exemption for use of petroleum as a primary energy source by intermediate load powerplants. To qualify for this exemption, a petitioner must demonstrate to the satisfaction of ERA that:

(1) The Administrator of the EPA or the Director of the appropriate State air pollution control agency has certified that the use of any available alternate fuel as a primary energy source will cause or contribute to a concentration, in an air quality control region or any area within such region, of a pollutant for which any national ambient air quality standard is or would be exceeded as described in subsection (c) of this section;

(2) The Powerplant as operated will replace no more than the equivalent

generating capacity of existing units which:

(i) Permanently cease operation within one month of ERA's granting the intermediate load powerplant this exemption, as requested;

(ii) Use natural gas or petroleum as a primary energy source;

(iii) Are owned by the same person who is to operate the existing powerplant; and

(iv) Would, if they used coal as a primary energy source, cause or contribute to a pollutant concentration as described in paragraph (a)(1) of this section;

(3) The powerplant is and shall continue to be operated solely as an intermediate load powerplant in which the electrical generation (in kilowatt hours) for any 12-calendar-month period, shall not exceed the powerplant's design capacity multiplied by 3,500 hours;

(4) The net fuel heat input rate for the powerplant will be maintained at or less than 9,500 BTU's per kilowatt hour throughout the remaining useful life of the powerplant; and

(5) The powerplant has the capability to use synthetic fuels derived from an alternate fuel as a primary energy source.

(b) *Evidence required in support of a petition.* A petition must include the following information in order to make the determination required by this section:

(1) An air quality certification for the unit, prepared by the administrator of EPA or by the appropriate State air pollution control agency, meeting the requirements of paragraph (a)(1) of this section, including a listing of all alternate fuels covered by the certification;

(2) A description of the existing powerplants to be replaced by the powerplant for which the intermediate load exemption is requested, which shall include:

(i) The name and location of each of these existing powerplants;

(ii) The volume of fuel consumed by type for the previous two years by these existing powerplants;

(iii) The corporate ownership of these existing powerplants; and

(iv) The reasons supporting the petitioner's claim that the existing powerplants would cause or contribute to a pollutant concentration as described in subsection (a)(1) of this section if they used coal as a primary energy source.

(3) An affidavit executed by a duly authorized officer of the electric utility which operates the powerplant for which the exemption is requested, certifying that the powerplant shall be operated at all times in the future solely as an intermediate load powerplant. The certification shall set forth the powerplant's design capacity and its maximum allowable generation in kilowatt hours for the first 12 months of operation from the date the petition for the exemption is filed;

(4) An affidavit executed by a duly authorized officer and a qualified engineer of the utility operating the powerplant certifying that the powerplant will be maintained (operated) at a net heat input rate of 9,500 BTU's per kilowatt hour or less throughout the useful life of the powerplant;

(5) An affidavit executed by a duly authorized officer and a qualified engineer of the operating utility certifying that the powerplant has the synthetic fuels capability requirement described in paragraph (a)(5) of this section, and agreeing to cease using petroleum or natural gas when ERA has found that such synthetic fuels are available;

(6) Identification of the synthetic fuel referred to in paragraph (b)(5) of this section, which the powerplant is designed to use, with appropriate documentation including:

(i) The expected source of synthetic fuel, if known;

(ii) The year the synthetic fuel is expected to be available in adequate quantities and at an acceptable price;

(iii) Estimates of the future prices of the synthetic fuel the plant is designed to use;

(iv) A description of the operating utility's role, if any, in developing the facilities to produce the synthetic fuel; and

(v) A statement of the operating utility's basis for believing that this synthetic fuel can be burned in the existing powerplant in compliance with applicable Federal and state environmental standards;

(7) No alternative power supply as required under § 504.13;

(8) Use of mixtures as required under § 504.15;

(9) Use of fluidized bed combustion not feasible as required by § 504.16;

(10) Conservation measures as required by § 504.18;

(11) Petroleum and natural gas consumption as required under § 504.19;

(12) Environmental impact analysis as required under § 504.20; and

(13) Fuels search as required under § 504.21.

(c) *Terms and conditions.* ERA, if it grants this exemption, will set as a condition the amount of oil to be used by the existing powerplant. In general, ERA will also require that as a condition to the granting of this exemption, the petitioner must reduce its oil use or reduce the rate of oil increase by its system. ERA expects that reduced oil use would be achieved by the petitioner's ceasing operation of the existing units identified in paragraph (a)(2) above and by employing the more efficient exempted unit in their place.

(d) *Reporting requirement.* If the petition is granted, the petitioner must report to ERA, at the end of each 12 month period from the first day of the month following the effective date of the exemption and, if applicable, upon reaching the maximum number of hours of permitted operation within each 12 month period, the name, location and design capacity of the exempted unit, and the number of kilowatt hours of actual operation. The petitioner must also report at the same time the amount of petroleum used by the unit and the total amount of petroleum used by all units in the petitioner's system.

(e) *Periodic review.* ERA shall, from time to time, review this exemption and shall terminate it when it finds that there is available a supply of synthetic fuel suitable for use by the exempt powerplant.

§ 504.60 Use of natural gas by powerplant with capacity of less than 250 million Btu's per hour.

(a) *Eligibility.* Section 312(h) of the Act provides for a permanent exemption for the use of natural gas by powerplants with a capacity of 250 million Btu's per hour or less. To qualify for this exemption a petitioner must certify that:

(1) The unit has a design capability of consuming any fuel or fuel mixture at a fuel heat input rate of less than 250 million Btu's per hour;

(2) The unit was a baseload powerplant on April 20, 1977;

(3) The unit is not capable of burning solid coal, and no suitable coal derivative is available; and

(4) Use of a mixture of alternate fuel and natural gas or petroleum for which an exemption would be available is not technically or economically feasible in the unit.

(b) *Terms and conditions.* By petitioning for an exemption under this section, the petitioner accepts, upon grant of the exemption, the following terms and conditions:

(1) All steam pipes must be insulated and all steam traps properly maintained;

(2) This exemption may only apply to prohibitions under section 301 of FUA and prohibitions established by final rules or orders issued before January 1, 1990.

§ 504.61 Use of liquefied natural gas.

(a) *Eligibility.* Section 312(i) of the Act provides for a permanent exemption for the use of liquefied natural gas (LNG). To qualify for this exemption a petitioner must demonstrate to the satisfaction of ERA that:

(1) The Administrator of the EPA or the appropriate State air pollution control agency has certified that the use of coal, including any available coal-derived fuel, as a primary energy source will cause or contribute to a concentration, in an air quality control region or any area within such region, of a pollutant for which any national ambient air quality standard is or would be exceeded (air quality certification);

(2) The Administrator of the EPA or the appropriate State air pollution control agency has certified that petitioner will be unable to use coal, including any available coal-derived fuel, as a primary energy source without violating applicable environmental requirements (environmental certification); and

(3) The LNG to be used at petitioner's powerplant will be produced outside the contiguous United States.

(b) *Evidence required in support of the petition.* A petition must include the following information in order to make the demonstration required by this section:

(1) Copies of petitioner's applications for an air quality certification and an environmental certification filed with the EPA or State air pollution control agency which request certification for coal and all available coal-derived fuels, and copies of all supporting documentation filed with or subsequent to the applications; and

(2) The name of the country or state that will be the source of the LNG, the name of the company that owns the LNG terminal through which the LNG will be imported, the name and location of such terminal, and the name of the company that will be supplying the LNG;

(3) Conservation measures as required by § 504.18; and

(4) Petroleum and natural gas consumption as required by § 504.19.

(c) *Air quality certification.* A petition is not complete unless the following have been submitted to ERA:

(1) A certification of the EPA or the appropriate State air pollution control agency that the use by the powerplant of coal or any available coal-derived fuel as a primary energy source will cause or contribute to a concentration, in an air quality control region or any area within such region, of a pollutant for which any national ambient air quality standard is or would be exceeded and that the use of coal or any available coal-derived fuel would not comply with applicable environmental requirements; and

(2) A statement indicating which fuels were presented for consideration to the agency which certified with regard to the Clean Air Act, and, to the extent known by the petitioner, why they were rejected as a method of compliance.

(d) *Reporting requirement.* If the petition is granted, petitioner must report to ERA, at the end of each 12 month period from the first day of the month following the effective date of the exemption and, if applicable, upon reaching the maximum number of hours of permitted operation within each 12 month period, the name, location and design capacity of the exempt unit, the number of hours of operation permitted by the exemption, the number of hours of actual operation, and efforts taken to seek and obtain a synthetic fuel for use in the powerplant.

(e) *Enforcement.* Violations of the provisions of this exemption will subject petitioners to the maximum penalties provided for by Part 501, Subpart L, of these regulations.

§ 504.62 Scheduled equipment outages.

(a) *Eligibility.* Section 312(l) of the Act provides for a permanent exemption for major fuel burning installations to meet scheduled equipment outages. To qualify for this exemption a petitioner must demonstrate that:

(1) The petitioner's routine maintenance schedule does not permit, or could not be adjusted to permit, continuing production or other activity carried on at the site unless ERA grants this exemption;

(2) If scheduled outages and, thereby, projected use of the unit would exceed an average of 28 days per year over a three-year period, the petitioner cannot meet its requirements by burning an alternate fuel; and

(3) The unit will be used only during those periods when other units are not in operation for reason of scheduled outage.

(b) *Evidence required in support of a petition.* To submit an adequate petition for review by ERA, a petition must include the following information in order to make the demonstration required by this section:

(1) An explanation of why petitioner's routine maintenance schedule does not permit, or could not be adjusted to permit, continuing production or other activity carried on at the site unless ERA grants this exemption;

(2) A schedule of operation for the unit estimating the number of hours per year used and fuel consumed on an annual basis;

(3) A description of the maintenance schedule for all units located at the facility, specifically identifying those units at the facility which will be out of service for scheduled maintenance at times when the unit for which the exemption is requested is operating;

(4) Use of mixtures as required under § 504.15;

(5) Use of fluidized bed combustion not feasible as required under § 504.16;

(6) Environmental impact analysis as required under § 504.20; and

(7) If scheduled outages and thereby projected use of the unit will exceed 28 days per year over a three-year period:

(i) Conservation measures as required under § 504.18;

(ii) Petroleum and natural gas consumption as required under § 504.19; and

(iii) Fuels search as required under § 504.21.

(c) *Certification alternative for unit use 28 days per year or less.* If use of the unit is not to exceed an average of 28 days per year over a three-year period, the petitioner may, in lieu of the requirement of subsection (b) of this section, provide:

(1) A certificate indicating:

(i) That the routine maintenance schedule does not permit, or could not be adjusted to permit, continuing production or other activity carried on at a site unless ERA grants this exemption;

(ii) That the use of the unit will not exceed an average of 28 days per year over a three-year period; and

(iii) That the unit will be used only during those periods when other units are not in operation for reason of scheduled outage in accordance with a schedule of operation submitted simultaneously which contains an estimate of the annual number of days used and fuel consumed;

(2) A certificate indicating that use of a mixture of petroleum or natural gas and an alternate fuel for which an exemption would be available is not economically and technically feasible; and

(3) A certificate as required under § 504.20(b).

(d) *Terms and conditions.* By petitioning for an exemption under subsection (c) of this section, the petitioner agrees, upon grant of the exemption, to the following terms and conditions:

(1) The MFBI will only be operated for use necessary to meet scheduled equipment outages;

(2) Use of the MFBI will not exceed an average of 28 days per year over a three-year period;

(3) All steam pipes must be insulated and all steam traps properly maintained;

(4) The quality of any petroleum to be burned in the installation as a primary energy source will be of the lowest grade available which is technically feasible, and capable of being burned consistent with applicable environmental requirements; and

(5) Petitioner will comply with any terms and conditions which may be imposed pursuant to environmental requirements of § 504.20(b) of these regulations.

(e) *Reporting requirement.* ERA will rely upon the schedule of operation submitted with the petition as the permanent schedule for exempt use. The petitioner must notify ERA in advance of any proposed changes to this schedule.

(f) *Emergency use.* A petition for an emergency exemption may be submitted in addition to a petition for a scheduled equipment outage. Eligibility and evidentiary requirements of each exemption must be satisfied. If granted, separate reporting requirements will be required for each exemption.

§ 504.63 Installations served by certain international pipelines.

(a) *Eligibility.* Section 312(j) of the Act provides for a permanent exemption for the use of natural gas by major fuel burning installations served by certain international pipelines. To qualify for this exemption a petitioner must demonstrate to the satisfaction of ERA that:

(1) Petitioner's primary source of natural gas is under a contract with a pipeline between the United States and Canada;

(2) The contract was signed before April 21, 1977;

(3) The natural gas would revert to Canada if petitioner is not granted an exemption;

(4) The pipeline serves high priority users as defined in subsection (b) below;

(5) Petitioner would suffer substantial financial penalty if the contract were cancelled and there is no available relief from the penalty; and

(6) The revenues from the transportation and sale of natural gas under petitioner's contract are essential to the economic vitality of the pipeline.

(b) For purposes of this section the term "high priority user" means any residential user of natural gas or any commercial user whose consumption of natural gas on a peak day is less than 50 MCF.

(c) *Evidence required in support of the petition.* A petition must include the following information in order to make the demonstration required by this section:

(1) A copy of the contract between petitioner and the international pipeline with the applicable sections underlined;

(2) A certification from the natural gas supplier of the pipeline that the natural gas would revert to Canada upon cancellation of the contract;

(3) A certification by the pipeline that it serves high priority users and a description of those users;

(4) An explanation of the substantial financial penalty that would be incurred;

(5) An explanation of why *force majeure* would not apply to the contract cancellation;

(6) A description of petitioner's attempt to transfer its contract as described in Section 731 of the Act;

(7) A determination from the Federal Energy Regulatory Commission that the revenues from the transportation and sale of natural gas under petitioner's contract are essential to the economic vitality of the pipeline;

(8) Conservation measures, as required under § 504.18; and

(9) Petroleum and natural gas consumption, as required under § 504.19.

§ 504.64 Product or process requirements [Reserved].

Appendix I—Procedures for the Computation of the Real Cost of Capital

(a) The discount rate for use in determining if it is financially feasible to convert a facility from oil or gas to alternate fuel is the firm's real after-tax weighted average marginal cost of capital. This appendix outlines the procedure used to compute it.

(b) The firm's real after-tax weighted average marginal cost of capital (K) is computed with equation 1.

EQ 1

$$K = W_d \left[\frac{\hat{R}_d\,(1-t)}{1-f_d} - INF\right] + W_p \left[\frac{\hat{R}_p}{1-f_p} - INF\right] + W_e \left[\frac{\hat{R}_e}{1-f_e} - INF\right]$$

The terms in equation 1 are defined as follows:

W_d = Fraction of existing capital structure which is debt.

W_p = Fraction of existing capital structure which is preferred equity.

W_e = Fraction of existing capital structure which is common equity and retained earnings.

$\hat{R}_d$ = Predicted nominal cost of long term debt expressed as a fraction.

$\hat{R}_p$ = Predicted nominal cost of preferred stock expressed as a fraction.

$\hat{R}_e$ = Predicted nominal cost of common stock expressed as a fraction.

INF = Percentage change in the GNP implicit price deflator over the past 12 months expressed as a fraction.

f_d = Flotation cost of debt expressed as a fraction.

f_p = Flotation cost of preferrd stock expressed as a fraction.

f_e = Flotation cost of common stock expressed as a fraction.

t = Marginal federal income tax rate for the current year.

(c) *Information on parameters used in Equation 1.*

(1) The parameters will be obtained from the firm, accepted rating services [e.g., Standard & Poor's, Moody's], government publications, accepted financial publications, annual financial reports and statements of firms, and investment bankers.

(2) The predicted nominal cost of long term debt ($\hat{R}_d$) is estimated by determining the current average yield on newly issued bonds—industrial or utility as appropriate—which have the same rating as the firm's most recent debt issue.

(3) The predicted nominal cost of preferred stock ($\hat{R}_p$) is estimated by determining the current average yield on newly issued preferred stock—industrial or utility as appropriate—which has the same rating as the firm's most recent preferred stock issue.

(4) (A) The predicted nominal cost of common stock ($\hat{R}_e$) is computed with equation 2.

EQ 2 $\hat{R}_e = \hat{R}_f + B \times \hat{R}_m$

where:

$\hat{R}_f$ = The risk free interest rate—the average of the most recent auction rates of U.S. Government 13-week Treasury Bills,

B = The "beta" coefficient—the relationship between the excess return on common stock and the excess return on the S&P 500 composite index, and

$\hat{R}_m$ = The mean excess return on the S&P 500 composite index—the mean of the difference between the return on the S&P 500 composite index and the risk free

interest rate for the years 1926–1976 as computed by Ibbotson and Sinquefield [1]—9.2%

(B) The "beta" coefficient is computed with regression analysis techniques. The regression equation is Equation 3.

EQ 3 $(R_e^t - R_f^t) = A + B(R_m^t - R_f^t) + e^t$

where:

$$R_e^t = \frac{PRCC_t - PRCC_{t-1} + (DIVRATE/12)}{PRCC_{t-1}}$$

R_f^t = The risk free interest rate in month t—the average of the yields on 13-week treasury bills auctioned in month t.[2]

A = A constant which should not be significantly different than zero.

$$R_m^t = \frac{V_{sp,t} - V_{sp,t-1} + D_{sp,t}}{V_{sp,t-1}}, \text{ and}$$

e^t = The error in month t.

$PRCC_t$ = Closing market prices of the firm's common stock at the end of month t fully adjusted for splits and stock dividends.

$DIVRATE_t$ = The sum of the dividends paid in the fiscal year which contain month t.

$V_{sp,t}$ = The market value of "one share" of the S&P 500 composite index at the end of month t.

$D_{sp,t}$ = The estimated monthly income received from holding "one share" of the S&P 500 in month t.

The regression analysis is done with sixty months of data. The first month (t=1) is sixty months before the month in which the firm's current fiscal year started. The last month (t=60) is the last month of the past fiscal year.

(5) Where the parameters specified above are not obtainable, alternate parameters that closely correspond to those above may be used. This may include substituting a bond yield for nominal cost of preferred stock where the former is not available. Where the capital structure does not consist of any debt, preferred equity, or common equity, an alternate methodology to predict the firm's real after-tax marginal cost of capital may be used.

Examples of using alternate parameters that closely correspond to those above are:

(A) In the case of industrials, which do not typically issue preferred stock, the predicted nominal cost of preferred stock (R_e) can be estimated by determining the current average yield on newly issued industrial bonds which have the same rating as the firm's most recent debt issue.

(B) If necessary, the following assumptions can be made to determine the nominal cost of debt or preferred stock and their flotation costs.

(i) Where a company issued privately placed debt that was not rated, the rating applied to preferred stock could be used to determine the cost of debt and its flotation cost.

(ii) Where a company issued privately placed preferred stock that was not rated, the rating applied to debt could be used to determine the cost of preferred stock and its flotation costs.

(iii) In the case where all issues were privately placed, the current average yield on all newly issued debt or preferred could be used to determine the cost of debt or preferred respectively, and an average flotation cost, for debt or preferred, could be used.

Energy Conservation Program for Consumer Products; Test Procedures for Furnaces

DEPARTMENT OF ENERGY

Office of Conservation and Solar Energy

10 CFR Part 430

Energy Conservation Program for Consumer Products; Final Rulemaking Regarding Amendments to Test Procedures for Furnaces

AGENCY: Department of Energy.

ACTION: Final rule.

SUMMARY: The Department of Energy (DOE) hereby prescribes amendments to its test procedures for furnaces. The purpose of these amendments is to include test procedures for pulse combustion and condensing furnaces and to include certain technical revisions. These test procedures are part of the energy conservation program for consumer products established pursuant to the Energy Policy and Conservation Act, as amended by the National Energy Conservation Policy Act. Among other program elements, the legislation requires that standard methods of testing be prescribed for covered products.

EFFECTIVE DATE: September 11, 1980.

FOR FURTHER INFORMATION CONTACT: James A. Smith, U.S. Department of Energy, Office of Conservation and Solar Energy, Division of Buildings and Community Systems, Consumer Products Efficiency Branch, Room GH-065, Mail Stop 6B-025, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, (202) 252-9127. Eugene Margolis, U.S. Department of Energy, Office of General Counsel, Room 1E-254, Mail Stop 6A-152, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, (202) 252-9510.

SUPPLEMENTARY INFORMATION:

A. Background

On October 1, 1977, the Department of Energy (DOE) assumed the authority of the Federal Energy Administration (FEA) for the energy conservation program for consumer products, pursuant to Section 301 of the Department of Energy Organization Act (DOE Act) (Pub. L. 95-51). The energy conservation program for consumer products was established by FEA pursuant to Title III, Part B of the Energy Policy and Conservation Act (Act) (Pub. L. 94-163).[1] Section 323 (42 U.S.C. 6293) of the Act requires that standard methods of testing be prescribed for covered products. Test procedures appear at 10 CFR Part 430, Subpart B.

Test procedures for furnaces were originally proposed by notice issued August 11, 1977 (42 FR 40828). Public hearings on the proposed test procedures were held on October 4, 1977. A final rule was published May 10, 1978 (43 FR 20147).

On May 29, 1979 (44 FR 30978), DOE published an advance notice of proposed rulemaking which invited interested persons to present written data, views and arguments with respect to the need for amending DOE's test procedures for furnaces in order to address any areas which interested persons felt should be expanded or changed, and to include in the test procedures two new furnace designs, pulse combustion furnaces and condensing furnaces.

DOE has learned that some manufacturers, through the experience of testing, have identified areas of concern in the test procedures which they feel should be expanded or changed. A number of such areas of concern have been the subject of applications for exception to DOE's Office of Hearings and Appeals (OHA) and the findings of OHA are available from the Public Docket Room, Room B210, 2000 M St., Washington, D.C. 20461, Monday through Friday 1:00 p.m. to 5:00 p.m. On the basis of information submitted with applications to OHA, comments submitted in response to the advance notice, and other available information, DOE published a proposed rule to amend its test procedures for furnaces on January 4, 1980 (45 FR 1298). Subsequently, a hearing was held on February 27, 1980 and comments were received regarding the proposed rule.

B. Discussion of Comments

Comments were received from industry, trade associations and members of the public. The major issues raised by the comments are discussed below.

1. Number of Units to be Tested

Comments were received which raised two issues regarding the number of furnaces required to be tested.

First, an industry trade association outlined a procedure which would reduce the number of furnaces required to be tested for groups of furnaces utilizing forced air as the heating medium and which have heat exchangers consisting of a number of identical sections. The commenter felt the efficiency performance of furnaces of this design will be the same regardless of their size and therefore no need exists to test all basic models. The commenter concluded that the procedure outlined is statistically valid because differences in the various efficiency measures were insignificant even when a worse case analysis is performed. The commenter performed an "Analysis of Variance" on a manufacturer's line of forced air furnaces and concluded with 99 percent confidence that the efficiency variation seen within the line was due to chance variation and not due to any "true" or actual difference. The commenter concluded that, based on this "insignificant" difference, the efficiency measures of basic models in other related groups (for instance, basic models of the same heat exchanger design with electronic ignition added) can be predicted by the manufacturer, thus reducing his testing burden. DOE is of the opinion that this approach is a reasonable course of action to be taken by a manufacturer since no significant reduction in the probability of a manufacturer overstating his performance capability is likely to occur if every basic model of the line is tested in accordance with the existing sampling requirements.

DOE feels that the procedure outlined by the commenter is in accordance with the applicable DOE sampling provisions for representations and labeling, in particular the provision allowing components of similar design to be substituted without requiring additional testing and the provision allowing conservative rating of performance at the manufacturer's option. DOE feels the commenter's outlined procedure is an extension of these existing provisions and agrees that no changes to existing basic model definition or the sampling requirements are warranted at this time.

The above mentioned provisions (component substitution and conservative rating) have not been proposed as part of the standards program. Rather by notice issued June 19, 1980 (45 FR 43976 June 30, 1980), DOE has proposed that testing of all basic models be required in order to certify that the basic model meets or exceeds the standard.

DOE or FTC will not evaluate the statistical validity of a manufacturer's "analysis of variation" or other sampling plan when involved in any type of enforcement action under the Act, (i.e., representations, labeling or standards) whereas the commenter felt this should be the first area of investigation.

When DOE recognized component substitution and conservative rating in the sampling requirements for representations and labeling, it was not outlining a less stringent enforcement technique to be used by DOE or FTC. All enforcement actions will be carried out on a model by model basis. The use of a reduced testing plan as proposed by the commenter is not a justifiable reason for reduced accuracy.

Second, manufacturers from the electric furnace industry and representatives of a trade association felt that a reduced testing requirement was warranted in regard to all electrical furnaces. The commenters correctly realized that the DOE test procedures assign an efficiency of 100 percent to all indoor installed electric furnaces; therefore no actual testing requirements exist for determining efficiency. However, for electrical furnaces installed in unheated spaces the test procedures require that the percent loss through the jacket be evaluated and deducted from 100 percent. This is consistent with what is done in the test procedures for fossil fuel furnaces installed in unheated spaces. The commenters believe this jacket loss test requirement is burdensome and can be eliminated by DOE assigning a constant percent jacket loss that can be used by all manufacturers and thereby eliminate the testing requirement when determining measures of efficiency for all electric furnaces. Some commenters also pointed out that DOE should not be pursuing this insignificant energy loss because a large number of electric furnaces are proximate to cooling coils and thus the casings, jackets or ducts are insulated to protect this cooling function. The commenters felt that for this reason the manufacturer would minimize jacket losses. However, DOE believes that no such incentive exist for electric furnaces built solely for heating. In any event, DOE believes that the manufacturer should be accountable for this energy loss whereas an assigned value removes this accountability entirely.

Furthermore, the conservative rating provisions discussed above in regard to fossil fueled furnaces also can be applied to electric furnaces to greatly reduce the testing requirements. For example, if a manufacturer determines the percent jacket loss of the model with the largest heating element and poorest jacket he could consider using this value in calculating efficiency of all his outdoor models as long as he is willing to certify that none of the untested models will perform at a lower efficiency.

For the measures of energy consumption other than efficiency, such as operating cost, electric furnace manufacturers may employ the same approach regarding testing requirements as allowed with the electrical furnace efficiency determinations.

2. Energy Factor

DOE has sought in the proposal to include in the test procedures a new efficiency measure which will reflect variations in the efficiency of electrical components of fossil fueled furnaces. Comments were received which express strong opposition to the use of the proposed energy factor (EF) as the measure of efficiency used in the energy efficiency standards program or the labeling program. The proposed EF takes into account the relative efficiency of furnace electrical components. Commenters felt that at this point in time the resulting confusion would outweigh any benefit that could be obtained by adopting the proposed EF as the measure of efficiency in lieu of the existing Annual Fuel Utilization Efficiency (AFUE).

DOE agrees with the commenters that adopting the proposed EF in lieu of the AFUE would be inappropriate and therefore is not contemplating changing the measure of efficiency used in the labeling or standards program. Much effort has been spent by Government and industry to help the public assimilate AFUE for the labeling program. Also much of the economic analysis that has been conducted in support of the energy efficiency standards program has been based on AFUE levels.

However, since the inclusion of this energy measure adds to the completeness of the test procedures (it will allow manufacturers to make representations regarding efficiency improvements attributable to high efficiency electrical components), DOE is prescribing this energy factor in today's final rule.

3. Condensing Furnaces

There was no major objection to the proposed test procedures for condensing furnaces and boilers, however there were some minor technical changes suggested which the commenters felt would serve to improve the test procedures.

Several comments suggested that the temperature specifications called out in the test procedures should be changed. One commenter stated that condensing furnaces should be tested at temperature rises below the specified 50°F if the unit is capable and designed to do so. However, DOE and National Bureau of Standards (NBS) feel the substantial improved performance resulting from such testing conditions would not be reflective of what would occur in actual use. NBS believes the maximum temperature rise specified by the manufacturer is likely to be the most representative temperature rise and thus should be specified instead of the present 50°F temperature rise. Therefore, DOE is prescribing that paragraph 2.5.1 be changed to require that the tests "be carried out at the maximum temperature rise specified by the manufacturer for the unit being tested."

In related comments it was requested that the more stringent temperature constraints specified for condensing furnaces and boilers should be adopted for non-condensing furnaces and boilers. Specifically, an industry trade association felt the proposed narrow limits of permissible return air temperatures should be adopted for non-condensing furnaces and a manufacturer of boilers felt all boilers should be tested at the same return water temperature and the tighter limits on return water temperature rise for condensing boiler should be adopted for noncondensing boilers. DOE and NBS do not agree with these suggested revisions. Non-condensing furnaces and boilers are not nearly as sensitive as condensing furnaces and boilers to return water/air temperatures. Stricter specifications for noncondensing furnaces and boilers could penalize some small manufacturers who do not have conditioned laboratories and DOE believes there exists no reason to increase the complexity of the test procedure for noncondensing furnaces or boilers when approximately the same results can be obtained using the presently specified conditions. Therefore, today's rule prescribes stricter testing conditions only for condensing furnaces and boilers.

This same boiler manufacturer failed to see the appropriateness of testing a condensing boiler at 120°F return water temperature and then correcting its efficiency to a return water temperature of 180°F in the calculations. DOE, however, feels this procedure is appropriate because only steady state efficiency, not the annual fuel utilization efficiency, is corrected to a return water tmeperature of 180°F. This is done because 180°F return water temperature is more typical of actual operation under full load, steady state conditions.

Also, there were comments received concerning the proposed equations for steady state efficiency of condensing furnaces and boilers. DOE agrees with the suggestion to include the terms latent heat loss coefficient "C_L" and condensate heat loss "L_C" in the equation for furnaces and to include brackets in the equation for condensing

[1] Subsequently, the Act was amended by the National Energy Conservation Policy Act (NECPA) (Pub. L. 95-619). References in this notice to "the Act" or to sections of the Act refer to the Energy Policy and Conservation Act as amended by NECPA.

boilers. DOE is correcting these

those obtained by collecting and

procedure would be applicable to non-

extended to only condensing units with

two adjustments is identical for forced

boilers. DOE is correcting these oversights in today's rule.

Also, the equation for condensing boiler steady state efficiency was critized because inherent in this equation is the assumption that for each 1°F change in entering water temperature there is a 1°F change in flue gas temperature. NBS agrees that this assumption is not exact but it has an insignificant effect on the calculations of steady state efficiency and it avoids the need for an additional boiler test at a return water temperature of 180°F. Thus, DOE is not changing the provisions that were proposed.

Further, a manufacturer claimed the proposed provisions of requiring the return air temperature of a condensing furnace to be maintained within ±5°F of the value of the room temperature (T_{RA}) coupled with the existing provisions that T_{RA} may not fall below 65°F could allow for the testing of condensing furnaces at return air temperatures of 60°F. This temperature of return air would not be realistic of the temperature encountered in the field and testing at 60°F would result in undeserved performance improvement. NBS has determined that the performance improvement is small (about 0.15 percentage points). Nevertheless DOE is adding to section 2.5.1 the provision that the return air temperature shall not be below 65°F for condensing furnaces.

Further a manufacturer commented that the calculations should be expanded to allow condensing furnaces and boilers to have separate ratings depending on whether the furnace uses indoor or outdoor air for combustion. DOE disagrees because the use of oudoor air for rating all condensing furnaces and boilers is a justifiable simplification of an already difficult calculation procedure. And because of the low flue temperature of condensing units, this simplification has an insignificant effect on the annual fuel utilization efficiency. The calculations do not prevent condensing furnaces or boilers from using indoor air for combustion; they only, for purposes of simplicity, evaluate all condensing furnaces and boilers as if they were direct vent furnaces (using outdoor air).

Finally, some commenters questioned the assumption employed in the calculation that the flue gases for condensing furnaces and boilers are saturated. One commenter claimed that this dew point method of test could result in an error of 2 or 3 percentage points. However, in laboratory tests performed at NBS, a discrepancy of only 1 percentage point was observed between results obtained using the dew point temperature of the flue gases and those obtained by collecting and measuring condensate. NBS believes that the use of the flue gas dew point method is the better procedure due to the repeatability and ease with which the required measurements can be performed. Therefore, DOE is prescribing today the dew point method of test as proposed.

4. Commercial Standards

Today's notice incorporates as part of the test procedures the updated versions of the American National Standards Institute (ANSI) standards in lieu of the versions cited in the existing test procedures.

Pursuant to section 301 of the Department of Energy Organization Act (Pub. L. 95-91), DOE is required to comply with section 32 of the Federal Energy Administration Act of 1974 (FEA Act) (Pub. L. 93-275), as amended by section 9 of the Federal Energy Administration Authorization Act of 1977 (Pub. L. 95-70).

The findings required of DOE by section 32 of the FEA Act serve to alert the public and DOE to the use and background of commercial standards in a proposed rulemaking and, through the comment and hearing process, allow interested persons to make known their views regarding the appropriateness of the use of particular commercial standards in any proposed rulemaking.

All comments received concerning these standards expressed the approval of the updated ANSI standards. Also, DOE has consulted with the Attorney General and the Chairman of the Federal Trade Commission as required by section 32(c) of the FEA Act and neither recommends against such incorporation or use of the updated ANSI standards. Therefore, DOE is incorporating in today's final rule the ANSI Z21.47—1978 standard in lieu of ANSI Z21.47—1973.

5. Determination of Draft Factors

A manufacturer of a direct vent furnace requested that the option of performing the procedure specified in 3.6 of Appendix N for determining draft factors be allowed for non-power burner furnaces, whereas currently this procedure is limited to power burner systems. This commenter contends that direct vent furnace models exhibited draft characteristics which warrant a flue draft factor lower than that assigned in the test procedures (D_p=1).

The optional procedure was specifically designed to evaluate the draft characteristics of furnaces equipped with power burners, and at the time of the proposed rule DOE had determined whether the optional procedure would be applicable to non-power burner furnaces. Specifically, DOE expressed concerns, in the proposed rule, as to the accuracy and repeatability of the results obtained when using the tracer gas technique employed in the optional procedure.

In this regard NBS has been tasked with a project to conduct a complete analysis of this manufacturer's direct vent non-power burner furnace. The purpose of this analysis was to determine the actual draft factors representative of operation and, if necessary, to devise a uniform test method for the accurate determination of these draft factors. NBS has determined that a reduction in the "D_p" value exists for this design but was unable to develop a simplified uniform test method for the accurate determination of these draft factors. However, NBS found that results obtained when using the tracer gas technique were reasonably accurate and repeatable. For this reason, DOE is including in today's final rule the provisions to allow manufacturers the option of using the tracer gas procedure, outlined in section 3.6 of Appendix N, to determine the off-period draft factor for flue gas flow, D_p, when testing direct vent furnaces (with or without preheating of combustion air). Having this option on direct vent units will enable manufacturers of this type of furnace to account for the reduced off-period flow found in such systems.

6. Pulse Combustion

The proposed amendments to include condensing units was based on furnace designs which employ pulse combustion along with the condensing mode of operation. Pulse combustion designs include some type of valves that are likely to eliminate all flow through the furnace during the off-period. Because of this and because it was thought that all pulse combustion furnace designs would include the condensing mode, NBS recommended, and DOE adopted, a procedure that would permit, at manufacturers' option, testing only under steady state conditions as specified in section 3.7 of Appendix N. However, commenters pointed out that some designs of pulse combustion units may not include the condensing mode and also other designs, not just pulse combustion, could have no flow conditions during the off-period. Therefore, today's final rule prescribes that the term pulse combustion be replaced by the expression "any unit whose design is such that not air flows through the combustion chamber and heat exchanger during the off-period." Also the option in section 3.7 is

extended to only condensing units with no off-period losses. Thus, the option in 3.7 is not extended to noncondensing furnaces because a noncondensing furnace has high flue gas temperatures which have a substantial effect on seasonal efficiency.

7. Finned Tube Boilers

One commenter believed the arguments presented in the proposal relative to water flow rate for finned tube boilers apply equally to any low water volume boiler. Accordingly, the commenter felt the proposed revisions to 2.5.4 should be applicable to all low water volume boilers and DOE should define "low water volume" rather than "finned tube." DOE sees no advantage in attempting to define "low water volume" since to the best of NBS's knowledge only finned tube boilers have the problem of boiling at high water temperature rises. Until such a problem in found to exist on other designs, DOE will prescribe the provision for finned tube boiler water flow rates as proposed.

The proposed rule also allowed the capacity (Q_{cont}) of finned tube boilers be calculated without regard to the adjustment which accounts for the difference in jacket heat losses measured at laboratory conditions and jacket heat losses that would occur at outside design conditions. Commenters suggested that other designs could deserve the same treatment. However, DOE feels it is inappropriate to give general applicability ruling and therefore, today's rule reflects only the changes resulting from the applications for exceptions filed by the manufacturers of finned tube boilers.

A related comment stated that the treatment of finned tube boilers was inconsistent in that the jacket heat loss adjustment factor is unity in the calculations for capacity but the factor C_j, which also is a jacket loss adjustment factor remains the same for all boilers in the calculations for AFUE. This commenter failed to realize that there is no direct relationship between the values assigned to C_j in the AFUE calculations and the coefficients appearing in front of L_j in the Q_{out} calculations. As mentioned above, the laboratory measured jacket loss (L_j) is adjusted for outside design conditions when calculating capacity. This is done because an outside furnace or boiler is likely to see outdoor design conditions at full capacity; whereas, the C_j factor in the calculations for AFUE adjusts the laboratory measured jacket loss for the effects of cycling and average outside conditions. A misinterpretation exists because the numerical value of these two adjustments is identical for forced air furnaces. DOE is currently considering expanding the list of adjustment factors, C_j, for all designs and installations but this requires considerable research. This research is not complete at this point in time. DOE and NBS are analyzing the entire jacket heat loss question. Once this research is completed, comprehensive assignment of jacket heat loss factors depending not only on design but also installation may be possible.

8. Room Temperature Measurement

Three comments were received regarding the procedures used to determine the test measure of room temperature, T_{RA}. First, it was suggested that the room temperature be measured with only one thermocouple instead of the specified four thermocouples because the commenter felt one is sufficient and there are no instructions regarding which (of the four) temperature readings should be used in the calculation procedure. However, DOE believes the four thermocouples provide a necessary level of accuracy and reliability of room temperature measurement, and the proposed section 2.9 clearly states that the four readings are to be averaged to find the value of T_{RA}, which is to be used in the calculation procedure.

This same commenter felt that other types of thermocouples besides the specified "iron-constantan" thermocouple should be allowed. NBS and DOE agree with the commenter and the words "iron-constantan" are deleted from section 2.9 in today's rule.

Finally, a manufacturer of a direct vent type of furnace believed it would be appropriate to raise the specified plane of measurement of T_{RA} so that the value obtained would be more reflective of the actual combustion air inlet temperature. This particular design has its inlet air and exhaust air openings located proximate to one another at the top of the furnace. The proposed amendments specify that the room air temperature and inlet air temperature should agree within ±5° F. DOE believes this provision is well within the ability of the manufacturer and provides equitable testing conditions. However, the commenter felt a superior solution of the problem would be for DOE to allow measurement of T_{RA} at the plane of air inlet. NBS has analyzed this problem and has concluded that the perceived temperature difference is not only due to some stratification of the air temperature in the testing laboratory but is primarily due to recirculation of hot flue gases into the cumbustion air intake. DOE feels that both these effects are artificial and should be avoided when testing. Therefore no change in the location where T_{RA} is measured is prescribed in today's rule.

9. Definition of Furnace

DOE has proposed to amend the definition of furnace in section 430.2 in order to more clearly define the applicability of the furnace test procedures by including the words "utilizing single phase electric current." Several commenters concurred with this change stating that it would have the desired effect of excluding from coverage some basic models using three-phase electric current that would otherwise be covered by the test procedures, but which are intended primarily for commercial applications. However, one commenter pointed out that the inclusion of the term "single-phase electric current" could be interpreted as excluding gas-fired units utilizing self energizing controls since DC millivoltage circuits are not usually considered "single-phase electric current." DOE agrees and is adding to the definition of furnace the words "or millivoltage DC current" in today's rule.

10. Draft Requirements

In order to better reflect field conditions in the laboratory, section 3.2.2 of the test procedures specifies that the draft in the flue must be maintained during the cool down test of oil fired boilers. This is done because the thermal mass of the venting system in the field will typically impose a draft on the furnace during this off-period. A commenter contended that this draft requirement should be deleted to simplify the running of the test because this requirement does not significantly affect the test results. NBS and DOE believe that this statement is correct for units equipped with power burners that have small off-cycle air flows but probably not correct for all types of oil fired units and therefore believe this requirement should not be relaxed at this time. However, DOE might consider a future research program to determine whether this requirement could be relaxed for certain types of oil fired equipment.

11. Conflicting Testing Conditions

The furnace test procedures currently specify restrictions on voltage, external static pressure, and temperature rise across the heat exchanger. Comments noted that on a few basic models these restrictions could conflict with one another. For example, at the specified static pressure and temperature rise, outlined in section 2.5.1, a particular furnace may not be able to meet the

V 45 AG 12 80 UMI

requirement that the testing voltage be within one percent of nameplate as specified in section 2.3.5. DOE agrees and is correcting this problem in today's rule by expanding section 2.5.1 to outline the priorities of these restrictions.

12. Nameplate Input Ratings

DOE has proposed to use the nameplate input rating in lieu of the measured input to prevent variations in the derived capacity. The proposed rule reflected this by changing the calculations for capacity in section 4.7. A commenter noted that the intent of this amendment will not be served until this change is also carried out in sections 4.2.34, 4.2.35, 4.8, and 4.12. NBS and DOE agree and is prescribing in today's rule that the measured input term Q_{in} in the above sections should be replaced by a new variable, Q_{np}, which would stand for the nameplate input rating.

13. Insulation on Flue Pipe During Testing

As discussed in Item 7 of the proposed rule, DOE intended to include provisions that would require insulation of exposed areas of flue pipe. A commenter stated, however, that the language in the proposed section 2.2.1.2 does not accomplish this intent. DOE agrees and is changing the appropriate sentences in this paragraph to read: "Test gas-fueled furnaces having a horizontally discharging hood outlet with the draft hood in place and elbow and a 5 foot long vertical pipe attached to the hood outlet. Insulate the flue pipe upstream of the draft hood."

14. Propane Gas Testing

One commenter suggested that since the American National Standards Institute (ANSI) Z21.47 1978 recognizes other liquid petroleum gases (LPG) besides propane, DOE should allow testing with other LPG's. NBS and DOE do not feel this expansion of procedures is warranted because results obtained using readily available propane are adequate to describe the performance of LPG burning furnaces regardless of the type of LPG.

This same commenter also suggested that manufacturers of furnaces fueled by either natural gas or propane be allowed to rate all models based on only natural gas testing. In accordance with the currently prescribed provisions of conservative rating discussed above in Item 1, this testing and rating method is allowed as long as the tested models' ratings are known to be below the ratings of the untested models.

15. CO_2 Readings

One of the proposed amendments allowed for measuring the CO_2 concentration at a location downstream of the plane of temperature measurement. This amendment served to eliminate problems regarding nonrepeatable test data, without compromising the reliability of measures of energy consumption derived from the test procedures. A commenter has brought to DOE's attention an instance in the test procedure where this provision was omitted. Therefore, DOE is today adding the words "or within 3.5 feet of this plane on the downstream side" to paragraph 7 of proposed section 3.1.1.

16. Temperature Measurement Times

One commenter felt that an explanation is needed to justify why the times at which the temperature measurements are taken differ for condensing and non-condensing furnaces. The only time that is changed for condensing furnaces is the time at which the flue gas temperature "$T_{f,off(\infty)}$" is measured. This has been reduced to 20 minutes after burner shut down for condensing boilers without pilot lights. This reduction in testing time is warranted since condensing boilers start the cool down process from a lower temperature than noncondensing boilers would and therefore equilibrium is reached sooner.

17. Blower Delay Time

One commenter requested that the test procedures should be modified to allow furnaces with a timing device for blower shutdown to be tested with the timer operating in its normal manner, whereas, the test procedures currently require blower shutdown at 3 minutes after burner shutdown or when the supply air temperature drops to a value of 40°F above the inlet air temperature, whichever results in the longest blower on time. DOE feels these existing provisions should remain because: (a) There is a desire to provide a fixed set of test conditions, representative of field conditions, that would facilitate the performance comparison of different furnaces, (b) there is a desire to discourage manufacturers from sacrificing the comfort of the homeowner for the sake of minute improvement in the efficiency number assigned to a furnace, (NBS believes supplying air at a temperature which is less than 40°F above inlet air temperature could be uncomfortable to the homeowner), and (c) there is a desire to prevent manufacturers from improving through increased use of electricity, their AFUE level at the expense of the annual operating cost. The latter follows from the fact that AFUE does not include the electrical energy consumption on gas or oil-fueled furnaces, but is included in the calculation procedures for determining the annual operation cost.

This same commenter requested that the test standard be modified to give proper credit to units that are designed such that the indoor blower starts simultaneously with the burner, whereas the test procedures specify a time delay (t#) between the burner startup and blower startup of 1.5 minutes for this type of design. DOE is also not changing this provision because the time delay (t#) of 1.5 minutes between blower and burner startup was fixed in the furnace test procedure for the same reasons cited above for the 3 minute delay between burner and blower shutdown. As in the above case, the 1.5 minute delay was chosen to be typical of most furnaces operating in the field and to minimize the total (fuel + electric) annual operating cost.

18. Miscellaneous

After careful consideration of all of the comments and further consultation with NBS, DOE has made some editorial and minor technical changes (for instance, added brackets, where appropriate, to the equations in section 4.2.5) in the prescribed amendments to the test procedures that were not discussed above and incorporated them in the final rule prescribed today.

C. Regulations Prescribed

1. *Test Procedures.* The amendments to the test procedures for furnaces prescribed today are included in Subpart B of Part 430 and are substantially the same as those proposed, with the exception of the changes discussed above. Specifically, in discussion comment number 4 above, today's final rule incorporates as part of the test procedures the updated versions of the American National Standards Institute (ANSI) standards in lieu of the versions cited in the existing test procedures. Any subsequent amendment to these standards by the standard-setting organizations will not affect the DOE test procedures, which can only be amended by DOE.

2. *General Provisions.* Today's rulemaking contains an amended definition of "Furnace."

3. *Application of Test Procedures.* For the convenience of the reader, today's amendments contain the previously prescribed statistical sampling provisions for any testing required in order to comply with sections 323(c) and 324 of the Act. Section 323(c) provides that, effective 180 days after a test procedure rule applicable to a covered product is prescribed by DOE, no manufacturer, distributor, retailer, or private labeler may make any representation in writing or in any broadcast advertisement respecting the energy consumption or cost of energy consumed by that covered product, unless the product has been tested in accordance with the DOE test procedure, and the representation fairly discloses test results. Section 333(c) of the Act assigns enforcement responsibility for this provision to the Federal Trade Commission (FTC). The test procedures prescribed today are also applicable to any labeling rules which may be prescribed by the FTC pursuant to section 324 of the Act.

The test procedure provisions prescribed today, other than the sampling provisions of § 430.23(m), are expected to be used generally for determining compliance with future standards, but the exact method of determining compliance will be decided upon during the ongoing efficiency standards setting process. The sampling provisions of § 430.23 are specifically intended to apply only to testing required pursuant to sections 323(c) and 324 of the Act. Future DOE regulations relating to the selection of units, for testing to ensure compliance with efficiency standards under section 325, may differ substantially from the approach taken in the sampling provisions of § 430.23.

4. *Unit Costs of Energy.* Under section 323(b)(2) of the Act, DOE is required to provide manufacturers with information on representative average unit costs of energy. This information was provided by notice issued June 22, 1979 (44 FR 37534, June 27, 1979), and is expected to be updated in the near future.

5. *Preemption.* Today's rulemaking prescribing final amended test procedures for furnaces supersedes any State regulation to the extent required by section 327 of the Act. Pursuant to section 327, all State regulations which provide for the disclosure of information with respect to any measure of energy consumption of furnaces or which provide for an energy efficient standard, or other requirement regarding the energy efficiency or energy use of furnaces, must now employ test procedures identical to those specified in today's final rule.

6. *Regulatory and Environmental Review.* In accordance with the requirements of the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321 et seq.), DOE evaluated the proposed establishment of these test procedures for consumer products to determine if an environmental assessment or an environmental impact statement was required. These test procedures will be used only to standardize the measurement of energy usage for the subject consumer products. The action of prescribing the test procedures, by itself, will not result in any environmental impact. Because it was clear that the proposed action was not a major Federal action significantly affecting the quality of the human environment, DOE determined that neither an environmental assessment nor an environmental impact statement was required. The potential environmental impacts that might occur from the application of the test procedures in connection with DOE's energy efficiency standards program will be evaluated by the program.

This rule has been reviewed in accordance with Executive Order 12044 and DOE Order 2030.1. It was determined that this rule was significant in nature but did not have major impacts to manufacturers and consumers imposing annual economic costs of $100 million or more.

In consideration of the foregoing, Part 430 of Chapter II of Title 10, Code of Federal Regulations, is amended as set forth below, effective September 11, 1980.

Issued in Washington, D.C., August 4, 1980.

T. E. Stelson,

Assistant Secretary, Conservation and Solar Energy.

1. Section 430.2 is amended by revising the definition of "furnace" to read as follows:

§ 430.2 Definitions.

* * * * * *

"Furnace" means a device, utilizing only single-phase electric current, or single-phase electric current or millivoltage DC. current in conjunction with either natural gas, propane, or home heating oil, which is designed to be the principal heating source for the living space of a residence and which is not contained within the same cabinet with a central air conditioner whose rated cooling capacity is above 65,000 Btu's per hour. Every furnace is either an electric central furnace, electric boiler, forced-air central furnace, gravity central furnace, or low pressure steam or hot water boiler. The heat input rate of a furnace is less than 300,000 Btu's per hour for electric boilers and low pressure steam or hot water boilers, and is less than 225,000 Btu's per hour for forced-air central furnaces, gravity central furnaces, and electric central furnaces.

* * * * * *

2. Section 430.22 is amended by redesignating the present paragraph (n)(4) as paragraph (n)(5) and by adding a new paragraph (n)(4) to read as follows:

§ 430.22 Test procedures for measures of energy consumption.

* * * * * *

(n) *Furnaces.* * * *

(4) The energy factor for fossil-fueled furnaces, expressed in percent, is the ratio of annual output of useful energy delivered to the heated space to the total annual energy input to the furnace determined according to 4.15 of Appendix N of this subpart.

* * * * * *

3. The provisions of § 430.23 which relate to furnaces are reprinted as follows for the convenience of the reader:

§ 430.23 Units to be tested.

When testing of a covered product is required to comply with section 323(c) of the Act or to comply with rules prescribed under section 324 of the Act, a sample shall be selected and comprised of units which are production units, or are representative of production units of the basic model being tested, and shall meet the following applicable criteria.

* * * * * *

(n)(1) For each basic model[2] of furnaces, other than basic models of those sectional cast-iron boilers which may be aggregated into groups having identical intermediate sections and combustion chambers, a sample of sufficient size shall be tested to insure that—

(i) Any represented value of estimated annual operating cost, energy consumption or other measure of energy consumption of a basic model for which consumers would favor lower values shall be no less than the higher of (A) the mean of the sample, or (B) the upper 97½ percent confidence limit of the true mean divided by 1.05, and

(ii) Any represented value of the annual fuel utilization efficiency or other measure of energy consumption of a basic model for which consumers would favor higher values shall be no greater than the lower of (A) the mean of the sample, or (B) the lower 97½ percent confidence limit of the true mean divided by .95.

(2) For the lowest capacity basic model[3] of a group of basic models of those sectional cast-iron boilers having identical intermediate sections and combustion chambers, a sample of sufficient size shall be tested to insure that—

(i) Any represented value of estimated annual operating cost, energy consumption or other measure of energy consumption of a basic model for which consumers would favor lower values shall be no less than the higher of (A) the mean of the sample, or (B) the upper 97½ percent confidence limit of the true mean divided by 1.05, and

(ii) Any represented value of the fuel utilization efficiency or other measure of energy consumption of a basic model for which consumers would favor higher values shall be no greater than the lower of (A) the mean of the sample, or (B) the lower 97½ percent confidence limit of the true mean divided by .95.

(3) For the highest capacity basic model[3] of a group of basic models of those sectional cast-iron boilers having identical intermediate sections and combustion chambers, a sample of sufficient size shall be tested to insure that—

(i) any represented value of estimated annual operating cost, energy consumption or other measure of energy consumption of a basic model for which consumers would favor lower values be no less than the higher of (A) the mean of the sample, or (B) the upper 97½ percent confidence limit of the true mean divided by 1.05, and

(ii) Any represented value of the fuel utilization efficiency or other measure of energy consumption of a basic model for which consumers would favor higher values shall be no greater than the lower of (A) the mean of the sample, or (B) the lower 97½ percent confidence limit of the true mean divided by .05.

(4) For basic model[3] or capacity other than the highest or lowest of the group of basic models [3] of sectional cast-iron boilers having identical intermediate sections and combustion chambers, represented values of measures of energy consumption shall be determined by either—

(i) A linear interpolation of data obtained for the smallest and largest capacity units of the family, or

(ii) Testing a sample of sufficient size to insure that (A) any represented value of estimated annual operating cost, energy consumption or other measure of energy consumption of a basic model for which consumers would favor lower values shall be no less than the higher of (1) the mean of the sample, or (2) the upper 97½ percent confidence limit of the true mean divided by 1.05, and (B) any represented value of the energy factor or other measure of energy consumption of a basic model for which consumers would favor higher values shall be no greater than the lower of (1) the mean of the sample, or (2) the lower 97½ percent confidence limit of the true mean divided by .95.

(5) Whenever measures of energy consumption determined by linear interpolation do not agree with measures of energy consumption determined by actual testing, the values determined by testing will be assumed to be the more reliable values.

(6) In calculating the measures of energy consumption for each unit tested, use the design heating requirement corresponding to the mean of the capacities of the units of the sample.

4. Section 1.18 of Appendix N to Subpart B is amended to read as follows:

1.18 "Steady state heat input" (Q_{in}) means the rate of energy supplied in a fuel to a furnace, operating under steady state conditions, expressed in Btu's per hour. It includes any input energy to the pilot light and is obtained by multiplying the measured rate of fuel consumption by the measured higher heating value of the fuel.

5. Section 1.27 of Appendix N to Subpart B is amended to read as follows:

1.27 "Heating capacity" (Q_{out}) means the rate of useful heat output from a furnace, operating under steady state conditions, expressed in Btu's per hour. For furnaces intended to be installed indoors, it is obtained by multiplying the "nameplate input" by the steady state efficiency (n_{ss}) divided by 100. For furnaces intended to be installed outdoors, it is obtained by multiplying (A) the "nameplate input" by (B) the difference of the steady state efficiency divided by 100 and the quantity (3.3) (L_t) divided 100, where L_t is the jacket loss as determined in 3.4 of this appendix. For finned tubed boilers intended to be installed outdoors, it is obtained by multiplying (A) the "nameplate input rating" by (B) the difference of the steady state efficiency divided by 100 and the quantity L_t divided by 100, where L_t is the jacket loss as determined in 3.4 of this appendix.

6. Appendix N to Subpart B is amended by adding, after § 1.27, the following new sections:

1.28 "Condensing furnace" means a furnace or boiler which condenses part of the water vapor generated by the burning of hydrogen in fuels and is equipped with a means of collecting and draining this condensate. A furnace or boiler shall be considered a "condensing furnace" only if the latent heat loss coefficient (C_L), defined in 1.29 below, is less than 1.

1.29 "Latent heat loss coefficient (C_L)" means the coefficient which is the fraction of the total latent heat remaining in the flue gases after any condensing has occurred, as calculated in section 4.17 of this appendix.

1.30 "Pulse combustion furnace" means a furnace or boiler which uses a steady sequence of explosions to produce heat.

1.31 "Nameplate input rating" (Q_{in}) means the maximum hourly Btu input rate affixed by the manufacturer to a fossil-fueled furnace to indicate the fuel burning capacity.

1.32 "Finned tube boiler" means a boiler whose heat exchanger consists of only finned tubes.

1.33 "Forced draft" means air forced into the combustion chamber by mechanical means.

1.34 "Direct exhaust system" means a furnace venting system supplied by the manufacturer through which the products of combustion pass directly from the furnace to the outside and which does not employ a means of draft relief.

7. Section 2.1 of Appendix N to Subpart B is amended to read as follows:

2.1 *Installation of test plenum, duct work, and piping.*

2.1.1 Gravity central furnaces (including direct vent systems). Install and equip gravity central furnaces with a vertical supply test plenum or extended casing and horizontal test ducts as described in section 2.3.3 of ANSI Standard Z21.47–1978.

2.1.2 Forced-air central furnaces (including direct vent systems). Equip gas-fueled forced-air central furnaces with a plenum and test duct as described in Sections 2.3.1 and 2.3.2 of ANSI Standard Z21.47–1978. Equip oil-fueled forced-air central furnaces with a plenum and test duct as described in Section 6.2 of ANSI Standard Z91.1–1972.

2.1.3 Low pressure steam and hot water boilers (including direct vent systems). Install gas-fueled low pressure steam and hot water boilers as prescribed in section 2.9 of ANSI Standard Z21.13–1974. Install oil-fueled low pressure steam and hot water boilers as prescribed in sections 7.0 and 8.1.1 through 8.1.3 in the January 1977 edition of the Hydronic Institute "Testing and Rating Standard for Cast Iron and Steel Heating Boilers." In the case of condensing boilers, a means shall be provided for supplying 120° F return water, at a constant rate, to the test boiler during both the steady state and heat-up tests described below. This will typically, although not necessarily, require the use of a large tank, an auxiliary boiler and two pumps.

2.1.4 Electric central furnaces. Install equipment for testing in accordance with ARI Standard 230–74, section 4 and figure 1.

2.1.5 Electric boilers.

Install equipment in accordance with manufacturer's instructions.

8. Section 2.2.1.2 of Appendix N to Subpart B is amended to read as follows:

2.2.1.2 Gas-fueled gravity and forced-air central furnaces which employ draft hoods. Test gas-fueled gravity and forced-air central furnaces which employ draft hoods having vertically discharging outlets with the draft hood in place and a 5-foot long pipe attached to the hood outlet. Test gas-fueled furnaces having a horizontally discharging hood outlet, with the draft hood in place and an insulated elbow and 5-foot long vertical pipe attached to the hood outlet. Insulate the flue pipe upstream of the draft hood with insulation having an R value not less than 7 (°F–HR-ft²/Btu's) and an outer layer of aluminum foil. Use an elbow and pipe with a cross sectional area the same size as the hood discharge outlet.

9. The first sentence of section 2.2.3 of Appendix N to Subpart B is amended to read as follows:

2.2.3 Direct vent and direct exhaust systems.

9a. Section 2.3.3 of Appendix N to Subpart B is amended to read as follows:

2.3.3 Other test gas. The specific gravity of other test gases shall approximate the values given in Table VII of ANSI Standard Z21.47–1978. Maintain the test pressures immediately ahead of all controls between the "normal" and "increased" values of test pressures given in Table VIII in the ANSI Standard. Use gas with a measured higher heating value within ±5 percent of the values specified in Table VII of ANSI Standard Z21.47–1978. Determine the actual higher heating value of the gas used in the test with an error no greater than 1 percent.

10. Section 2.4.1 of Appendix N to Subpart B is amended to read as follows:

2.4.1 Gas burner adjustments (not including condensing furnaces). Adjust burners of gas-fueled furnaces or boilers such that the Btu's per hour input, as measured during the steady state performance test described below and corrected to standard conditions of 80° F and 30 inches of mercury barometric pressure, is within ±2 percent of the nameplate input rating. Set the primary air shutters in accordance with the manufacturer's recommendation to give a good flame at this adjustment. If, however, the setting results in the deposit of carbon during any test specified herein, the tester shall adjust the shutters and burners until no more carbon is deposited and shall perform the tests again with the new settings. After the steady state performance test has been started, do not make additional adjustments to the burners during the required series of performance tests specified in section 3.0 of this appendix.

If a vent limiting means is provided on a gas pressure regulator, keep it in place during all tests.

11. Section 2.4.2 of Appendix N of Subpart B is amended to read as follows:

2.4.2 Oil burner adjustments (not including condensing furnaces). Adjust the burners of oil-fueled furnaces or boilers to give the CO_2 reading recommended by the manufacturer and an hourly Btu input during the steady state performance test described below which is within ±2 percent of the furnace nameplate input rating. Smoke in the flue may not exceed a No. 1 smoke during the steady state performance test as measured by the procedure in ANSI Standard Z11.182–1965 (R1971) (American Society for Testing and Materials D 2158–65 (1970)). Maintain the average draft over the fire and in the flue during the steady state performance test at that recommended by the manufacturer. Do not allow draft fluctuations exceeding 0.005 inches of water gauge. Do not make additional adjustments to the burner during the required series of performance tests. The instruments and measuring apparatus for this test are described in section 6.3 of ANSI Standard Z991.1–1972.

12. Appendix N to Subpart B is amended by adding, after section 2.4.2, the following new section:

2.4.3 Gas and oil burner adjustments for condensing furnaces. The burners on gas- and oil-fueled condensing furnaces and boilers shall be adjusted to give, during the steady state performance test described below, the CO_2 reading recommended by the manufacturer (if applicable) and an hourly Btu input which is within ±2 percent of the nameplate input rating. During the steady state performance test, the concentration of carbon monoxide present in dry flue gas shall not exceed 0.04 percent by volume. For oil-fired condensing units, the smoke in the flue gases shall not exceed a No. 1 smoke during the steady state performance test as measured by the procedure in ANSI Standard Z11.182–1965 (R 1971) (ASTM D2156–65 (1970)). If the carbon monoxide or smoke exceeds these specified limits during the steady state test, the burner shall be readjusted to give a lower CO_2 reading and all tests shall be started over. Once the burner is properly adjusted, no additional adjustments shall be made to it during the required series of performance tests.

If a vent-limiting means is provided on a gas pressure regulator, it shall be in placed during all tests.

13. Section 2.5.1 of Appendix N to Subpart B is amended to read as follows:

2.5.1 Gas-fueled forced-air central furnaces (including direct vent systems and condensing furnaces).

Adjust the external static pressure and air flow rate as specified in section 2.6 of ANSI Standard Z21.47–1978 and measure the inlet and outlet air temperatures in accordance with section 2.3.2 of this ANSI standard. If the above requirements on temperature rise and static pressure cannot simultaneously be met and the temperature rise does not exceed the maximum temperature rise specified by the manufacturer when the unit is operated against the minimum external static pressure specified in section 2.6 of ANSI Standard Z21.47–1978, then the blower motor voltage shall not be increased and the temperature rise shall be the lowest value attainable at the required minimum external static pressure, provided that it is not less than 15° F (8.5° C) below the manufacture's recommended maximum temperature rise. If the above restriction on not exceeding the maximum temperature rise specified by the manufacturer cannot be met while maintaining the required minimum external static pressure, then the voltage to the blower motor shall be increased to obtain the maximum temperature rise specified by the manufacturer at the required minimum external static pressure.

For gas-fueled condensing furnaces, the temperature rise during the steady state test described below shall be the maximum temperature rise specified by the manufacturer with the unit operating against a static pressure equal to a greater than the minimum external static pressure specified in section 2.6 of ANSI Standard Z21.47–1978. The static pressure shall be adjusted by symmetrically restricting the outlet air duct. If the above requirements on temperature rise and static pressure cannot simultaneously be met, then the blower motor voltage shall be increased. During the steady state and heat-up tests described below, the return air temperature to the condensing furnace shall remain within ±5° F of the value T_{RA} measured during the steady state performance tests and shall not be below 65° F.

If the above procedures require the voltage to the blower motor to be changed, then the requirements of section 2.5.3, relating to the blower motor voltage, are waived.

13a. Section 2.5.2 of Appendix N to Subpart B is amended to read as follows:

2.5.2 Gravity central furnaces (including direct vent systems). Maintain the air flow rate through the furnace such that the average normal air temperature rise at steady-state is not greater than 130° F above the inlet air temperature when the furnace is equipped with the vertical test plenum of extended casing and horizontal test ducts as described in section 2.1.1. Measure the outlet air temperature as specified in section 2.3.3 of ANSI Standard Z21.47–1978. Measure the inlet air temperature measured at the center of the plane of each inlet air opening by means of a single No. 24 American Wire Gauge (AWG) thermocouple, suitably shielded from direct radiation.

14. Section 2.5.3 of Appendix N to Subpart B is amended to read as follows:

2.5.3 Oil-fueled forced-air central furnaces (including direct vent systems and condensing furnaces). Adjust the external static pressure and air flow rate as specified in table 5 and section 6.2 of ANSI Standard Z91.1–1972. For oil fueled condensing furnaces, the temperature rise during the steady state tests described below shall be the maximum temperature rise specified by the manufacturer. During the steady state and heat-up tests described below, the return air temperature to the condensing furnace shall remain within ±5°F of the value T_{RA} measured during the steady state performance test.

15. Section 2.5.4 of Appendix N to Subpart B is amended to read as follows:

[3] Components of similar design may be substituted without requiring additional testing if the represented measures of energy consumption continue to satisfy the applicable sampling provision.

V 45 AG 12 80 UMI

2.5.4 Gas- and oil-fueled low pressure steam and hot water boilers (including direct vent systems and condensing boilers). For hot water boilers, adjust the water flow rate to produce a water temperature rise during steady state operation of between 120°F (48.9°C) and 185°F (73.9°C) and an outlet water temperature of 200°F (93.3°C) ±5°F (2.8°C). For finned tube boilers, the water flow shall be adjusted to produce a temperature rise of 20 to 40°F and outlet water temperature of 200°F ±5°F. Also for finned tube boilers, the maximum permissible temperature variation of the return water is limited to 5°F. For steam boilers, conduct the steady state performance test described in 3.1 at atmospheric pressure or at a pressure not exceeding 2 psia.

For condensing hot water boilers, the water flow rate shall be adjusted to produce a water temperature rise, during the steady state test described below, which is between 19.5 and 20.5°F. During the steady state and heat-up tests, the condensing boiler shall be supplied with return water having a temperature of 120°F. The maximum permissible variation of the return water temperature from the required value during the steady state and heat-up tests shall not exceed ±2°F, except during the first 30 seconds after start-up when it shall not exceed ±10°F, and between 30 and 60 seconds after start-up it shall not exceed ±5°F.

16. Section 2.6.1 of Appendix N to Subpart B is amended to read as follows:

2.6.1 Gas-fueled gravity furnaces, forced-air furnaces, and boilers (including direct vent systems and condensing furnaces and boilers). For units employing an integral draft diverter, install a grid of thermocouples wired in parallel, in a horizontal plane in the 5-foot test stack located 1 foot from the test stack inlet. The grid shall consist of either 9 or 17 thermocouples (manufacturer's option) if the nominal inside diameter of the flue pipe is greater than 2 inches and 5 thermocouples if the nominal inside diameter of the flue pipe is less than or equal to 2 inches. Henceforth in this section all parenthetical expressions refer to the 17 thermocouple grid, and all bracketed expressions refer to the 5 thermocouple grid. Equalize the length of all thermocouple leads before paralleling. Arrange the thermocouples in a grid with 1 thermocouple in the center of the test stack, and 8 (16) [4] along imaginary lines intersecting at right (45 degree) [right] angles in the horizontal plane at points one-third and two-thirds (one-third and two-thirds) [half] of the distance between the center of the pipe and the pipe wall.

For units which employ a draft hood, or a direct vent system which does not significantly preheat the incoming combustion air, install the thermocouple grid described above in a horizontal plane located within 12 inches (304.8 mm) of the furnace or boiler outlet, and upstream of the draft hood on units so equipped. Equalize the length of all thermocouple leads before paralleling and arrange the thermocouples as described above.

For furnaces or boilers which employ direct vent systems that significantly preheat the incoming combustion air, install the thermocouple grid described above in a plane parallel to and located within 6 inches (152.4 mm) of the vent/air intake terminal. Equalize the length of all thermocouple leads before paralleling and arrange the thermocouples as described above.

Use bead-type thermocouples having wire size not greater than No. 24 AWG. If there is a possibility that the thermocouples could receive direct radiation from the flame, install radiation shields on the flame side of the thermocouples only and position the shields so that they do not touch the thermocouple junctions.

Locate the thermocouples used for measuring conditioned warm air as described in ANSI Z21.47–1978, sections 2.3.1, 2.3.2, and 2.3.3. Measure the temperature of the inlet air by means of a single No. 24 AWG bead-type thermocouple, suitably shielded from direct radiation and located in the center of the plane of each inlet air opening.

For non-condensing boilers, measure the inlet and outlet water temperature on gas-fueled hot water boilers as shown in figure 3 of ANSI Standard Z21.13–1974. For condensing boilers, the inlet and outlet water temperatures shall be measured using sheathed thermocouples inserted through pipe plugs that are located within 12 inches of the inlet and outlet of the boiler. A minimum of 6 inches of thermocouple lead, immediately upstream of the thermocouple junction, shall be immersed in the water between the pipe plug and the boiler inlet/outlet. The remainder of the thermocouple lead shall be run along the surface of the pipe (and under any insulation) for a distance of not less than 3 feet. The pipe, 3 feet immediately before the boiler inlet and 3 feet immediately after the boiler outlet, shall be covered with insulation having a R value of not less than 7 (°F-h-ft²/Btu) and an outer layer of aluminum foil.

17. Section 2.6.2 of Appendix N to Subpart B is amended to read as follows:

2.6.2 Oil-fueled forced-air central furnaces and boilers (including direct vent systems and condensing furnaces and boilers). Install a grid of thermo-couples, wired in parallel and having equal length leads, in a plane perpendicular to the axis of the flue pipe. For systems other than direct vent systems which significantly preheat the incoming air, locate this plane at the position of the single thermocouple shown in figure 2 of ANSI Standard Z91.1–1972. For direct vent systems which significantly preheat the incoming air, locate the plane within 6 inches (152.4 mm) of the outlet of the vent/air intake terminal. Arrange the thermocouples as described in section 2.6.1.

Use bead-type thermocouples having a wire size not greater than No. 24 AWG. If there is a possibility that the thermocouples could receive direct radiation from the flame, install radiation shields on the flame side of the thermocouples only and position the shields so that they do not touch the thermocouple junctions.

Locate the thermocouples for measuring conditioned warm air as described in section 6.2 of ANSI Standard Z91.1–1972. Measure the temperature of the inlet air by means of a single thermocouple, suitably shielded from direct radiation and located in the center of the plane of each inlet air opening.

For non-condensing boilers, measure the inlet and outlet water temperatures on oil-fueled hot water boilers as described in section 7.4 and figure 2 of the January 1977 edition of the Hydronic Institute Standard "Testing and Rating Standard for Cast Iron and Steel Heating Boilers." For condensing oil-fueled boilers, the inlet and outlet water temperature shall be measured as described in 2.6.1 for gas-fueled condensing boilers.

18. Section 2.7 of Appendix N to Subpart B is amended to read as follows:

2.7 *Combustion measurement instrumentation.* Analyze the samples of stack and flue gases for furnaces and determine the concentration by volume of CO_2 present in the dry stack or flue gas with instrumentation which will result in a determination of the CO_2 concentration with an error no larger than ±0.1 percentage points.

19. Section 2.9 of Appendix N to Subpart B is amended to read as follows:

2.9 *Room ambient temperature.* During the time period required to perform all the testing and measurement procedures specified in section 3.0, maintain the room temperature within ±5°F (+2.8 C) of the value T_{RA} measured at the end of the steady state performance test. During these tests, the room temperature may not exceed 100°F (37.8 C) or fall below 65°F (18.3 C) for noncondensing furnaces and boilers and condensing boilers and may exceed 80°F or fall below 65°F for condensing furnaces. Room temperature (T_{RA}) shall be the arithmetic average temperature of the test area, determined by measurement with four No. 24 AWG iron-constantan bead-type thermocouples with junctions shielded against radiation, located approximately at 90-degree positions on a circle circumscribing the furnace or furnace enclosure under test, in a horizontal plane approximately at the vertical midpoint of the appliance or test enclosure, and with the junctions approximately 24 inches from sides of the furnace or test enclosure and located so as not to be affected by other than room air. The temperature of the air for combustion and the air for draft relief shall not differ more than ±5°F from room temperature as measured above.

20. Section 2.10 of Appendix N to Subpart B is amended to read as follows:

2.10 *Equipment used to measure mass flow rate in flue and stack.* The tracer gas chosen for this task should have a density which is less than or approximately equal to the density of air. Use a gas that is of a different chemical species or different concentration from the flue gas to be measured and unreactive with the environment to be encountered. Using instrumentation of either the batch or continuous type, measure the concentration of tracer gas with an error no larger than ±2 percent of the value of the concentration measured.

21. Section 3.1.1 of Appendix N to Subpart B is amended to read as follows:

3.1.1 Gas-fueled gravity furnaces, forced-air central furnaces, and low pressure steam and hot water boilers (including direct vent systems and not including condensing furnaces, or boilers). The following procedure is to be used for gas-fueled gravity furnaces, forced-air central furnaces, and boilers (including direct vent systems).

Set up the furnace or boiler as specified in sections 2.1, 2.2, and 2.3. Begin the steady state performance test by operating the burner and the circulating air blower or water pump, with the adjustments specified by 2.4.1 and 2.5, until steady state conditions are attained as indicated by a temperature variation in three successive readings taken 15 minutes apart of not more than: (1) 3°F (1.7C) in the stack gas temperature for furnaces and boilers equipped with draft diverters, (2) 5°F (2.8C) in the flue gas temperature for furnaces and boilers equipped with either draft hoods, or direct vent systems, and (3) 4°F (2.2C) in the outlet water temperature for hot water boilers.

On units employing draft diverters, measure the room temperature (T_{RA}) as described in 2.9 and measure the steady state stack gas temperature ($T_{S.SS.X}$) using the thermocouple grid located in the 5-foot test stack as described in 2.6.1. Secure a sample of stack gases in the plane where $T_{S.SS.X}$ is measured, or within 3.5 feet of this plane on the downstream side, and determine the concentration by volume of carbon dioxide ($X_{CO^2,S}$) present in dry stack gas. If the location of gas sampling differs from the temperature measurement plane, care should be taken to assure that there are no air leaks in the stack pipe between the two locations.

On units employing draft hoods or direct vent systems, measure the room temperature (T_{RA}) as described in 2.9 and measure the steady state flue gas temperature ($T_{F.SS.X}$) using the thermocouple grid located in the flue pipe as described in section 2.6.1. Secure a sample of the flue gas in the plane of temperature measurement and determine the concentration by volume of CO_2 ($X_{CO^2,F}$) present in dry flue gas. For units employing draft hoods or direct vent units which significantly preheat the incoming combustion air, secure a sample of the flue gas in the plane of temperature measurement and determine the concentration by volume of CO_2 ($X_{CO^2,F}$) present in dry flue gas. For direct vent units which do not significantly preheat the incoming combustion air, secure a sample of the flue gas in the plane of temperature measurement, or within 3.5 feet of this plane on the downstream side, and determine the concentration by volume of CO_2 ($X_{CO^2,F}$) present in dry flue gas. If the location of gas sampling differs from the temperature measurement plane, care should be taken to assure that there are no air leaks in the flue pipe between the two locations.

Determine the steady state heat imput rate (Q_{in}), including pilot gas, by multiplying the measured higher heating value of the test gas by the steady state gas input rate corrected to standard conditions of 60°F and 30 inches of mercury. Use measured values of gas temperature and pressure at the meter and the barometric pressure to correct the metered gas flow rate to standard conditions.

Measure the steady state electric power to the power burner (PE) on units so equipped. For furnaces, measure the steady state electrical power to the conditioned air blower (BE). For hot water boilers, use a steady state water pump power of 0.13kW.

After the above test measurements have been completed on units employing integral draft diverters, secure a sample of the flue gases at the inlet to the draft diverter and determine the concentration of CO_2 ($X_{CO^2,F}$) present. In obtaining this sample of flue gas, move the sampling probe around to assure that an average value is obtained for the CO_2 concentration. To obtain the average CO_2 concentration for units with multiple heat exchanger outlets, draw and weigh a sample from each outlet. Block the draft diverter relief opening and cover the draft diverter and flue gas collection box (on a power vented unit) with insulation having an R value no less than 7 (°F-HR-ft²/Btu) and an outer layer of aluminum foil. If the unit is turned off during the process of blocking the diverter relief opening, run it until steady state conditions (as defined above) are again achieved. Progressively restrict the test stack outlet until the concentration of CO_2 in flue gas samples secured from the test stack in the plane where $T_{S.SS.X}$ was measured or within 3.5 feet of this plane on the downstream side, is within ±0.2 percentage points of the previously determined value of ($X_{CO^2,F}$). Measure the flue gas temperature ($T_{F.SS}$) using the thermocouple grid located in the 5-foot test stack as described in 2.6.1.

22. Section 3.1.2 of Appendix N to Subpart B is amended to read as follows:

3.1.2 Oil-fueled forced-air central furnaces and low pressure steam and hot water boilers (including direct vent systems and not including condensing furnaces or boilers). Set up and adjust the furnace or boiler as specified in sections 2.1, 2.2 and 2.3.4. Begin the steady state performance test by operating the burner and the circulating air blower or water pump with the adjustments specified by 2.4.2 and 2.5 until steady state conditions are attained as indicated by a temperature variation in three successive readings taken 15 minutes apart of not more than: (1) 5°F (2.8C) in the flue gas temperature for furnaces and boilers and (2) 4°F (2.2C) in the outlet water temperature for hot water boilers.

Smoke in the flue for units equipped with power burners may not exceed a No. 1 smoke during the steady state performance test as measured by the procedure described in ANSI Standard Z11.182–1975 (R1971) (ASTM D 2156–65 (1970)). Maintain the average draft (recommended by the manufacturer) over the fire and in the breeching during the steady state performance test. Draft fluctuations may not exceed 0.005 inches of water guage.

Measure the room temperature (T_{RA}) as described in 2.9 and measure the steady state flue gas temperature ($T_{F,SS}$) using the thermocouple grid located in the flue pipe as described in 2.6.1. Secure a sample of the flue gas in the plane of temperature measurement or within 3.5 feet of this plane on the downstream side and determine the concentration by volume of CO_2 ($X_{CO^2,F}$) present in dry flue gas. If the location of gas sampling differs from the temperature measurement plane, care should be taken to assure that there are no air leaks in the flue pipes between the two locations.

Measure and record the steady state heat imput rate (Q_{in}) and the steady state electrical power to the power burner (PE) on unit so equipped. For furnaces, measure the steady state electrical power to the conditioned air blower (BE). For hot water boilers, use a steady state water pump power of BE=0.13 kW.

23. Appendix N to Subpart B is amended by renumbering the present section 3.1.3 as 3.1.4.

24. Appendix N to Subpart B is amended by renumbering the present section 3.1.3 as 3.1.5.

25. Appendix N to Subpart B is amended by adding a new section 3.1.3 to read as follows:

3.1.3 Gas- and oil-fueled condensing furnaces and boilers. The furnace or boiler shall be set up as specified in sections 2.1, 2.2, 2.3, and 2.6. Begin the test by operating the burner and circulating air blower or water pump for hot water boilers, with the adjustments specified in 2.4 and 2.5, until steady state conditions are obtained as indicated by a temperature variation in their successive readings taken 15 minutes apart of not more than 1°F (0.56°C) in the flue gas temperature and the supply (outlet) water temperature.

Measure the room temperature (T_{RA}) as described in section 2.9, and measure the steady state flue gas temperature ($T_{F,SS}$) using the thermocouple grid described in section 2.6. A sample of the flue gas shall be secured in the plane of temperature measurement or within 3.5 feet of this plane on the downstream side and analyzed to determine the concentration by volume of CO_2 ($X_{CO2,F}$) present in the dry flue gas. If the location of sampling the CO_2 differs from the temperature measurement plane, care should be taken to assure that there are no air leaks in the flue pipe between these two locations.

The steady state heat imput rate (Q_{in}), including pilot gas input if appropriate, shall be determined by multiplying the measured higher heating value of the test fuel by the measured steady state imput rate. If gas is the fuel used, correct the imput rate to standard conditions of 60°F and 30 inches of mercury using measured values of gas temperature and pressure at the meter and the measured barometric pressure.

Measure the steady electric power to the burner (PE), if appropriate. For furnaces, measure the steady state electrical power to the conditioned air blower (BE). For hot water boilers, use a steady state water pump power of BE = 0.13 kw. Record all measured values.

26. Section 3.2.1 of Appendix N to Subpart B is amended to read as follows:

3.2.1 Gas- and oil-fuel gravity and forced-air central furnaces (including direct vent systems but not including condensing furnaces). Turn off the main burner after steady state testing is completed and measure the flue gas temperature by means of the thermocouple grid described above at 1.5 ($T_{F,\,OFF}$ (t_5)) and 9.0 minutes ($T_{F,OFF}$ (t_6)) after the burner shuts off. By-pass the damper control in units employing stack dampers and integral draft diverters or draft hoods so that the damper remains open during the cool down test.

During this off-period, allow a time delay (t^+) between burner shut-down and blower shut-down of either 3 minutes or until the supply air temperature drops to a value of 40° F (22.2° C) above the inlet air temperature, whichever results in the longest blower on-time. However, if the furnace employs a single motor to drive a power burner and an indoor air circulating blower, turn off the blower and the burner together. If the blower delay time exceeds 3 minutes, measure the time delay (t^+) between burner shut-off and blower shut-off using a stop watch. The quantity t^+ shall be set equal to this measured delay time or 13.3 minutes, whichever is smaller. For oil-fueled furnaces not equipped with stack dampers, maintain the draft in the flue pipe within a range of −0.001 and +0.005 inch of water gauge of the average draft maintained during the steady state test described in section 3.1 if the optional test in section 3.6 is being carried out, or within ±0.01 inch of water gauge of the average steady state draft if it is not. For a direct vent system with a flue damper or a furnace equipped with both a stack damper and a barometric damper, close the flue or stack damper during the cool-down test. Keep the main burner(s) off until equilibrium conditions are attained as indicated by variations in the flue gas temperature of not more than 3° F (1.7° C) between three successive readings taken 15 minutes apart. For units employing a continuously burning pilot light, take a third flue gas temperature measurement and determine the off-period minimum flue gas temperature ($T_{F,\,OFF}(\infty)$). For units not employing a continuously burning pilot light, set ($T_{F,\,OFF}(\infty)$) equal to the room temperature (T_{RA}). During this cool-down test, measure the energy input rate to the pilot light (Q_P), if the unit is so equipped, within an error no larger than ±3 percent. Record all measured values.

27. Section 3.2.2 of Appendix N to Subpart B is amended to read as follows:

3.2.2 Gas- and oil-fueled boilers (including direct vent systems and not including condensing boilers). After steady state testing has been completed, turn the main burner(s) off and measure the flue gas temperature at 3.75 ($T_{F,\,OFF}(t_5)$) and 22.5 ($T_{F,\,OFF}(t_6)$) minutes after the burner shuts off, using the thermocouple grid described above. During this off-period, do not allow water to circulate through the hot water boilers. Make a third flue gas temperature measurement 45 minutes after the burner shuts off to determine the off-period minimum flue gas temperature ($T_{F,\,OFF}(\infty)$). During this cool-down test, measure the energy input rate to the pilot light (Q_P), if the unit is so equipped, to within an error no larger than ±3 percent. Record all measured values. For oil-fueled units not equipped with stack dampers, maintain the draft in the flue within the same ranges called for in section 3.2.1 above. For direct vent systems with flue dampers or boilers equipped with both stack dampers and barometric dampers, close the flue or stack damper during the cool-down test.

28. Appendix N to Subpart B is amended by adding, after section 3.2.2, the following new sections:

3.2.3 Gas- and oil-fueled condensing furnaces. After steady state testing is completed and all required measurements made, the burner shall be turned off and the flue gas temperature measured by means of the thermocouple grid described in section 2.6 at 1.5 ($T_{F,\,OFF}\,t_5$) and 9.0 ($T_{F,\,OFF}\,t_6$) minutes after the burner shuts off. Units employing flue dampers shall have their dampers closed during the cool-down test. During this off-period, there shall be a time delay (t^+) between burner shut down and blower shut-down of either 1.5 minutes or until the supply air temperature drops to a value of 40° F (22.2° C) above the inlet air temperature, whichever results in the larger blower on-time. An exception to this is if the furnace employs a single motor to drive a power burner and an indoor air circulating blower, the blower and the burner shall be shut off together. If the blower delay time exceeds 1.5 minutes, the time between burner shut-off and blower shut-off shall be measured using a stop watch and the quantity t^+ shall be set equal to this measured delay time or 13.3 minutes, whichever is smaller. For units equipped with a continuously burning pilot light, the main burner(s) shall remain off until equilibrium conditions are attained as indicated by variations in the flue gas temperature of not more than 0.5° F (0.28° C) in three successive readings taken 15 minutes apart, and then a third flue gas temperature measurement shall be made to determine the off-period minimum flue gas temperature ($T_{F,\,OFF}(\infty)$). For units not equipped with a continuously operating pilot light, $T_{F,\,OFF}(\infty)$ shall be set equal to the measured room temperature (T_{RA}) and the unit shall remain off for a minimum time period of 20 minutes.

During the cool-down test, the energy input rate to the pilot light (Q_P), if the unit is so equipped, shall be measured with an error no larger than ±3 percent. Record all measured values.

3.2.4 Gas- and oil-fueled condensing boilers. After steady state testing is completed, the main burner(s) shall be turned off and the flue gas temperature measured at 3.75 ($T_{F,\,OFF}(t_5)$) and 22.5 ($T_{F,\,OFF}(t_6)$) minutes after the burner(s) shuts off, using the thermocouple grid described in section 2.6. During this off-period, no water shall be allowed to circulate through the boiler. A third flue gas temperature shall be made 45 minutes after the burner(s) shuts off to determine the off-period minimum flue gas temperature ($T_{F,\,OFF}(\infty)$). During this cool-down test, the energy input rate to the pilot light (Q_P), if the unit is so equipped, shall be measured with an error no larger than ±3 percent. For units equipped with flue dampers, the damper shall be closed during the cool-down test. Record all measured values.

29. Section 3.3.1 of Appendix N to Subpart B is amended to read as follows:

3.3.1 Gas- and oil-fueled central furnaces (including direct vent systems and not including condensing furnaces). After equilibrium conditions are achieved following the cool-down test and the required measurements performed, turn on the furnace and measure the flue gas temperature using the thermocouple grid described above, at 0.5 ($T_{F,\,ON}(t_1)$) and 2.5 ($T_{F,\,ON}(t_2)$) minutes after the main burner(s) comes on. After the burner start-up, delay the blower start-up by 1.5 minutes (t^-) unless: (1) the furnace employs a single motor to drive the power burner and the indoor air circulating blower, in which case the burner and blower shall be started together, or (2) the delay time would result in the activation of a temperature safety device which shuts off the burner, in which case the fan control shall be permitted to start the blower. In the latter case, if the fan control is adjustable, set it to start the blower at the highest temperature. If the fan control is permitted to start the blower, measure the time delay (t^-) using a stop watch. Record the measured temperatures. During the heat-up test for oil-fueled furnaces, maintain the draft in the flue pipe within ±0.01 inch of water gauge of the manufacturer's recommended on-period draft.

30. Section 3.3.2 of Appendix N to Subpart B is amended to read as follows:

3.3.2 Gas- oil-fueled boiler (including direct vent systems and not including condensing boilers). Fifty minutes after the main burner(s) is turned off for the cool-down test, turn on the steam or hot water boiler and measure the flue gas temperature using the thermocouple grid described above, at 1.0 ($T_{F,\,ON}(t_1)$) and 5.5 ($T_{F,\,ON}(t_2)$) minutes after the main burner(s) comes on. Start the pump circulating the water through the hot water boiler simultaneously with the main burner(s) and maintain the water flow rate at that maintained during the steady state test described in section 3.1. During the heat-up test for oil fired boilers, maintain the draft in the flue pipe within ±0.01 inch of water column of the manufacturer's recommended on-period draft. Record the measured temperatures.

31. Appendix N to Subpart B is amended by adding, at the end of section 3.3.2, the following new sections:

3.3.3 Gas- and oil-fueled condensing furnaces. After the cool-down test is completed, the furnace shall be turned on and the flue gas temperature measured using the thermocouple grid described in section 2.6 at 0.5 ($T_{F,\,ON}(t_1)$) and 2.5 ($T_{F,\,ON}(t_2)$) minutes after the main burner(s) comes on. During this on-period, there shall be a time delay (t^-) between the burner start-up and blower start-up of 1.5 minutes. Two exceptions to this are: (1) if the furnace employs a single motor to drive a power burner and an indoor air circulating blower, both shall be started together, and (2) if a 1.5 minute blower delay time results in the operation of the high limit control to shut the burner off, the fan control shall be permitted to automatically start the blower provided, if it is adjustable, it is set to turn the blower on at the highest flue gas temperature. If the fan control is permitted to start the blower, the time delay (t^-) between burner and blower start-up shall be measured using a stop watch. Record the measured values.

3.3.4 Gas- and oil-fueled condensing boilers. Fifty minutes after the main burner(s) is turned off for the cool-down test, the condensing boiler shall be turned on and the flue gas temperature measured using the thermocouple grid described in section 2.6 at 1.0 ($T_{F,\,ON}(t_1)$) and 5.5 ($T_{F,\,ON}(t_2)$) minutes after the main burner comes on. The pump circulating the water through the boiler shall be started simultaneously with the main burner(s), the water flow rate shall be the same as that maintained during the steady state test described in 3.1, and the return water temperature shall be within the limits specified in section 2.5.4.

32. Section 3.4(i) and (ii) of Appendix N to Subpart B is amended to read as follows:

(i) Electric and gas-fueled gravity and forced-air central furnaces—ANSI Standard Z21.47–1978, section 2.12.1 and Exhibit B.

(ii) Gas- and oil-fueled low pressure steam and hot water boilers—ANSI Z21.47–1978 section 2.12.1 and Exhibit B.

33. The first two sentences of 3.6 of Appendix N to Subpart B are amended to read as follows:

3.6 *Optional procedure for determining D_f, D_p, and D_b for systems equipped with power burners, forced draft fans, induced draft fans and for direct vent systems with nonpowered burners.* On systems which employ power burners, forced draft fans, or induced draft fans and do not employ a stack damper, or do employ a stack damper but with a draft diverter or draft hood, and direct vent system measure D_f (the ratio of gas mass flow rate through the flue during the off-cycle to the gas mass flow rate through the flue during the on-cycle at identical temperatures) during the cool-down test described in section 3.2.

* * * * *

34. Appendix N to Subpart B is amended by adding the following new paragraph at the end of section 3.6:

* * * * *

For any unit whose design is such that there is no air flow through the combustion chamber and heat exchange during the off period, D_f and D_b shall be set equal to 0.0. For condensing units employing power burners, forced draft fans, or induced draft fans, the values of D_f and D_b may be obtained using the optional procedures described above in this section, except that the steady state conditions shall be indicated by a temperature variation in three successive readings, taken 15 minutes apart, of not more than 1°F in the flue gas temperature in the case of furnaces and the supply (outlet) water temperature for hot water boilers.

35. Appendix N to Subpart B is amended by adding after section 3.6, the following new section:

3.7 *Optional procedure for condensing furnaces and boilers which have no off-period flue losses.* At the discretion of the manufacturer, the cool-down and heat-up tests specified in 3.2 and 3.3 may be omitted on condensing units for which there is no air flow through the combustion chamber and heat exchange during the off period. In lieu of conducting the cool-down and heat-up tests, the manufacture may use the losses determined during the steady state test described in 3.1 when calculating part load efficiency (η_w).

36. Section 4.2.2 of Appendix N to Subpart B is amended to read as follows:

4.2.2 Ratio of combustion air to stoichiometric air. Determine the ratio of combustion air mass flow rate to stoichiometric air mass flow rate ($R_{T,F}$) for the test fuel from Figure 1 by using the value of dry flue gas CO_2 concentration ($X_{CO2,F}$) determined in accordance with section 3.1 of this appendix.

37. Section 4.2.5 of Appendix N to Subpart B is amended to read as follows:

4.2.5 Steady state efficiency. Calculate the steady state efficiency (excluding jacket loss) (η_{ss}) expressed in percent and defined as:

$\eta_{ss} = 100 - C'_L\,L_{L,A} - L_{s,SS,A} - L'_c$ for noncondensing furnaces and boilers and condensing furnaces

and

$$\eta_{ss} = 100 - L_{L,A} - L_{s,ss,A} - \frac{(100)(.24)(180-120)\left[1+(R_{T,F})(A/F)\right]}{HHV_A}, \text{ for condensing boilers}$$

where:

$L_{L,A}$ = average latent heat loss of the test fuel determined in accordance with Table 3, in percent.

$L_{s,SS,A}$ as defined in 4.2.4.

(.24) = specific heat of air.

(180) = rated return water temperature.

(120) = test return water temperature.

$R_{T,F}$ as defined in 4.2.2.

A/F = the stoichiometric air/fuel ratio determined in accordance with table 3.

100 = number which relates results in percentages.

HHV_A = average higher heating value of the test fuel determined in accordance with Table 3, in Btu's per pound.

L'_C=0 for non-condensing furnaces or boilers and as determined in 4.2.33 for condensing furnaces or boilers.

C'_L=1 for non-condensing furnaces or boilers and as determined in 4.2.33 for condensing furnaces or boilers.

38. Section 4.2.6 of Appendix N to Subpart B is amended to read as follows:

4.2.6 Average ratio of stack gas mass flow rate to flue gas mass flow rate at full-load steady state operation. Determine the average ratio of stack gas mass flow rate to flue gas mass flow rate at full-load steady state operation (S/F) for the system number to be tested from table 1 or 2.

39. Appendix N to Subpart B is amended by adding in the equation in section 4.2.8 a minus sign, "−", between the two terms of the numerator.

40. Appendix N to Subpart B is amended by changing the fourth and fifth paragraphs of section 4.2.13 to read:

D_p=off-cycle flue gas draft factor selected from table 1 or, for units with power burners, induced draft fans, or forced draft fans where D_p is measured, determined in accordance with section 4.4.2 of this appendix.

D_b=off-cycle stack gas draft factor selected from table 1 or, for units with power burners, induced draft fans, or forced draft fans where D_p is measured, determined in accordance with section 4.4.3 of this appendix.

41. Section 4.2.15 of Appendix N to Subpart B is amended to read as follows:

4.2.15 Correction factors for systems 9–12. Calculate a correction factor which corrects for the use of outdoor air for combustion instead of air at room temperature (C_n) defined as:

for non-condensing furnaces:

$$C_n = 1 + \frac{(70-42)\,\eta_{ss}}{(T_{F,SS}-T_{RA})\,100}$$

for condensing furnaces:

$$C_n = \frac{T_{F,SS}-42}{T_{F,SS}-70}$$

42 = average outdoor temperature

where:

$T_{F,SS}$ = average flue gas temperature at full-load steady-state

43. Appendix N to Subpart B is

42=average outdoor temperature corresponding to 5,200 degree day location, in degrees fahrenheit.
η_{ss} as defined in 4.2.5.
$T_{F,SS}$ as defined in 4.2.4.
70 assumed average indoor air temperature.
T_{RA} as defined in 4.2.4.

The correction factor which corrects for the effect of outdoor air passing through the heat exchanger during the off-period, C'_L is defined as: $C'_L=1.22$

42. Appendix N to Subpart B is amended by changing the second paragraph of section 4.2.22 to read as follows:

For systems 1–8 and condensing units:

* * *

43. Appendix N to Subpart B is amended by changing the third paragraph of section 4.2.22 to read as follows:

For systems 9–12 except condensing units:

* * *

44. Appendix N to Subpart B is amended by changing section 4.2.32 to read as follows:

4.2.32 Latent heat loss coefficient (C_L). For condensing furnaces, and for part load and steady state conditions, calculate the latent heat loss coefficient expressed as a decimal and defined as:
for part load conditions

$$\text{If } P_V > P_V^S \quad C_L = \frac{P_V^S}{P_V} \times \frac{14.7 - P_V}{14.7 - P_V^S}$$

$$\text{If } P_V \leq P_V^S \quad C_L = 1.0$$

for steady-state conditions

$$\text{If } P_V > P_V^{S,SS} \quad C'_L = \frac{P_V^{S,SS}}{P_V} \times \frac{14.7 - P_V}{14.7 - P_V^{S,SS}}$$

$$\text{If } P_V \leq P_V^{S,SS} \quad C_L = 1.0$$

where:

$$P_V = \frac{M_V}{M_{FG}} \times \frac{m_{FG}}{m_V} (14.7),$$

is the water vapor partial pressure that would be in the flue gases if there were no condensation and the atmospheric pressure were equal to 14.7 psia.
14.7=standard atmospheric pressure in psia.
M_V=18, is the approximate molecular weight of water.
M_{FG}=
29.0 for No. 1 and No. 2 fuel oil
28.0 for natural gas
27.5 for manufactured gas
28.5 butane and propane, are the approximate apparent molecular weights of flue gases for different fuels.

$$m_{FG} = 1 + \left[(A/F) \quad (R_{T,F})\right]$$

is the weight of flue gases generated per unit weight of fuel burnt.

$$m_V = \frac{(HHV_A) \quad (L_{L,A})}{(100) \quad (1053.3)}$$

(HHV_A) as defined in 4.2.5
$(L_{L,A})$ as defined in 4.2.5
(A/F) as defined in 4.2.5
$(R_{T,F})$ as defined in 4.2.5
(1053.3) is assumed latent heat/lb. of water
P_V^S=saturated vapor pressure determined from Table 5 at average flue gas temperature $T_{F,ON}$.
$P_V^{S,SS}$=saturated vapor preasure determined from Table 5 at average flue gas temperature at full-load steady-state operation $T_{F,SS}$.
where:
If the option described in 3.7 is not employed:

$$T_{F,ON} = T_{F,SS} - \frac{\Theta_{F,O}\left[1 - e^{-(t_{ON}/\tau_{ON})}\right]}{(t_{ON}/\tau_{ON})}$$

If the option described in 3.7 is employed: $T_{F,ON}=T_{F,SS}$
where:
$T_{F,SS}$ as defined in 4.2.4.
$\theta_{F,O}$ as defined in 4.2.22.
t_{ON} as defined in 4.2.20.
τ_{ON} as defined in 4.2.20.

45. Appendix N to Subpart B is amended by renumbering existing section 4.2.33 to 4.2.35.

46. Appendix N to Subpart B is amended by adding a new section 4.2.33 to read as follows:

4.2.33 Condensate heat loss. For condensing furnaces, and for part load and steady state conditions calculate the loss due to condensate going down the drain and correct for the fact that this condensate did not go up the flue as heated vapor (as was assumed in determining $L_{S,SS,A}$), expressed as a percent and defined as:
for part load conditions:

$$L_C = \frac{L_{L,A}(1 - C_L)\left[1.0 \quad (T_{F,SS} - 70) - .45\ (T_{F,SS} - 42)\right]}{1053.3}$$

for steady steady state conditions:

$$L'_C = \frac{L_{L,A}(1 - C'_L)\left[1.0 \quad (T_{F,SS} - 70) - .45\ (T_{F,SS} - 42)\right]}{1053.3}$$

where:
$T_{F,SS}$ as defined in 4.2.4.
.45 specific heat of water vapor
1.0 specific heat of water (liquid)
70 as defined in 4.2.15
42 as defined in 4.2.15
C_L as defined in 4.2.32
C'_L as defined in 4.2.32
$L_{L,A}$ as defined in 4.2.5
1053.3 latent heat vaporization of water

47. Appendix N to Subpart B is amended by adding a new section 4.2.34 to read as follows:

4.2.34 Part-load fuel utilization efficiency. Calculate the part-load fuel utilization efficiency, expressed as a percent and defined as:
If the option described in 3.7 is not employed:

$$\eta_U = 100 - C_L L_{L,A} - L_C - C_J L_J - \frac{t_{on}}{t_{on} + \left(\frac{Q_p}{Q_{NP}}\right)(t_{off})} \left(Q_{NP}\right)\left[L_{S,ON} + L_{S,OFF} + L_{LON} + L_{LOFF}\right]$$

If the option described in 3.7 is employed:

$$\eta_U = 100 - C_L L_{L,A} - L_C - C_J L_J - \frac{t_{on}}{t_{on} + \left(\frac{Q_p}{Q_{NP}}\right)(t_{off})} \left[C_S L_{S,SS,A}\right]\left(Q_{NP}\right)$$

where:
C_J=0 for furnaces or boilers intended to be installed indoors, 3.3 for furnaces intended to be installed outdoors, and 4.7 for boilers intended to be installed outdoors.
C_S as defined in 4.2.15.
C_L=1 for non-condensing furnaces or boilers, and as determined in 4.2.32 for condensing furnaces or boilers.
t_{on} as defined in 4.2.20.
t_{off} as defined in 4.2.21.
Q_p=pilot flame fuel input rate determined in accordance with section 3.2 of this Appendix, in Btu's per hour.
Q_{NP}=nameplate input rating as defined in 1.31.
L_J=jacket loss determined in accordance with section 3.4 of this Appendix, in percent.
$L_{L,A}$ as defined in 4.2.5.
t_{on} as defined in 4.2.20.
t_{off} as defined in 4.2.21.
$L_{s,on}$ as defined in 4.2.28.
$L_{s,off}$ as defined in 4.2.29.
$L_{l,on}$ as defined in 4.2.30.
$L_{l,off}$ as defined in 4.2.31.
$L_{S,SS,A}$ as defined in 4.2.4.
L_C=0 for non-condensing furnaces or boilers, and as determined in 4.2.33 for condensing furnaces or boilers.

47a. Appendix N to Subpart B is amended by changing in section 4.2.35, 4.8 and 4.12 the term Q_{in} to Q_{NP} in all formulas and replacing the expression "Q_{in}" as defined in 4.2.32" to Q_{NP} as defined in 1.31.

48. Appendix N to Subpart B is amended by changing in sections 4.4.1, 4.4.2, 4.4.3, and 4.5, the words "power burner" to "power burner, induced draft fan or forced draft fan."

49. Section 4.4 of Appendix N to Subpart B is amended by adding a paragraph at the end of the section to read as follows:

* * * * *

For direct exhaust systems utilizing indoor air for combustion and employing forced or induced draft shall be tested as a direct vent system without preheating of combustion air. The test data for the type of furnace shall be reduced as a system number 2 with S/F=1, and $D_s=D_f=0.4$ or D_p if the unit is not equipped with a flue damper, and as a system number 8 with S/F=1, $D_f=0.4$ or D_p, and $D_s=(0.4)\ D_e$ or $(D_p)\ (D_8)$, if the unit is equipped with a flue damper.

50. Appendix N to Subpart B is amended by changing the fourth paragraph of section 4.7 to read as follows:

$Q_{out}=(\eta_{ss}/100)$ (nameplate input) rounded off to the nearest 1,000 Btu/hr for units intended for installation in a heated space, $Q_{out}=(\eta_{ss}/100)-(3.3)\ (L_J/100))$ (nameplate input) rounded off to the nearest 1,000 Btu/hr for finned tubed boilers intended for installation outdoors or in an unheated space, and $Q_{out}=(\eta_{ss}/100)-(L_J/100)$ (nameplate input) rounded off to the nearest 1,000 Btu/hr for finned tubed boilers intended for installation outdoors or in an unheated space.

51. Appendix N to Subpart B is amended by changing in section 4.7 the defined term "O_{in} as defined in 4.2.5" to "η_{ss} as defined in 4.2.5."

52. Appendix N to Subpart B is amended by changing the cite "4.2.32" in section 4.7 to "4.2.34."

53. Appendix N to Subpart B is amended by adding at the end of section 4.7 the defined term:

nameplate input as defined in section 1.31.

53a. Appendix N in Subpart B is amended by replacing the existing formula for $E_{F,R}$ to:

$E_{F,R}=(Q_{in}-Q_P)$ BOH+8760 Q_P

54. Appendix N to Subpart B is amended by adding a new section 4.15 after existing section 4.14 to read as follows:

4.15 *Energy factor for furnaces.*
Calculate the energy factor for gas and oil-fueled furnaces*, EF, defined as:

$$E_F = \left[\frac{(\eta_U/100)\left[E_F - (4600\ Q_P)\right]}{E_F + 3413\ E_{AE}}\right] (000)$$

Where:
η_u is the part-load fuel utilization-efficiency defined in 4.2.34.
E_F is the average annual fuel energy consumption as defined in section 4.8.
4600 as defined in 4.2.35.
Q_P as defined in 4.2.35.
E_{AE} is the average annual auxiliary electric energy consumption as defined in 4.9.
3413 conversion factor corresponding to 1 kilowatt=3414 Btu/hour.
*Set the energy factor for electric-furnaces equal to the annual fuel utilization-efficiency as defined in 4.1.

55. Appendix N to Subpart B is amended by changing the title of Table 1 to read as follows:

Factors Describing Air Flow Rate for Gas- and Oil-Fired Non-Condensing Furnaces or

Boiler Utilizing Indoor Air for Combustion and Draft Control.

56. Appendix N to Subpart B is amended by adding to the title of Table 2 the phrase "and All Condensing Furnaces or Boilers" at the end of the existing title.

57. Appendix N to Subpart B is amended by adding to Table 4 the following line items preceding the existing line items:

5,000 to 10,000	5	5
11,000 to 16,000	10	5, 10
17,000 to 25,000	15	10, 15

58. Appendix N to Subpart B is amended by adding a new Table 5 after existing Table 4 to read as follows:

Table 5.—*Saturated Vapor Pressure at Different Temperatures*

Temperature (°F):	Pressure (lb./in²a)
700	3094.3
600	1543.2

ENVIRONMENTAL PROTECTION AGENCY

[FRL 1567-5]

Air Quality Assessment of Hydrocarbon and Carbon Monoxide Emission Standards for 1984 and Later Model Year Heavy-Duty Engines

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: In accordance with the provisions of the Clean Air Act as amended (the Act), Section 202(a)(3)(E)(i) (42 USC 7521(a)(3)(E)(i)), EPA is conducting a continuing pollutant specific study concerning the effects of hydrocarbon (HC) and carbon monoxide (CO) emissions from heavy-duty engines and other mobile sources of these pollutants on the public health and welfare. The purpose of this study is to assess the heavy-duty engine or vehicle control strategy contained in the 1977 Clean Air Act Amendments and provide a basis for evaluating the adequacy of that strategy for attaining the established air quality standards.

EPA considered the most up-to-date findings of the study in promulgating HC and CO exhaust emission standards applicable to 1984 and later model year heavy-duty motor vehicle engines. That information was made part of the record of the rulemaking. EPA is now publishing that information in the form of a Report to Congress to meet the requirements of section 202(a)(3)(E)(i) of the Act, which states that "the results of such study shall be published in the **Federal Register** and reported to the Congress * * *."

For additional copies of this report, or for further information, contact: Mr. Thomas Nugent, Emission Control Technology Division, Environmental Protection Agency, 2565 Plymouth Road, Ann Arbor, MI 48105, telephone: (313) 668-4491.

Dated: August 7, 1980.

David G. Hawkins,

Assistant Administrator for Air, Noise and Radiation.

Air Quality Assessment of Hydrocarbon and Carbon Monoxide Emission Standards for 1984 and Later Model Year Heavy-Duty Engines

A Report to Congress, June 1980

I. Summary

This report to the Congress is intended to fulfill the requirement of Section 202(a) the Clean Air Act as amended, for pollutant specific studies of the health and welfare effects of emissions of hydrocarbons and carbon monoxide from heavy-duty engines or vehicles. As part of the original process of developing ambient air quality standards, the Environmental Protection Agency (EPA) developed and published criteria for air quality standards requisite for the protection of the public health and welfare. These "criteria documents" were initially published in March 1970 for carbon monoxide, hydrocarbons, and photochemical oxidants. Under Section 108 of the Act, EPA has begun the process of revising and reissuing the criteria documents and proposing changes to ambient air quality standards where appropriate. Revised criteria for ozone were issued in April 1978 and a revised ozone standard of 0.12 ppm established. Carbon monoxide and hydrocarbon criteria are in the early stages of review and no conclusion about change in the air quality standard can be made at the present time. As distinguished from this process, the purpose of the Section 202 pollutant specific studies is to assess the heavy-duty engine or vehicle control strategy contained in the 1977 Amendments and provide a basis for evaluating the adequacy of that strategy for attaining the established air quality standards.

In the course of this report, reductions in emissions from heavy-duty engines attributable to the statutory 90% reduction are evaluated, along with the air quality impact of these reductions. Alternative standards requiring either more or less reduction than the statutory values are then examined in comparison. Consideration is also given to the potential secondary impact from the introduction of catalyst technology for heavy-duty gasoline engines.

Air quality problems related to hydrocarbon and carbon monoxide emissions are widespread in United States urban environments. As of July 1979, 586 counties or county equivalents were classified as exceeding the ozone ambient air standard, and 164 were classified as exceeding the carbon monoxide standard. Mobile sources have long been recognized as major sources of these emissions. In 1976, mobile sources represented over one-third of the hydrocarbon emissions and over 80 percent of the carbon monoxide emissions. Further control of light-duty vehicle emissions will greatly reduce these levels in the future, while at the same time highlighting an increasing need to control heavy-duty vehicle emissions.

Three principal conclusions are drawn from this study:

(1) The air quality in many urban areas of the U.S. continues to exceed applicable ambient air quality standards. These high levels are associated with detrimental effects on the health and welfare of the people living in those areas. Health effects from elevated ozone and CO levels are documented in the appropriate EPA Criteria Documents. (*1*)

(2) Heavy-duty vehicles are a significant contributor to urban emissions of HC and CO. Without further controls, they are expected to account for about 35 percent of mobile source non-methane HC emissions and 44 percent of mobile source CO emissions by 1995. In turn, mobile source emissions will represent about 17 percent of all urban HC emissions and 61 percent of urban CO emissions. Implementing the statutory standards will reduce (by 1995), heavy-duty vehicle HC emissions by about 75 percent for gasoline-fueled engines and 36 percent for diesels. For CO, and 84 percent reduction will be achieved for gasoline-fueled engines. CO emissions from diesels are unaffected by the New regulations since they are inherently lower than the standard dictates.

(3) The feasibility of attaining the target emission levels associated with a more stringent 95 percent standard cannot be specified at this time. Therefore, that standard is not an appropriate alternative. The 85 percent standard alternative results in a loss of benefits and some reduction in cost. These changes are in such proportions that the cost effectiveness of the

regulations becomes prohibitive for diesel engines. In addition, approximately half of the ozone air quality benefit of the statutory standard would be lost under the 85 percent standard. Furthermore, EPA has determined that the 90 percent standard is attainable with catalyst technology, and has estimated the approximate cost involved and found it to be cost effective. Therefore, the statutory standard represents the best of the three choices at the present time.

II. Introduction

A. Background

Section 202(a)(3)(E)(i) of the 1977 Amendments to the Clean Air Act (Pub. L. 95-95, August 7, 1977) requires that EPA "shall conduct a continuing pollutant specific study concerning the effects of each air pollutant emitted from heavy-duty vehicles or engines and from other sources of mobile source related pollutants on the public health and welfare." Results of the study for hydrocarbons and carbon monoxide are reported to the Congress herein and the report for oxides of nitrogen is due by June 1, 1980. Subsequent reports are due before June 1 of each third year thereafter.

The intent of requiring these reports is to provide a portion of the framework needed to evaluate the statutory standards for heavy-duty vehicle (HDV) provided in those same Amendments. Subparagraph (ii) of the above section indicates that on the basis of such studies, and other information available, EPA may change the statutory standards for heavy-duty engines or vehicles. In this context then, the purpose of these pollutant specific studies is not so much to break new ground in basic health effect studies (where a great deal of work has already been done), but rather to assess the heavy-duty control strategy contained in the 1977 Amendments. The assessment will be done in terms of the emission reductions and air quality impact to be expected from implementing the new standards plus a comparison with less stringent or more stringent standards.

There are other considerations which must be entered into any decision to revise standards. These considerations would address such issues as technological feasibility, cost benefits, lead time requirements, fuel economy penalties, etc. Therefore, this pollutant specific study must be viewed as only one element of the overall framework. However, it is also true that insofar as the question of more stringent standards is concerned, this environmental assessment plays a key role in determining whether the other factors even need be addressed. That is, if the environmental assessment indicates that the present standards are appropriate from an environmental viewpoint, and that greater control of emissions from heavy duty engines is unnecessary, then there would be no need to address the other factors in depth.

In carrying out this study, primary attention is focused upon the impact of the statutory standards for hydrocarbons and carbon monoxide. Two alternatives are then evaluated in relation to the statutory standards. The first alternative would relax the standards to require only an 85% reduction from baseline. The second alternative would tighten the standards to a 95% reduction. In this way the effect of standards either more or less stringent than the existing ones can be evaluated. Comparisons will be made both in terms of emission changes and in terms of the expected air quality impact of these emission changes.

To avoid confusion over terminology it is important to note that the heavy-duty vehicle or engine class in the Clean Air Act Amendments refers to vehicles which EPA for purposes of regulation development has further subdivided. In the Amendments, heavy-duty vehicles are defined as those motor vehicles over 6,000 pounds gross vehicle weight. This includes what EPA commonly calls heavy-duty vehicles (8,500 lbs. GVW and over) plus that portion of EPA's "light-duty truck" (LDT) class between 6,000 and 8,500 lbs. GVW. EPA is developing separate standards for these trucks as part of that class (such standards will be as restrictive or more restrictive than the standards being developed for HDV). In this report then, we will focus on those HDV of 8,500 lbs. GVW and over, with the understanding that the 6,000-8,500 lbs. GVW vehicles are included in the LDT class.

B. Air Quality

The Clean Air Act as amended in 1970 contained many provisions aimed at removing harmful pollutants from the air we breathe. Among other things, the 1970 Act called for the establishment of National Ambient Air Quality Standards. These levels were to be set such that there would be no danger to public health and welfare.(*1*) To date, ambient air quality standards have been set for seven pollutants: particulate matter, sulfur dioxide (SO_x), carbon monoxide (CO), nitrogen dioxide (NO_x), ozone (of which hydrocarbons (HC) is the main precursor), hydrocarbon (HC) and lead (Pb). Of these seven pollutants, mobile sources are major contributors to the total pollutants emitted for three: HC, CO, and NO_x.

Both HC (in its role as an ozone precursor) and CO emissions have been related to adverse health effects. Detailed information on these health affects will not be discussed in depth in this Report since such information is well documented elsewhere.(*1*) Briefly, HC emissions react with sunlight to form ozone and other photochemical oxidants. Ozone is a pulmonary irritant that affects the respiratory mucous membrances, other lung tissues, and respiratory functions. CO when inhaled replaces ozygen in the blood. The presence of CO therefore, adversely affects the carrying and delivering capacity of oxygen by the blood.

Although significant improvements have been made in air quality since 1970, a review of air quality monitoring data makes it clear that additional reductions in HC and CO emissions will be necessary if ambient air quality goals set by Congress in the Clean Air Act are to be achieved. On March 3, 1978, EPA published in the **Federal Register** a listing on a State-by-State, pollutant-by-pollutant basis, of the attainment status of every area of the Nation (43 FR 8962). This information, compiled by the respective States are reviewed by EPA, was the most accurate picture available of the nation's air quality status as of the adoption of the Clean Air Act Amendments. These data indicated that of 3215 counties or county equivalents covered by those designations, 607 (19 percent) were classified as nonattainment for photochemical oxidant, and 190 (6 percent) were classified as nonattainment for carbon monoxide. Nonattainment status indicates that the given area fails to meet the primary national ambient air quality standard (NAAQS) for the pollutant under consideration based upon either direct air quality monitoring or indirect estimates for areas lacking monitoring data. Current non-attainment data is available to indicate the changes which have occurred since 1977. As of July, 1979, the non-attainment designations include 586 (18 percent) counties for ozone and 164 (5 percent) for carbon monoxide.

Since the U.S. population is not uniformly distributed, but rather is concentrated in urbanized areas, the above geographically based figures are not representative of the proportions of population actually exposed to excessive ambient pollutant concentrations. Indeed, it is the very fact of urbanization which has led to many of our air pollution problems. For example, the nonattainment areas for

ozone include 103 out of a total of 105 urban areas in the U.S. with populations greater than 200,000 (the exceptions being Honolulu, Hawaii, and Spokane, Washington). The 103 areas represent an exposure of over 100 million people.

Clearly, there is a great need to reduce pollutant (or pollutant precursor in the case of ozone) emissions in the urban areas of the U.S. So long as large numbers of people continue to be exposed to concentrations in excess of the NAAQS, further emission reductions must be sought.

C. *Mobile Source Emissions*

Mobile sources have been recognized for some time as major sources of hydrocarbons (ozone precursors) and carbon monoxide. Light-duty vehicles in particular have been the focus of considerable control work since the late 1960's. However, as light-duty vehicle emissions grow smaller, other source categories such as heavy-duty vehicles grow in proportional significance. The wisdom of controlling heavy duty vehicle emissions is evident when these emissions are placed in the context of other sources of these same pollutants.

In order to properly assess mobile source emissions and their control it is best to look at urban areas where historically the NAAQS contraventions have occurred. In this way a truer perspective of the air quality impact of mobile sources can be obtained. It is in these urban areas that improvements are most needed. HC analysis will be done on an Air Quality Control Region (AQCR) basis (refer to page 15 for an explanation of AQCR selection. CO, on the other hand, will be analyzed on a county basis. This is due to the more localized nature of CO problems. Fifty seven AQCRs have been selected for HC, and 52 counties for CO. Hydrocarbons analyzed include only non-methane hydrocarbons since the methane fraction is non-reactive.

Figures A and B present breakdowns of non-methane hydrocarbon (NMHC) and CO emissions into various source categories for the selected regions. These figures give the 1976 emission levels along with projected levels out to 1999. The data presented in these figures represents what is considered the base case. That is, it projects future heavy-duty emissions as if no new regulations beyond those already in existence (the 1979 heavy-duty standards) were promulgated. For other source categories, possible future control programs are included. For example, light-duty trucks are projected based upon the 1984 implementation of the regulations proposed for light-duty trucks in the July 12, 1979 **Federal Register** (44 FR 40784).(*2*)

Figure -A
Annual Non-Methane Hyrocarbon Emissions for 57 Urban Regions

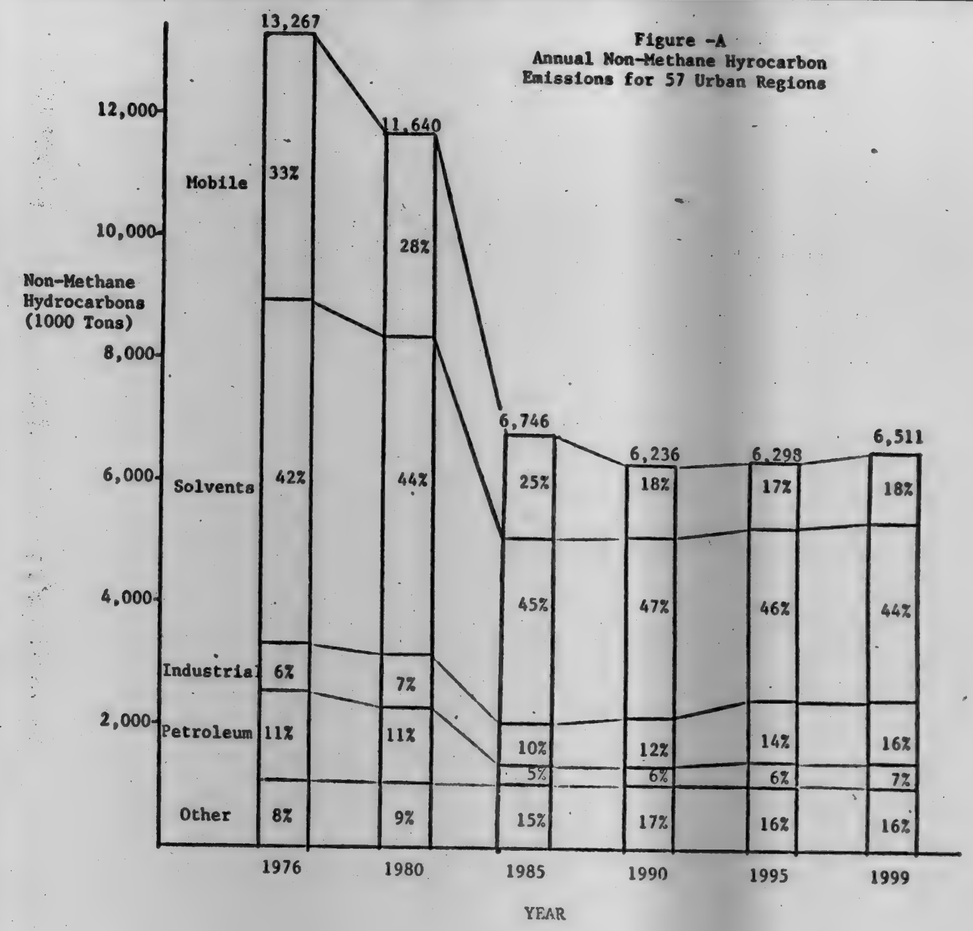

Figure –B
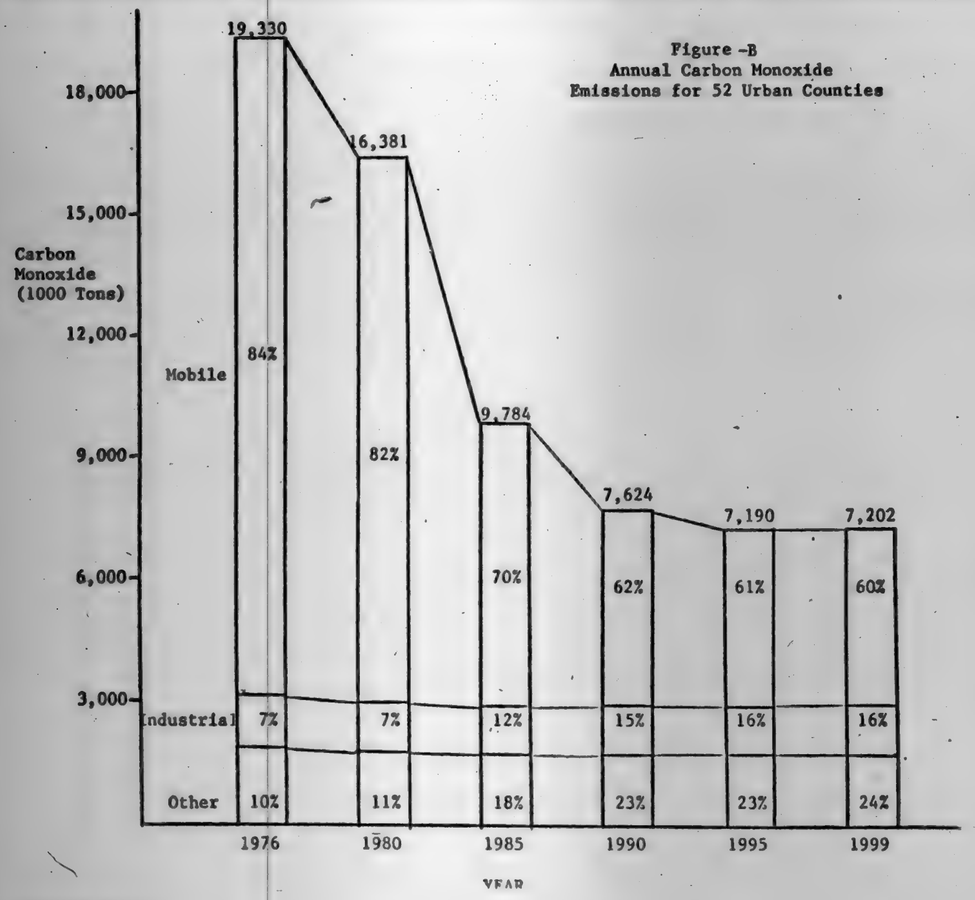
Annual Carbon Monoxide
Emissions for 52 Urban Counties



BILLING CODE 6560-01-C

For non-methane hydrocarbons, mobile sources currently represent approximately 30 percent of the urban emissions (Figure A). With current regulations this percentage is expected to decline to 17 percent by 1995. After that time a gradual increase begins to set in.

Mobile source carbon monoxide emissions currently represent over 80 percent of the urban emissions (Figure B). This amount is expected to decline to 60 percent by 1999. No significant change in stationary source emissions is expected for CO. However, since CO problems are often attributed to high localized concentrations during periods of high traffic density, stationary sources have minimal impact on CO air quality problems.

Light-duty vehicles (passenger cars) contribute the major portion of mobile source NMHC and CO emissions. The 1976 emission levels from light-duty vehicle and other mobile sources, and projections of the future urban emissions are given in Figures C and D. Again, these projections are for the base case of no new heavy-duty regulations. The figures give a general overview of the contribution to air pollution that each class of vehicles is expected to make through 1995, and of the distribution of the burden of control of emissions from all mobile sources. From these figures it can be seen that emissions from heavy-duty vehicles will grow in proportion to emissions from light-duty trucks and light-duty vehicles. This apparent inequitable distribution of the burden for reducing mobile source emissions can be in part accounted for by the past need to concentrate control efforts on the primary sources of mobile source pollution where potential gains were the highest.

It is evident from the figures that for both NMHC and CO, heavy-duty vehicles represent a growing proportion of emissions. For hydrocarbons, heavy-duty vehicles go from 12 percent of the total in 1976 to 36 percent in 1999. The increasing share of these emissions going to diesels is also apparent. For carbon monoxide the figures are 15 percent in 1976 and 43 percent in 1999. Thus, control of heavy-duty engines is extremely important in any overall strategy for reducing emissions sufficient to meet ambient air quality standards.

III. Emission Reductions

A. Heavy-Duty Engine Emission Rates

Heavy-duty vehicles may be equipped with either gasoline-fueled engines or diesel engines depending on the needs of the user. The use of a diesel engine, as opposed to a gasoline engine, in heavy-duty vehicles is also important from an emissions point of view because the emissions characteristics of the two engines differ. Basically diesel engines have very low levels of HC and CO emissions, below the levels of the current Federal emission standards for heavy-duty engines. NOx emissions on the other hand, for uncontrolled diesel engines are high relative to gasoline engine NOx emissions. Diesels also emit smoke consisting primarily of unburned carbon present in small particles. Gasoline engines do not. But gasoline engines do have higher HC and CO emissions than do diesels.

BILLING CODE 6560-01-M

Figure-C
Annual Mobile Source
Non-Methane Hydrocarbon
Emissions for 57 Urban Regions

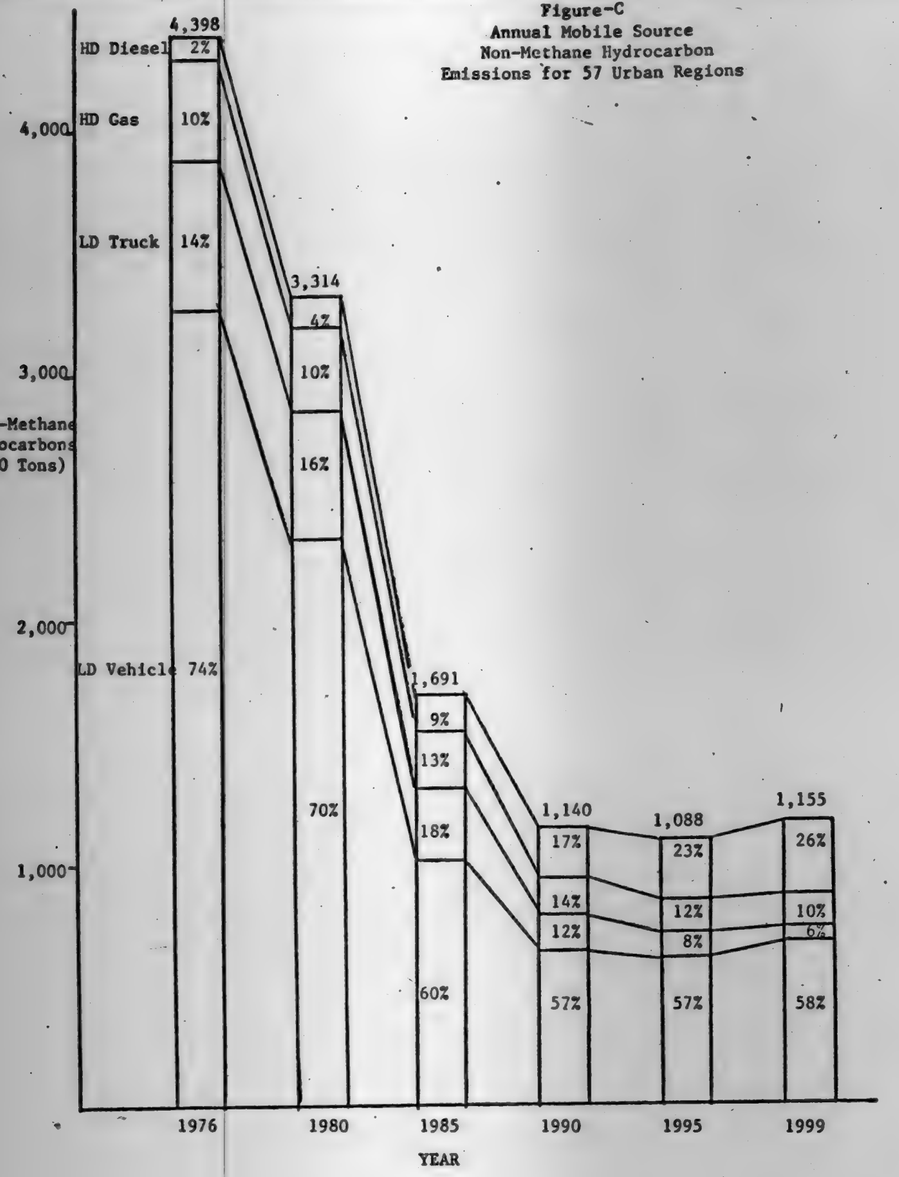


Figure -D
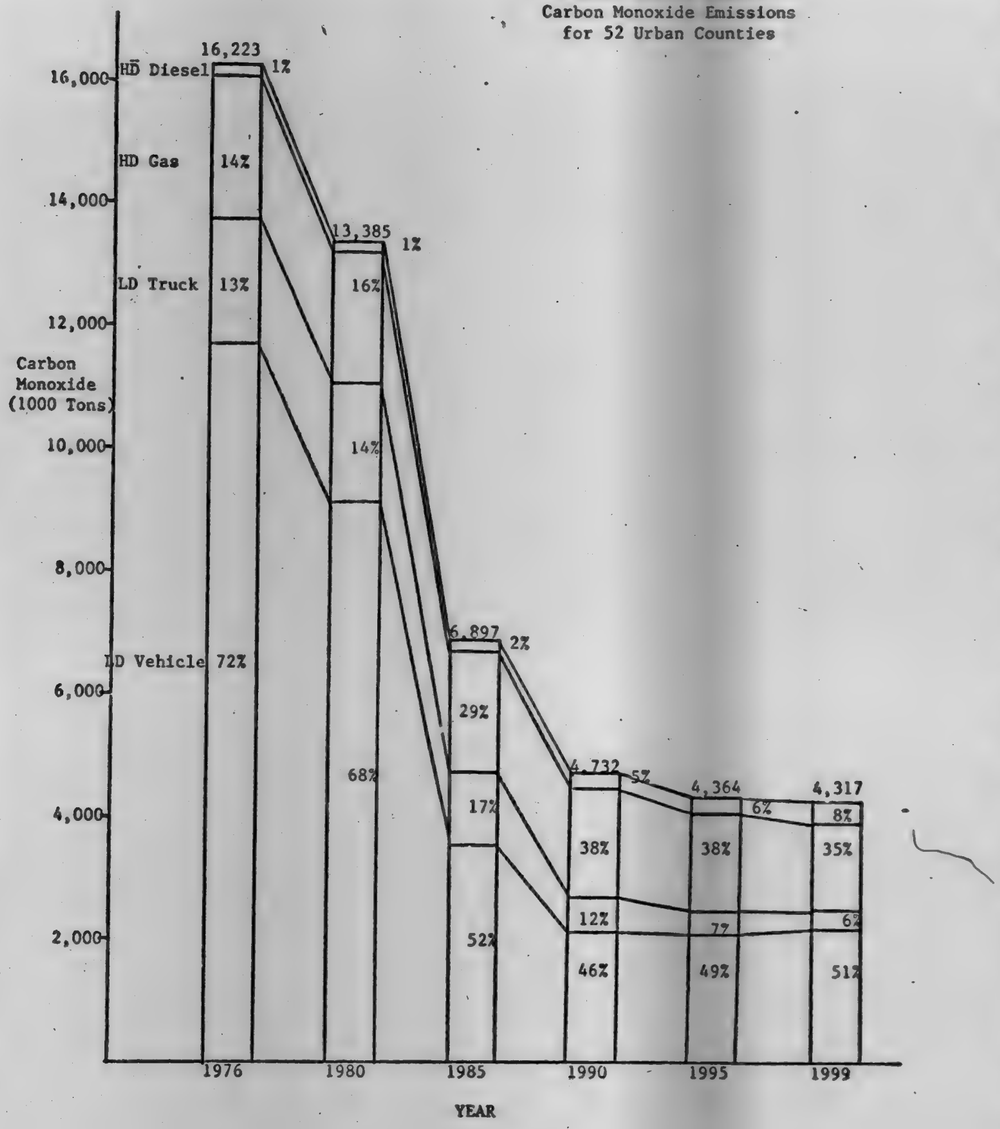
Annual Mobile Source
Carbon Monoxide Emissions
for 52 Urban Counties



The primary reason for the different emission characteristics of diesel and gasoline engines is explained by the way each type of engine functions. With gasoline engines, the fuel and air are mixed in the carburetor prior to passing into the engine cylinder. The more or less homogeneous air/fuel mixture is admitted into the cylinders via a throttle plate, which is varied in position by the operator to control engine power, before it passes through the intake manifold to the individual cylinders. The air/fuel ratio of the mixture which enters the cylinder tends to vary at different power conditions, with excess fuel under some conditions and excess air under others. In the engine cylinder an ignition source (spark plug) must be provided to get the combustion started, since gasoline air mixtures have high minimum ignition temperatures. The compression ratio must be low enough to avoid detonation (or random auto ignition), which is another basic characteristic of gasoline-air mixtures. The effects of these constraints on pollutant emissions is that carbon monoxide and hydrocarbons tend to be relatively high, being primarily associated with engine operating modes at which the mixtures are somewhat on the excess fuel side. Hydrocarbons also result from "quenching" of the combustion reactions because of contact between the gasoline-air mixture and relatively cool surfaces of the combustion chamber. Nitrogen oxides are relatively high too, because of the high peak combustion chamber temperatures inherent in the relatively rapid combustion process of premixed gasoline and air.

Diesel engine operation differs in many ways from that of the gasoline engine. Fuel and air are not mixed prior to entering the engine cylinder, and there is no spark plug since the type of fuel used has ignition characteristics such that it can be ignited by the heat of compression as long as the compression ratio is high enough. Therefore, unthrottled air alone is inducted into the engine through the intake valve. Engine power is controlled by varying fuel flow only, with the fuel injected under pressure directly into the combustion chamber at the proper time for ignition to begin. Fuel continues to be injected and burned concurrently under highly stratified local air/fuel mixtures. The overall fuel/air mixture, however, is always on the excess air side to assure that enough oxygen is available near the fuel spray to support combustion. Compression ratios to achieve spontaneous ignition tend to be much higher than for gasoline engines, roughly 16 to 21. Because of these high compression ratios, diesel engines have higher thermal efficiencies than gasoline engines which, combined with the fact that there are no pressure losses associated with having a throttle valve in the inlet system, give them superior fuel consumption characteristics. As to emissions, the excess air conditions result inherently in relatively low carbon monoxide and hydrocarbon emissions, but the high compression ratio tends to cause diesel engines to have nitrogen oxide emission characteristics of roughly the same magnitude as gasoline engines. The smoke from diesel engines is caused by the initially unmixed nature of the fuel and air in the diesel combustion process. This may also result in objectionable odors in diesel exhaust that are not found in gasoline engine exhaust.

Considerable work has been done within EPA in an attempt to determine accurate emission factors for mobile sources. This work depends heavily on in-use vehicle testing under EPA's Emission Factor Program. To answer the question of how well vehicles perform in actual use, EPA has administered a series of exhaust emission surveillance programs. Test fleets of consumer-owned vehicles within various major cities are selected by model year, make, engine size, transmission, and carburetor in such proportion as to be representative of both the normal production of each model year and the contribution of that model year to total vehicle miles traveled. These programs have focused principally on light-duty vehicles and light-duty trucks.

The data collected in these programs are analyzed to provide mean emissions by model-year vehicle in each calendar year, change in emissions with the accumulation of mileage, change in emissions with the accumulation of age, percentage of vehicles complying with standards, and effect on emissions of vehicle parameters (engine displacement, vehicle weight, etc.). These surveillance data, along with prototype vehicle test data, assembly line test data, and technical judgment, form the basis for the existing and projected mobile source emission factors.(4)

For this study changes have been made to the emission factors for heavy-duty and light-duty trucks. The emission factors found in the mobile source emission factors document for heavy-duty vehicles are based upon steady-state data gathered on the 9-mode and 13-mode test procedures. In the course of developing current regulations, EPA has accumulated substantial data on the transient emissions of heavy-duty engines. Both the CAPE-21 data gathering program and resultant transient test procedure were designed to accurately characterize in-use operation and therefore in-use emission. Therefore, the available transient test data has been used to revise the heavy-duty truck emission factors which are currently being used. The emission factors for future heavy-duty engines as well as for future light-duty trucks have also been revised to reflect accurately the final standards and the implementation of Selective Enforcement Auditing with a 10 percent acceptable quality level. Refer to Appendix A for details of the methodology and the calculations.

The general form of all the emission factors for mobile sources is an equation with some starting new vehicle emission rate plus a mileage dependent deterioration rate (see Tables 1 and 2 of Appendix A). This means that to determine the emissions from a given vehicle one must know the accumulated mileage. To determine the average emission rate for the fleet made up by a given class of vehicles (for example, heavy-duty gasoline/fueled trucks), it is necessary to account for the fact that the on-the-road fleet consists of a mix of vehicles of varying ages and model years. The appropriate emission rate is applied to each fraction of the fleet and the fractions are summed into a composite.

When vehicles meeting a new emission standard are introduced into the on-the-road fleet, they at first represent only a small fraction of the whole fleet. As time passes, the newer technology vehicles come to represent a larger and larger share of the entire fleet. This means that the composite emission rate for the entire fleet will show a gradual change in response to new standards, rather than a sudden change. As an illustration, the composite emission rate for heavy-duty gasoline-fueled vehicles for CO changes as follows: (4)

Composite CO (g/mi): Years—	
1980	256
1985	222
1990	106
1995	57
1999	40

Although the new standard is introduced in 1984, composite rates do not show substantial drops until 1990 and beyond.

One way to examine the effect of the rulemaking action is to compare the emissions of engines built to meet the requirements of the rulemaking with the

emissions of earlier engines. Using the emission factor equation of Table 1, 2 and 4, of Appendix A, the total lifetime emissions of a given model year engine may be estimated. This will be done for 1969 (the "baseline" model year for derivation of the standard), 1979 (representing engines built to current standards), and 1984 (year of implementation for the final rulemaking) model year vehicles. The calculations will use average vehicle lifetimes of 114,000 miles for heavy-duty gasoline-fueled vehicles, and 475,000 miles for heavy-duty diesel vehicles. (5) Lifetime per-vehicle average emissions are given in Table A.

The impact of the new standards on vehicles produced for 1984 (or later) is clearly evident in this data. Compared to emissions from 1979 engines, 1984 engines are reduced 85 percent for HC and 92 percent for CO in the case of gasoline-fueled engines. For diesel engines, HC is reduced 35 percent while CO remains unchanged.

B. *Reduction in Urban Emissions From Heavy-Duty Vehicles*

Table A.—*Lifetime Emissions for Heavy-Duty Vehicles (Tons)*

Class + pollutant	Model year—		
	1969	1979	1984
Gasoline fueled:			
HC	2.71	1.17	0.17
CO	31	31	2.4
Diesel:			
HC	2.18	2.18	1.41
CO	5.9	5.9	5.9

We have seen that as new heavy-duty vehicles are put into use and older ones retired, the emissions of the average heavy-duty vehicle on the road will decrease. The resulting composite emission factors can be used to project changes in annual emissions from the entire fleet. The same can be done for other mobile source categories as well. To make the projections, the changes in composite emission rates are used along with estimated growth rates in total vehicle miles traveled to modify the baseline emission inventory for future years. Projections are also made of changes in stationary source emission rates depending on present and anticipated stationary source control programs. (2)

For hydrocarbons, the exhaust emissions themselves are an indirect rather than a direct problem. That is, the principal harmful effect of HC emissions stems from the photochemical reactions leading to ozone formation. The reaction process can take several hours, by which time the pollutants involved are transported and dispersed over broad areas. Therefore, the hydrocarbon emissions have been analyzed on an Air Quality Control Region (AQCR) basis. The AQCRs selected were those non-California, non-high-altitude regions violating the ozone standard (or estimated to be violating where actual sampling data is missing) in a 1975–1977 base period. California regions were excluded since California has its own emission standards. High altitude regions were excluded because the emissions data used in the analysis is not considered representative of high altitude conditions. A separate detailed analysis would have to be done to assess the impact of these regulations on high-altitude areas. This selection process led to a set consisting of 57 AQCRs to be analyzed for hydrocarbons. In addition, because methane emissions are non-reactive and do not contribute to ozone formation, the emission inventories compiled for analysis will be based upon non-methane hydrocarbons (NMHC).

Carbon monoxide emissions, in contrast to hydrocarbons, frequently create localized problems of high concentrations. These are often associated with urban core areas experiencing high traffic densities. It is desirable, therefore, to analyze CO on a more localized basis than AQCRs. This has been done by using a county based inventory. As for HC, only non-California non-high-altitude areas were selected. The result is 52 counties exceeding the CO standard for a 1975–1977 base period.

Following the selection of areas to be analyzed, an emission inventory for each region was compiled. The most recent year for which complete information could be obtained was 1976. This data then forms the basis for future projections. Compilation of the baseline and projection for future years is an involved process entailing a number of assumptions. These are discussed in detail in supporting documents(4, 6) Two assumptions are important to highlight here. The first is the assumption that light-duty vehicle and light-duty truck I/M programs will be implemented in all the areas analyzed by 1982. Since all the areas chosen are areas exceeding the HC and CO standards, such programs are expected.

The second assumption concerns projected growth rates for various source categories in future years. For non-methane hydrocarbons, rollback projections were made for a range of growth rates. The high and low end of these ranges differ by one or two percent. For this analysis we will use the growth rates of the low growth option. For mobile sources these rates appear most consistent with what appears likely because of energy costs and related matters. The high growth assumptions would increase the absolute levels of emissions and decrease the absolute levels of air quality benefits projected by the models somewhat. They would, however, make little difference in the relative change from the base case to the control case. The maximum air quality benefits would peak in 1995 rather than in 1999 if the high growth case were chosen. For heavy-duty vehicles, other specific adjustments in growth rates are also required. Based upon the results found in Section D of Appendix A, annual vehicle miles traveled (VMT) are expected to decline for gasoline-fueled engines by about 2 percent per year, while diesel VMTs will increase by about 5 percent per year. These rates reflect increased use of diesel engines in the heavy-duty industry, largely because of energy consideration.

Projections for both emission data and air quality data are made on an AQCR By AQCR basis (or county by county for CO). However, the underlying assumptions on emission factors are not region specific. Rather, they represent typical nationwide values. Because of this, only average results for all regions will be used for analysis.

Figure E and F provide a comparison of the projected mobile source emissions for the base case with no new heavy-duty regulations with the projected emissions for the control case with final regulations. They cover the year from 1990–1999. Without further controls, heavy-duty emissions become a major fraction of mobile source emissions. By 1995, heavy-duty emissions would account for 35 percent of mobile source NMHC and 44 percent of mobile source CO emissions. The substantial reductions in heavy-duty emissions expected are clearly indicated. For HC, in 1999 the reduction reaches 75 percent for gasoline-fueled engines and 36 percent for diesels. For CO, in 1999 the reduction for gasoline-fueled engines is 84 percent. Diesel CO is unaffected by the new regulations. These percentages are measured in comparison to the base-case emissions for the same year, 1999.

Expressed as a percentage of all mobile source emissions, the impact of the final rulemaking is as follows. Hydrocarbons are reduced 17 percent in 1995 and 1999. Carbons monoxide is reduced 30 percent in 1995 and 1999.

IV. Ambient Air Quality Impact of Regulation

Using the emission rates previously discussed, an analysis was done of the air quality impact in each of the selected regions. (4) The Modified Rollback method was used for oxidant and CO to project future air quality improvements for each region. In addition, the Empirical Kinetic Modeling Approach (EKMA) was also used for oxidant. The EKMA procedure has been developed by EPA in an attempt to provide an improved analysis of the relationship between oxidant and precursor emissions while avoiding the complexity of photochemical dispersion models. (7) There is uncertainty over the applicability of EKMA, so that both EKMA and rollback were used to provide a range of possible air quality impacts.

In preparing the air quality projections, baseline emission rates for various source categories were taken from the National Emissions Data System (NEDS), and projections for future control strategies plus growth rates were made. In combination with the mobile source projections, this data allowed an evaluation of air quality improvements to be expected. With both Modified Rollback and the EKMA approach, the relative changes from strategy to strategy are more reliable than predictions of absolute levels of air quality. Therefore, the results will be expressed as percentage gains over baseline between various strategies. In addition, although the individual regions used in the analysis can be identified, the results are not considered accurate enough to be used for a region by region review of the regulations. Rather, averages over all areas analyzed will be used. The average air quality improvements are given in Table B.

The modified linear rollback and EKMA models differ by a factor of nearly 2 to 1 for ozone reductions. However, they each indicate nearly the same percentage gain from implementing the new standards. For example, both methods indicate an improvement of 1 percent in ozone in 1995 when the 1984 regulations are implemented. This reduction becomes 2 percent in 1999.

Table B indicates that carbon monoxide will be improved 5 percent in 1990, and 7 percent in both 1995 and 1999.

The significance of a percentage gain in air quality in terms of progress toward attainment of standards depends upon the original levels. For example, a 2 percent improvement in air quality may be sufficient to bring a region that is already close to the standard into compliance, whereas in a region experienceing very high levels (relative to the standard) that 2 percent would represent an inadequate reduction. In a region already meeting the standards, such a further gain would increase the margin for compliance. The question could then be posed: "How many areas originally exceeding air quality standards are brought into compliance by implementing the new emission standards?" In table C the air quality improvements are analyzed in this fashion.

Table B.—*Average Air Quality Percent Reductions, From 1976 Base Year*

[Ozone—Modified Linear Rollback/EKMA]

Strategy	1980	1985	1990	1995	1999
Base case	13/7	49/25	54/30	54/31	52/29
Implement HD Regs	13/7	49/25	55/32	55/32	54/31
Carbon Monoxide					
Base case	16	53	65	67	67
Implement HD	16	54	70	74	74

Table C.—*Percentage of Regions Originally Violating Air Quality Standards Brought Into Compliance*

[Ozone—Modified Linear Rollback/EKMA]

Strategy	1980	1985	1990	1995	1999
Base case	35/14	96/56	98/68	98/72	98/68
Implement HD	35/14	96/56	98/72	98/72	98/72
Carbon Monoxide					
Base case	2	88	100	100	100
Implement HD	2	88	100	100	100

Considering the ozone results first, the marked difference in absolute reductions predicted by modified rollback versus EKMA noted in Table B are again readily apparent. While modified rollback indicates that 96–98 percent of the regions originally violating the ozone standard will come into compliance in the 1990's, EKMA puts that percentage at 68–72 percent. Therefore, as noted earlier, caution must be used in interpreting results from either model in absolute terms. For example, the indication from modified rollback that nearly all violating regions will meet the ambient ozone standard by 1999 should not be considered reliable. Rather, the relative change attributable to implmentation of the new regulations is the item of maximum accuracy. The table indicates that implementation of the heavy-duty regulations will result in approximately a 2 percent (rollback) to 4 percent (EKMA) reduction in the number of violating regions.

The cautions noted for ozone are equally important in interpreting the CO results in Table C. Only rollback applies to this case, and that model indicates that with either strategy, all regions analyzed will attain the CO standard by 1990. However, it has already been noted that it is not within the ability of this model to accurately predict absolute air quality levels. Therefore, the indication of all regions meeting the standard is inconclusive. As an illustration of the accuracy required to accept the absolute projections, in the final rollback projections for 1999 only 87 percent of the regions are in compliance with the standard by a margin of greater than 20 percent for the base case. For the control case, that result changes by 5 percent to a value of 92 percent. Inaccuracies on the order of 20 percent or greater are more than possible in the present air quality analysis, and would markedly change the absolute levels of predictions. However, such inaccuracy would probably be relatively constant from strategy to strategy and lead to consistent relative effects. Unfortunately, since changes in air quality produced by the new regulations do not become significant prior to 1990, no clear conclusions can be drawn about the effect these regulations will have on attainment status. As noted, based upon the number of regions within 20 percent of the standard, implementing the heavy-duty regulations produces a 5 percent improvement.

V. Potential Secondary Environmental Impacts

A. Sulfuric Acid Emissions

A recent EPA report (8) provides an in-depth review of the current status of sulfate emissions from mobile sources. On a nationwide basis, mobile sources represent less than 2% of the total man-made sulfur oxides. However, with the introduction of the catalyst/air pump technology to control HC and CO emissions from mobile sources, there exists the potential for a significant source of mobile related sulfate emissions in the form of sulfuric acid aerosol. While negligible magnitude on a regional basis, mobile source sulfuric acid emissions could produce a significant localized urban sulfate concentration in urban street canyons, or congested urban freeway situations. Moreover, mobile source sulfates differ from stationary source sulfates in that they are emitted in the form of a fine sulfuric acid mist and the particles tend to remain near ground level.

The increase in sulfate emissions due to the use of oxidation catalst/air pump control systems on passenger cars and light-duty trucks has been of considerable concern to EPA. In pre-model year 1975 non-catalyst systems, most of the fuel sulfur leaves the vehicle after combustion as SO_2. In oxidation catalyst/air pump systems used on recent model year automobiles and light-duty trucks, a small amount (less than 10 percent) (8) of the sulfur is converted by the catalyst to SO_3. The SO_3 combines with water in the exhaust to form sulfuric acid aerosol. Heavy-duty catalyst technology has not yet been used on in-use vehicles, and so little is known about sulfate emissions from these systems.

Extensive efforts have been made within government and industry to improve the information about mobile source sulfate emission factors, sulfate air quality modeling techniques and sulfate health effects as a function of exposure level. In addition, technology assessment work is proceeding to identify how sulfates are formed in catalyst/air pump systems, and to develop other low sulfate producing catalytic control systems such as the three-way catalyst. According to current data, the extent of sulfate emissions is much less than early concerns had anticipated. Major adverse health and welfare effects from mobile source sulfates are unlikely.(8) Table D indicates sulfuric acid emission rates for several mobile source categories.

The use of catalysts on heavy-duty gasoline engines resulting from implementing the new gaseous standards is not expected to increase present mobile source sulfate emissions significantly or to present a future problem. Considering the much larger sulfate emissions already associated with diesel trucks, plus the fact that equipping HD gasoline vehicles with catalysts would increase the number of all catalyst equipped vehicles by only approximately 2 percent, there appears to be no reason to expect a significant change in roadside sulfate levels.

B. Lead

The introduction of catalyst technology for heavy-duty engines will require use of unleaded gasoline to replace the leaded gasoline used in current heavy-duty gasoline fueled engines. This change will have a positive environmental effect as regards the emission of lead particulate in engine exhausts. Reduction of mobile source lead emissions is an important means of reducing U.S. urban population exposures to high ambient air lead concentrations.

Table D.—*Approximate Mobile Source Sulfuric Acid Emission Rates (8)*

Source category	H_2SO_4 conversion rate (percent)	H_2SO_4 (mg/mile)
Non-catalyst car	1	1
Oxidation catalyst car	10	10–15
3-way catalyst car	5	4
Light-duty diesel car	2	9
Heavy-duty diesel truck	2	50
Aircraft gas turbine	0.03	N/A

Emission data for light-duty vehicles shows that approximately 60 percent of the lead content of leaded gasoline is eventually emitted from the tailpipe. Applying this to a typical lead content for leaded gasoline of 1.5 grams per gallon gives an emission of 1.2 grams per gallon. With an average heavy-duty mileage of 9.9 miles per gallon, and a 114,000 mile life, total lead emission over the life of a heavy-duty gasoline-fueled vehicle would be approximately 30 pounds. That is, converting to unleaded fuel will result in a reduction of lead emissions for gasoline-fueled heavy-duty vehicles of approximately 30 pounds per vehicle over the vehicle life.

C. Water Pollution, Noise Control, Energy Consumption

Complying with the heavy-duty engine regulations is expected to have negligible impact on water pollution, or on the ability of the heavy-duty vehicle manufacturers to meet present and future noise emission regulations. Implementing catalyst technology can be done with no fuel economy penalty. In fact, the analysis of fuel economy impact done in the Summary and Analysis of Comments for the heavy-duty rulemaking indicates the possibility of up to a 9 percent fuel economy benefit. (9)

VI. Irreversible and Irretrievable Commitment of Resources

Assuming that catalytic converters are used to meet the 1984 standards, an additional commitment of platinum and palladium would be required over and above that needed for light-duty vehicles and light-duty trucks which already employ catalysts. The incremental demand in 1985 from equipping all HD gasoline vehicles with catalytic converters would be approximately 72,423 troy ounces of platinum and 36,212 troy ounces of palladium. These figures are based upon projected vehicle sales, catalyst loadings and catalyst sizes.

VII. Alternative Actions

The statutory standard provides for emission standards for both gasoline-fueled and diesel engines derived from a 90 percent reduction from a 1969 gasoline-fueled engine baseline. To examine the appropriateness of that 90 percent reduction, two alternatives will be considered. One is an 85 percent reduction and is less stringent than the 90 percent statutory standard. The second is a 95 percent reduction from baseline and is more stringent than the statutory standard. These standards correspond to the following numerical values (g/BHP-hr):

85% standard 1.9, HC—23.3, CO
95% standard 0.64 HC—7.7, CO

These alternatives will be evaluated in terms of lifetime emission reductions per vehicle (and cost effectiveness), changes in mobile source emissions, and changes in air quality.

A. Lifetime Emission Reductions and Cost

Table A presented lifetime emissions for engines representative of 1969 baseline levels, 1979 engines, and the final regulations. Similar results can be computed for the alternative standards. Emission factors corresponding to the alternative standards are given in Table 4 of Appendix A. They were derived in the same fashion as those for the statutory standards. The corresponding lifetime emission rates, compared to the statutory standards, are as follows:

Lifetime Emissions for Heavy-Duty Vehicles (Tons)

Engine class and pollutant	Optional 85 percent standard	Statutory 90 percent standard	Optional 95 percent standard
Gasoline-fueled:			
HC	0.24	0.17	0.10
CO	3.20	2.40	1.50
Diesel:			
HC	2.07	1.41	0.71
CO	5.90	5.90	5.90

The effect of changing the stringency of the standard is significant over the average life of a heavy-duty vehicle. For example, relaxing the standard to the 85 percent level would increase HC emissions from gasoline-fueled engines by a factor of 1.4. On the other hand, increasing the stringency would reduce HC emissions by a factor of 1.7. A similar change occurs for CO. Relaxing the standard increases diesel HC emissions by a factor of 1.5, while tightening the standard would reduce diesel HC by a factor of 2.0. Diesel CO emissions are unaffected by a change in the standard because they are

Annual Nonmethane Hydrocarbon and Carbon

inherently lower than even the 95 percent standard level.

Lifetime emission rates have been used to evaluate the cost effectiveness of the heavy-duty regulation. To do this for the alternative standards necessitates assigning costs to these levels. A prime consideration in evaluating cost variations is the change in production target levels associated with the standards. Target levels are as follows:

Production Target Levels (g/BHP-hr)

Engine class and pollutant	85 percent standard	90 percent standard	95 percent standard
Gasoline-fueled:			
HC	0.73	0.50	0.24
CO	6.90	5.90	2.90
Diesel:			
HC	1.32	.99	.42

Considering gasoline-fueled engines first, the 85 percent standard will allow some reduction in hardware costs. R&D costs would be unchanged since most of the R&D effort is expected to be directed toward system durability. Likewise, other components of the per engine cost are not directly tied to the level of the standard and would remain unchanged. Hardware cost would include savings on air pump requirements and catalyst loading. Air pump cost has been estimated at $26 (before markup for overhead and profit). This was the cost of increasing air pump capacity the equivalent of two additional air pumps. At the 85 percent standard only one air pump would be required, and the cost would be reduced $13. At the 85 percent standard, catalyst loading will be reduced from 45 g/ft³ to 40 g/ft³ with a net savings of $11. Total cost change, including markup, is (13 + 11) 1.29 = $30.96. Applied to the estimated cost per engine of $477, the 85 percent standard would cost $446.(*10*)

For the case of the 95 percent standard for gasoline-fueled engines, the target level for CO is sufficiently low as to make the feasibility of this option questionable. There is insufficient data at this time to determine how low optimized heavy-duty catalyst systems will be able to operate. Therefore, no costs will be estimated for this case.

Turning next to diesel engines, a somewhat different situation exists. Much of the cost of reducing engine emissions is in R&D rather than in add-on hardware. Hardware costs relate largely to those few engine families which exceed the standards by substantial amounts. These are largely unaffected by the change of target values. Most engine families can attain the desired targets by design changes or calibration changes (e.g., injector design or injection timing). These actions are included in the R&D costs. In evaluating the cost for diesels associated with the AQL level changing the target from 0.89 g/BHP-hr to 1.05 g/BHP-hr was associated with a change of R&D cost of approximately $3 per engine.(*10*) For the 1.32 target level of the 85 percent standard given above, this change will be estimated as increasing to a $5 saving per engine.

A second area where diesel manufacturers would be expected to realize savings from a relaxed standard is in self-audit costs. The target level for the 85 percent standard is such that most engine families expected to be offered in 1984 already meet the standard with substantial margins. Therefore, less self-auditing and less stringent quality control programs would be required. Quality control costs will be estimated as reduced by half, and self-audit rates reduced to 0.2 percent. These changes result in a saving of $11.92 per engine. Total cost saving is then $5 (R&D) + 11.92 (audit plus quality control) = $16.92. Applied to the cost per engine of $195, the 85 percent standard would cost $178.(*10*)

In the case of the 95 percent standard, as was the case with gasoline-fueled engines, the target levels are sufficiently low as to make the feasibility of attainment uncertain. Therefore, no costs will be estimated.

B. Cost Effectiveness

Cost effectiveness is a measure of what might be termed the economic efficiency of some action directed toward achieving some goal. Expressed as cost per unit of benefit achieved, cost effectiveness can be used to compare various alternative methods of achieving the same goal. In the context of improving air quality, the goal is to reduce emissions of harmful pollutants, and cost effectiveness is expressed in terms of the dollar cost per ton of pollutant controlled.

To evaluate cost effectiveness, two pieces of information on the alternatives being evaluated are needed. These are the costs of the alternatives, which have been determined, and the benefits to be gained. The benefit from implementing any of the alternative standards is found by comparing the emissions of engines build to those standards with the emissions of current engines. Lifetime emissions for current engines are found in Table A. For gasoline-fueled engines they are 1.17 tons HC and 3 tons CO. For diesel engines the current value is 2.18 tons HC. From these starting values, the emission reductions per vehicle from the alternatives are:

Incremental Lifetime Emission Reductions (Tons)

Engine class and pollutant	Optional 85 percent standard	Statutory 90 percent standard	Optional 95 percent standard
Gasoline-fueled:			
HC	.93	1.0	1.07
CO	27.80	28.8	29.50
Diesel:			
HC	.11	.77	1.47

Using the costs estimated above (and allocating gasoline-fueled engine costs equally between HC and CO) the resulting cost effectiveness is:

Cost Effectiveness ($/ton)

Engine class and pollutant	Alternative 85 percent standard	Statutory 90 percent standard	Alternative 95 percent standard
Gasoline-fueled:			
HC	240	239	N/A
CO	8	8	N/A
Diesel:			
HC	1,618	253	N/A

Since it is not known if the 95 percent standard is feasible at this time, no costs have been estimated and, therefore, cost effectiveness cannot be computed. The 85 percent standard for gasoline-fueled engines is only marginally less cost effective than the 90 percent standard. However, for diesels, the alternative standard is shown to be much less cost effective than the statutory standard. This reflects the fact that at the level represented by the 85 percent standard very little emission reductions from curent levels would be required, while much of the cost would remain constant (being associated with acquisition of equipment, testing, etc.).

C. Change in Mobile Source Emissions

Since the feasibility of the 95 percent standard is unknown at present, the impacts of that option will not be evaluated further. The effect of the 85 percent alternative on mobile source emissions would be significant. The following table compares 1999 mobile source emissions for the selected areas under the base case (no new heavy-duty standard), the 85 percent option and the statutory 90 percent case.

Annual Nonmethane Hydrocarbon and Carbon Monoxide Emission in 1999 (thousands of tons)

	Base case	Alternative 85 percent standard	Statutory 90 percent standard
Non/methane hydrocarbons	1155	1058	969
Carbon monoxide	4317	3082	3038

The statutory standard produces a desirable reduction in benefits compared both to the base case and the alternative 85 percent standard.

D. Change in Air Quality

The optional standard being considered, when incorporated into the overall emission inventory for stationary plus mobile sources, produces some incremental changes. The average air quality improvement for the three cases would be as follows:

Average Percent Reduction from 1976 Base Year Realized in 1999

	Base case	Optional 85 percent standard	Statutory 90 percent standard
Ozone (rollback/EKMA)	52/29	53/30	54/31
Carbon monoxide	67	73	74

This data indicates that an additional one percent air quality improvement for ozone (either rollback or EKMA model) and for CO can be associated with the 90 percent standard over the 85 percent standard. For ozone, this is half of the total improvement.

VIII. Conclusions

(1) Pollution levels in many urban areas of the U.S. continue to exceed applicable ambient air quality standards. These high levels are associated with detrimental effects on the health and welfare of the people living in those areas. Health effects from elevated ozone and CO levels are documented in the appropriate EPA Criteria Documents. (*1*)

(2) Heavy-duty vehicles are a significant contributor to urban emissions of HC and Co. Without further controls, they are expected to account for about 35 percent of mobile source non-methane HC emissions and 44 percent of mobile source CO emissions by 1995. In turn, mobile source emissions will represent about 17 percent of all urban HC emissions and 61 percent of urban CO emissions. Implementing the statutory standards will reduce (by 1999) heavy-duty vehicle HC emissions by about 75 percent for gasoline-fueled engines and 36 percent for diesels. For CO, an 84 percent reduction will be achieved for gasoline-fueled engines. CO emissions from diesels are unaffected by the new regulations since they are inherently lower than the standard dictates.

(3) The feasibility of attaining the target emission levels associated with the more stringent 95 percent standard can not be specified at this time. Therefore, the standard is not an appropriate alternative. The 85 percent standard alternative results in a loss of benefits and some reduction in cost. These changes are in such proportions that the cost effectiveness of the regulations becomes prohibitive for diesel engines. In addition, approximately half of the ozone air quality benefit of the statutory standard would be lost under the 85 percent standard. Furthermore, EPA has determined that the 90 percent standard is attainable with catalyst technology, and has estimated the approximate cost involved and found it to be cost effective. Therefore, the statutory standard represents the best of the three choices at the present time.

Appendix A—

Revised Emission Factors for Heavy-Duty Engines and Light-Duty Trucks

A number of changes to the MOBILE–1 factors and the air quality model inputs were needed for the final analysis of the heavy-duty regulation. Transient data on old and new heavy-duty engines can be used to update emission factor estimates. For future standards, emission target levels for manufacturing production have been identified, and projected in-use deterioration rates established for the components of the final package. Growth rates for regional heavy-duty gasoline (HDG) and heavy-duty diesel (HDD) vehicle miles traveled (VMT) need to be adjusted consistent with projected increased dieselization rates. Light-duty truck emission factors appropriate to the proposed LDT package are also needed, and dieselization of LDTs needs evaluation.

A. Incorporate HD Transient Data Into Emission Factor Equations

Heavy-Duty Gasoline—The Deterioration Factors (DFs) are based upon light-duty experience with various emission control systems. The EPA transient testing program for HD engines has not provided data at this time to revise the DFs, so they will remain as is.

The 1969 baseline engines were overhauled prior to testing and will be assumed to be at their new vehicle emission rates. While this is not strictly true, residual deterioration associated with basic engine wear should be quite small (witness the near-zero DFs from certification durability engines). The "pre-1970" HDG new vehicle emission

rate will therefore be ravised to equal the sales weighted 1969 baseline values. The 1969 baseline data represents 81.5 percent of 1969 sales of HDG engines.

1972–1973 baseline data is available at this time for seven engines representing 46.4% of 1973 sales. This data will be used to update the 1970–78 factors. There is insufficient data to distinguish 1970–1973 from 1974–1978 and a single factor will be used for both. The 1974 HD standards were not of such stringency as to produce any significant change in HC or CO emission control hardware. During the period of interest for our air quality analysis (late 1980's and beyond), vehicles of that vintage will have only a minor impact on overall HD emissions.

1979 baseline is available at this time on 12 engines representing 86% of 1979 sales projection. This data will be used to update the 1979–1983 emissions factors. Note that the analysis will use 1984 as the first year of implementation for the new standards and transient test procedure.

Since the 1979 baseline data is from certification engines, some allowance needs to be made for the difference between those engines and production line engines (since there was no Selective Enforcement Audit (SEA) program). This will be done by estimating the historic ratio of certification levels to new engine emission rates.

The sales weighted certification levels for 1974 heavy-duty engines are 4.8 (HC)/24 (CO) g/BHP-hr on the 9-mode test. The revised transient emission factor for that year derived from the 1972/1973 baseline program (Table 1–A) is 12.7/211 g/mile (new vehicle emission rate). To compare these two rates it is necessary to estimate the transient emission levels associated with the 1974 9-mode certification levels. These are estimated at 9.6/145 g/mile.

From the above two data sets the ratio of new vehicle emission rate (g/mile) to certification level (g/mile) can be estimated at 12.7/9.6 = 1.3 for HC and 211/145 = 1.45 for CO. These ratios were applied to the 1979 baseline to derive the new vehicle emission rates for 1979–1983 in Table 1–A.

Heavy-Duty Diesel—At this time, transient test data on diesel engines is extremely limited. This data will be used in two different manners to estimate HDD emission factors. The first, which is probably somewhat more accurate, but is also considerably more complicated, will be used to estimate HC rates. The second will be used for CO.

For HC emission rates, the method is based upon that approach developed to evaluate the cost effectiveness of the transient test procedure for HC control. Since CO from HDDs will not be affected by the new procedure, CO was not evaluated. Available test data on diesel engines from SwRI and Cummins was used to estimate an approximate ratio of transient HC emissions to 13-mode HC emissions. This ratio is estimated at 2.40. Since there were relatively few engines tested (10 used for this ratio), rather than use the transient HC emissions directly, the ratio was applied to 1979 certification data to estimate a sales weighted 1979 transient emission result. The sales-weighted 13-mode certification result is 0.594 g/BHP-hr on the 13-mode test. This converts to .594 × 2.4 = 1.42 g/BHP-hr estimated 1979 transient emission level. To convert to g/mile involves the relation between fuel consumption per BHP-hr and fuel consumption per mile of truck travel:

$$\frac{g}{BHP\text{-}hr} \times \frac{BHP\text{-}hr}{lb\ fuel} \times \frac{lb\ fuel}{per\ gallon} \times \frac{gallons}{mile} = g/mile$$

Table 1-A.—*Revised Exhaust Emission Rates Heavy-Duty Gas Vehicles For All Areas Except California and High Altitude*

Pollutant	Model year	A (g/mile) New Vehicle Emission Rate	B (g/mile) Deterioration Rate (Per 10,000 Miles)
HC	Pre-1970	18.3	0.58
HC	1970–78	12.7	.53
HC	1979–83	6.3	.53
CO	Pre-70	226.0	3.06
CO	1970–78	211.0	6.15
CO	1979–83	210.0	6.15

Table 1-B.—*Revised Exhaust Emission Rates Heavy-duty Diesel Vehicles For All Areas Except California and High Altitude*

Pollutant	Model year	A (g/mile) New Vehicle Emission Rate	B (g/mile) Deterioration Rate (Per 10,000 Miles)
HC	Pre-1984	4.0	0.007
CO	Pre-1984	9.7	0.11

From the SwRI test data, fuel/BHP-hr is estimated at 0.43 lb/BHP-hr.

The density of diesel fuel is 7.1 lb/gallon. Fuel economy was derived from fuel economy data for various HDD vehicle classes combined with projected sales splits to give an overall sales weighted fuel ecomony for current diesel engines of 5.8 mpg.

Using these numbers, the conversion factor is:

$$\frac{7.1}{0.43 \times 5.8} = 2.85$$

The resulting estimated diesel HC emission rate is 1.42 × 2.85 = 4.047 g/mile. This number is based upon 1979 certification data, which includes deterioration factors, if any. The sales-weighted 1979 certification DFs are 0.023 for HC and 0.38 for CO. These are additive values over a durability test approximately equal to 100,000 miles. The zero mileage emission rates for diesels are found by removing the DF. In g/mile, these DFs are .066/100,000 mi HC, 1.08/100,000 mi CO. The resulting HC emission rate is 3.98 g/mile. Considering the accuracy of the various inputs to this calculation, the result will be rounded to 4.0 g/mi. Existing emission factors suggest that there is little or no year-to-year variation in HDD emission factors. Therefore, a single factor will be estimated for all pre-1984 HDD engine.

For CO emissions, the available CO data was used directly. Individual engine results are tabulated below:

HDD Transient Test Data

(g/mile)

Engine	CO
1978 Caterpillar 3208	7.14
1976 Cummins NTC–350	16.84
1978 Detroit Diesel 6V–92T	8.66
1979 Cummins NTCC–350	8.53
1978 Detroit Diesel 6V–71N:	
No. 1 fuel	9.43
No. 2 Fuel	10.91
1979 Detroit Diesel 6V–92TA:	
No. 1 fuel	3.57
No. 2 fuel	4.40
Average	8.66

Since these results are for new or nearly new engines, no zero mileage DF adjustment is necessary. HC and CO emission factors are included in Table 1–B.

B. Modify Baseline Emission Inventory

Since the 1976 baseline emission inventory for both HDG and HDD has been computed based upon the existing emission factors, these values should be adjusted to account for the change to new factors. This should be done for each area analyzed by applying a correction ratio. The correction ratio would be determined by computing 1976 composite emission factors using the old and then the new emission factor equations. The ratio of the new composite factors to the old ones would be used to correct the baseline emission inventory.

C. Develop Estimates of Future HD Emission Factors

Heavy-Duty Gasoline—Given the existence of an SEA program, statistical relationships can be established between the standards and the design values of emissions. Determining factors are the low mileage target (which is equal to the divided by the deterioration factor), the emission, variability, the number of preproduction engines available for testing (typically 3), and the desired level of confidence that production engines would be able to pass an SEA. For HDGs, they are based upon a modification of the approach used by Ford and allow for an 80% confidence that the "manufacturer's risk" during an SEA would be no more than 10%.

In addition to new vehicle emission rates, estimates of deterioration rates are also needed. Expected deterioration rates for the catalyst systems to be used on HDG engines have been analyzed in the Summary and Analysis of Comments for the rulemaking (see the "allowable maintenance" issue). That analysis indicates that a catalyst DF of 1.7 over 100,000 miles should be reasonable.

The resulting emission rates are calculated in Chapter VII Section D1b of the Regulatory Analysis to be:

HC = 0.50 + 0.035 (M/10,000) g/BHP-hr
CO = 5.9 + 0.41 (M/10,000) g/BHP-hr

These can be converted to grams per mile, again based upon information in Chapter VII, Section D1a of the Regulatory Analysis. The conversion factor is 1.74, and yields the following results:

HC = 0.87 + 0.06 (M/10,000) g/mi
CO = 10.3 + 0.72 (M/10,000) g/mi

Because of such aspects of the final rulemaking as the transient test, parameter adjustment, full life useful life, allowable maintenance and SEA, in-use deterioration rates are expected to correspond closely to certification levels. However, as catalysts approach the end of their useful lives, a small number of them can be expected to fail. Therefore, average HDG emission rates will increase somewhat near the end of the useful life. Projections of catalyst failures made in the regulatory analysis indicate that approximately 15% of the catalysts would fail. These are distributed according to a Weibull distribution, and are assumed to fail to the level of a well maintained 1979 engine.

Vehicles with failed catalysts will be assumed to emit at levels corresponding to well-maintained 1979 engines. The zero-mileage emission rates will be taken from the EPA 1979 HDG baseline data. The DFs will be those derived in Chapter VII, Section D1a of the Regulatory Analysis, converted to g/mile:

HC (failed catalyst) = 4.9 + 0.035 (M/10,000) g/mi
CO (failed catalyst) = 145 + 0.36 (M/10,000) g/mi

If F is the fraction which has failed, then the average emission rate can be developed as follows:

HC (average) = [0.87 + 0.06 (M/10,000)][1–F] + [4.9 + 0.035 (M/10,000)][F]
HC (average) = 0.87 + 0.06 (M/10,000) + F [4.0 − 0.025 (M/10,000)]
CO (average) = [10.3 + 0.72 (M/10,000)][1–F] + [145 + 0.38 (M/10,000)][F]
CO (average) = 10.3 + 0.72 (M/10,000) + F [135 − 0.34 (M/10,000)]

These final results are given in Table 2.

Heavy-Duty Diesel.—New vehicle hydrocarbon emission rates for diesels were estimated following the procedure used by Caterpillar. This method estimates the maximum desired production mean level based upon the AQL and variability and then establishes a target level to assure attainment of the desired production level based upon a small sample of pre-production engines (e.g., 3). The calculations are given in Chapter VII of the Regulatory Analysis. Expressed in g/mile, the zero mileage emission rate is 2.5 g/mi.

HDD carbon monoxide emission rates fall below the final standards and therefore continue at the level of existing engines.

The resulting equations are found in Table 2.

D. Growth Rates for VMTs

The rollback model usually assumes a common growth rate for HDGs and HDDs, which has been based to some extent upon the pollutant in question and the ambient problem associated with that pollutant. That is, CO, which is seen as an urban core area "hot spot" problem, is limited to low growth on the assumption that urban core VMTs are near saturation levels HC, on the other hand, can increase at a greater rate because of the broader regional impact of HC emissions. One and two percent growth rates, respectively, have been used for these pollutants.

The analysis for the Final HD Regulations indicates a significant shift in diesel utilization rates. For major urban areas, negative growth in the HDG fleet is expected, while the diesel fleet will increase substantially. The analysis indicates that the usual MOBILE–1 growth rates need to be adjusted to account for this change. The results developed below result in growth of HDG plus HDD VMTs at about 2% per year, but apportion that growth unevenly between the two classes.

Future fleet projections used are those of the Interagency Study[1] for the 1980–1990 time period. The totals for HDGs and HDDs are summarized below:

Table 2.—Projected Exhaust Emission Rates for all Areas Except California and High Altitude

Applicable to 1984 and Later Years

Heavy-Duty Gasoline

HC = 0.87 + 0.06 (M/10,000) + F_M[4.0 − 0.025 (M/10,000)]
CO = 10.3 + 0.72 (M/10,000) + F_M[135 − 0.34 (M/10,000)]

Where,
M = Mileage.
F_M = Fraction of failed catalysts

$$= 1-\exp\left[-\left(\frac{M}{211,726}\right)^3\right]$$

Heavy-Duty Diesel

HC = 2.5 + 0.007 (M/10,000)
CO = 8.7 + 0.11 (M/10,000)

Light-Duty Trucks

HC = 0.39 + 0.016 (M/10,000) + F_L[1.5 + 0.022 (M/10,000)]
CO = 4.8 + 0.17 (M/10,000) + F_L[18.6 + 0.30 (M/10,000)]

Where,
FL = 1-exp[− (M ³)
269,141

$$FL = 1-\exp\left[-\left(\frac{M}{269,141}\right)^3\right]$$

[1] "Interagency Study of Post-1980 Goals for Commercial Motor Vehicles," June 1976.

Projected HD Fleet Population, Vehicle Class[1]

	III–V	VI	VII	VIII	Total
HDG:					
1973	1,595,000	2,442,000	335,000	437,000	4,809,000
1980	1,778,000	2,474,500	299,000	296,000	4,849,000
1985	2,036,000	2,123,000	217,000	184,000	4,560,000
1990	2,237,000	1,682,000	115,000	65,000	4,099,000
HDD:					
1973		75,000	161,000	718,000	954,000
1980		332,000	224,000	1,067,000	1,623,000
1985		947,000	314,000	1,243,000	2,504,000
1990		1,682,000	425,000	1,247,000	3,354,000

[1] Interagency Study, Fig. I–6, I–8.
[2] Class III–V=10,000–19,500 lb. GVW, Class VI=19,500–26,000 lb. GVW, Class VII=26,000–33,000 GVW, Class VIII=above 33,000 lb. GVW.

Over the 1973–1990 period, the total HDG fleet is projected to decline at an average rate of 0.9% per year, while the HDD fleet will increase by 7.7% per year on average. The overall fleet is projected to grow at an average rate of 1.5% per year.

Of more direct interest are those portions of the fleet contributing most to urban VMTs (as distinguished from interstate travel, for example). This generally can be done by looking at the lighter weight classes. Classes III–V and VI accumulate most of their VMTs on local or short hauls. For these classes, the following average growth rates between 1973 and 1980 are projected (% per year):

	III–V	VI	III–VI
HDG	+2.0	−2.2	−0.2
HDD		+20	+20
Total	+2.0	+1.7	+1.8

The growth in the size of the fleet will not correspond exactly to changes in VMTs. The Interagency Report also projected VMTs for 1973 and 1990 for local trips, short haul trips, and long haul trips.

Annual HD VMT's[4]

(Billions of miles per year)

	Local	Short	Long	Local and short	Total
1973					
HDG	35.8	19.7	3.3	46.5	49.8
HDD	10.4	18.3	30.6	28.7	59.3
Total	46.2	29.0	33.9	75.2	109.1
1990					
HDG	22.8	5.8	2.0	28.4	30.4
HDD	42.3	38.8	54.3	81.1	135.4
Total	65.1	44.4	56.3	109.5	165.8

[4] Interagency Report, Fig. I–7.

The average annual growth rates represented by these figures are as follows:

HDG	−2.6	−3.7	−2.9	−2.9	−2.9
HDD	+4.5	+3.4	+6.3	+5.0	
Total	+2.9	+2.5	+3.0	+2.2	+2.5

Comparing fleet growth rates with VMT growth rates reveals significant differences. They reflect a decline in sales of larger (and higher annual mileage) gasoline trucks and increasing sales of lighter (and lower annual mileage) diesel trucks. The VMT projections are the most appropriate to use since the rollback and EKMA models work on VMT growth rates. On the assumption that he shrinkage in HDG VMTs may be somewhat overstated, we will use the following growth projections:

Growth Rate of Annual VMTs to Use for Air Quality Projections

HDG = −2.0% per year
HDD = +5.0% per year

E. *LDT Estimated 1984 Emission Factors*

The LDT emission factors for future vehicles require estimates of "full life" deterioration rates and new vehicle production targets.

LDTs are expected to continue using oxidation catalysts similar to current systems. Therefore, similar DFs to current vehicles are expected. To determine a "full life" DF, we assume catalysts will be sufficiently durable to last the entire useful life and to maintain deterioration characteristics similar to those observed on current 50,000 mile systems. The full life DF can then be determined by linear extrapolation of the 50,000 mile DF. 1979 certfication data yields the following LDV and LDT average DFs:

LDV DF(HC)=1.20 DF(CO)=1.18 (197 vehicles)
LDT DF(HC)=1.18 DF(CO)=1.11 (60 vehicles)

In the interest of simplicity, a rounded off DF of 1.2/50,000 miles will be used for both HC and CO. Assuming manufacturers might certify for useful lives of about 100,000 miles this becomes 1.4/100,000 miles.

Manufacturers base their estmates of production line mean values upon limited testing of pre-production vehicles (typically 3). In order to ensure that a SEA audit will be passed with some desired confidence factor (we will use 90%), their target emission levels will, of necessity, be some point below the required level (because of production variability and the small sample size). This point can be estimated by standard statistical techniques, using the "t" statistic. The following relationships will be used:

LMT = low mileage target = standard/DF
m = maximum desired production mean = LMT − 1.28s
x = target new vehicle emission rate = m − s(t/n)

Where,

s = standard deviation of emission levels
t = "t" statistic for 90% confidence level and n − 1 degrees of freedom
n = sample size

To perform the calculations, an estimate of emission variability is needed. Data on variability expressed in the form of s/LMT was submitted by Ford in their comments on the LDT NPRM. That data indicated a value of s/LMT of 0.20 for LDVs certified to the 0.41/9/1.5 California standards. This value was higher than that found by Ford on vehicles certified to higher standards, and Ford felt that it would be even higher at lower standards.

For our analysis, we will assume that variability expressed as s/x is essentially constant. A value of s/x can be estimated from the Ford s/LMT data. Ford indicated in the submission of its data that current engines are such that X is approximately equal to or somewhat less than LMT. Therefore, current s/LMT data can be used as an estimate of the current s/x ratio. For engines built to meet a 10% AQL, we will assume that s/x remains constant (rather than s/LMT) as x goes down. To examine the effect of s/x increasing, we will calculate results using both 0.20 and 0.24.

We have:

x = m − s(t//n)
m = LMT − 1.28s
s/x = 0.20 or 0.24

Combining these we get, depending on the s/x ratio used:

x = LMT − .20x(1.28 + t/√n) or x = LMT − .24x(1.28 + t/√n)
x(1.256 + .20t/√n) = LMT or x(1.307 + .24t/√n) = LMT
x/LMT = 1/(1.256 + .20t/√n) or x/LMT = 1/(1.307 + .24t/√n)

For sample size n = 3,5,7, the results are as follows:

n	t	x/LMT (s/x=0.20)	x/LMT (s/x=0.24)
3	1.886	0.68	0.64
5	1.533	0.72	0.68
7	1.440	0.73	0.70

Based upon what seems to be the most common sample size (3) and the s/x = 0.20 ratio, we will use an x/LMT ration of 0.68. The above tabulations indicate that manufacturers could raise production target levels by increasing sample size or reducing variability. For example, if s/x were .24 instead of .20, increasing the sample size from 3 to 5 would allow maintenance of the same target value.

New vehicle emission rates for these ratios are:

0.68 (0.8/1.4) = 0.39 HC
0.68 (10/1.4) = 4.8 CO

A DF of 1.4/100,000 miles will yield the following:

HC = 0.39 + 0.016 (M/10,000)
CO = 4.8 + 0.19 (M/10,000).

These rates would apply to LDTs until such time as a catalyst failure occurred. As catalysts approach the end of their useful lives, random failures will begin to occur. These failures would be expected to follow a Weibull distribution of the form:

$$F = 1 - \exp\left[-\left(\frac{\theta}{0}\right)^{b}\right]$$

One of the principle uses of the Weibull distribution is in characterizing lifetime phenomena,[5] so that it is well suited to our purposes. To specify the distribution, we will assume the catalyst change point of 100,000 miles corresponds to a 5% failure rate (giving the manufacturers 95% confidence of catalyst survival). We will further assume a "Weibull slope" of b = 3. Based upon these parameters, 0 = 269,141 miles. A plot of this function is given in Figure A–1.

For those catalysts that fail, emission rates characteristic of well maintained, pre-catalyst engines are desired. Based upon review of emission factors for LDTs,[6] new vehicle emission rates of 1.9 HC, 23.4 CO will be used and combined with a DF of 1.1.

Then:

HC (failed catalyst) = 1.9 + 0.038 (M/10,000)
CO (failed catalyst) = 23.4 + 0.47 (M/10,000)

Combining the OK catalyst and failed catalyst emission rates according to the fraction (F) of failed catalysts, we get:

HC = [0.39 + 0.016 (M/10,000)][1–F] + [1.9 + 0.038 (M/10,000)][F]
HC = 0.39 + 0.0116 (M/10,000) + F [1.51 + 0.022 (M/10,000)]

BILLING CODE 6560-01-M

[5] Discussed in many statistical tests. See, for example "Statistical Design and Analysis of Engineering Experiments," Lipson and Sheth, p. 36.

[6] "Mobile Source Emission Factors—Final Document," EPA–400/9–78–005, March 1978, Table II–1.

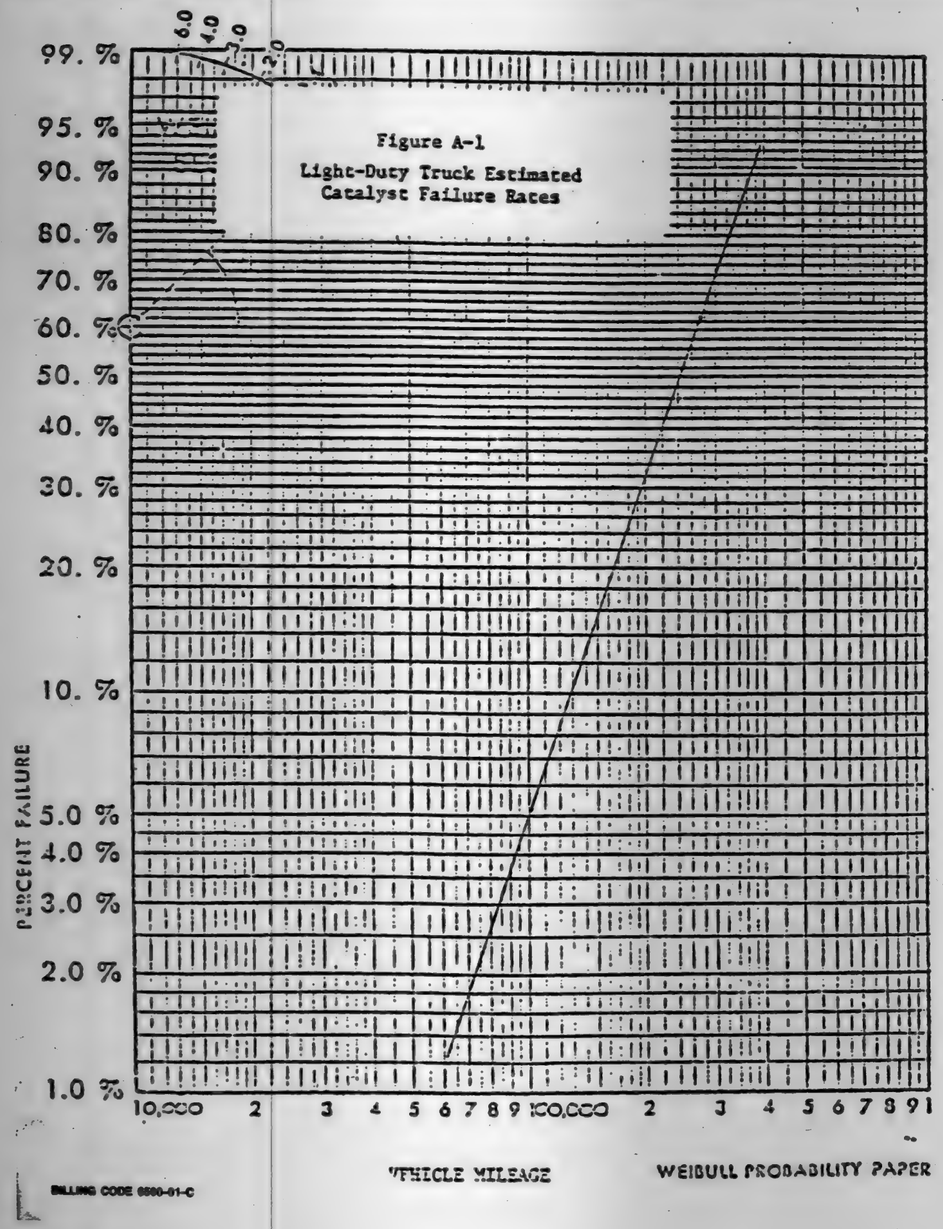

Figure A-1

Light-Duty Truck Estimated Catalyst Failure Rates

BILLING CODE 6560-01-C

CO = [4.8 + 0.17 (M/10,000)][1–F] + [23.4 + 0.47(M/10,000)][F]

CO = 4.8 + 0.17 (M/10,000) + F [18.6 + 0.30 (M/10,000)]

These results are included in Table 2.

The above factors are for gasoline fueled LDTs. In future years, some dieselization of LDTs is expected. Reproduced in Table 3 is data from the Summary and Analysis of Comments for the Light Duty Diesel Particulates package. This table gives diesel fractions for future LDV sales. These same projections will be used to estimate the fraction of LDT diesels.

For 23 certified LDV and LDT diesels in 1979 the average emissions are 0.60 (HC)/ 1.75 (CO). The two LDT diesels in this set span the average values. The following values will be used to estimate diesel LDT emission:

LDT Diesel Emission Rates

HC = 0.60 g/mile

CO = 2.0 g/mile

These levels are sufficiently low to be independent of AQL or emission standard. The average DF for 11 durability vehicles was low enough to neglect.

F. Develop Future HD Emission Standards for Optional Cases

In the course of evaluating the Clean Air Act mandated 90 percent reduction standard, optional reductions of 85 percent and 95 percent will be examined also. The standards corresponding to these levels would be 1.9/23.3 g/BHP-hr HC/CO for 85 percent and 0.64/7.7 g/BHP-hr HC/CO for 95 percent. Corresponding emission factors are derived below:

Heavy-Duty Gasoline.—Following the methodology developed earlier, zero mileage emission rates for HDGs would be:

85 Percent Standard

HC = 0.65 (1.9/1.7) = 0.73 g/BHP-hr

CO = 0.65 (23.3/1.7) = 8.9 g/BHP-hr

95 Percent Standard

HC = 0.65 (.64/1.7) = 0.24 g/BHP-hr

CO = 0.65 (7.7/1.7) = 2.9 g/BHP-hr

Converting these to grams per mile and adding in deterioration

Table 3.—*Year-by-Year Projections of the Diesel Fraction of Light-Duty Vehicle Sales* [1]

	Percent
Model year:	
1981	4.7
1982	7.5
1983	8.9
1984	9.5
1985	11.4
1986	13.8
1987	16.5
1988	17.6
1989	18.7
1990	19.7
1991	20.0
1992	20.0
1993	20.0
1994	20.0
1995	20.0

[1] Source: Summary and Analysis of Comments, EPA Light-Duty Diesel Particulate Final Rulemaking, Table I–5.

rates corresponding to a 1.7 DF these become:

85 Percent Standard

HC (OK Catalyst) = 1.3 + 0.09 (M/10,000) g/mile

CO (OK Catalyst) = 15.5 + 1.08 (M/10,000) g/mile

95 Percent Standard

HC (OK Catalyst) = 0.42 + 0.03 (M/10,000) g/mile

CO (OK Catalyst) = 5.0 + 0.35 (M/10,000) g/mile

Failed catalyst emission rates will be the same as those previously used for HDGs in Section C. The average emission rates are then:

85 Percent Standard

HC (average) = 1.3 + 0.09 (M/10,000) + F [3.6–0.05 (M/10,000)]

CO (average) = 15.5 + 1.1 (M/10,000) + F [129–0.72 (M/10,000)]

95 Percent Standard

HC (average) = 0.42 + 0.03 (M/10,000) + F [4.5–0.01 (M/10,000)]

CO (average) = 5.0 + 0.35 (M/10,000) + F [140–0.03 (M/10,000)]

These results are included in Table 4.

Heavy-Duty Diesel.—The zero mileage emission rates can be estimated as was done in Chapter VII of the Regulatory Analysis, Section E. As before, only HC is affected since diesel CO emissions naturally fall below even the 95 percent reduction standard.

In g/BHP-hr, the zero mileage emission rates are:

85 Percent Standard

0.72 (1.9–0.06) = 1.32 g/BHP-hr

95 Percent Standard

0.72 (0.64–0.06) = 0.42 g/BHP-hr

Converting to grams per mile and including the DF, the final results are:

85 Percent Standard

HC = 3.8 + .007 (M/10,000) g/mile

95 Percent Standard

HC = 1.2 + .007 (M/10,000) g/mile

These equations are included in Table 4.

Table 4.—*Optional Projected Exhaust Emission Rates For All Areas Except California and High-Altitude*

Applicable to 1984 and Later Years

A. *85 Percent Reduction Standard (1.9/23.3 g/BHP-hr HC/CO)* [1]

Heavy-Duty Gasoline:

HC = 1.3 + 0.09 (M/10,000) + F_H [3.6–0.05 (M/10,000)]

CO = 15.5 + 1.1 (M/10,000) + F_H [129–0.72 (M/10,000)]

Heavy-Duty Diesel:

HC = 3.8 + 0.007 (M/10,000)

CO = 8.7 + 0.11 (M/10,000)

B. *95 Percent Reduction Standard (0.64/7.7 g/BHP-hr HC/CO)* [1]

Heavy-Duty Gasoline:

HC = 0.42 + 0.03 (M/10,000) + F_H [4.5–0.01 (M/10,000)]

CO = 5.0 + 0.35 (M/10,000) + F_H [140 + 0.03 (M/10,000)]

Heavy-Duty Diesel:

HC = 1.2 + 0.007 (M/10,000)

CO = 8.7 + 0.11 (M/10,000)

Interagency Working Group on a Hazardous Substances Export Policy

Draft Report

INTERAGENCY WORKING GROUP ON A HAZARDOUS SUBSTANCES EXPORT POLICY

Draft Report

AGENCY: Interagency Working Group on a Hazardous Substances Export Policy.

ACTION: Draft report.

SUMMARY: The Interagency Working Group was convened to review the authorities under which and the procedures by which the Federal government regulates the export of substances whose use in the United States is banned or significantly restricted. The fourth draft report of the Working Group was completed in January 1980. That report was distributed widely and was the subject of a series of consultation meetings with representatives of a variety of affected interests—the chemical, pesticides, consumer product and drug industries; consumer, environmental, and health groups; and labor organizations. Based upon the comments of the participants at these meetings and upon the views and suggestions of individual Federal agencies in response to the fourth draft, the Working Group has prepared a fifth draft report.

The report, which is printed below, discusses the nature and scope of the problems posed by the export of hazardous substances, summarizes the existing statutory authorities and regulatory procedures that are now used or may be used to address these problems, identifies the policy considerations that should be taken into account in the development of a hazardous substances export policy, and proposes a multipronged policy that reflects those considerations.

The Working Group is publishing the fifth draft report in the **Federal Register** in order to assure that it receives wide distribution. Comments on the report are welcome and will be reviewed and analyzed during the preparation of the Working Group's final report.

DATE: Please submit any comments you wish to make on or before September 12, 1980.

ADDRESS: Send comments to the Interagency Working Group on a Hazardous Substances Export Policy, c/o Esther Peterson, Special Assistant to the President for Consumer Affairs, 495 Old Executive Office Building, Washington, D.C. 20500.

FOR FURTHER INFORMATION CONTACT: Ed Cohen or Mark Goldberg at the White House Office of Consumer Affairs at (202) 456–6226 or Kitty Gilman or Jean Halloran of the Council on Environmental Quality at (202) 395–5780.

Introduction

In early summer of 1978, an Interagency Working Group was established to consider Federal policy on the export of hazardous substances which are banned or whose is use significantly restricted in the United States.[1] The catalyst for convening the Working Group was the national and international controversy over U.S. exports of TRIS-treated children's sleepwear, after it has been banned for sale in the United States.

The export of TRIS-treated sleepwear was not an isolated incident. Congressional hearings in July 1978 [2] pointed out numerous instances in which American firms exported, without restriction on the part of the U.S. government, substances that had been banned or strictly limited for use in this country. In some of these cases, the risks and benefits of using the exported products in the importing countries may have been different from those in the United States due to differing economic, social, and cultural conditions. However, in most instances, there was little evidence of a special U.S. government effort to share with importing countries the information which had led the United States to ban or strictly limit the use of the products, so that the importing countries could make their own informed judgments. The unrestrained export of hazardous substances by U.S. firms raised questions about this country's ethical responsibility for the hazards arising from hazardous exports, questions that have important implications for U.S. trade and foreign relations. One result of this concern was that in 1978 Congress amended several regulatory acts to provide notification to importers and/or to the government of the importing nation when certain banned products are exported from the United States.

U.S. manufacturers have a strong stake in fostering a positive attitude among foreign governments and consumers toward products bearing the label "Made in USA." Sale abroad of banned products tends to undermine foreign confidence in American-made products. Among the potential consequences are losses in export trade and thus negative effects on our balance of payments, and possible adverse long-term effects on foreign markets.

Uncontrolled export of hazardous substances also tends to damage our relations with foreign countries. Importing countries—generally the poorer, less developed nations of the world—have urged that exporting countries exercise restraint in sending abroad products that are banned for use at home and provide full information on the products' effects. UN Environment Programme resolutions (formally called decisions) in 1977, 1978, and 1980 asked nations not to permit export of hazardous substances without the knowledge and consent of the importing countries. To these countries, a U.S. government policy that tolerates unrestrained export of banned products could appear callous or hostile and thus be detrimental to U.S. foreign policy interests.

The purpose of the Working Group was to explore the nature and scope of problems related to the export of banned or significantly restricted substances, and, if appropriate, to propose a government policy to which all Federal agencies would subscribe.

II. Definition of Banned and Significantly Restricted Substances

The Working Group found that careful definition of terms was necessary, to make clear what substances should be considered for purposes of a policy to control export of banned and significantly restricted substances. The Working Group has generically defined these substances to mean a pesticide, chemical, food (including meat, meat product, or poultry), food additive, drug, cosmetic, medical device, electronic product, biological product, color additive, or consumer product for which a Federal agency has taken any of the following types of regulatory actions in order to protect against an actual or potential threat to the health or safety of the United States public or to the environment:

(1) Final rulemaking or adjudicatory action (including emergency or interim binding action) which denies or revokes approval for, or prohibits, the manufacture, production, use, or sale in the United States.

(2) Final rulemaking or adjudicatory action (including emergency or interim binding action) which prohibits or revokes approval of most significant uses in the United states.

(3) Withholding, or absence of registration or approval for any substance for which Federal law requires Federal agency registration or approval before manufacture, production, use, or sale in the United States.

A more detailed definition of "banned and significantly restricted substances," in which the substances and products considered under the policy are defined in terms of regulatory action under certain sections of certain statutes, is provided in Section VII.

Certain categories of products were excluded from the Working Group report because of their special legislative history or because of the special problems they raise: alcohol, tobacco, and firearms; military weapons and equipment; narcotic and pyschotropic substances; and nuclear fuels. Hazardous non-nuclear wastes are not included since a current Administration effort led by the State Department is developing a policy to deal with exports of these wastes. Also generally excluded from consideration are the export of hazardous production facilities, and U.S. financial assistance for such facilities. Substances which may cause hazardous workplace conditions are included in parts of the policy.

III. Nature and Scope of the Problem

Since there are only limited controls at present on export of banned and significantly restricted substances, the government has no mechanisms for monitoring or valuing such exports. Further, many firms resist disclosure of the extent or destination of export products. Some of them consider their marketing plans trade secrets. Thus, no estimates are available of the dollar value of such substances exported from the United States.

Virtually unrestrained export is currently allowed for many substances banned for sale in the United States: certain food dyes; cyclamate sweeteners; and drugs, cosmetics, and antibiotics that are adulterated or misbranded. Other banned substances may be exported provided notice is sent to the importing nation. These include most CPSC and EPA-regulated products. Finally, a few classes of banned substances, including unapproved drugs and banned medical devices, are categorically prohibited from export.

Several examples, drawn from Congressional hearings and information provided by federal agencies, suggest the nature and scope of the problem. Some of the examples also suggest the complexity of controlling the export of substances which the United States may consider too hazardous to use but which other countries, with differing needs and conditions, may judge differently.

- Complying with federal requirements, U.S. manufacturers treated children's sleepwear with the chemical flame-retardant TRIS. In April 1977, after the carcinogenic hazard of the substance was discovered, the Consumer Product Safety Commission (CSPC) banned domestic sales of TRIS-treated sleepwear. According to Congressional testimony, however, exports of the garments continued for more than a year. Approximately 2.4 million pieces valued at $1.2 million were reported to have been shipped abroad. Most banned consumer products may still be exported, provided the government of the importing country is notified of the shipment.
- In March 1978, the Food and Drug Administration (FDA) issued a final rule prohibiting the nonessential uses of certain chlorofluorocarbons (CFCs) as propellants in self-pressurized containers of foods, drugs and cosmetics. EPA at the same time prohibited domestic production, processing, and use of CFCs for nonessential aerosol propellant use. These actions were taken because chlorofluorocarbons may deplete stratospheric ozone, leading to an increase in skin cancer, climatic changes, and other adverse effects. EPA also banned the processing of CFCs into aerosols for export, though it did not ban the export of unprocessed CFCs. Subsequently, some manufacturers requested information from FDA as to whether or not it was legal to export cosmetics (e.g., hair sprays) containing chlorofluorocarbons as propellants. FDA advised these firms that shipping cosmetic products to other countries was lawful as long as they were not prohibited by the country to which they are shipped.
- The very powerful and very hazardous pesticide, Leptophos, never registered by EPA for domestic use, was manufactured in the United States principally for export. According to Congressional testimony, nearly 14 million pounds was exported to 50 countries between 1971 and 1976. In 1971 and 1972 a number of Egyptian farmers were found to be suffering from hallucinations and impairment of vision and speech after using Leptophos, and 1,200 water buffalos were reported to have died from exposure to the pesticide.
- According to the General Accounting Office, over 500 million pounds of pesticides were exported from the United States in 1976. Of these exports, approximately 30 percent (more than 160 million pounds) were pesticides not registered for use in the United States. This includes pesticides whose "active ingredient" is contained in registered products, but which is being exported in a different formulation; pesticides for which registration has never been sought; and pesticides whose registration has been cancelled, suspended, or denied. Unregistered pesticides may lawfully be exported provided that the product is labeled as unregistered (and meets other labeling requirements) and that importers are notified and acknowledge that the pesticide is unregistered. A copy of the acknowledgement is sent to EPA for transmittal to the foreign government.
- The World Health Organization has estimated that approximately 500,000 human poisonings, including about 5,000 deaths, are attributable to pesticides each year. Many of these are due to use of certain classes of pesticides which degrade quickly but are extremely toxic when applied. EPA has established stringent standards for the training and certification of individuals wishing to use these registered pesticides in the United States. However, the U.S. exports tens of millions of pounds of these pesticides each year to countries where such training may not be required and warning labels may not be followed.
- Chloramphenicol is an extremely potent antibiotic used in the United States only against typhoid fever and a few other life-threatening infections because of its serious potential side effects, such as aplastic anemia. The FDA indicated in Congressional testimony that an American firm had labelled and exported it to Spanish-speaking countries as suitable for treatment of much more routine disease for which there had been no substantiation of its effectiveness, including measles, mumps, and chicken pox, with no warnings as to its dangerous side effects.
- Depo-Provera, a drug that can be used legally in 69 countries (though not in the United States) as an injectable contraceptive, is supplied for contraception by an American drug firm from overseas manufacturing sites. According to FDA, it is approved for use in the United States only for palliative treatment of endometrial cancer, because there is evidence that it may be linked to long-term risks of other cancers. The drug is produced in this country only at dosage levels that are not effective for contraception. Currently, it may not be exported for

[1] The Working Group, convened by Esther Peterson, Special Assistant to the President for Consumer Affairs, included the Departments of State, Agriculture, Commerce, Energy, Health and Human Services (Food and Drug Administration), Justice, Defense, Labor, Transportation, and Treasury, and the Environmental Protection Agency, Consumer Product Safety Commission, Export-Import Bank, Overseas Private Investment Corporation, Action, Agency for International Development, Regulatory Council, Office of Management and Budget, Council on Environmental Quality, Nuclear Regulatory Commission, Office of the U.S. Trade Representative, and several other Executive offices.

Provisions

contraceptive use. Several foreign government representatives have asked for U.S. approval of the drug as a contraceptive so it can be used in AID programs for population control.

• Manually collumated X-ray machines are not approved for use in the United States because their operation can result in patients' being overexposed. However, according to FDA testimony before Congress, these machines could provide substantial medical benefits to underdeveloped countries lacking the equipment or personnel required to maintain more complex machines. They can be exported under current law if the exporter obtains the approval of the FDA and the importing country for the shipment.

Besides the concerns about health and safety effects of hazardous substances exports on foreign citizens, effects on our own citizens are also a cause of concern. Export of hazardous substances can have a direct effect on U.S. citizens by more than one route: through adverse effects on workers in the plant where the product is manufactured; through the reimportation of the original substances or their traces or derivatives; through the illegal diversion into domestic commerce of restricted products originally produced for export; or through transport of hazardous substances back to this country via the air or oceans. The world environment itself could suffer through release of hazardous substances to the global commons.

A General Accounting Office report concluded that many kinds of imported foods may be contaminated with pesticides not allowed in the United States. FDA spot checks (examining about 1 percent of shipments) of imported raw agricultural commodities found that about 5 percent of the shipments tested in 1977 through 1979 contained residues of pesticides for which no U.S. tolerance levels exist. According to the GAO report, test results showing unacceptable residue levels are sometimes received after the item tested has already entered the marketplace. Moreover, the vast majority of imported foods enter the United States with no testing for toxic residues. Pesticides banned in the United States but used in other countries, especially nearby countries like Canada and Mexico, can also travel by water or air to enter the environment of the United States.

Several factors suggest that the problem of hazardous substances exports is likely to increase over the next several years. Growth in world population, especially in developing countries, will put a strain on global resources. Significant health and food supply problems may follow, leading to increased foreign demand for imported drugs, pesticides, and other potentially hazardous products. Moreover, continued new discoveries of carcinogenic and other damaging effects of many substances are probable over the next few years. In some cases, certain firms may be left with stocks of materials which can no longer be sold in the United States, and the incentive to recover some of their investment by selling in products abroad may be considerable.

If current economic trends continue, exports are likely to increase. In 1970, total U.S. exports of goods and services were $82.5 billion or 6.4 percent of gross national product. By 1978, the percentage had risen to 9.7 percent and the dollar value was $205 billion. Yet the U.S. balance of trade has deteriorated, and pressure for U.S. firms to increase exports has mounted. The National Export Policy, recommended by the President's National Export Policy Task Force provides new economic incentives for export. Importing countries may improve their ability to assess the effects of imports and exclude those they consider damaging. Nevertheless, it appears that the problem of hazardous substances exports will remain serious.

IV. Existing Statutory Authority and Procedures

A. Summary of Existing Authority

The following agencies have been directed by Congress to regulate the domestic manufacture, use, and introduction in interstate commerce of certain products or substances that may involve hazards to human health and the environment.

Agency[1]	Product class	Statute
Consumer Product Safety Commission	Consumer products	Consumer Product Safety Act.
	Fabric-type products	Flammable Fabrics Act.
	Household chemical substances, e.g., if toxic, corrosive, flammable.	Federal Hazardous Substances Act.
	Children's articles	
Drug Enforcement Administration	Drugs (narcotics and dangerous drugs).	Controlled Substances Act.
Environmental Protection Agency	Pesticides	Federal Insecticide, Fungicide, and Rodenticide Act; Federal Food, Drug and Cosmetic Act.
	Chemical substances	Toxic Substances Control Act.
Food and Drug Administration	Foods, drugs, cosmetics, and medical devices.	Federal Food, Drug and Cosmetic Act.
	Biological and electronic products	Public Health Service Act.
U.S. Department of Agriculture	Meat and meat products	Federal Meat Inspection Act.
	Poultry	Poultry Products Inspection Act.
Occupational Safety and Health Administration	Workplace hazards and workplace equipment.	Occupational Safety and Health Act.

[1] The Customs Service of the Treasury Department assists some of these agencies in enforcement.

While many of the statutes listed above address the export issue in some measure, there are no consistent principles underlying their various mandates. If any generalizaiton is warranted, it is that Congress seems recently to have moved away from extremes—complete permissiveness on the one hand and rigid controls on the other—toward a middle course that calls for notification, disclosure, and, in limited circumstances, bans on exports of hazardous substances (see Appendix A for more information on the provisions of these statutes).

Since the mid-1970s, Congress has put increasing emphasis on notification to the receiving country of the export of banned and significantly restricted substances. Such notificaiton was required by the Toxic Substances Control Act of 1976 and amendments to four existing statutes passed in 1978 by the 95th Congress. These amendments strengthened existing notification procedures of the Federal Insecticide, Fungicide, and Rodenticide Act and established notification requirements for consumer products under the Consumer Product Safety Act, the Flammable Fabrics Act, and the Federal Hazardous Substances Act. Also, Congress authorized limited discretionary export banning authority, to protect U.S. consumers, under the same three acts. These recent actions suggest that there is a growing concern in Congress about the effects of exports of hazardous substances on foreign citizens, combined with the view that it is generally appropriate for countries to make their own judgments about their needs for hazardous substances, so long as they are adequately informed.

The provisions of existing statutes pertaining to export of substances which are banned or significantly restricted in the United States are of five general types, although some statutes fit more than one category. In addition there are a good many qualifications and exceptions in the laws. As the following outline shows, the regulatory scheme is complex.

(1) *Substances for which there are no export limitations or for which exports must be in accord with the laws of the importing nation:*

Federal Food, Drug and Cosmetic Act—adulterated or misbranded foods (except meat and poultry subject to controls), cosmetics, drugs, and antibiotics.
Public Health Service Act—noncomplying electronic products.
Federal Insecticide, Fungicide and Rodenticide Act—registered pesticides composed of active ingredients for which major uses have been cancelled or suspended.

(2) *Substances for which notification of the importing country of any export is required:*

Federal Insecticide, Fungicide, and Rodenticide Act—pesticides not registered for use in the United States.
Toxic Substances Control Act—certain regulated chemical substances.
Consumer Product Safety Act—consumer products which are banned or do not meet federal safety standards.
Flammable Fabrics Act—fabric-type products which do not conform to federal safety standards.
Federal Hazardous Substances Act—toxic, flammable, corrosive and otherwise hazardous products, including children's articles which fail to meet federal requirements.

(3) *Substances for which prior approval by the importing country must be sought:*

Federal Food, Drug and Cosmetic Act—unapproved medical devices [2] and investigational drugs.[3]

(4) *Substances for which an agency can ban exports if there is a risk to health or the environment of the United States:*

Toxic Substances Control Act—chemical substances [4]
Consumer Product Safety Act—consumer products [5]
Flammable Fabrics Act—fabric-type products [5]
Federal Hazardous Substances Act—household chemicals [5]

(5) *Substances for which there is a total ban on export:*

Federal Food, Drug and Cosmetic Act—unapproved new drugs,[6] unapproved new animal drugs
Public Health Service Act—unapproved biological products (serums, vaccines, etc.)
Meat Inspection Act—meat failing to meet U.S. quality standards (except for preservation)
Poultry Products Inspection Act—poultry failing to meet U.S. standards.

A more detailed summary of the authority contained in the various regulatory statutes for each product appears in Appendix A.

It is not surprising that the export provisions of the various regulatory statutes are not consistent in their treatment of the export of hazardous substances. These laws were enacted over a period of 40 years. In addition, considering the different hazards involved in the various product categories, the various circumstances in which the products are shipped, and the different conditions of use of the products, some variation in the treatment of different products is perhaps warranted.

This is not to say that more consistency in the treatment of hazardous substance exports is not desirable or achievable. For example, where federal agencies provide notification of export to a foreign government, it would be desirable to systematize the procedures to assure more regularity in the process. Additional steps, described later in this report, could be taken to make product hazard information and data more readily available and accessible. Finally, there are some circumstances, also discussed afterward, under which any export of a banned or significantly restricted substance may be undesirable and not in the national interest.

In addition to the laws regulating specific products or practices, two additional authorities are relevant to export policy.

First, the Export Administration Act of 1979 (Pub. L. 96–72) authorizes the President to use export controls to restrict the export of goods and technology where such export might prove detrimental to the national security of the United States; restrict export where necessary to prevent the excessive drain of scarce materials from the United States or to reduce the serious inflationary impact of foreign demand; and restrict export where necessary to further significantly the foreign policy of the United States or to fulfill its declared international obligations. This recently enacted statute extends and revises the Export Administration Act of 1969.

Second, Executive Order No. 12114, issued by President Carter on January 4, 1979, requires that agencies analyze the environmental effects abroad of certain types of major Federal actions that may significantly affect the environment. This analysis will help guide decisions by the responsible agency officials. However, the grant or denial of an export license under the Export Administration Act is not considered a major Federal action for the purposes of Executive Order No. 12114.

B. Present Export Procedures

Present agency procedures dealing with the export of hazardous substances may be described in two categories: (1) procedures to implement specific control authorities and (2) mechanisms to promote international cooperation in the analysis and exchange of hazard data and to develop common approaches to regulation.

1. *Procedures to Implement Existing Control Authority:* Most agencies have in place administrative procedures which could be adapted to carrying out a more consistent export policy for banned and severely restricted hazardous substances. This is particularly true of agencies with long established responsibilities in the export area. The Commerce Department has well established procedures for imposing export controls for the various purposes specified in the Export Administration Act. The State Department has formal procedures for the cases where it is required by statute to transmit notifications regarding hazardous exports from U.S. regulatory agencies to foreign governments. Customs has long-established procedures for controlling the entry of goods into international commerce, such as checking for required export licenses and documents, which could be adapted to the needs of an export policy for banned and severely restricted hazardous products. FDA has in place under its various statutory authorities procedures for approving exports, as

[2] Non-complying banned products cannot be exported unless the HHS Secretary determines that export is not contrary to public health and safety and the foreign government approves of the export.
[3] Export is permitted if requested by the foreign government.
[4] Banning is authorized if the exported product presents an unreasonable risk of injury to health within the U.S. or to the environment of the U.S.
[5] Banning is authorized if exported product presents an unreasonable risk of injury to consumers within the U.S.
[6] A bill (S. 1075) has passed the Senate which would allow export if the approval of the importing country were obtained and the HHS Secretary determined that the export would not be contrary to public health.

well as for notifying foreign governments of significant regulatory decisions and changes in statutes or regulatory approaches. In the case of agencies with new statutory authorities—EPA for the Toxic Substances Control Act and Federal Insecticide, Fungicide and Rodenticide Act and CPSC for the various laws it administers—new formal procedures either are currently in place or soon will be.

2. *Existing Programs to Foster International Exchange of Hazard Data and Consistent Approaches to Regulation and Export of Hazardous Substances:* The U.S. government is participating in several programs to promote international cooperation on control of hazardous substances and their export. The programs seek to improve exchange of information, to broaden understanding of common regulatory issues, and to develop consistent approaches where feasible.

The locus and subjects of such international initiatives include:

- Organization for Economic Cooperation and Development (OECD): exchange of information on regulation of pesticides and other toxic chemicals; development of consistent testing methods and control practices for chemicals; possible controls over the export of unsafe consumer goods; study of export policy needs for chemicals.
- United Nations General Assembly (UNGA): Resolution requesting the Secretary General in cooperation with the United Nations agencies and bodies concerned, especially the World Health Organization, to assist governments to exchange information on banned hazardous chemicals and unsafe pharmaceutical products. A report is to be submitted to the General Assembly at its 35th (1980) session, through the Economic and Social Council about the experience of Members States and United Nations agencies and bodies concerned.
- World Health Organization (WHO, a UN body): dissemination of methodologies to study the human health effects of chemicals and evaluate risks; development of environmental health criteria for various toxic substances; intergovernmental cooperation of international health matters.
- Food and Agricultural Organization (FAO, a UN body): consultation on assessing environmental hazards of pesticides and on developing consistent requirements for pesticide registration.
- Codex Alimentarius Commission (independent UN body established by WHO and FAO): establishment of international maximum residue limits for pesticides in foods, to be adopted by member countries.
- United Nations Environment Programme (UNEP): resolutions calling for strong and consistent policies governing hazardous substances exports; development of an International Registry of Potentially Toxic Chemicals (IRPTC) to serve as data clearinghouse for all information generated on potentially toxic substances.
- International Labor Organization (ILO): a global occupational safety and health hazard alert system.
- The UN Committee of Exports on the Transport of Dangerous Goods: development of recommendations regarding classification, labeling, and packaging of hazardous materials during transport.
- Multinational agreements: an example, is the Tri-Partite Pesticide Agreement among the U.S., U.K., and Canada.

U.S. participation in international programs takes on still more importance as the United States implements a strong hazardous substances export policy. The "International Efforts" section VI, below, gives the Working Group's recommendations for strengthened international efforts.

V. Policy

This section identifies considerations that must be weighed in arriving at a hazardous substances export policy and proposes and discusses a policy that balances those considerations.

A. Policy Considerations

The Working Group agreed on the need to establish a more consistent, practical Federal policy to govern the export of banned and significantly restricted substances. Participating agencies identified the following considerations that should be taken into account:

(1) As a nation exporting banned and significantly restricted substances, the United States has a moral obligation to recognize and assist in controlling the potential effects of these substances on the health and safety of citizens abroad and on the world environment.

(2) Nations differ substantially in their economic and cultural conditions and in their use of, and need for, hazardous substances. It is difficult for one nation to make decisions on the acceptability of risks for another nation. Such assessments require extensive information regarding economic, political, and social conditions which U.S. regulatory agencies do not have and cannot readily obtain.

(3) U.S. relations with other countries could be harmed by unrestrained export of substances which are banned or significantly restricted in the United States.

(4) The unrestrained export of hazardous products could undermine confidence of foreign buyers in U.S.-made goods, and could jeopardize their sale abroad.

(5) Excessively restrictive limitations on the export of products which a foreign country may decide it needs could place U.S. firms at a competitive disadvantage and harm U.S. relations with the government of that country.

(6) Excessively restrictive limitations could also place significant economic burdens on the U.S. economy, including adverse effects on the balance of trade and payments, on output and jobs, and perhaps on domestic competition (if smaller firms suffer disproportionately from reduced ability to compete in foreign markets).

(7) An export policy should be administratively simple and inexpensive to implement, and should recognize the complexities of international commerce.

(8) The United States should encourage and participate actively in international initiatives to develop consistent policies for hazardous substance exports, and for the sharing of data, analysis, and information. The effectiveness of unilateral United States action could be substantially diminished if foreign facilities or firms were to become alternative suppliers of substances which U.S. policies seek to control.

(9) The United States should attempt to protect American citizens against the dangers to their health and safety of importing hazardous substances and their derivatives or residues, and of damage to the world environment.

B. Proposed Policy

The Working Group recommends a policy that includes the considerations listed above and that also recognizes and uses the expertise of individual regulatory agencies. The proposed policy relies on existing statutory authority and would be further implemented through formal Executive action. The Executive action would set forth the *minimum* requirements that all agencies would be obliged to meet. Agencies would be expected to adopt more stringent requirements where required by statute or where authorized and appropriate for the types of hazards within their jurisdiction.

(1) *Hazard Notification:* The Working Group concluded that in most circumstances the international responsibilities of the United States could be met by an effective hazard notification system. Existing law requires notification tied to actual shipment (either first shipment of the year or shipment-by-shipment) or intent to export for most categories of products included in this policy. Exceptions include foods, cosmetics, and radiation-emitting electronic products which do not meet FDA health and safety standards; approved drugs and antibiotics which do not meet FDA quality control standards; and registered pesticides made from active ingredients for which major uses have been suspended or cancelled in the United States.

Most of the laws requiring notification, including those contained in the Consumer Product Safety Act, the Federal Hazardous Substances Act, the Flammable Fabrics Act, and the Federal Insecticide, Fungicide, and Rodenticide Act, are less than 2 years old; some of the regulations implementing them are not yet final, and those in effect are very recent. The notification schemes in the various laws differ in terms of timing, frequency, and content of the notice, and experience with them is minimal. Accordingly, the Working Group is not able at this point to recommend the best scheme for notification.

The Working Group does not recommend any changes in existing law at this time. As we gain experience with the requirements of present laws, the Administration will assess their effectiveness, any important omissions they may have left, and any burdens they may impose. The Administration will then work together with Congress to determine whether notification requirements should be imposed where they are not now required and whether existing notification requirements should be modified.

Notification systems are intended to allow a foreign government to decide for itself whether the potential benefits of a substance are worth the anticipated risks and detriments. With this knowledge, a foreign government would be in a position to limit the importation of a partiuclar hazardous substance or take other measures to protect its citizens, if it decides any of these limitations or measures would be in its national interest.

The Working Group agreed that there was a need for greater procedural uniformity in the notification process as used by Federal agencies. It would be more effective and more efficient, for the United States and for other countries, to establish an official government-to-government contract for transmission of information concerning hazardous substances.

The Working Group recommends that the State Department be designated the official conduit of notifications concerning exports of banned and significantly restricted hazardous substances for all Federal agencies. This recommendation is consistent with the Department's role as official U.S. representative to foreign governments. Each agency would list for the State Department its own offices and people to be contacted if a foreign government wanted further information about regulatory actions or hazardous substances risks. Agencies should also work with the Department to identify their opposite numbers in foreign governments, to receive notifications and to serve as points of contact. The State Department would transmit notifications to the U.S. embassy in the country in question and might also transmit them to the country's embassy in the United States. U.S. embassies in foreign countries would keep on file copies of notifications transmitted to host governments. If a foreign government is required under any existing notification system to respond to a notice, that response should be transmitted through the State Department to the relevent U.S. regulatory agency.

Individual agencies would still be free to communicate directly with their counterparts in a foreign government if they wished, and would of course do so where required to by law.

In addition to greater uniformity in procedure, it is also desirable to achieve greater uniformity in the content of the notices sent to foreign governments. The Working Group recommends that the information to be provided by the State Department to the foreign government include, at a minimum:

(a) The name of the hazardous substance to be exported;

(b) A concise summary of the agency's regulatory actions regarding that substance, including the statutory authority for such actions and the timetable for any further actions that are planned; and

(c) A conscise summary of the potential risks to human health or safety or to the environment that are the grounds for the agency's actions.

In addition, to the extent deemed appropriate by the agency with jurisdiction, copies of additional documents could be forwarded to a foreign country to assist that country in its assessment of the risks associated with the substance. Trade secret data would not be sent to the foreign country except as authorized by domestic statute and deemed appropriate by the agency with jurisdiction.

(2) *Annual Summary:* As a complement to the notification scheme that is already in effect, the Working Group recommends the preparation and distribution of a report which:

(a) Summarizes all final regulatory actions of the types described in Section VII [1] that were taken by federal agencies by the end of the previous calendar year (including those antedating that calendar year by continuing in force) and that are of significant international interest;

(b) Summarizes all proposed regulatory actions of the types described in Section VII that were pending before agencies at the end of the previous calendar year and that are of significant international interest; and

(c) Indicates generally what kind of additional information is available with respect to each of these final or proposed regulatory actions and how the information may be obtained.

The report would also include information on some substances the use of which is generally permitted in the United States, subject to conditions or restrictions based on potential risks to human health or safety or to the environment. For example, the Occupational Safety and Health Administration, under the Occupational Safety and Health Act, issues health standards that set maximum workplace exposure levels for certain chemicals and other substances, and establishes other requirements for worker protection. Similarly, the Environmental Protection Agency issues regulations governing the use of some pesticides. Such regulations should be included in the Annual Summary when they are likely to be of interest to other countries in protecting against similar hazards.

The report would be compiled by the Regulatory Council and distributed by the State Department to appropriate foreign officials and to public and private international organizations. (The latter would include such organizations as the UN Environment Programme, OECD, FAO, World Health Organization and the ILO.) Each agency would provide the Regulatory Council with the information requested in a standard format and on a timetable determined by the Regulatory Council. The report would also be published in the United States in the **Federal Register.**

The annual summary would serve several important purposes. It would compile in one up-to-date document a summary of U.S. regulatory actions banning or significantly restricting the

[1] Information on unregistered pesticides would be included in the Annual Report only if EPA suspends, cancels or denies registration or if a tolerance is denied or revoked.

V 45 AG 12 80 UMI

manufacture, production, use, or sale of hazardous substances. It would inform foreign governments of regulatory actions the previous year that were not included in the last annual report, and for which some governments would not have received a shipment notification. It would give foreign governments notice of prospective regulatory actions so they could monitor the progress of a proceeding if they so desired. Furnished with this information, a foreign government could take regulatory action it deems appropriate at the same time that U.S. regulatory action takes place. The report would also list people and offices in the United States to approach for discussions of hazards of particular substances. The summary would also serve as a "hazard alert" for foreign governments on products that it may be importing from other countries.

(3) *Export Control:* The Working Group concluded that the responsibilities of the United States concerning the export of hazardous substances would be fulfilled in most cases through notification. There are some limited circumstances, however, where additional safeguards are needed to assure good and stable relations with other nations in the world community. If the United States does not exercise special vigilance over the export of some banned or significantly restricted products which are particularly hazardous, our economic and diplomatic ties with other countries could be jeopardized. Citizens and governments of foreign countries receiving these products directly, or being adversely affected indirectly as innocent bystanders, may develop increasingly hostile attitudes towards this country and its products.

As indicated in Section IV, existing law already prohbits the export of some substances in particular circumstances. Another mechnism that can be used to prohibit hazardous exports where such exports would prove detrimental to the foreign policy interests of the United States is the Export Administration Act of 1979 (Pub. L. No. 96–72, 93 Stat. 503, 50 U.S.C. App. § 2401 *et seq.* (the Act)). The Act authorizes the President to "* * * prohibit or curtail the exportation of any goods, technology, or other information subject to the jurisdiction of the United States or exported by any person subject to the jurisdiction of the United States, to the extent necessary to further significantly the foreign policy of the United States or to fulfill its declared international obligations." (Sec. 6(a)(1)). The authority contained in this subsection is to be exercised by the Secretary of Commerce, in consultation with the Secretary of State and such other departments and agencies as the Secretary considers appropriate, and is to be implemented by means of export licenses issued by the Secretary.

The Export Administration Act of 1979 is the successor statute to the Export Administration Act of 1969. By memorandum dated January 30, 1979, Deputy Assistant Attorney General, Office of Legal Counsel, Leon Ulman advised the Department of Commerce that the 1969 statute gave the President authority to control exports of hazardous substances for foreign policy purposes. On January 9, 1980, the Working Group inquired as to whether this authority was modified in the 1979 statute. Deputy Assistant Attorney General Ulman advised the Working Group, by memorandum dated April 11, 1980, that the President may control the export of hazardous substances to further significantly the foreign policy of the United States under the 1979 statute. [8]

The Working Group recommends that the Secretary of Commerce require a validated export license for those prohibited and significantly restricted products which, if exported, would prove detrimental to the foreign policy interests of the United States. The products on which such export controls would be imposed would be chosen in the following manner. First, the appropriate regulatory agencies would prepare lists of substances, products, and classes of products which have been banned or significantly restricted in the United States under the specific statutory authorities listed in Section VII. These prohibited and restricted substances, with the exception of certain unregistered pesticides [9] and "medicines and medical supplies" as the term is used in the Act, [10] would constitute the universe from which those substances to be subjected to export controls would be chosen. No substance which is not already prohibited or significantly restricted for use in the United States would be considered for export controls under this policy.

Next, these lists of substances and products would be brought before an interagency task force chaired by the State Department and composed of the Department of Commerce, the Environmental Protection Agency, the Consumer Product Safety Commission, the Food and Drug Admnistration, the Office of the United States Trade Representative, and the Council on Environmental Quality. The State Department, as chair of the task force, could invite representatives of other Federal agencies as well to participate from time to time in the work of the task force. This task force would advise the State Department as to which of the listed substances should be considered, because of the especially severe hazards that their export would pose to human health or safety or to the environment, candidates for inclusion on the Commodity Control List. In doing so, the task force would consider, to the extent possible within the limits of available information, the type, extent, and severity of the potential detrimental effects of each substance proposed for inclusion on the Commodity Control List by a member of the task force; the likelihood of the effects; the duration of the effects; the ability of foreign countries to avoid or mitigate the effects; the availability of the substance from sources other than the United States; the availability of other substances or methods that would serve the same purpose as the substance to be exported; and the importance of the beneficial uses of the substance (this is not intended to require a rigorous, quantitative analysis of costs and benefits, however, as is usually performed in domestic regulatory procedures).

The function of the regulatory agencies on the task force would be to provide technical advice to the State Department, on the basis of available information compiled in the course of previous regulatory proceedings pertaining to the substance or product; and to assure that those products for which a recommendation of restricted export is made all pose a common, especially severe, level of hazard. The task force would be a continuing one which would review additional substances and suggest new candidates for the Commodity Control List as new actions of the type defined in Section VII are taken. With the benefit of advice obtained from the interagency task force, the State Department would identify, subject to the concurrence of

[8] The full text of the 1980 memorandum appears in Appendix B.

[9] Pesticides for which registration has never been sought would not generally be included in this universe of products since U.S. regulatory agencies would not necessarily possess any test data on their health or safety ramifications. However, pesticides for which a tolerance has been denied or revoked would be included in the universe for the purpose of consideration for export controls. In this way, some unregistered pesticides might be placed on the list for consideration. For example, the unregistered pesticide Leptophos would appear on the list (were it still being manufactured), because EPA denied a tolerance for residues on foods (under authority of Sec. 408 of the Food, Drug, and Cosmetics Act).

[10] The Working Group has asked the Office of Legal Counsel of the U.S. Department of Justice for a legal opinion as to the particular classes of products regulated by FDA which are covered by this term as used in the Export Administration Act.

the Secretary of Commerce, those relatively few banned or significantly restricted substances which should be included on the Commodity Control List because controls on their export would further significantly the foreign policy of the United States or would fulfill declared international obligations of the United States.

In the event that the State and Commerce Departments disagreed over the imposition of export controls, the disagreement would be referred to the President as provided in the Act.

The Act mandates a number of procedural and substantive requirements which must be met when invoking foreign policy controls. The President may impose export controls "only after full consideration of the impact (of such controls) on the economy of the United States" (sec. 3(2)) and only if the foreign policy standard is satisfied (sec. 3(2)(B)). Where the controlled goods or technology are comparably available from foreign sources, he may impose controls only after he "determines that adequate evidence has been presented to him demonstrating that the absence of such controls would prove detrimental to the foreign policy or national security of the United States." Sec. 4(c). Furthermore, the President is obligated to initiate negotiations with foreign governments to eliminate foreign availability of goods or technology comparable to those subject to U.S. controls (Sec. 6(g)). Export controls maintained for foreign policy reasons expire one year after their imposition, unless extended by the President.

In addition, the Act specifies several preconditions to the imposition of foreign policy controls. The President must determine that reasonable efforts have been made to achieve the purposes of the controls through negotiations or other alternative means" Sec. 6(d). The President must "in every possible instance * * * consult with the Congress before imposing any export control * * *" Sec. 6(e). The Secretary of Commerce must "consult with such affected United States industries as the Secretary considers appropriate, with respect to * * * [criteria 1 and 4 listed below]" Sec. 6(c).

Section 6(b) of the Act also requires that the President consider the following criteria [11] when imposing, expanding, or extending foreign policy controls:

"(1) The probability that such controls will achieve the intended foreign policy purpose, in light of other factors, including the availability from other countries of the goods or technology proposed for such controls;

"(2) The compatibility of the proposed controls with the foreign policy objectives of the United States, including the effort to counter international terrorism, and with overall United States policy toward the country which is the proposed target of the controls;

"(3) The reaction of other countries to the imposition or expansion of such export controls by the United States;

"(4) The likely effects of the proposed controls on the export performance of the United States, on the competitive position of the United States in the international economy, on the international reputation of the United States as a supplier of goods and technology, and on individual United States companies and their employees and communities, including the effects of the controls on existing contracts;

"(5) The ability of the United States to enforce the proposed controls effectively; and

"(6) The foreign policy consequences of not imposing controls."

In addition to consulting with Congress, the Act requires that when controls are imposed, expanded or extended, the President "shall immediately notify the Congress of such action and shall submit with such notification a report * * *." The report must (1) specify "the conclusions of the President" with respect to each of the six criteria discussed above; (2) specify "the nature and results of any alternative means attempted * * * or the reasons for imposing, extending, or expanding the control without attempting any such alternative means"; and (3) indicate "how such controls will further significantly the foreign policy of the United States * * *." (Sec. 6(e)).

The Secretary of Commerce has statutory authority, or the President has delegated to the Secretary, the responsibility for meeting many of the above requirements.

Once all of the above requirements for imposing export controls have been met and a hazardous substance has been placed on the Commodity Control List, an exporter must apply to the Commerce Department for a validated license before it can export that substance. The Act sets forth specific statutory deadlines for processing applications. The Department of Commerce would make the decision on whether to grant the license in consultation with the Federal agency with domestic regulatory authority, the State Department, and any other relevant agency.

Historically, the Commerce Department has rarely, if ever, granted licensees over State Department objections. In this context, Commerce will continue to give great weight to State Department recommendations. The State Department would not recommend issuing a license unless it had determined that the export would not be detrimental to U.S. foreign policy interests, and that the State Department, after appropriate consultations, had received no objections to the export from the government of the foreign country to which the banned or significantly restricted product is being sent. The State Department's determination and findings would be conveyed in writing to the Commerce Department. The State Department would instruct its personnel at missions and embassies in foreign nations to be prepared to carry out such consultations. Embassy personnel would be instructed to identify an official of the foreign government with whom to consult on proposed hazardous export shipments. When a validated export license is sought for a substance added to the CCL under this policy, a U.S. embassy official in the country of destination would apprise the foreign government official of the nature of the product, quantity to be shipped, the regulatory action which prohibited or significantly restricted its sale in the United States, the potential risks to human health or the environment which were the basis for the action, and such other information as is deemed appropriate (provided that the confidentiality of trade secret information would be maintained as required by law).

Other factors to be considered by the Commerce Department in acting on an application for a validated export license might include: the type of hazardous substance, the destination of the export; the proposed use to which the product would be put; whether the foreign government is the importer; the nature and type of hazards involved; the number of people potentially affected by the hazard; the benefits to be gained by the export (again, this would not be a rigorous, quantitative analysis of costs and benefits); the availability of alternative sources of the substance; the availability of non-hazardous alternative; precautions the importer will take with the substance; the dangers inherent in alternative substances presently being used; the effect the substance might have on neighboring countries; the potential reaction of other countries; results of consultations with industry

[11] The legislative history of the Act indicates that these criteria are to be taken into consideration, but they are not conditions which must be met. See Appendix B for further discussion.

representatives and other concerned parties; and the results of international efforts to curb the export of the substance. Actual experience evaluating applications may reveal other factors that should be considered. The Commerce Department would propose and receive comment on regulations governing its consideration of applications for export licenses for hazardous substances.

The Working Group believes that the economic consequences of invoking export controls would not be great. The categories of products which would be candidates for Commodity Control List are well defined (see Section VII) and readily identifiable. The number of substances which would be chosen for the CCL is expected to be small. In addition, it is quite possible that a U.S. firm may have or could develop a substitute product offering the same benefits without posing severely hazardous risks.

(4) *Evaluation:* Considering the importance of an effective policy for export of hazardous substances, and recognizing that experience with such a policy is lacking, the Working Group considered it essential to evaluate from time to time how well the policy is working in practice. The Working Group recommends that the President be provided a progress report 18 months after the effective date of the policy, and annually thereafter. The report would be prepared jointly by the Council on Environmental Quality, the Department of State, and the Department of Commerce in consultation with other affected agencies.

The report would summarize agency activities under the policy, evaluate the effectiveness of the hazardous substances export policy, and make any recommendations that are deemed appropriate.

(5) *Government-Sponsored Exports:* All the policies discussed so far apply to exports by private commercial firms. Somewhat different considerations apply to products which the U.S. government itself buys and distributes abroad, mainly for the purpose of assisting economic development in other countries. The Working Group expects and recommends that the U.S. government, in its own dealings with export of hazardous substances, maintain the highest standards of good judgment and scrupulous care for the health and welfare of foreign citizens and their environment.

Environmental review by which government agencies look at the consequences of a proposed action before undertaking it, and analyze reasonable alternatives, is a good model for government dealings with hazardous exports. In fact, such an approach has been tried and worked well. In the early 1970s, the Agency for International Development (AID) distributed abroad some pesticides which were not approved for use in the United States (Leptophos, DDT for other than public health uses). Following a lawsuit, AID reexamined its entire pesticide program, writing a comprehensive environmental impact statement that looked at consequences and weighed alternatives. AID no longer purchases or distributes abroad pesticides that are banned for use in the United States, except for compelling reasons and after very careful examination. The AID pest control program now emphasizes alternatives such as integrated pest management.

The Working Group recommends the same approach of program assessment and analysis of alternatives for other programs that may involve the distribution abroad of hazardous substances. For example, population programs that are a part of U.S.-assisted development efforts should be carefully scrutinized, to ensure that the birth control drugs and devices bought with U.S. government funds are as safe and effective as possible. The program assessment should be concerned with more than the simple avoidance of products that have already been banned, through lengthy legal proceedings, for use in the United States. It should also be sensitive to the likely circumstances of use in the country of destination. For example, if a birth control drug is known to interfere with vitamin metabolism, or if safe application of a birth control device requires special medical skills, these facts should be carefully considered before the U.S. government provides the funds to export such products to countries where women are likely to be malnourished, or medical skills are scarce.

Similar considerations apply to mother-child nutrition programs. Infant formula that is safe and convenient to use in the United States may be fatal if used in places with impure water supplies. Program assessments and the decisions based on them should take such factors into account.

Responsible, well-informed decisions by U.S. government agencies related to shipments of hazardous substances abroad might serve as a model for other countries and for private traders.

(6) *Labeling of Hazardous Exports:* The Working Group recommends that regulatory agencies give continuing attention to improvements in labeling, as a technique for dealing with hazardous exports. In some cases, it may be possible to develop simplified, more readily understandable labels. Agencies may also want to consider new requirements that pesticide, drug and toxic substance labels on exported products include more information on the nature of possible hazards associated with their use. The Administration might propose legislation, if appropriate, to impose such requirements.

VI. International Efforts

Unilateral actions should be just one part of a broader U.S. program to promote international cooperation on trade of hazardous substances throughout the world. The Working Group recommends that the President direct the State Department and other federal agencies in consultation with the State Department to seek international agreement in these areas:

- Notification of the export of hazardous substances;
- Comprehensive adoption of uniform, readily understandable hazard labeling for substances in international commerce;
- Improved worldwide hazard alert systems and clearinghouses for information on health and safety risks in the workplace;
- Other common standards and practices related to the export of hazardous substances.

These steps could lead to the formulaton of an international convention governing hazardous substances exports.

A common international effort is important for several reasons. Common policies governing hazardous exports, subscribed to by all counties, would help to assure that U.S. multinational firms located abroad or firms in other nations would not become alternate suppliers for hazardous substances. Consistency among nations in hazard notification and labeling would be more effective than widely varying national programs, because more hazards would be covered and the procedures would be more universally understood; more accurate, because it would be based on broad international experience; and less burdensome to industry, because firms would not have to respond to multiple varying requirements. Moreover countries like the United States that take responsibility for hazardous exports would not be penalized economically.

Through international cooperation, ongoing technical assistance programs should focus on helping developing countries to establish adequate standards for health and safety, competent regulation, and effective use of available hazard information. The United States committed itself to such bilateral efforts when it signed the Multilateral Trade Negotiations Agreement on Technical Barriers to Trade (Standards Code) in December, 1979. Differences among countries in needs and desires for assistance should be recognized in shaping these programs. International cooperation will more likely flourish if it is built on existing structures, and is mindful of resource constraints that affect the ability of developing countries to contribute to the effort.

Targeted technical assistance to countries which are increasing their importation, manufacture and use of chemicals would greatly enhance the policy's chances of success. The Working Group recommends that appropriate agencies consider possibilities for technical assistance under present legal authorities, and adopt changes to make present programs more effective. In this connection, the Department of Commerce should investigate opportunities for the Bureau of the Census to monitor exports of hazardous substances, to serve as the basis for better notification and targeting technical assistance.

The Working Group recommends continued participating by the United States in the international efforts listed in Section IV. The Group encourages increased activity by the UNEP Committee on Toxic Chemicals, the WHO International Program on Chemical Safety, and the OECD. The OECD has begun considering approaches to the control of toxic substances and export of hazardous products. OECD membership includes the major non-Communist industrialized nations; these nations are responsible for the bulk of hazardous substances trade. OECD is an excellent forum for exchange of information and tehnology among member countries, and for consideration of export notification and control policies. However, OECD is not so useful as a clearinghouse for communication with less developed countries, which are often importing countries and are thus greatly interested in and affected by policies concerning trade in hazardous substances. OECD should be encouraged to cooperate with UNEP, or to include by other means a broader array of nations in conducting deliberations on these matters.

U.S. resources to be devoted to international health and safety cooperation merit careful consideration and budget review. The success of the effort would depend to a significant extent on U.S. leadership, plus financial support and cooperaton from other major industrial countries.

The proposals described above, together with the other recommendations in this report, are an important first step toward the control of hazardous substances in international trade. The adoption of a U.S. policy that includes notification, export controls in limited circumstances, careful assessment of exports by U.S. government agencies, and efforts to reach international agreements on controls over hazardous exports will put the United States in a position of world leadership in the field. Through such domestic and international policies, the United States will be in a strong position to persuade other industrialized nations to control the distribution of hazardous products throughout the world. This leadership role is, we believe, consistent with the President's human rights themes and will enhance our trading position.

VII. Substances Covered by the Policy

As discussed in Section II, this policy would cover substances which are banned or significantly restricted in the United States because of the threat they pose to public health and safety or the environment. It would thus apply to substances and products regulated under certain sections of FIFRA, TSCA, FDCA, PHSA, CPSA, FHSA and the Flammable Fabrics Act. The Working Group has specifically defined the policy as covering the following substances and products, all of which are banned or significantly restricted in the United States:

(a) A food or class of food which:

(1) Is adulterated, as defined by rules issued under Sec. 402 (a) or (c) (21 U.S.C. 342 (a) or (c)),

(2) Is in violation of emergency permit controls issued under Sec. 404 (21 U.S.C. 344),

(3) Contains a poisonous or deleterious substance which exceeds a tolerance or action level issued under Sec. 406 (21 U.S.C. 346), or

(4) Contains an unsafe food additive within the meaning of Sec. 409 (21 U.S.C. 348) of the Federal Food, Drug, and Cosmetic Act;

(b) A drug which is:

(1) Adulterated, as defined by rules or orders issued under Sec. 501 (a), (b), (c), or (d) (21 U.S.C. 351 (a), (b), (c), or (d)),

(2) Misbranded, as defined by rules or orders issued under Sec. 502(j) (21 U.S.C. 352(j)), or

(3) A new drug for which an approval is not in effect under Sec. 505 (21 U.S.C. 355) of the Federal Food, Drug and Cosmetic Act;

(c) an Antibiotic drug which has not been certified as required under Sec. 507 (21 U.S.C. 357) of the Federal Food, Drug and Cosmetic Act;

(d) A drug containing insulin which has not been certified as required under Sec. 506 (21 U.S.C. 356) of the Federal Food, Drug and Cosmetic Act;

(e) A device which:

(1) Is adulterated, as defined by rules or orders issued under Sec. 501(a) (21 U.S.C. 351(a)),

(2) Is misbranded, as defined by rules or orders issued under Sec. 502(j) (21 U.S.C. 352(j)),

(3) Fails to comply with a performance standard issued under Sec. 514 (21 U.S.C. 360d),

(4) Has not received premarket approval where so required by rules issued under Sec. 515 (21 U.S.C. 360e), or

(5) Is a banned device under Sec. 516 (21 U.S.C. 360f) of the Federal Food, Drug and Cosmetic Act;

(f) A cosmetic which is adulterated as defined by rules or orders issued under Sec. 601 (21 U.S.C. 361) of the Federal Food, Drug and Cosmetic Act;

(g) A color additive in or on a food, drug, device, or cosmetic which is deemded unsafe within the meaning of Sec. 706 (21 U.S.C. 376) of the Federal Food, Drug and Cosmetic Act;

(h) A biological product which has been propagated or manufactured and prepared at an establishment which did not hold a license as required by Sec. 351 (42 U.S.C. 262) of the Public Health Services Act;

(i) An electronic product which does not comply with a performance standard issued under Sec. 358 (42 U.S.C. 263f) of the Public Health Services Act;

(j) A consumer product which:

(1) Does not comply with a consumer product safety standard adopted under Sections 7 and 9 (15 U.S.C. 2056 and 2058) other than one relating solely to labeling,

(2) Has been declared to be a banned hazardous product under Sections 8 and 9 (15 U.S.C. 2057 and 2058),

(3) Presents a substantial product hazards under Sec. 15 (15 U.S.C. 2064), or

(4) Is an imminently hazardous consumer product under Sec. 12 (15 U.S.C. 2061) of the Consumer Product Safety Act;

(k) A fabric, related material, or product which does not comply with a flammability standard (other than one relating to labeling) adopted under Sec. 4 (15 U.S.C. 1193) of the Flammable Fabrics Act;

(l) A product which is a banned hazardous substance (including a

children's article) under Secs. 2 and 3 (15 U.S.C. 1261 and 1262) of the Federal Hazardous Substances Act;

(m) A pesticide which, on the basis of potential risks to human health, or safety or to the environment,

(1)(A) Has been denied registration for all or most significant uses under Sec. 3(c)(6) (7 U.S.C. 136a(c)(6)),

(B) Has been classified for restricted use under Sec. 3(d)(1)(C) (7 U.S.C. 136a(d)(1)(C)),

(C) Has had its registration cancelled for all or most significant uses under Sec. 6 (7 U.S.C. 136d),

(D) Has been proceeded against and seized under Sec. 13 (7 U.S.C. 136k), or

(E) Requires an acknowledgement statement under Sec. 17(a)(2) (7 U.S.C. 1360(a)(2)) of the Federal Insecticide, Fungicide, and Rodenticide Act, or

(2) For which a tolerance has been denied or revoked under Sec. 408 (U.S.C. 346a) of the Federal Food, Drug and Cosmetic Act; and

(n) A chemical subtance or mixture

(1) Which is subject to an order or injunction issued under Sec. 5(f) (15 U.S.C. 2604(f)),

(2) Which is subject to a requirement issued under Sec. 6(a)(1), 6(a)(2), 6(a)(5) or 6(a)(7) (15 U.S.C. 2605(a)(1) 2605(a)(2), 2605(a)(5), or 2605(a)(7)), or

(3) For which a civil action has been brought and relief granted under Sec. 7 (15 U.S.C. 2606) of the Toxic Substances Control Act.

The number of substances and products which would be covered by this policy is limited. Under FIFRA, EPA estimates that there are less than 20 pesticide chemicals the use of which is entirely prohibited in the United States, about 15 pesticide chemicals for which major uses are prohibited, and 36 whose use is restricted by regulation (under FIFRA, Sec. 3(d)(1)(C)). (EPA also estimated on the basis of early experience with the notification process that there are perhaps 25 pesticides which are wholly unregistered in the U.S. being manufactured for export only.[12]) Under TSCA, two classes of chemicals (PCBs and chlorofluorocarbons) have been regulated so far, though more actions are expected in the future. Under FDCA and PHSA there are perhaps several hundred standards which prohibit sale of certain kinds of foods, drugs, cosmetics and medical products; it is not known how many products are manufactured and sold for export only which do not comply with these standards. However, it is anticipated that few of these products would be recommended for inclusion on the Commodity Control List. Under the three statutes which CPSC administers, some 30 classes of products have been subject to standard-setting or other actions which prohibit sale in the U.S. Again, it is not certain how many products which do not comply with these requirements are exported, but early experience with notification requirements suggests that the number is quite small.

The Working Group agreed to exclude from within the purview of its recommended policy alcohol, tobacco, firearms, military weapons and equipment, narcotic and psycotropic substances, and nuclear fuel. Also excluded are the exportation of hazardous production facilities, and U.S. financial assistance for such facilities. As indicated, certain substances which may create hazardous workplace conditions are included only in the annual summary proposed as part of the policy. Finally, Export-Import Bank financing of exports would not be covered by the policy.

Alcohol, tobacco, and firearms were excluded because they are extensively controlled through the tax code and their health and safety implications are well known. The Working Group believes there is sufficient attention to and control over these products and that their exclusion does not detract from the policy review. Military weapons and equipment and narcotic and psychotropic substances were excluded because they are subject to an extensive system of national controls and agreements under international treaty obligations. Likewise, nuclear fuels were excluded because they are extensively controlled nationally and internationally.

As indicated by the criteria, substanaces for which most significant uses in the United States have been prohibited would be covered by the policy. In this category are products such as DDT, banned for most uses by EPA because of its serious adverse environmental effects but allowed for certain very narrowly defined uses (i.e., public health measures).

Products that are not restricted for use in the United States, but subject to unsafe circumstances fo consumption abroad are not included in the Working Group's policy recommendations affecting private, commercial trade. The Working Group excluded these products with some reluctance, since there are indications that they are posing problems in cerain countries. One such product is infant formula, discussed above in connection with U.S. government actions. It appears that commercial trade involving such products might be more appropriately dealt with through such means as technical assistance or codes for industry rather than export controls.

The Working Group also excluded from consideration the export of hazardous production facilities and direct or indirect financial assistance for those facilities (for example, through the Export-Import Bank and the Overseas Private Investment Corporation). As occupational health and safety and environmental protection requirements are placed on U.S. production facilities, some firms have established new facilities in other countries with less rigorous regulatory requirements. In some cases these "runaway" facilities have been established in Mexico near the U.S. border so that they remain close to U.S. markets, with advanced freight transport systems, but they can be and are located elsewhere in the world.

Hazardous production facilities were excluded because the issues they raise and the nature of possible remedial action are quite different from those related to exports of hazardous substances. In the case of banned or severely restricted hazardous substances, there are ample precedents for export controls on products. This is not true for exports of production facilities. Only certain exported production facilities involving major federal actions abroad (as defined under Executive Order 12114) are subject to even environmental review. Often the only connection between the facility and this country is that it is owned or built by a U.S.-based firm. Any system of controls for export of hazardous facilities would require a statutory basis; this is an issue that the Congress may want to examine.

Substances causing hazardous workplace conditions as regulated by OSHA are included in one part of the Working Group's proposals. The Working Group recommends that the Annual Summary include OSHA health standards where appropriate, so that foreign governments will have the benefit of our studies and regulations to protect their own workers.

The question of how to control the export of hazardous wastes (as defined by EPA under RCRA) has not yet been resolved. EPA has promulgated stringent new regulations governing the disposal of wastes in the United States which could create increased pressure for export. Because these regulations will go into effect in the fall of 1980, resolution of of this matter is urgent. The Working Group recommends that the interagency group led by State which is now considering the matter should make recommendations to control the export of these substances as soon as possible.

[12] While unregistered pesticides would be covered by certain aspects of this policy (e.g., notification as required by statute), they would generally not be candidates for inclusion on the Commodity Control List or the Annual Report on regulatory actions.

VIII. Implementation and Enforcement

Virtually all of the policies affecting commercial trade proposed by the Working Group can be established through Executive action. To implement the policy, each regulatory agency with jurisdiction over substances subject to the policy would undertake the following:

(1) Define with particularity either the specific products or the classes of products which are banned or significantly restricted substances as defined in Section VII, for publication in the **Federal Register**. This list would be revised as necessary to reflect new regulatory actions.

(2) Prepare, on an annual basis, consistent with the format developed by the Regulatory Council, summaries of all final and proposed regulatory actions taken each year concerning banned and severly restricted hazardous substances, and indications of what additional information is available with respect to each of these final or proposed regulatory actions. In addition, in the first year, each agency would provide a listing or summary of all of its final regulatory actions with respect to such hazardous substances.

(3) Establish procedures, where notification is required under existing law, for expeditiously notifying the State Department of exports of relevant hazardous substances to foreign countries. The procedures would include timing and content of notices, recordkeeping responsibilities, provisions relating to trade secrets and confidential information, any special agency requirements in addition to those required by this policy, and provisions for enforcement.

It is not anticipated that the regulatory agencies will require additional personnel or resources to carry out these tasks. In implementing this policy, the State Department will need to enhance its ability to expeditously provide export notifications, through its embassies, to the appropriate foreign officials, and to consult with these officials prior to the granting of a validated export license for hazardous substances on the Commodity Control List. This will require each embassy to develop accurate up-to-date directories of the foreign officials responsible for hazardous substances so that there is no delay in identifying the appropriate official when a notification is transmitted or an export license is applied for.

The Department of Commerce would have enhanced responsibilities in implementing the Export Administration Act. In order to implement certain provisions of this policy, certain hazardous substances would be added to the Commodity Control List (see Section V). The Working Group anticipates that the small number of substances so listed should not unduly burden the Department. However, some resources may need to be shifted to or added to the offices responsible for implementing this part of the policy.

The Customs Service also has authority, resources, field structure, and enforcement experience which will be needed to implement certain provisions of this export policy. Customs, through the use of Shipper's Export Declarations, enforces Commerce's greatest export licensing requirements. Customs can inspect, seize, and detain articles in violation of the Export Administration Act. Enforcement responsibility for shipment notification would be added as another element in the Customs export check.

Esther Peterson,

Special Assistant to the President for Consumer Affairs and Chair, Interagency Working Group on a Hazardous Substances Export Policy.

Attachment A

Consumer Product Safety Commission

Consumer Product Safety Act (15 U.S.C. 2051)

Products or Financing Arrangement: Consumer products—articles used in and around the residence, school, or in recreation for the personal use, consumption, or enjoyment of a consumer, except tobacco, motor vehicles, pesticides, boats, ammunition, aircraft, foods, drugs, cosmetics, or medical devices. (15 U.S.C. 2052(a)(1))

Regulatory Authority for Domestic Use: CPSC can (1) set mandatory Federal standards for products which pose an unreasonable risk of injury; (2) ban products which pose such risk if no standard can adequately protect the public; (3) seek a court order to seize products which contain an imminent hazard; (4) order pre-market notice of new products; (5) mandate labeling and data disclosure requirements; and (6) order public notice and recall of products presenting substantial product hazards. (15 U.S.C. 2056; 2057; 2058; 2061; 2062; 2063; 2064; 2076(e))

Regulatory Authority for Exports: The CPSC can prohibit export if it determines that exportation of a product presents an unreasonable risk of injury to consumers within the U.S.

Any other product can be exported (except to U.S. installation outside the U.S.) if it

(1) Is manufactured or sold for export purposes and has never been distributed in the U.S., and

(2) Is labeled for export.

Thirty days prior to exporting a product which does not comply with a product safety standard or banned by rule, the exporter must notify the CPSC. CPSC notifies country of destination of the exportation and the basis of the standard or rule. CPSC may, by petition, require only 10 days notice. (15 U.S.C. 2067)

Pending Amendments: None.

Federal Hazardous Substances Act (15 U.S.C. 1261)

Products or Financing Arrangement: A substance which is (1) toxic, corrosive, an irritant, a strong sensitizer, flammable, combustible, or which generates pressure and which may cause substantial personal injury or illness, and (2) toys. (15 U.S.C. 1261)

Regulatory Authority for Domestic Use: CPSC may ban hazardous substances, require labeling, and seek a court order to seize noncomplying products, or enjoin their distribution. (15 U.S.C. 1262; 1265; 1267)

Regulatory Authority for Exports: CPSC may prohibit export if it determines that exportation of a hazardous substance represents an unreasonable risk of injury to persons residing within the United States. All other products can be exported if they are

(1) In a package branded in accordance with the specifications of the foreign purchaser;

(2) Labeled in accordance with the laws of the foreign country;

(3) Labeled on the shipping package as intended for export;

(4) So exported and have not previously been introduced into domestic commerce.

Thirty days prior to exporting a misbranded or banned hazardous substance, the exporter must notify CPSC. CPSC notifies country of destination of the exportation and the basis upon which the substance has been misbranded or banned. CPSC may, by petition, require only 10 days notice. (15 U.S.C. 1264(b); 1265(a); 1273(d))

Pending Amendments: None.

Flammable Fabrics Act (15 U.S.C. 1191)

Products or Financing Arrangement: Wearing apparel, fabrics, interior furnishings, or related materials. (15 U.S.C. 1191)

Regulatory Authority for Domestic Use: CPSC can set standards, issue

cease and desist order, and seek court order to seize noncomplying products. (15 U.S.C. 1193; 1195)

Regulatory Authority for Exports: The CPSC can prohibit export if it determines that exportation of a product presents an unreasonable risk of injury to persons residing within the U.S.

Any other product can be exported (except to U.S. installations outside the U.S.) if it is labeled for export. (15 U.S.C. 1202)

CPSC interprets this provision so as to require the manufacturers of noncomplying goods to have the intention to export goods at the time of orginal manufacture. (16 CFR 1602.2)

Thirty days prior to exporting a fabric which fails to conform with a standard, the exporter must notify CPSC. CPSC notifies country of destination of the exportation and the basis of the standard. CPSC may, by petition, require only 10 days notice. (15 U.S.C. 1202)

Pending Amendments: None.

Drug Enforcement Administration

Controlled Substances Import and Export (21 U.S.C. 881)

Products or Financing Arrangement: Narcotics and Dangerous Drugs.

Regulatory Authority for Domestic Use: Broad controls are provided for the transshipment of controlled substances through the United States to other countries and for their in transit shipment within the U.S. for immediate export, and for the possession of controlled substances on board any vessel, aircraft or other vehicle arriving or departing from the United States.

Regulatory Authority for Exports: Regulates the importation and exportation of all controlled substances—narcotics, marijuana, depressants, stimulants and other dangerous drugs. No controlled substance can be exported except in compliance with specified procedures which vary according to the schedule of the substance. Registration of importers and exporters of substances classified in schedule I or II would be based on the Attorney General's determination that this would be consistent with the public interest and certain treaty obligations.

Pending Amendments: None.

Environmental Protection Agency

Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. 136)

Products or Financing Arrangement: Substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, or for use as a plant regulator, defoliant or desiccant. (7 U.S.C. 136)

Regulatory Authority for Domestic Use: Registration of pesticides for specified uses upon a finding by EPA of no "unreasonable adverse effect on the environment"; EPA registration of pesticide producers; EPA can issue "stop sale, use, or removal" orders and seek court orders for seizure of noncomplying pesticides. (7 U.S.C. 136a; 136e; 176k)

Regulatory Authority for Exports: Pesticides are subject only to certain labeling regulations when intended solely for export and are prepared or packed according to specifications or directions of the foreign purchaser. Pesticides not registered in the U.S. may be exported if, prior to export, the foreign purchaser signs a statement acknowledging that it understands the product cannot be sold in the U.S. A copy of the statement is forwarded to the appropriate government official of the importing country.

EPA notifies State Department whenever a registration is cancelled or suspended. State Department notifies foreign governments and appropriate international agencies.

EPA, in cooperation with State and other appropriate federal agencies are to participate and cooperate in international efforts to develop improved pesticide research and regulation. (7 U.S.C. 136(0))

Pending Amendments: None.

Resource Conservation and Recovery Act of 1976 (42 U.S.C. § 6901–6987)

Products or Financing Arrangement: Hazardous wastes, which are defined to include solids, liquids, and sludges which may cause or significantly contribute to an increase in serious irreversible or incapacitating reversible, illness; or pose a substantial present or potential hazard to human health on the environment when improperly treated, stored, transported or disposed of, or otherwise managed. (42 U.S.C. § 6903(5))

Regulatory Authority for Domestic Use: EPA to identify hazardous wastes, establish standards applicable to generators and transporters of such waste and owners and operators of hazardous waste treatment, storage and disposal facilities. Each person owning or operating a hazardous waste treatment, storage or disposal facility is required to obtain a permit from EPA within prescribed time periods. EPA is to assist states in the development of hazardous waste programs. (42 U.S.C. §§ 6921–25, 6930)

Regulatory Authority for Exports: None.

Pending Amendments: None.

Toxic Substances Control Act (15 U.S.C. 2601)

Products or Financing Arrangement: Chemical substances or mixtures except pesticides, tobacco, nuclear materials, firearms, etc. (15 U.S.C. 2602)

Regulatory Authority for Domestic Use: EPA may require testing, impose pre-market notice requirements, require labeling, limit or prohibit sale if tests show a reasonable basis to conclude an unreasonable risk of injury to health or the environment, or obtain a court order to seize a substance or mixture posing an imminent hazard. (15 U.S.C. 2603–2606)

Regulatory Authority for Exports: Statute does not apply if substance, mixture or article is manufactured for export and is labeled as such *except* as follows:

1. If EPA finds the substance, mixture or article will present "an unreasonable risk of injury to health within the United States or to the environment of the United States," it may control export. Administrator may order testing to make such a determination.

2. If a person intends to export a substance which has been subject to certain regulatory actions, such person shall notify EPA and EPA shall furnish foreign government notice of the rule, order, action, or relief. (15 U.S.C. 2611)

Pending Amendments: None.

Food and Drug Administration

Federal Food, Drug and Cosmetic Act (21 U.S.C. 321(i))

Products or Financing Arrangement: Foods. (21 U.S.C. 321(f))

Regulatory Authority for Domestic Use: Secretary may establish standards of identity, levels of adulteration, and standards of misbranding. (21 U.S.C. 341–343)

Regulatory Authority for Exports. May be exported, (no permit required) if—

(1) Accords to specifications of foreign purchasers.

(2) Is not in conflict with laws of foreign country.

(3) Is labeled for export.

(4) Is not offered for domestic sale. (21 U.S.C. 381(d))

Foods which are subject to Emergency Permit Controls and for which a permit has not been issued, cannot be exported. (21 U.S.C. 344)

Pending Amendments: None.

Products or Financing Arrangement: Cosmetics. (21 U.S.C. 321(1))

Regulatory Authority for Domestic Use: Secretary may establish standards of adulteration and misbranding. (21 U.S.C. 361–362)

Regulatory Authority for Exports: May be exported, (no permit required) if—

(1) Accords to specification of foreign purchasers.

(2) Is not in conflict with laws of foreign country.

(3) Is labeled for export.

(4) Is not offered for domestic sale. (21 U.S.C. 381(d))

Pending Amendments: None.

Products or Financing Arrangement: Drugs approved for United States use.

Regulatory Authority for Domestic Use: Drug must previously have been approved by FDA.

Regulatory Authority for Exports: A drug which may be sold in interstate commerce may be exported without special requirements. A drug which is misbranded or adulterated may be exported (no permit required) if—

(1) Accords to specifications of foreign purchasers.

(2) Is not in conflict with laws of foreign country.

(3) Is labeled for export.

(4) Is not offered for domestic sale.

This provision also applies to antibiotics, insulin, and pre-1938 drugs. (21 USC 381(d))

Pending Amendments: May be exported (permit required) so long as drug meets manufacture and quality standards required for domestic products (outlined in subparts 3 and 4 of H.R. 4258 and S. 1045). (H.R. 4258 and S. 1045, Sec. 134)

Products or Financing Arrangement: New drugs; New animal drugs. (21 USC 321(p) and (w))

Regulatory Authority for Domestic Use: No introduction of new drugs or animal drugs in interstate commerce without approval by FDA ("Interstate commerce" between any state or territory and any place outside thereof). (21 USC 355(a) and 360b(a))

Regulatory Authority for Exports: No exportation permitted unless the new drug is in complete compliance with an approved new drug application.

Exportation authorized for *investigational* use only if FDA receives, through the State Department a formal request from the foreign government. The request must specify that such government has adequate information about the drug and the proposed investigational use. (21 CFR 312.1 and 21 CFR 511.1)

Pending Amendments: New drugs not yet approved in the United States, or approved drugs not in compliance with domestic requirements, may be exported if exporting firm applies to the HEW Secretary for an export permit. The Secretary shall issue the permit unless he finds:

(1) Drug does not accord to specifications of foreign purchaser.

(2) Drug is not labeled for export.

(3) The foreign government has not been informed of the legal status of the drug in the United States and it does not disapprove of importation of the drug.

(4) Export of the drug is contrary to the public health (presumably of the United States or the foreign country). (H.R. 4258 and S. 1045, Sec. 134–135)

Products or Financing Arrangement: Medical devices for human uses. (21 USC 321(h))

Regulatory Authority for Domestic Use: Depending upon the type of device, the Secretary may (1) establish performance standards, (2) require premarket approval, (3) ban devices which present unreasonable deception or an unreasonable and substantive risk of illness or injury, and (4) require recall. (21 USC 360d, 360e, 360f, 360h)

Regulatory Authority for Exports: Generally, may be exported (no permit required) if:

(1) Accords to specifications of foreign purchasers.

(2) Is not in conflict with the laws of foreign country.

(3) Is labeled for export.

(4) Is not offered for sale in domestic commerce.

In addition to the above, devices which do not comply with performance standards, have not received premarket clearance, or have been banned cannot be exported unless the Secretary has determined:

(1) That exportation is not contrary to the public health and safety, and

(2) That the foreign country approves. (21 USC 381(d)(1) and (d)(2))

Similar requirements for investigational devices. (proposed 43 FR 20749 to 21 CFR 812.19(b))

Pending Amendments: None.

Public Health Service Act (42 USC 262)

Products or Financing Arrangement: Biological Products. (42 USC 262(a))

Regulatory Authority for Domestic Use: HEW Secretary licenses establishments which propagate or manufacture and prepare biological products (e.g., viruses, serums, vaccines, blood, toxins). (42 USC 262(a))

Regulatory Authority for Exports: No exportation of products which cannot be sold in United States (42 USC 262(a))

Pending Amendments: None.

Public Health Service Act (42 USC 2636)

Products or Financing Arrangement: Electronic products. (42 USC 263c(2))

Regulatory Authority for Domestic Use: Secretary of HEW may establish performance standards to control emission of electronic product radiation and require notification for defects or noncompliance. (42 USC 263f(a); 263g)

Regulatory Authority for Exports: Products for export need not conform to standards if—

(1) Labeled for export.

(2) Product meets all applicable requirements of the foreign country. (42 USC 263f(a)(3))

Pending Amendments: None.

U.S. Department of Agriculture Food Safety and Quality Service

Federal Meat Inspection Act (21 U.S.C. 601 et seq.)

Products or Financing Arrangement: Meat or meat food products of cattle, sheep, swine, goats, horses, mules or other equines.

Regulatory Authority for Domestic Use: Secretary has regulatory authority with respect to standards of identity, adulteration and misbranding.

Regulatory Authority for Exports: Meat or meat food products which are not allowed to enter interstate or foreign commerce may not be exported. Provisions in regard to preservatives used in meat food products shall not apply to such products exported if:

(1) They are prepared or packed according to specifications or directions of the foreign purchasers and

(2) No substance used therein is in conflict with the laws of the country to which the products are to be exported. (21 U.S.C. 606)

In addition, livestock and meat or meat food products derived therefrom that are offered for export must undergo an export inspection and certification procedure. (21 U.S.C. 612–618)

Pending Amendments: None.

Poultry Products Inspection Act (21 U.S.C. 451 et seq.)

Products or Financing Arrangement: Poultry and poultry products.

Regulatory Authority for Domestic Use: Secretary has regulatory authority with respect to standards of indentity, adulteration and misbranding.

Regulatory Authority for Exports: Poultry or poultry products which are not allowed to enter interstate or foreign commece may not be exported.

Pending Amendents: None.

Attachment B

Department of Justice,
Washington, D.C.

Subject: Legal Memorandum dated April 11, 1980. Titled: Controlling the Export of Hazardous Substances Under the Export Administration Act of 1979 [50 U.S.C. App. 2401 et seq.].

To: Honorable Esther Peterson, Special Assistant to the President for Consumer Affairs.

From: Leon Ulman, Deputy Assistant Attorney General, Office of Legal Counsel.

The Attorney General has directed the Office of Legal Counsel to undertake the publication of selected opinions of this Office. We believe the attached opinion addressed to you is appropriate for publication. Unless we hear from you to the contrary within ten days, we shall assume that you have no objection to its publication.

This Office will undertake review of the opinion for accuracy of citations, etc., and will subsequently prepare an appropriate headnote. In instances involving questions of conflict-of-interest and ethical matters, the opinion will be sanitized to delete identifying details. Minor editorial revisions may also be made.

April 11, 1980.

Memorandum for the Honorable Esther Peterson, Special Assistant to the President for Consumer Affairs

Re Controlling the Export of Hazardous Substances Under the Export Administration Act of 1979 (50 U.S.C. App. 2401 et seq.).

This responds to your request of January 9, 1980, for our opinion on whether the Export Administration Act of 1979, Pub. L. No. 96–72, 93 Stat. 503, to be codified at 50 U.S.C. App. § 2401 *et seq.*, provides authority for the President to control the export of hazardous substances in pursuit of the foreign policy of the United States. We conclude that the Act does provide such authority. You have also asked whether the President, in exercising such authority, is formally bound by the factors for his considerations that are set forth in § 6 of the 1979 Act. We conclude that he is not.

I. Substantive Authority to Control Exports of Hazardous Substances

In our previous memorandum dated January 30, 1979, to Deputy General Counsel Moyer of the Department of Commerce (copy enclosed), we concluded that the 1979 Act's predecessor statute, the Export Administration Act of 1969, gave the President authority to control exports of hazardous substances for foreign policy purposes. The issue, then, is whether the 1979 Act continued this authority, or modified it in any respect.

The Act's operative language for foreign policy controls was left essentially unchanged in 1979. It authorizes the President to "prohibit or curtail the exportation of any goods, technology, or other information * * * to the extent necessary to further significantly the foreign policy of the United States or to fulfill its declared international obligations." (§ 6(a)1; *compare* 50 U.S.C. App. § 2404(2) (Supp. V 1975)). Although the phrase "foreign policy" is not defined in either the 1969 or the 1979 statute, Congress provided some explanatory legislative history in 1979. It did so in the course of separating authority for foreign policy controls from that for national security controls, and providing different criteria and procedures for each. In the House of Representatives, where the separation originated, the Report of the Committee on Foreign Affairs explained how these two sources of authority differ. (H.R. Rep. No. 200, 96th Cong., 1st Sess. 7 (1969)):

> The purposes of foreign policy controls are more vague and more diffuse. The purposes can range from changing the human rights policy of another country; to inhibiting another country's capacity to threaten the security of countries friendly to the United States; to associating the United States diplomatically with one group of countries as against another; to disassociating the United States from a repressive regime. Unlike the situation with national security controls, some of these foreign policy purposes may be served by denying exports even where foreign availability exists. (In the hypothetical case frequently mentioned in hearings and markup, the United States would not want to export thumbscrews, even if other countries were doing so.) Since decisions on foreign policy controls are often more political than technical, congressional involvement in those decisions is more appropriate than in the case of national security controls.

The Report's emphasis on the range of purposes that foreign policy controls may serve suggests strongly that controls on exports of hazardous substances are included. The Conference Report provides further support in its statement that this authority "encompasses the full range of U.S. foreign policy goals." H.R. Conf. Rep. No. 482, 96th Cong., 1st Sess. 43 (1979).

The 1979 Act provides definitions of the terms "good" and "technology" as used in § 6. These are certainly broad enough to include hazardous substances. Under § 16(3), "good" is defined to mean "any article, material, supply or manufactured product, including inspection and test equipment, and excluding technical data." The term "technology" is defined by § 16(4) to mean "the information and know-how that can be used to design, produce, manufacture, utilize, or reconstruct goods, including computer software and technical data."

II. Procedure for Imposing Foreign Policy Controls

Procedurally, § 6(e) of the 1979 Act requires that the President "in every possible instance shall consult with the Congress before imposing" foreign policy controls. Upon imposing the controls, the President must report to Congress, specifying his conclusions with respect to a set of criteria for decisions set forth in § 6(b) of the Act. On their face, these criteria are not significantly confining of presidential discretion. (For example, the President is to consider the probability that controls will achieve the intended foreign policy purpose in light of such factors as foreign availability of the goods.) Moveover, the legislative history is clear that these criteria "are to be taken into consideration, but they are not conditions which must be met." (125 Cong. Rec. S 10123, Daily ed. July 21, 1979, Statement of Senator Stevenson on introducing S. 737.) The Committee reports confirm this interpretation. *See* H.R. Rep. No. 200, *supra*, at 20: "Having considered these criteria, the President is not strictly bound by them." *See also* Sen. Rep. No. 169, 96th Cong., 1st Sess. 8 (1979), remarking that this provision "did not establish criteria to be met but factors to be considered, and recognized that the President, having considered them, might find one or more of the factors irrelevant to a decision to impose or remove controls."

Section 6(e) also requires the President to report any alternative means that were attempted to achieve the purposes of the controls, or his reason for eschewing them; § 4(c) of the Act allows the President to impose foreign policy controls only on a determination that the embargoed goods cannot be replaced through sources outside of the United States, "unless the President determines that adequate evidence has been presented to him demonstrating that the absence of such controls would prove detrimental to the foreign policy or national security of the United States."

III. Conclusion

Thus we conclude that under the Export Administration Act of 1979, the President may control the export of hazardous substances in appropriate circumstances. We would enter one caveat, however. Certain statutes presently impose conditions on the export of hazardous substances, *e.g.*, the Toxic Substances Control Act, 15 U.S.C. § 2611, requiring notice to the recipient nation of product risks. It may be that these statutes foreclose presidential discretion to take some actions, for example banning a product that a statute allows to be exported if notice is given. In the absence of a specific proposal, we have not researched such questions, and wish merely to alert you to them.

Leon Ulman,
Deputy Assistant Attorney General, Office of Legal Counsel.

January, 30, 1979.

Memorandum for Homer E. Moxer, Jr., Deputy General Counsel, Department of Commerce

Re Controlling Exports of Hazardous Substances Under the Export Administration Act of 1969.

Assistant Attorney General Harmon has asked me to respond to your letter of October 21, 1978, inquiring whether current authority under the Export Administration Act of 1969, 50 U.S.C. App. § 2401 *et seq.* (1970), as amended, Act of June 22, 1977, Pub. L. 95–52, 91 Stat. 235, may be used by the Department of Commerce to control the export of hazardous substances upon a determination by the Department, in consultation with the Department of State, that such controls are necessary to further the foreign policy of the United States. We conclude that existing authority is sufficient for such a purpose.

Section 3(2) of the Act states: It is the policy of the United States to use export controls * * * (B) to the extent necessary to further significantly the foreign policy of the United States and to fulfill its international responsibilities, * * *.

50 U.S.C. App. § 2404(2) (Supp. V 1975). Section 4(b) of the Act authorizes the President to "effectuate" this and the other declared statutory policies by prohibiting or curtailing the exportation of:

> * * * any articles, materials, or supplies, including technical data or any other information, subject to the jurisdiction of the United States or exported by any person subject to the United States.

50 U.S.C. App. § 2403(b)(1) (Supp. V 1975), amended by the Act of Dec. 28, 1977, Pub. L. 95–223, 91 Stat. 1629. The President has delegated this authority to the Secretary of Commerce. Executive Order No. 12002, 3 CFR 133 (1978 Comp.).

No definition of "the foreign policy of the United States," restrictive or otherwise, appears within the Act,[1] which suggests that any significant foreign policy concern may be the basis for appropriate export controls.

What little legislative history is relevant supports this conclusion. The authority to use export controls to further the foreign policy of the United States and to permit it to fulfill its international responsibilities was created first by the Export Control Act of 1949, 63 Stat. 7. The accompanying House of Representatives committee report emphasized, with respect to foreign policy objectives apart from national security, the importance of controls in connection with the fulfillment of Marshall Plan obligations and our relations with Soviet bloc countries. H.R. Rep. No. 18, 81st Cong., 1st Sess. 2 (1949). The 1949 Act granted export control authority to the President through 1951, but was extended for two-, three-, or four-year intervals until 1969. (See Appendix to this memorandum.) The legislative history of the Export Control Act extensions indicates no Congressional intent to limit the scope of foreign policy-oriented controls, but instead reflects Congress' changing foreign policy concerns throughout the Korean conflict and the Cold War. The Senate Committee on Banking and Currency, summarizing in 1962 the history to that point of the administration of export controls, said:

> * * * [T]he act gives the President the widest possible discretion to limit, restrict, or prohibit entirely exports to any person or to any Nation of any or all commodities or articles whether or not, and to whatever extent they are of military, industrial, or economic significance, if limitation, restriction, or prohibition is found to be in the interest of our national security or our foreign policy or necessary because of domestic shortages. The act is not limited to strategic materials or to critical material or to essential commodities. It will support a total embargo or the mildest of restrictions. The requirements of foreign policy, national security, and domestic shortages are the only tests.

[1] Our research discloses that the phrase "foreign policy" is nowhere defined in the United States Code.

S. Rep. No. 1576, 87th Cong., 2d Sess. 4–5 (1962).

Congress substituted the Export Administration Act of 1969 for the Export Control Act of 1949, reiterating and adding to the earlier Act's declared objectives, and revising the system of export control administration. The House Committee on Banking and Currency, in reporting the bill that was the basis for the law as enacted, noted with apparent approval the disparate ways in which controls had been used to further United States foreign policy, including controls on the export of non-strategic goods to Eastern Europe, the embargo on exports to Rhodesia, and restrictions on the export of commodities and data for use in the testing or development of nuclear technology. H.R. Rep. No. 524, 91st Cong., 1st Sess. 2 (1969). In the nearly ten years since the implementation of the 1969 Act, Congress has continued to leave unconstrained the President's power to control exports to further the nation's foreign policy.

No statute under which hazardous substances are currently controlled domestically provides for export controls. However, Congress has already recognized the importance of domestic-substance control decisions to our foreign policy by providing in the Toxic Substances Control Act, 15 U.S.C. § 2611 (1976), for notice to other countries as to any government data available with respect to chemical substances intended for export to those countries in cases in which the submission of data to the Environmental Protection Agency concerning such substances is required by the Act. In 1978, Congress enacted similar amendments with respect to products and substances regulable under the Consumer Product Safety Act, 15 U.S.C. § 2051–81 (1976), the Federal Hazardous Substances Act, 15 U.S.C. § 1261–74 (1976), and the Flammable Fabrics Act, 15 U.S.C. § 1191–1204 (1976). Act of Nov. 10, 1978, Pub. L. 95–631, 92 Stat. 3742. In reporting on these amendments, the House Committee on Interstate and Foreign Commerce said:

> It is the belief of the Committee that the United States government has an obligation to share the results of its safety research with countries which purchase U.S. exports. Such a policy not only affirms this nation's commitment to human rights, but also strengthens U.S. diplomatic relations and long range export prospects.

H.R. Rep. No. 1164, 95th Cong., 2d Sess. 7 (1978). This language confirms Congress' awareness of the potential relevance to United States foreign policy of governmental decisions to regulate hazardous substances domestically.

In sum, we conclude that the plain language of the Export Administration Act of 1969 affords executive authority to control the export of hazardous substances when necessary to further significantly the foreign policy of the United States. Congress has in no way limited this broad grant of power in thirty years of export control authority extensions, recognizing instead the importance of extensive and flexible executive authority in this area. Congress' awareness of the potentially significant foreign policy implications of internal decisions to regulate or ban hazardous substances is confirmed by the legislative history of the statutes under which such substances are controlled domestically.

Leon Ulman,
Deputy Assistant Attorney General, Office of Legal Counsel.

Part VII

Department of Justice

Law Enforcement Assistance Administration

Formula Grants for Juvenile Justice

DEPARTMENT OF JUSTICE

Law Enforcement Assistance Administration

28 CFR Part 31

Formula Grants for Juvenile Justice

AGENCY: Law Enforcement Assistance Administration, U.S. Department of Justice.

ACTION: Notice of final regulations: juvenile justice formula grants.

SUMMARY: The Law Enforcement Assistance Administration (LEAA) is publishing final regulations for the implementation of the formula grant program authorized by Part B, Subpart I, of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended.

DATE: These regulations are effective August 12, 1980.

FOR FURTHER INFORMATION CONTACT: Frank M. Porpotage (202) 724-7774.

SUPPLEMENTARY INFORMATION: Draft regulations were published in the **Federal Register** on January 14, 1980 (44 FR 2808-2827), for a 45 day period of public review and comment. A total of five national organizations, and twenty-two regional and local organizations responded in writing with comments, some of which were received as late as March 21, 1980. All comments have been considered by LEAA in accordance with the terms contained in the draft regulations.

The president's revised fiscal year 1981 budget represents no change in the $100 million appropriation requested for the programs authorized by the Juvenile Justice and Delinquency Prevention Act. However, the President's revised fiscal year 1981 budget request, submitted to the Congress in March 1980, contains no funding to implement in fiscal year 1981 the formula grant program authorized under Part D of the Justice System Improvement Act. *Therefore, final regulations regarding the development and administration of Part D criminal justice formula grants will not be issued at this time.* Should funds subsequently be appropriated for the implementation of this program, formal notice will be provided in the **Federal Register** and sufficient time alloted for the development of Part D formula grant applications.

Discussion of Comments

Numerous responders commented favorably upon the relative simplicity of the draft regulations and the degree to which they reduce red tape. The following is a summary of major issue areas in the juvenile justice formula grant program.

1. *Comment:* The mandatory Juvenile Justice Advisory Group membership on the State Criminal Justice Council (CJC) was opposed.

Response: The Mandatory Juvenile Justice Advisory Group representation on the CJC is a continuation of existing policy cleared and implemented by OJJDP. It is also specifically required by the Juvenile Justice Act.

2. *Comment:* The draft guidelines language should be modified to track the specific statutory requirement that 66⅔% of JJDP formula grant funds must be passed through to units of general local government and to local private agencies.

Response: Agreed. Section 31.703(c) has been modified accordingly.

3. *Comment:* Audit requirements require excessively detailed application information as opposed to assurances. The entire section should be reserved until further clarification of OMB requirements, as applied to the intergovernmental LEAA formula grant program, can be obtained.

Response: Explanatory language regarding financial and compliance audits is deleted, as is the requirement for a survey of subgrantees in the final regulations. Individual specific requirements were responses to external critiques of LEAA's implementation of OMB's audit regulations. These requirements are viewed as necessary to emphasize and implement this priority activity.

4. *Comment:* Civil rights requirements should be clarified to indicate who specifically is required to submit an approved EEOP.

Response: Agreed. Section 31.506(b) was modified accordingly.

5. *Comment:* The separation requirement of section 223(a)(13) of the Juvenile Justice Act should be clarified to be consistent with OJJDP policy and with the current criteria states are using to determine whether regular contact occurs between juveniles and incarcerated adult offenders. Thus, the term "sight and sound" should be incorporated into the regulations.

Response: Agreed. Section 31.703(f) was modified accordingly.

The Official program number and title as outlined by OMB Circular A-89 for these regulations are 16.540, Juvenile Justice and Delinquency Prevention Allocation to States (State Formula Grants).

Applications (State plans) are subject to Part III of OMB Circular A-95 and must be submitted to the Governor for review and comment. Clearinghouse review at the discretion of the Governor is encouraged.

Title 28 of the Code of Federal Regulations is amended by the addition of new Part 31 which reads as set forth below:

PART 31—FORMULA GRANTS

Subpart A—General Provisions

Sec.
31.1 Genaral.
31.2 Purpose of program.
31.3 Statutory authority.
31.4 Research and statistics.
31.5 Submission date.
31.6 Further information.

Subpart B—Eligible Applicants

31.100 General.
31.101 State Government.
31.102 Reserved.
31.103 Reserved.

Subpart C—Reserved

Subpart D—Reserved

Subpart E—Reserved

Subpart F—Additional Requirements

31.501 Reserved.
31.502 Reserved.
31.503 Juvenile Justice Maintenance of Effort.
31.504 Reserved.
31.505 Audit.
31.506 Civil Rights.
31.507 Open meetings and public access to records.
31.508 Reserved.

Subpart G—Reserved

Subpart H—Juvenile Justice

31.700 General.
31.701 Fund Availability.
31.702 State Council.
31.703 Other Requirements.
31.704 Definitions.

Subpart I—General Conditions and Assurances

31.800 Compliance with Statute.
31.801 Compliance with other Federal Laws, Orders, Circulars.
31.802 Application on File.
31.803 Non-Discrimination.
31.804 Applicability.

Authority:—Juvenile Justice and Delinquency Prevention Act of 1974, (42 U.S.C. 5601 et seq.)

Subpart A—General Provisions

§ 31.1 General.

This Part defines eligibility criteria and sets forth hereto State Governments authorized by Part B, Subpart I, of the Juvenile Justice and Delinquency Prevention Act. These regulations simplify the application process, reduce paperwork, and emphasize the submission of certifications and assurances, rather than detailed and voluminous applications.

§ 31.2 Purpose of program.

This program allocates monies among the States by formula to undertake juvenile justice improvement efforts in accord with broad statutorily-specified purposes. States and localities have discretion to determine priorities and propose programs and projects based on their analysis of their needs and problems.

§ 31.3 Statutory authority.

The statute establishing the Office of Juvenile Justice and Delinquency Prevention within LEAA and giving authority to make grants for juvenile justice and delinquency prevention improvement programs is the *Juvenile Justice and Delinquency Prevention Act of 1974*, as amended (42 U.S.C. 5601 et seq). Formula grants are authorized to States which in turn make subgrants for use by State and local public and private agencies in carrying out juvenile justice and delinquency prevention improvement programs. Complete application requirements for this grant program are detailed in Subpart H of this Regulation. In addition to formula grants, the Juvenile Justice and Delinquency Prevention Act authorizes a major national-level grant program called:

Special Emphasis Grants (Part B, Subpart II, of the Juvenile Justice and Delinquency Prevention Act). These grants provide assistance to public and private agencies for juvenile justice demonstration and improvement programs. Information and application requirements for these related grant programs may be obtained on request from LEAA's Office of Juvenile Justice and Delinquency Prevention (OJJDP).

§ 31.4 Research and statistics.

The Juvenile Justice and Delinquency Prevention Act authorizes programs of juvenile justice statistics and research. These programs are administered by the National Institute of Juvenile and Delinquency Prevention (NIJJDP).

§ 31.5 Submission date.

Juvenile Justice Plans for Fiscal Years 1981 shall be submitted to the Law Enforcement Assistance Administration by August 31, 1980.

§ 31.6 Further information.

Persons requesting additional information about the formula grants program should contact: Office of Juvenile Justice and Delinquency Prevention, Law Enforcement Assistance Administration, U.S. Department of Justice, 633 Indiana Avenue, NW, Washington, D.C. 20531.

Subpart B—Eligible Applicants

§ 31.100 General.

This subpart describes who may apply for formula grants under the Juvenile Justice and Delinquency Prevention Act and the general responsibilities and functions of applicants.

§ 31.101 State government.

All States are eligible to apply for and receive formula grants authorized by the Juvenile Justice and Delinquency Prevention Act. States are defined to include the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

(a) *Establishment of State Criminal Justice Council.* Each state which chooses to apply for a formula grant must establish or designate by law a State Criminal Justice Council. This Council must be subject to the jurisdiction of the State's chief executive. The chief executive of the State shall provide professional, technical and clerical support to the Council to enable it to meet its responsibilities under the Act. (Sec. 402(b) of the Justice System Improvement Act and Sec. 223(a)(1) of the JJDP Act):

(1) *Membership.* Membership requirements are set forth in Section 402(b)(2) of the Justice System Improvement Act. States participating in the formula grant program of the Juvenile Justice and Delinquency Prevention Act, must include on the Council the chairperson and at least two additional citizen members of any advisory group established pursuant to Sec. 222(a)(3) of that Act. For purposes of this requirement a citizen member is defined as any person who is not a fulltime government employee or elected official. Any executive committee of the Council must include the same proportion of juvenile justice advisory group members as are included in the total Council membership. Individual representatives may fulfill the requirements of more than one functional or geographical area where appropriate to the background and expertise of the individual. Federal representation is prohibited except in the District of Columbia, American Samoa, Guam, the Virgin Islands, the Trust Territory of the Pacific Islands, and the Commonwealth of the Northern Mariana Islands.

(2) *Council Functions.* Sec. 402(b)(1) of the Justice System Improvement Act sets forth the purposes of State Criminal Justice Council.

(3) *Transition.* State criminal justice planning agencies established pursuant to the Omnibus Control and Safe Streets Act may carry out the functions, powers and duties of State Criminal Justice Councils provided that within two years of the effective date of the Justice System Improvement Act, they meet the representation requirements set forth therein. Prior to this date, Councils not meeting the representation requirements of the Justice System Improvement Act must be in compliance with those set forth in the Sec. 203(a) of the Crime Control Act.

(4) *Assurance.* States must assure that they have on file and available for review a copy of the state law establishing the Council, and a current list of Council membership that includes information adequate to document compliance with the representation requirements set forth.

Subpart C—Reserved

Subpart D—Reserved

Subpart E—Reserved

Subpart F—Additional Requirements

§ 31.500 General.

This subpart sets forth additional requirements under the Justice System Improvement Act (JSIA) of 1979 and JJDP Act of 1974, as amended. Formula grants applicants must assure compliance with each of these requirements.

§ 31.501 Reserved.

§ 31.502 Reserved.

§ 31.503 Juvenile justice maintenance of effort.

States must expend at least 19.15 percent of their total annual Part D allocation under the JSIA for juvenile justice and delinquency prevention related programs and projects. States may expend more than this required minimum at their discretion. States must assure that at a minimum they have allocated 19.15 percent of their formula grant funds for planning and administrative activities for juvenile justice. Prior OJJDP approval is necessary for any reprogramming of Part D funds out of juvenile justice. OJJDP should be notified of any reprogramming that increases the maintenance of effort level of a specific state.

§ 31.504 Reserved.

(contractors, etc.) in OMB Circulars A-

due, that necessary audits have been

Compliance (OCRC) within ten (10) days

objectives of Section 223(a) and other

formula grant award may be utilized to

§ 31.504 Reserved.

§ 31.505 Audit.

(a) *Policy.* Pursuant to the JSIA and OMB Circulars A–102 and A–110, as revised, it is LEAA policy that the audit function is primarily the responsibility of the recipients and subrecipients of Federal funds. Further in accordance with the Justice System Improvement Act and circulars A–102 and A–110, it is LEAA policy that:

(1) The State Council and each of its subgrantees must arrange for and have an audit of its activities. These audits are to determine whether:

(i) Financial operations are conducted properly;

(ii) The financial statements are presented fairly;

(iii) The organization has complied with laws and regulations affecting the expenditure of federal funds;

(iv) Internal procedures have been established to meet the objectives of federally assisted programs; and

(v) Financial reports to the Federal Government contain accurate and reliable information.

(2) Audits shall be made in accordance with the General Accounting Office Standards for Audit of Governmental Organizations, Programs, Activities and Functions, the Guideline for Financial and Compliance Audits of Federally Assisted Programs, compliance supplements approved by OMB, and generally accepted auditing standards established by the American Institute of Certified Public Accountants.

(3) Audits of the State Council and each of its subgrantees will be made on an organization-wide basis (entity audits) and not on a grant-by-grant basis.

(4) Audits of the State Council and each of its subgrantees will usually be made annually, but not less frequently than every two years. Audits will cover the period since the previous audit.

(5) Audit reports, in accordance with GAO reporting standards and applicable requirements in OMB Circulars A–102 and A–110, will be prepared and issued in connection with all audit work. Procedures will be established to ensure the timely and appropriate resolution of the audit findings and recommendations contained in those reports.

The "Financial Management for Planning and Action Grants" Manual, Guideline M 7100.1A, Chapter 8, contains a more comprehensive statement of LEAA's audit policies and requirements relative to grantees and subgrantees.

(b) *Background.* Uniform administrative requirements have been (contractors, etc.) in OMB Circulars A–102, revised, "Uniform Administrative Requirements for Grants-in-Aid to State and Local Governments," and A–110, revised, "Grants and Agreements with Institutions of Higher Education, Hospitals and Other Non-Profit Organizations—Uniform Administrative Requirements." Attachments G and P of Circular A–102 and Attachment F of Circular A–110 specify the audit responsibilities included in these administrative requirements for grantees, subgrantees and subrecipients. Accordingly, the audit responsibilities of all recipients of LEAA funds are those specifically established in the JSIA and the referenced Attachments to OMB Circulars A–102 and A–110.

(c) *Application Requirement.* Regarding the audit responsibilities applicable to the State Council and each of its subgrantees, the following must be submitted as part of the State application.

(1) *State Council.* The application must describe the procedures and controls to ensure that:

(i) An Audit is performed of the State Council in accordance with the requirements of OMB Circular A–102. The application must indicate the organization that will conduct the audit of the council, the approximate timing of audit performance and completion, the audit coverage to be provided including the period of activity to be included, and the assistance, both programmatic and audit, requested.

(ii) An audit report is issued in connection with the State Council audit and three (3) copies are forwarded to the appropriate Federal cognizant audit agency, where assigned, or to the OJARS Office of Audit and Investigation, if more is assigned.

(iii) There is a timely and appropriate resolution of all audit findings and recommendations contained in the audit report of the State Council.

(2) *State Council Subgrantee Audits.* The State application must describe the policy, procedures and controls established by the State Council to ensure each of its subgrantees satisfies the audit requirements. The procedures and controls must include:

(i) Clear notification to all applicants of the audit requirements.

(ii) A mechanism for ensuring that subgrantees explicitly agree to comply with the audit requirements (special or general conditions, specific commitment in the application, etc.).

(iii) A mechanism for determining that subgrantees audits are due or coming due, that necessary audits have been done and that corrective action is appropriately initiated for instances of subgrantee non-compliance with audit responsibilites.

(iv) A control for ensuring that audit reports are prepared upon completion of each subgrantee audit and forwarded to the appropriate Federal cognizant audit agency, where assigned, or to the OJARS Office of Audit and Investigation, if none is assigned.

(v) A control for ensuring that subgrantees have a system for the timely and appropriate resolution of all audit findings and recommendations.

§ 31.506 Civil rights.

(a) *Applicability.* The State Criminal Justice council must assure that it will comply, and require other applicants located within its State to assure that they will comply, with the following nondiscrimination laws:

(1) Section 815(c) of the Justice System Improvement Act (JSIA), and its implementing regulations, found at 28 CFR 42.201, et seq. and 28 CFR 42.301, *et seq.;*

(2) Title VI of the Civil Rights Act of 1964, and its implementing regulation, found at 28 CFR 42.101, et seq.;

(3) Section 504 of the Rehabilitation Act of 1973, as amended; and its implementing regulations, published in Vol. 45, No. 108 of the **Federal Register** on June 3, 1980, 28 CFR 42.501, *et seq.*

(4) Old Age Discrimination Act of 1975, as amended, and its implementing regulations; and

(5) Executive Order 12138, 44 FR 29637 (May 22, 1979), requiring recipients of federal financial assistance to take appropriate affirmative action in support of women's business enterprise.

(b) *Designation of Civil Rights Compliance Officer.* The State Criminal Justice Council shall designate an employee as Civil Rights Compliance Officer. This officer shall:

(1) Secure the assurances listed in § 31.506(a) in every application for assistance under the JJDP Act;

(2) Require that each state or local unit of government assure in its application that, in the event a Federal or State court or Federal or State administrative agency makes a finding of discrimination of the basis of race, color, religion, sex or national origin against the recipient after a due process hearing, the recipient will forward a copy of the finding to the Council and the OJARS Office of Civil Rights Compliance (OCRC) within ten (10) days after receipt of the finding;

(3) Require that every applicant required to formulate an Equal Employment Opportunity Program (EEOP) in accordance with 28 CFR 42.301 *et seq., submit a certification to the State Criminal Justice Council that it has an EEOP on file;*

(4) Require that every criminal justice agency applying for a grant of $500,000 or more submit a copy of its EEOP (if required to maintain one under 28 CFR 42.301, *et seq.*) to OCRC at the same time it submits its application to the Council;

(5) Where the Council is required to formulate an EEOP pursuant to 28 CFR 42.301 *et seq.*, submit the EEOP with the formula grant application, if the application is for $500,000 or more; and

(6) Serve as liaison with the OJARS Office of Civil Rights Compliance (OCRC). The officer's duties in this regard include informing the public and grantees of an affected person's right to file a complaint of discrimination to OCRC for investigation, and cooperating with OCRC during compliance reviews of recipients located within the State.

§ 31.507 Open meetings and public access to records.

Pursuant to section 402(e)(2), of the JSIA, State Councils, State Advisory Groups and local criminal justice advisory boards must assure that meetings are open to the public and must give public notice of the time and place, and the nature of the business to be transacted, if final action is to be taken on any application for funds or amendment. Further, they must assure public access to all records relating to their functions, except those required to be kept confidential by local, state or Federal law.

§ 31.508 Reserved.

Subpart G—Reserved

Subpart H—Juvenile Justice

§ 31.700 General.

(a) The Juvenile Justice and Delinquency Prevention Act provides formula grants to States for use by State and local government and private non-profit agencies in carrying out juvenile justice improvement programs. This subpart sets forth all of the requirements for application and receipt of JJDP Act formula grants.

(b) Section 223(a) of the JJDPA requires States to submit for LEAA approval a State plan which meets the requirements of the Act. Applications by the State to LEAA must set forth programs for funding which meet the objectives of Section 223(a) and other necessary information to assure compliance with the requirements of the statute. Application forms and additional information are provided in OJJDP's "Fiscal Year 1981 Application Kit for Formula Grant under the JJDPA". Responsibility for administering the program is vested in the State Council which, under the transition authority of the JSIA (Sec. 1301(i)), serves as the State Planning Agency for the purposes of the JJDP Act. The process for applying for and administering JJDP Act formula grant monies differs in two major respects from that required by the JSIA:

(1) The juvenile justice plan is for one, rather than three years; and

(2) Entitlement jurisdictions have no mandated portion of funds or administrative responsibilities.

(c) The State application must include programs for the improvement of juvenile justice or the development of delinquency prevention programs funded with JJDP Act formula funds. These programs shall be described in accordance with the standard format set forth in § 31.703(h).

Information to comply with all other requirements shall also be included and shall be submitted annually. Unless otherwise indicated, an assurance is sufficient to indicate compliance, providing that there has been no change from the previous year juvenile justice plan submission.

§ 31.701 Fund availability.

(a) *Allocation to States.* Each State receives a base allotment of $225,000 except for the Virgin Islands, Guam, American Samoa, the Trust Territory of the Pacific Islands and the Commonwealth of the Northern Marianas where the base amount is $56,250. Funds are allocated among the States on the basis of relative population of people under 18 years of age.

(b) *Funds for Local Use.* At least two-thirds of the formula grant allocation to the State must be used for programs of local government, or local private agencies unless the State applies for and is granted a waiver by LEAA's Office of Juvenile Justice and Delinquency Prevention (OJJDP).

(c) *Match.* Formula grants under the JJDP Act shall be 100 percent of approved costs, with the exception of planning and administrative funds which must be matched dollar for dollar and construction projects funded under section 227(a)(2) which require a 50 percent cash match.

(d) *Funds for Administration.* Not more than 7.5 percent of the total annual formula grant award may be utilized to develop the annual juvenile justice plan and to pay for administrative expenses, including monitoring and evaluation. These funds are to be matched on a dollar for dollar basis. The State shall make available needed funds for planning and administration to units of local government or combinations on an equitable basis.

§ 31.702 State Council.

(a) Pursuant to section 223(a) (1) and (2) of the JJDP Act, the State Council shall assure that it is the sole agency for supervising the preparation and administration of the plan and has the authority to implement the plan even if an agency other than the Council is delegated the authority to prepare or administer the plan under the Council's supervision.

(b) The Chief Executive shall establish a Juvenile Justice Advisory Group pursuant to section 223(a)(3) of the JJDP Act. State Councils shall as part of their annual juvenile justice plan:

(1) Provide a list of all current advisory group members, indicating their respective dates of appointment and how each member meets the membership requirements specified in this Section of the Act. Indicate those members appointed prior to their 26th birthday as youth members. Full-time elected officials are considered to be government employees and may not be appointed to chair advisory groups.

(2) Assure that three members who have been or are now under the jurisdiction of the juvenile justice system have been appointed to the advisory group.

(3) Indicate the roles, responsibilities and activities of the advisory group concerning those duties listed in section 223(a)(3) of the Act.

(b) Pursuant to section 222(e) of the JJDP Act, the advisory group shall develop a plan for using the five percent minimum allotment which, upon review by the State, it shall submit as part of the application. The State shall indicate the total amount of funds allocated to the advisory group. For computing that allotment, use the following procedures:

(1) Each State shall allocate a minimum of $11,250; the Virgin Islands, Guam, American Samoa, Trust Territories of the Pacific Islands, and the Commonwealth of the Northern Marianas shall allocate $2,812.50. Do not count these funds as part of the maximum 7½ percent monies set aside for planning and administration. Calculate the latter on the total formula grant award.

(2) Use funds allocated to the advisory groups for such functions and responsibilities as are consistent with Section 223(a)(3) of the JJDP Act. Funds allocated to the advisory group shall not supplant any funds currently allocated to them.

§ 31.703 Other requirements.

(a) *Consultation With and Participation of Units of General Local Government.* Pursuant to sections 223(a)(4) and (6) of the JJDP Act, the state shall assure that:

(1) The Chief Executive Officer of such a unit has assigned responsibility for the preparation and administration of its part of the State application.

(2) The State recognizes, consults with, and incorporates the needs of such units into the State application.

(b) *Participation of Private Agencies.* Pursuant to section 223(a)(9) of the JJDP Act, the state shall assure that private agencies have been consulted and allowed to participate in the development and execution of the state application.

(c) *Pass-Through Requirement.* Pursuant to section 223(a)(5) of the JJDP act, the state must pass through at least 66⅔ percent of JJDP formula grant funds to units of general local government and to local private agencies unless a waiver is requested by the State and approved by OJJDP. For purposes of this requirement, local private agency is defined as a private non-profit agency or organization that provides program services within an identifiable unit or a combination of units of general local government.

(1) Inclusion and Compilation of Pass-Through.

(i) Juvenile justice formula grant funds that the State makes available to units of general local governments or combination of units may be included in the compilation of pass-through. This includes funds for planning and administration as well as for programs.

(ii) If a unit of general local government or a combination of units has denied funding to a private agency, yet that agency received formula grant funds for prgrams consistent with the State application, then include those funds in the compilation of pass-through. In States lacking regional or local planning units, and in which the State distributes funds directly, a private agency need not first apply to a unit of general local government or a combination of units for funding. Those funds can also be included in the compilation of pass-through. In addition, if a unit of general local government or a combination of units receives pass-through funds from the State and, in turn, refuses to fund a project submitted by a private agency, the State can reduce the local allocation if it funds the project.

(2) Waiver of Pass-Through Requirements.

State Councils shall make all requests for waivers in writing to the Administrator of OJJDP and enclose a statement setting forth the following:

(i) The extent of State and local implementation of juvenile justice and delinquency prevention programs.

(ii) The extent of State and local financial responsibility for juvenile deliquency programs.

(iii) The extent to which the State provides services or directs outlays for or on behalf of local government (as distinct from statewide services).

(iv) The approval of the State Criminal Justice Council.

(v) Specific comments from local units of government expressing their position regarding the waiver.

(d) *Rights of Privacy of Recipients of Services.* Pursuant to sections 223(a)(16) and 229 of the JJDP Act, the State shall assure that it has established procedures to ensure that programs funded under the JJDP Act shall not disclose program records containing the identity of individual juveniles. Exceptions to this require:

(1) Authorization by law;

(2) The consent of either the juvenile or his legally authorized representative; or

(3) Justification that otherwise the functions of this title cannot be performed.

Under no circumstances may public project reports or findings name actual juveniles in the program.

(e) *Deinstitutionalization of Status Offenders and Non-Offenders.* Pursuant to Section 223(a)(12) of the JJDP Act the State Council shall:

(1) Describe in detail its specific plan, procedure, and timetable for assuring that within three years of its initial submission of an approved plan, juveniles who are charged with or who have committed offenses that would not be criminal if committed by an adult, or such non-offenders as dependent or neglected children, shall not be placed in juvenile detention or correctional facilities.

(2) Describe the barriers, including financial, legislative, judicial and administrative ones, the state faces in achieving full compliance with the provisions of this paragraph. All accounts shall include a description of the technical assistance needed to overcome these barriers. These barriers should be keyed to the annual plan noted in paragraph (e)(1) of this section.

(3) For those States that have achieved "substantial compliance" as outlined in section 223(c) of the Act, indicate the unequivocal commitment to achieve full compliance. Attach appropriate documentation.

(4) Submit the report required under section 223(a)(12)(B) of the JJDP Act as part of the annual monitoring report required by paragraph 704(g).

(f) *Contact with Incarcerated Adults.*

(1) Pursuant to section 223(1)(13) of the JJDP Act the State Council shall:

(i) Describe in detail its specific plan and procedure for assuring that juveniles alleged to be or found to be delinquent, status offenders, and non-offenders will be removed from any institution in which they have regular sight and sound contact with incarcerated adults, including inmate trustees. This prohibition seeks as absolute a separation as possible and permits no more than haphazard or accidental contact between juveniles and incarcerated adults. In addition, include a specific timetable for compliance and justify any deviation from a previously approved timetable.

(ii) In those isolated instances where juvenile criminal-type offenders remain confined in adult facilities or facilities in which adults are confined, the State must set forth in detail the procedures for assuring no regular sight and sound contact between such juveniles and adults for each jail, lockup and detention and correctional facility.

(iii) Describe the barriers, including physical, judicial, fiscal, and legislative ones, which may hinder the removal and separation of alleged or adjudicated juvenile delinquents, status offenders and non-offenders from incarcerated adults in any particular jail, lockup, detention or correctional facility. All such accounts shall include a description of the technical assistance needed to overcome those barriers. These barriers should be keyed to the Annual Plan in § 31.703(f)(1)(i) above.

(iv) Assure that offenders are not reclassified administratively and transferred to a correctional authority to avoid the intent of segregating adults and juveniles in correctional facilities. However, this does not prohibit or restrict waiver of juveniles to criminal court for prosecution, according to State law. It does, however, preclude a State from administratively transferring a juvenile offender to an adult correctional authority or a transfer within a mixed juvenile and adult facility for placement with adult criminals either before or after a juvenile reaches the statutory age of majority. It also precludes a State from transferring adult offenders to a juvenile correctional authority for placement.

(2) *Implementation.* Each State shall immediately plan and implement the requirement of this provision.

(g) *Monitoring of Jails, Detention Facilities and Correctional Facilities.*

(1) Pursuant to section 223(a)(14) of the JJDP Act, the State Council shall:

(i) Indicate how it will annually identify and survey all public and private juvenile detention and correctional facilities and facilities usable for the detention and confinement of juvenile offenders and adult criminal offenders.

(ii) Provide a plan for an annual on-site inspection of all such facilities identified in paragraph (g)(1)(i) of this section. Such plan shall include the procedure for reporting and investigating compliance complaints in accordance with sections 223(a)(12) and (13).

(iii) Include a description of the technical assistance needed to implement fully the provisions of this paragraph.

(2) *For the purpose of monitoring,* a juvenile detention or correctional facility is:

(i) Any *secure* public or private *facility* used for the *lawful custody* of *accused or adjudicated juvenile offenders* or *non-offenders;* or

(ii) Any public or private facility, secure or non-secure, which is also used for the lawful custody of accused or convicted adult *criminal offenders.* (Definitions of terms emphasized are found in § 31.704.)

(3) *Reporting Requirement.* The State shall report annually to the Administration of OJJDP on the results of monitoring for both sections 223(a)(12) and (13) of the JJDP Act. Three copies of the report shall be submitted to the Administrator of OJJDP no later than December 31 of each year.

(i) To demonstrate the extent of compliance with section 223(a)(12)(A) of the JJDP Act, the report must at least include the following information for both the baseline and the current reporting periods.

(A) Dates of baseline and current reporting period.

(B) Total number of public and private juvenile detention and correctional facilities AND the number inspected on-site.

(C) Total number of accused status offenders and non-offenders held in any juvenile detention or correctional facility as defined in § 31.703(g)(2) for longer than 24 hours.

(D) Total number of adjudicated status offenders and non-offenders held in any juvenile detention or correctional facility as defined in § 31.703(g)(2).

(ii) To demonstrate compliance with section 223(a)(12)(B) of the JJDP Act, the report must include the total number of accused and adjudicated status offenders and non-offenders placed in facilities that are:

(A) Not near their home community;

(B) Not the least restrictive appropriate alternative; and

(C) Not community-based.

(iii) To demonstrate the progress and extent of compliance with section 223(a)(13) of the JJDP Act, the report must at least include the following information for both the baseline and the current reporting periods.

(A) Designated date for achieving full compliance.

(B) The total number of facilities that can be used for the secure detention and confinement of both juvenile offenders and adult criminal offenders.

(C) Both the total number of facilities used for the secure detention and confinement of both juvenile offenders and adult criminal offenders during the past 12 months AND the number inspected on-site.

(D) The total number of facilities used for secure detention and confinement of both juvenile offenders and adult criminal offenders AND which did not provide adequate separation.

(E) The total number of juvenile offenders and non-offenders NOT adequately separated in facilities used for the secure detention and confinement of both juveniles and adults.

(4) *Compliance.* A State must demonstrate compliance with section 223(a)(12)(A) and (13) of the Act. Should a state fail to demonstrate substantial compliance with section 223(a)(12)(A) by the end of the three-year time frame and full compliance within an additional 2 years, eligibility for formula grant funding shall terminate.

(h) *Detailed Study of Needs and Utilization of Existing Programs.* Pursuant to section 223(a) (8) and (9) of the JJDP Act, the State Council shall assure that it has conducted a detailed study of the juvenile justice system. This study shall include: an analysis both of the juvenile crime for Part I offenses and of the status offenses and non-offenses, such as dependency and neglect, and an analysis of problems confronting the juvenile justice system. The result shall be a series of problem statements that reflect an analysis of the data, the monitoring reports and requirements of the JJDP Act and that provided the basis for developing the annual juvenile justice system programs.

(1) *Product.*

(i) The product of the Detailed Study of Needs and analysis is a series of brief written statements set forth in the application that define and describe the priority problems.

(ii) A problem statement, as used herein, is defined as a written presentation which describes the magnitude, seriousness, rate of change, persons affected, and spatial and temporal aspects of a problem using qualitative and quantitative information. It identifies the nature, extent, and effect of system reponse, makes projections based on historical inferences and rigorously attempts to establish the origins of the problem. A problem statement is a clear and succinct summary which reflects the results of the analysis undertaken. It does not necessarily represent all the analysis undertaken, or all data collected for any given priority problem area.

(2) *Programs.* Applications are to include descriptions of programs to be supported with Juvenile Justice Act formula grant funds.

(i) *Organization of Programs.* Programs are groupings of projects with similar program designs and objectives.

(ii) *Program Description.* Descriptions should not be more than three or four pages in length, but this may vary. Each item below must be addressed for all programs.

(A) *Title.*

(B) *Description of Program.*

(*1*) *Program Objectives.* Objectives are specific descriptive statements of the expected program performance and its impact on the identified problem. These must be quantified where possible and must be related to the measures used to describe the problem in the problem statement.

(*2*) *Summary of Activities Planned and Services Provided.* This part of the program description must summarize what agencies will implement the program, where and when the activities will take place, what services will be provided, and who will benefit from the services.

(3) *Budget.* Total Federal funds requested from JJDP allocations must be presented, along with any expected State, local or private funds. Indicate the number of subgrants and the dollar range, as well as anticipated subgrantees (if known). Include minimum duration of each program and minimum number of years that funding may be requested and received for projects. Once Congressional appropriations are final, specific budget figures must be submitted.

(4) *Relationship to Similar Programs.* The program description must indicate how the program relates to other similar State or local programs directed at the same or similar problems.

(iii) *Performance Indicators.* A list of performance indicators must be developed and set forth for each program. These indicators show what data will be collected at the project level to measure whether objectives and performance goals have been achieved and should related to the measures used in the problem statement and statement of program objectives.

(3) *Format.* Exhibit 1 shows the standard format for setting forth priority problems and programs in the annual plan.

Exhibit 1—Standard Format for Program Descriptions

Problem Statement: Statement of problem including an indication of its priority.

Program: Description of program developed to deal with the problem stated above.

1. Title
2. Description
   a. Objectives
   b. Summary of Activities Planned
   c. Budget
   d. Relationship to Similar Programs
3. Performance Indicators

Note: There may be more than one program for each priority problem.

(i) *Equitable Distribution of Juvenile Justice Funds and Assistance to Disadvantaged Youth.* Pursuant to section 223(a)(7) and (15) of the JJDP Act, the State Council shall assure that:

(1) The state will establish and adhere to procedures for the equitable distribution of JJDP Act formula grant money.

(2) The detailed study of needs analyzes the needs of disadvantaged youth and that assistance will be available equitably.

(3) It has developed and adheres to procedures for filing and considering grievances arising under this section.

(j) *Advanced Techniques.* Pursuant to section 223(a)(10) of the JJDP Act, the State Council shall:

(1) Demonstrate clearly in its application that at least 75 percent of the JJDP funds support advanced techniques as enumerated in this section of the Act.

(2) In order to ensure timely compliance with sections 223(a) (12)(13) and (14) of the JJDP Act, States should place special emphasis on projects which are designed to deinstitutionalize juveniles, remove children from jails, lock-ups and other adult institutions where adults are incarcerated to ensure adequate separation of adult and juvenile offenders, and monitor compliance.

(k) *Analytical and Training Capacity.* Pursuant to section 223(a)(11) and (20) of the JJDP Act, the State Council shall provide an assurance that it will conduct research, training and evaluation activities.

(l) *Continuation Support.* Pursuant to section 228(a) of the JJDP Act, the State Council shall:

(1) Indicate the minimum duration of each JJDP program described in its plan.

(2) Indicate the minimum number of years that funding may be requested and received for projects in each program.

(3) Assure that each funded project shall receive funding for the minimum number of years, unless prematurely ended due to:

(i) A substantial decrease in Federal funding to a State under the JJDP Act; or

(ii) An applicant's failure to comply with the terms and conditions of the award; or

(iii) An applicant's failure to receive a satisfactory yearly evaluation.

(4) The state must assure that potential applicants know the information submitted under paragraph (l) when programs are announced.

(m) *Other Terms and Conditions.* Pursuant to section 223(a)(21) of the JJDP Act, States shall agree to other terms and conditions as the Associate Administrator may reasonably prescribe to assure the effectiveness of programs assisted under the formula grant.

§ 31.704 Definitions.

(a) *Private Agency.* A private non-profit agency, organization or institution is:

(1) Any corporation, foundation, trust, association, cooperative, or accredited institution of higher education not under public supervision or control, and

(2) Any other agency, organization or institution which is operated primarily for scientific, educational, service, charitable, or similar public purposes, but which is not under public supervision or control, and not part of the net earnings of which inures or may lawfully inure to the benefit of any private shareholder or individual, and which has been held by IRS to be tax-exempt under the provisions of Section 501(c)(3) of the 1954 Internal Revenue Code.

(b) *Juvenile Offender.* An individual subject to the exercise of juvenile court jurisdiction for purposes of adjudication and treatment based on age and offense limitations as defined by state law.

(c) *Criminal-type Offender.* A juvenile who has been charged with or adjudicated for conduct which would, under the law of the jurisdiction in which the offense was committed, be a crime if committed by an adult.

(d) *Status Offender.* A juvenile who has been charged with or adjudicated for conduct which would not, under the law of the jurisdiction in which the offense was committed, be a crime if committed by an adult.

(e) *Non-offender.* A juvenile who is subject to the jurisdiction of the juvenile court, usually under abuse, dependency, or neglect statutes for reasons other than legally prohibited conduct of the juvenile.

(f) *Accused Juvenile Offender.* A juvenile with respect to whom a petition has been filed in the juvenile court or other action has occurred alleging that such juvenile is a criminal-type offender or is a status offender and no final adjudication has been made by the juvenile court.

(g) *Adjudicated Juvenile Offender.* A juvenile with respect to whom the juvenile court has determined that such juvenile is a criminal-type offender or is a status offender.

(h) *Facility.* A place, an institution, a building or part thereof, set of buildings or an area whether or not enclosing a building or set of buildings which is used for the lawful custody and treatment of juveniles and may be owned and/or operated by public or private agencies.

(i) *Facility, Secure.* One which is designed and operated so as to ensure that all entrances and exits from such facility are under the exclusive control of the staff of such facility, whether or not the person being detaind has freedom of movement within the perimeters of the facility or which relies on locked rooms and buildings, fences, or physical restraint in order to control behavior of its residents.

(j) *Facility, Non-secure.* A facility not characterized by the use of physically restricting construction, hardware and procedures and which provides its residents access to the surrounding community with minimal supervision.

(k) *Lawful Custody.* The exercise of care, supervision and control over a juvenile offender or non-offender pursuant to the provisions of the law of a judicial order or decree.

(l) *Criminal Offender.* An individual, adult or juvenile, who has been charged with or convicted of a criminal offense in a court exercising criminal jurisdiction.

Subpart I—General Conditions and Assurances

§ 31.800 Compliance with satute.

The applicant State assures and certifies that the State Criminal Justice Council and its subgrantees and contractors will comply with the provisions of the Omnibus Crime Control and Safe Streets Act of 1976 Pub. L. 90–351, as amended by Pub. L. 91–644, Pub. L. 93–83, Pub. L. 93–415, Pub. L. 94–430, Pub. L. 94–503, and Pub. L. 96–157 (the Justice System Improvement Act of 1979); and with the provisions of the Juvenile Justice and Delinquency Prevention Act of 1974, Pub. L. 93–415, as amended by Pub. L. 94–503, for activities funded under each Act.

§ 31.801 Compliance with other Federal laws, orders, circulars.

(a) The applicant State further assures and certifies that the State Criminal Justice Council and its subgrantees and contractors will adhere to regulations of the Department and other applicable Federal laws, orders and circulars. These requirements are described in greater detail in the "Fiscal Year 1981 Application Kit for Formula Grant under the JJDP Act." They include compliance, where applicable, with the provisions of the National Environmental Act of 1966, Pub. L 89–665; the Flood Disaster Protection Act of 1973, Pub. L. 93–234; the Clean Air Act, Pub. L. 88–206; the Federal Water Pollution Control Act Amendments of 1972, Pub. L. 92–500; the Safe Drinking Water Act, Pub. L. 93–523; the Endangered Species Act of 1973, Pub. L. 93–205; the Wild and Scenic Rivers Act, Pub. L. 90–524; the Fish and Wildlife Coordination Act, Pub. L. 85–624; the Historical and Archeological Preservation Act, Pub. L. 93–291; the Coastal Zone Management Act of 1972, Pub. L. 92–583; the Hatch Political Activity Act, Pub. L. 93–443; the Animal Welfare Act of 1970, Pub. L. 91–579; the Impoundment Control Act of 1973, Pub. L. 93–112; the Intergovernmental Cooperation Act of 1974, Pub. L. 93–510; the Education Amendments of 1974 (Title IX), Pub. L. 93–318; Executive Orders Nos. 11246, 11377, 11507, 11738, 11752, and 11914; Office of Management and Budget Circulars Nos. A–102 and A–111; FMC Circulars Nos. 74–4 and 74–7 found at 34 CFR Parts 255 and 256 respectively and all amendments and additions to those statutes, orders, and circulars.

(b) In administering funds awarded pursuant to this application, the State will assure compliance with 28 CFR Parts 18, 19, 20, 22, 42, and 52 as they relate to activities funded with LEAA funds; G 6060.1A, Medical Research and Psychosurgery; and the Guideline Manual M 7100.1A, Financial Management for Planning and Action Grants. The State further represents that it has established policies and provided procedures to assure sound fiscal control, effective management, and efficient use of funds received pursuant to this grant.

§ 31.802 Application on file.

Any Federal funds awarded pursuant to this application will be distributed and expended pursuant to and in accordance with the programs contained in the applicants State's current approved application and any advance funds will not be awarded for any program not specifically approved and clearly set forth in the current comprehensive application. Any departures therefrom, other than to the extent permitted by the Administration's current program and fiscal regulations and guidelines, will be submitted for advance approval by the Administration. The applicant State assures that it has complied with any special grant conditions applicable to formula grants previously awarded to the State or, as to those special conditions to which action is not yet due or required, will comply with such conditions within specific deadlines.

§ 31.803 Non-discrimination.

The State Criminal Justice Council hereby assures that it will comply with and will insure compliance by its subgrantees and contractors with all applicable non-discrimination requirements, including but not limited to Section 815(c) of the Justice System Improvement Act and its implementing regulations found at 28 CFR 42.201, et seq. and 28 CFR 42.301, et seq.; Title VI of the Civil Rights Act of 1964, Subparts C–E of 28 CFR Part 42; and, where applicable, Section 262(b) of the Juvenile Justice Act, to the end that no person shall, on the ground of race, color, religion, national origin, or sex be excluded from participation in, be denied the benefits of, be subjected to discrimination under or be denied employment in connection with any program or activity funded in whole or in part with funds made available through the Law Enforcement Assistance Administration. The State Council further assures that it will comply with and will insure compliance by its State and local governmental subgrantees with the requirement that in the event that a Federal or State court or Federal or State administrative agency makes a finding of discrimination on the ground of race, color, religion, national origin, or sex against the recipient State or local government unit or agency thereof, it will forward a copy of the finding to the cognizant State Council and to LEAA. The State Council further insures that educational institutions comply with the provisions and requirements of Title IX, Section 901, of the Federal Amendments of 1972 (Pub. L. 92–318) which provides that no person shall, on the basis of sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving financial assistance from the Department of Justice. The State Council recognizes the right of the United States to seek judicial enforcement of the foregoing covenants against discrimination, and will include a similar covenant assuring the right of the United States to seek judicial enforcement in its subgrants or contracts.

§ 31.804 Applicability.

The applicant State hereby further assures and certifies that by appropriate language incorporated in each grant, subgrant, contract, subcontract, or other document under which funds are to be disbursed, the grantee shall assure that these conditions apply to all recipients of assistance.

Ira M. Schwartz,

Administrator, Office of Juvenile Justice and Delinquency Prevention.

Homer F. Broome, Jr.,

Administrator, Law Enforcement Assistance Administration.

Part VIII

Department of Education

Program of Research Grants on Organizational Processes in Education

DEPARTMENT OF EDUCATION

45 CFR Part 1480

Program of Research Grants on Organizational Processes in Education

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary issues final regulations that govern the Program of Research Grants on Organizational Processes in Education by adding institutions of postsecondary education to the range of organizations that are eligible for study. The effect will be to broaden the opportunity for the research community to explore new areas involving organizational processes in education. The intention is to produce a foundation of knowledge leading to more effective and equitable postsecondary institutions.

EFFECTIVE DATE: These final regulations are expected to take effect 45 days after they are transmitted to Congress. Regulations are usually transmitted to Congress several days before they are published in the **Federal Register**. The effective date is changed if Congress takes certain adjournments. If you want to know the effective date of these final regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Joan Snyder, Postsecondary Organization and Management Studies, National Institute of Education, Mail Stop 16, 1200 19th Street, N.W., Washington, D.C. 20208, Telephone: (202) 254–6070.

SUPPLEMENTARY INFORMATION: On April 2, 1980, a notice of proposed rulemaking was published in the **Federal Register** to amend the regulations of the Program of Research Grants on Organizational Processes in Education to permit the funding of research at the postsecondary level. Interested persons were invited to submit comments concerning the amendments. Comments were received from seven individuals. All expressed support or enthusiasm, and some suggested research topics that would be appropriate or desirable under the amended regulations. None recommended any changes in the proposed regulations.

A. Background

In 1977, the National Institute of Education (NIE) established a research grants program for the study of elementary and secondary schools as organizations. Since then, the program has considered 650 proposals and funded 60 research projects representing a wide range of academic disciplines.

During this period, the program staff has received several hundred inquiries from the educational community concerning the possibility of obtaining funding for research on postsecondary education, which was not previously allowed. Consultation with experts has led to the conclusion that there is a substantial need for research in the postsecondary area. Further, the research areas of greatest concern in postsecondary education coincide with those of the elementary and secondary levels. Consequently, under these regulations, there will be two separate grants competitions conducted by the Program of Research Grants on Organizational Processes in Education. Funds for the Separate grants competition for postsecondary education have been included in the Department of Education budget for FY 1980 and later years, in addition to the funds allocated for the elementary and secondary research grants competition.

B. Changes in the Regulations

1. Most of the changes between the former regulations and these regulations have the effect of simply adding the words "and postsecondary institutions" to the phrase "elementary and secondary schools." Another change increases the maximum direct costs of a small grant from $7,500 to $15,000 to reflect the impact of inflation. Another change makes for-profit private organizations eligible to obtain grants, in accordance with current Federal policy. Finally, the language and order of the regulations have been changed, without any change in substance, to conform to administrative directives for the improvement of regulations.

2. When the notice of proposed rulemaking was published on April 2, 1980, the preamble included the statement that appropriate changes would be made in the final regulations if the Education Division General Administrative Regulations (EGDAR) took effect in the interim. EDGAR was published on April 3, 1980 and, at the same time, amendments to these regulations were published in EDGAR (45 FR 22545) to bring them into conformity with EDGAR. However, some of these amendments were inappropriate. Accordingly, the following changes have been made:

(i) The application requirements (formerly § 1480.8) are retained as new § 1480.20 because grant applications were invited for FY 1980 and FY 1981 under the earlier provisions.

(ii) Unnecessary administrative details dealing with application review procedures (formerly § 1480.9 (a), (b), and (c)) are deleted.

(iii) Paragraph (d), selection criteria, is retained as new § 1480.30 because grant applications were invited under these provisions. Requirements for multi-year projects (formerly § 1480.10) are deleted because they are covered under EDGAR.

C. Effective Period of these Regulations

These regulations apply only to awards made prior to December 31, 1981.

D. Application Information

Applications are accepted in accordance with application notices published in the **Federal Register**. An application notice announcing closing dates in FY 1981 for the elementary and secondary program area will be published in late summer 1980. Application instructions and program information for submission of proposals for FY 1981 are available from the Program Staff, School Management and Organization Studies, Mail Stop 16, National Institute of Education, 1200 19th Street, N.W., Washington, D.C. 20208, Telephone: (202) 254–7930.

An application notice announcing closing dates for the postsecondary program area was published in the **Federal Register** on May 2, 1980 (45 FR 29414). Application instructions and program information for submission of proposals for FY 1981 are available from the Program Staff, Postsecondary Organization and Management Studies, Mail Stop 16, National Institute of Education, 1200 19th Street, N.W., Washington, D.C. 20208, Telephones: (202) 254–5555 and 254–6070.

Citation of Legal Authority:

A citation of statutory or other legal authority appears in parentheses on the line following each substantive provision of these regulations.

(Catalog of Federal Domestic Assistance No. 84.117, Educational Research and Development. Part I of OMB Circular A–95 does not apply to this program.)

Dated: August 7, 1980.

Shirley M. Hufstedler,

Secretary of Education.

Title 45 of the Code of Federal Regulations is amended by revising Part 1480 to read as follows:

PART 1480—PROGRAM OF RESEARCH GRANTS ON ORGANIZATIONAL PROCESSES IN EDUCATION

Subpart A—General

Sec.

1480.1 Description of program of research grants on organizational processes in education.
1480.2 Eligible parties.
1480.3 Regulations that apply to the program of research grants on organizational processes in education.
1480.4 Effective period of the regulations.
1480.5 Definitions that apply to this program.

Subpart B—What Kinds of Projects Does the Department of Education Assist Under This Program?

1480.10 Eligible research projects.
1480.11 Ineligible projects.

Subpart C—How Does One Apply for a Grant?

1480.20 Application requirements.

Subpart D—How Does the Secretary Make a Grant?

1480.30 Selection criteria the Secretary uses to review an application.

Authority: Section 405 of the General Provisions Act, sec. 301(a)(2) of Pub. L. 92–318, 86 Stat. 328, 332, as amended (20 U.S.C. 1221e).

Subpart A—General

§ 1480.1 Description of Program of Research Grants on Organizational Processes in Education.

The Program of Research Grants on Organizational Processes in Education supports studies of how educational organizations, including elementary and secondary schools, school districts, and postsecondary institutions, carry out the essential tasks of any organization, such as setting goals, finding resources, assigning work, monitoring performance, identifying and solving problems, and adapting to changing conditions.

(20 U.S.C. 1221e(b)(2))

§ 1480.2 Eligible parties.

A college, university, State or local educational agency, other public or private agency, organization, group, or individual is an eligible applicant.

(20 U.S.C. 1221e(e)(1))

§ 1480.3 Regulations that apply to the Program of Research Grants on Organizational Processes in Education.

The following regulations apply to the Program of Research Grants on Organizational Processes in Education:

(a) The Education Division General Administrative Regulations (EDGAR) in 45 CFR Part 100a (Direct Grant Programs) and 45 CFR Part 100c (General), except the following:

(1) Sections 100a.200 through 100a.206, selection criteria; and

(2) Sections 100a.590 through 100a.592, project evaluations.

(b) The general provisions for National Institute of Education (NIE) grants in 45 CFR Parts 1400–1410.

(c) The regulations in this Part 1480.

(20 U.S.C. 3474)

§ 1480.4 Effective period of the regulations.

These regulations apply only to awards made prior to December 31, 1981.

(20 U.S.C. 3474)

§ 1480.5 Definitions that apply to this program.

(a) *Definitions in EDGAR.* The following terms used in this part are defined in 45 CFR Part 100c except as otherwise noted: Applicant, Application, Award, Budget (45 CFR 74.104), Department, Direct costs (45 CFR Part 74 Appendix C), Elementary school, EDGAR, Equipment (45 CFR 74.51), Facilities, Fiscal year, Grant (45 CFR 74.3), Indirect costs (45 CFR Part 74 Appendix C), Local educational agency, Private, Project, Public, Secondary school, Secretary, State educational agency, Subcontract (45 CFR 74.3).

(b) *The following terms apply specifically to this program.*

"Arrangements" means provisions for obtaining access to data and to study populations.

"Major grant" means a grant for an amount in excess of $15,000 of direct costs.

"Postsecondary institution" means any public or private nonprofit or for-profit organization that provides instruction at any level beyond secondary education.

"Preliminary proposal" is used interchangeably with "preapplication."

"Proposal" is used interchangeably with "application."

"Research" includes any activity designed to increase or synthesize basic knowledge about one or more processes or conditions relevant to understanding educational organizations and their context.

"Small grant" means a grant for an amount that does not exceed $15,000 of direct costs. (In the case of an indivdual applicant not affiliated with any institution, the NIE will not award indirect costs but will reimburse reasonable general and administrative expenses associated with and directly related to the administration of the small grant).

(20 U.S.C. 3474)

Subpart B—What Kinds of Projects Does the Department of Education Assist Under This Program?

§ 1480.10 Eligible research projects.

Under the Program of Research Grants on Organizational Processes in Education, the Secretary awards both major grants and small grants. The following provisions apply to research funded by this program:

(a)(1) Research funded under this part must be designed to increase or synthesize basic knowledge about one or more organizational processes, or the barriers which impede or prevent these processes, within or related to educational organizations.

(2) Organizational processes include the following:

(i) The means by which an elementary or secondary school, postsecondary institution, or larger administrative unit—

(A) Makes basic policy choices;

(B) Sets goals;

(C) Recruits and assigns personnel;

(D) Chooses and implements courses of action;

(E) Allocates resources;

(F) Establishes organizational forms and structures;

(G) Gathers and processes information on performance, and takes corrective action based on such evaluation; and

(H) Adapts to change.

(ii)(A) Interaction among personnel and among organizational units; and

(B) Changes in processes and interactions within the organization over time.

(b) Studies supported under this program may have potential relevance to other kinds of organizations, but must aim to build a body of data and theory particularly useful in designing and managing educational organizations.

(c) Increased understanding of organizational processes related to elementary and secondary schools and postsecondary institutions may require study of other organizations such as school districts, State or Federal agencies, community groups, and professional associations. Studies supported under this program may include examination of relevant organizations as necessary to advance knowledge about elementary and secondary schools and postsecondary institutions.

(d) A research project may use any research process or approach consistent with the purposes of this section.

(20 U.S.C. 3474)

§ 1480.11 Ineligible projects.

(C) The name, department, institution,

specific questions the research will

Departmental grant administration

§ 1480.11 Ineligible projects.

A project whose primary purpose is the operation, development, demonstration, or evaluation of specific programs or materials is not eligible for support under this part. Examples of ineligible projects follow:

(a) Operation of an educational program in any elementary or secondary school, postsecondary institution, or other setting or agency.

(b) Development, adaptation, implementation or evaluation of a new or improved instructional, administrative, or managerial procedure, technique, material, training, or piece of equipment.

(c) Course development through the production of a new curriculum or the improvement of an existing curriculum, including the preparation of new instructional material or the modification of instructional material already in existence.

(d) Demonstration, either in person or through communication media, of a technique or material employed in the execution of a new or modified instructional task, educational program, or administrative or management process.

(20 U.S.C. 3474)

Subpart C—How Does One Apply for a Grant?

§ 1480.20 Application requirements.

(a) *General.* An applicant shall file an application specifically directed to either the major grant or small grant segment of the Program of Research on Organizational Processes in Education.

(b) *Major grants.* An applicant for a major grant shall comply with the requirements contained in paragraph (b) of this section.

(1) *Preliminary proposal.* An applicant shall submit a preliminary proposal for initial review. Information concerning the strengths and weaknesses of the preliminary proposal and its standing relative to others reviewed will be returned to the applicant and may be used in preparation of the full proposal. The preliminary proposal must include the following:

(i) A cover sheet executed by the principal investigator, and by an individual authorized to execute grant applications for the institution, indicating—

(A) That the preliminary proposal is submitted to the Program of Research Grants on Organizational Processes in Education, National Institute of Education;

(B) The title of the study;

(C) The name, department, institution, address, and telephone number of each principal investigator;

(D) The estimated budget amount; and

(E) The proposed starting date and duration of the project.

(ii) A statement preferably not exceeding five typewritten pages summarizing the proposed project, including—

(A) A description of the proposed research, its relation to what is already known and to the problems of American education, and the importance of its expected addition to knowledge; and

(B) A description of the procedures to be followed in carrying out the research including where appropriate such concerns as sampling, data acquisition, instrumentation and data analyses.

(iii) A description of the equipment, facilities, and arrangements available to the investigator for conducting the research, including access to suitable organizations for study purposes.

(iv) A vita for each principal investigator, including education, applicable experience, and a list of major publications.

(v) An estimated budget covering direct costs (e.g., salaries and benefits, travel, supplies and materials, communication, services, equipment) and indirect costs proposed to be charged against the grant.

(2) *Full proposal.* A full proposal may only be submitted by an applicant who has submitted a preliminary proposal in the required format, and whose preliminary proposal has been reviewed by NIE. Full proposals must include the following elements:

(i) A cover sheet executed by the principal investigator and by an individual authorized to execute grant applications for the institution, indicating—

(A) That the application is submitted to the Program of Research Grants on Organizational Processes in Education, National Institute of Education;

(B) The title of the study;

(C) The name, department, institution, address, and telephone number of each principal investigator;

(D) The estimated budget amount; and

(E) The proposed starting date and duration of the project.

(ii) An abstract of approximately 200–250 words stating clearly the objectives and plans of the proposed research.

(iii) A table of contents.

(iv) A statement not to exceed forty (40) typewritten pages that describes—

(A) The research objectives, including identification of the problem or issue the proposed research will contribute to solving, the anticipated contribution of the research to that solution, and specific questions the research will address; and

(B) A research design, clearly linked to the questions the study will try to answer. The scientific or technical work of the project and methods for its accomplishment must be stated clearly. A discussion of related research with appropriate citations must be included to show that the investigators are thoroughly familiar with current and prior research in pertinent fields. Data to be obtained and analytic methods to be used upon that data must be explained.

(v) An organization and management plan that describes—

(A) The arrangements intended for direction, coordination, and control of the project;

(B) The roles, responsibilities, and project time-commitments of proposed staff;

(C) A schedule for major portions of multi-year projects; and

(D) An explanation of any expected subcontract arrangements.

(vi) A description of equipment, facilities, and arrangements available for the research. If new data are proposed to be collected, the proposal must give evidence of access to suitable organizations for study purposes. Letters of agreement to participate must be included, showing that relevant authorities in educational or education-related organizations have reviewed the research plans and agree to take part willingly. A lengthy and complex study which could place special burdens on parts of the education community may require joint planning and management of the entire project. A proposal for such a study must give detailed information to allow reviewers to judge the adequacy of the arrangement.

(vii) A plan for the dissemination of the research findings, including methods for reaching researchers, theorists, and practicing educators.

(viii) A vita and bibliography for each professional staff person, including professional background and employment as well as education, a chronological list of publications, and a listing of prior and current research support for each individual including requests now being considered regardless of source.

(ix) An estimate of expenses proposed to be charged against the grant, including direct costs (e.g., salaries and benefits, travel, supplies and materials, communication, services, equipment) and indirect costs. The proposed budget shall include all other details and explanations, and shall be arranged in such a form as to allow the cost analyses and other reviews called for by Departmental grant administration policies.

(c) *Small grants.* (1) An applicant for a small grant shall submit a proposal including all the elements listed in paragraph (b)(2) of this section.

(2) The discussion of objectives and design, as described in paragraph (b)(2) of this section, may not exceed eight typewritten pages.

(20 U.S.C. 3474)

Subpart D—How Does the Secretary Make a Grant?

§ 1480.30 Selection criteria the Secretary uses to review an application.

The Secretary uses the following criteria to evaluate all grant proposals:

(a) Significance of the proposed research for American education, including the—

(1) Importance of the research topic from the standpoint of basic knowledge or problems of American education; and

(2) Likely magnitude of the addition that will be made to knowledge if the project is successful, including the generalizability of the results.

(b) Quality of the proposed research project, including the—

(1) Adequacy of the design, methodology, and instrumentation where appropriate;

(2) Likelihood of success of the project; and

(c) Qualifications of the proposed principal investigator and other professional project personnel as evidenced by—

(1) Experience and previous research productivity; and

(2) Quality of the discussion and analysis in the application.

(d) Adequacy of the facilities and arrangements available to the investigator to conduct the proposed study, including evidence of access to necessary organizations, groups, and individuals for study purposes and the willingness of study populations to participate in the proposed research.

(e) Reasonableness of the budget for the work to be done and for the anticipated results.

(f) Whether funding the proposed project would contribute to—

(1) A diversity of projects under the overall program which collectively address a variety of research needs in the area of organizational processes in education;

(2) Other research efforts of NIE; or

(3) The educational needs and interests of other Federal agencies.

Part IX

Department of Education

Grants for Research on Knowledge Use and School Improvement

DEPARTMENT OF EDUCATION

34 CFR Part 709

Grants for Research on Knowledge Use and School Improvement

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary issues regulations that govern a program of research grants on knowledge use and school improvement. The program seeks to build knowledge about improvement processes in elementary and secondary schools. Studies will clarify how schools go about altering their administrative and instructional practices, and how knowledge resources in the form of ideas, new programs, products, or materials can support these changes.

EFFECTIVE DATE: These final regulations are expected to take effect 45 days after they are transmitted to Congress. Regulations are usually transmitted to Congress several days before they are published in the Federal Register. The effective date is changed if Congress takes certain adjournments. If you want to know the effective date of these final regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Rolf Lehming, Research and Educational Practice, Mail Stop 24, National Institute of Education, 1200 19th Street N.W., Washington, D.C. 20208. Telephone: (202) 254–6050.

SUPPLEMENTARY INFORMATION:

A. Background

In support of the Federal responsibility to provide leadership in the conduct and support of research into educational processes, Congress authorized the National Institute of Education (NIE) under Section 405 of the General Education Provisions Act to award grants for projects that further the realization of these national educational goals.

The studies on knowledge use and school improvement are designed to help build a systematic body of knowledge about effective improvement processes in elementary and secondary schools. This research seeks to clarify how schools go about altering their administrative and instructional practices, and how knowledge resources in the form of ideas, programs, products, or materials can support these changes. Results of this research program will be used by the Department to help policy makers, practitioners, and education officials at all levels to formulate and implement school improvement efforts more effectively.

These regulations describe—

(1) The purposes of the proposed program of studies on knowledge use and school improvement;

(2) The scope of the program;

(3) The types of activities eligible for support;

(4) The criteria that will be used in the selection of grantees; and

(5) Project requirements.

B. Summary of the Regulations

Subpart A of the regulations (1) describes the program, (2) lists the regulations that apply, (3) states who is eligible to apply, and (4) provides definitions.

Subpart B discusses the types of activities that are eligible for support under the program and describes ineligible activities.

(1) The program will support only research on knowledge use and school improvement. Examples of school improvement activities include organized attempts of schools, school districts, educators and educational organizations to improve, and render more equitable, student learning, instruction or curriculum, school or district organization or operations, or the ways the schools relate to their communities or governance organizations. High-quality studies of these kinds of processes will be eligible for support, provided they show promise of adding to our understanding of how school improvement and greater educational equity come about.

(2) Grants will not be made for the planning of a school improvement project or for its development, implementation, operation, modification, demonstration, evaluation, or dissemination.

Subpart C is reserved.

Subpart D states how the Secretary makes award decisions and what criteria are used for selecting applications that merit support. These criteria are identical for major and small grants.

Subpart E explains certain conditions that a grantee must meet.

C. Relationship to Education Division General Administrative Regulations (EDGAR)

The Education Division General Administrative Regulations (EDGAR) were published as final rules in the Federal Register on April 3, 1980 (FR 22494–22530). These regulations have been drafted to conform to the EDGAR requirements and to supplement EDGAR for the purpose of governing grants for research on knowledge use and school improvement. Except as noted in § 709.3, the EDGAR provisions apply to these grants.

The present regulations do not repeat certain types of requirements that are covered by EDGAR. These include:

How to apply for a grant.
How grants are made.
Conditions a grantee must meet.
Administrative responsibilities of a grantee.
Procedures used by the Secretary to assure compliance.

D. Relationship to Consolidated NIE Grant Regulations

The Department is currently developing a set of proposed regulations to govern all of NIE's research grants programs. The current rules are expected to be replaced by those regulations after they become effective.

E. Location of Regulations

These regulations were published as a notice of proposed rulemaking (NPRM) in the Federal Register (41 FR 13135–13138). They are now being issued as final regulations, and there have been changes in the numbering of sections. Thus, changes that result from public comment have section numbers that correspond to those in the final regulations. The affected section numbers of the NPRM appear in brackets.

F. Comments Received and Changes Made in the Regulations

Section 709.1(b)(2) [§ 1496.1(b)(2)] *Description of the Research on Knowledge Use and School Improvement Program.*

Comment. One commenter expressed concern that State educational agencies, while bearing main responsibility for public education, were not explicity mentioned as influencing school improvement activities and suggested doing so.

Response. A change has been made. Governance agencies outside the school district are specifically mentioned.

Section 709.12 [§ 1496.12] *Ineligible projects.*

Comment. One commenter noted that research to be proposed under these regulations might address questions about project effects as part of a larger research design. The commenter expressed concern that this type of incidental evaluation component might make this work ineligible.

Response. A change has been made. The section has been revised to state that project evaluations are ineligible. However, research containing an evaluation component as an incidental part of a larger research design is eligible under these regulations.

Section 709.32(d)(iv) [§ 1496.32(c)(1)] *What selection criteria does the Secretary use?*

Comment. A commenter suggested that selection criteria should specifically include points for the extent to which a proposed project could contribute to enhanced educational equity, along with its contribution to educational practice.

Response. A change has been made. The Secretary is committed to examining and improving educational equity wherever possible. A project's significance for enhancing educational equity is specifically included in the selection criteria.

Part 709 Subpart C [Part 1496 Subpart C] *How an Application for a Grant is Made*

Comment. A commenter asked that application procedures be kept simple so school districts with limited staff resources could apply for grant support.

Response. No change has been made. These regulations do not establish unique application procedures. Application procedures have been streamlined and simplified and are published in EDGAR.

Sections 709.11–709.12 [§§ 1496.11–1496.12] *Projects that will be assisted.*

Comment. One commenter noted that schools face a major problem in coordinating various social service programs potentially available to students and their parents, such as health care, counseling, and job training programs, with the school's education activities. The commenter expressed the hope that this problem could be addressed under these rules. Another commenter noted that schools face a severe problem of school dropouts and alienated pupils in schools and urged that this problem be studied.

Response. No change has been made. Improvement efforts that seek to address these problems are a permissible subject for research under these regulations.

G. Application Information

A first round of applications has already been received, based on the NPRM that was published in the Federal Register of February 28, 1980 (45 FR 13135–13138). Application notices inviting applications for future competitions will be published in the Federal Register at appropriate dates in the future. To obtain additional program information, including a package that contains detailed information about the program, contact Rolf Lehming, Knowledge Use and School Improvement Studies Staff, Mail Stop 24, NIE, 1200 19th Street N.W., Washington, D.C. 20208.

Citation of Legal Authority

A citation of statutory or other legal authority is placed in parentheses on the line following each substantive provision of these regulations.

(Catalog of Federal Domestic Assistance Number 13.950, Educational Research and Development. Part I of OMB Circular A–95 does not apply to this program)

Dated: August 7, 1980.

Shirley M. Hufstedler,

Secretary of Education.

Title 34 of the Code of Federal Regulations is amended by adding a new Part 709 to read as follows:

PART 709—GRANTS FOR RESEARCH ON KNOWLEDGE USE AND SCHOOL IMPROVEMENT

Subpart A—General

Sec.

709.1 Description of the Research on Knowledge Use and School Improvement Program.
709.2 Eligible applicants.
709.3 Regulations that apply to this program.
709.4 Definitions that apply to this program.
709.5 Types of grants.

Subpart B—Projects That Will Be Assisted

709.11 Projects that are eligible for support.
709.12 Projects that are ineligible for support.

Subpart C—How an Application for a Grant is Made [Reserved]

Subpart D—How Grants are Made

709.31 How does the Secretary evaluate an application?
709.32 What selection criteria does the Secretary use?
709.33 How the Secretary selects a new project.

Subpart E—Conditions a Grantee Must Meet

709.41 Restrictions on the items a grant may support.

Authority. Section 405 of the General Education Provisions Act, as amended (20 U.S.C. 1221e); Section 414 of the Department of Education Organization Act (20 U.S.C. 3474).

Subpart A—General

§ 709.1 Description of the Research on Knowledge Use and School Improvement Program.

(a) Through the Research on Knowledge Use and School Improvement Program, the Department of Education builds a systematic body of knowledge about improvement processes in elementary and secondary schools.

(b) The program explores:

(1) How elementary and secondary schools go about improving educational quality and equity by altering existing administrative and instructional practices, and how knowledge resources in the form of ideas, programs, products, or materials can support these changes;

(2) How bureaucratic, political, economic, cultural and other aspects of school life, such as school-community or school-state relations, affect school changes, and how these influences modify the effects of knowledge resources; and

(3) How knowledge and resources from outside the school district or school can support the different phases of a school improvement process.

(20 U.S.C. 1221e(b)(2))

§ 709.2 Eligible applicants.

Any institution of higher education, State educational agency, local educational agency, public or private nonprofit or for-profit agency, organization, individual, or any combination of these is eligible to apply for a grant award under this program.

(20 U.S.C. 1221e(e)(1))

§ 709.3 Regulations that apply to this program.

In addition to the regulations in this part, the Education Division General Administrative Regulations (EDGAR) in 45 CFR Part 100a (Direct Grant Programs) and 45 CFR Part 100c (General) apply, except the following:

(1) 45 CFR 100a.115 and 45 CFR 100a.590 through 100a.592, project evaluations.

(2) 45 CFR 100a.205 through 100a.206, selection criteria.

(20 U.S.C. 3474)

§ 709.4 Definitions that apply to this program.

(a) *Definitions in EDGAR.* The following terms used in these regulations are defined in 45 CFR Part 100c:

Applicant
Application
Award
Direct Cost
Government
Local educational agency
Local government
Nonprofit
Public
Secretary
State
State educational agency

(b) *Specific program definitions:* Definitions as used in this part are:

"Major grant" means support for a project whose direct, federally supported costs exceed $15,000.

"Small grant" means support for a project whose direct, federally

supported costs do not exceed $15,000 and whose duration is up to 12 months.

(20 U.S.C. 3474)

§ 709.5 Types of grants.

(a) The Secretary invites applications for small and major grant support in an application notice that is published in the **Federal Register**.

(b) The Secretary initially reserves funds for each of these application categories.

(20 U.S.C. 3474)

Subpart B—Projects That will be Assisted

§ 709.11 Projects that are eligible for support.

(a) The program supports only research on knowledge use and school improvement, as described in § 709.1.

(b) Any research process or approach except those listed in § 709.12 is eligible for support.

(20 U.S.C. 1221e(e)(1), 3474)

§ 709.12 Projects that are ineligible for support.

Grants will not be provided to support the planning of a school improvement project or its development, implementation, operation, evaluation, or dissemination.

(20 U.S.C. 1221e(e)(1), 3474)

Subpart C—How an Application for a Grant is Made [Reserved]

Subpart D—How Grants are Made

§ 709.31 How does the Secretary evaluate an application?

(a) The Secretary evaluates a proposal on the basis of the criteria in § 709.32.

(b) The Secretary awards up to 100 points for these criteria.

(c) The maximum score for each complete criterion is indicated in parentheses.

(20 U.S.C. 3474)

§ 709.32 What selection criteria does the Secretary use?

(a) *Plan of operation.* (10 points)

(1) The Secretary reviews each application for information that shows the quality of the plan of operation for the project.

(2) The Secretary looks for information that shows—

(i) High quality in the design of the project;

(ii) An effective plan of management that ensures proper and efficient administration of the project;

(iii) A clear description of how the objectives of the project relate to the purpose of the program;

(iv) The way the applicant plans to use its resources and personnel to achieve each objective; and

(v) A clear description of how the applicant will provide equal access and treatment for eligible project participants who are members of groups that have been traditionally underrepresented, such as—

(A) Members of racial or ethnic minority groups;

(B) Women;

(C) Handicapped persons; and

(D) The elderly.

(b) *Quality of key personnel.* (15 points)

(1) The Secretary reviews each application for information that shows the qualifications of the key personnel the applicant plans to use on the project.

(2) The Secretary looks for information that shows—

(i) The qualifications of the project director;

(ii) The qualifications of each of the other key personnel to be used in the project;

(iii) The time that each person referred to in paragraphs (b) (1) and (2) of this section will commit to the project; and

(iv) The extent to which the applicant, as part of its nondiscriminatory employment practices, encourages applications for employment from persons who are members of groups that have been traditionally underrepresented, such as—

(A) Members of racial or ethnic minority groups;

(B) Women;

(C) Handicapped persons; and

(D) The elderly.

(c) *Budget and cost effectiveness.* (5 points)

(1) The Secretary reviews each application for information that shows that the project has an adequate budget and is cost effective.

(2) The Secretary looks for information that shows—

(i) The budget for the project is adequate to support the project activities; and

(ii) Costs are reasonable in relation to the objectives of the project.

(d) *The significance of the proposed research for American education.* (35 points)

(1) The Secretary reviews each application for information that shows that the project addresses a significant problem of American education.

(2) The Secretary looks for information that shows—

(i) The proposed research is important from the standpoint of basic knowledge and problems of American education;

(ii) The likelihood of a significant addition to existing knowledge, if the project is successful;

(iii) The ability to generalize the project's results; and

(iv) The contribution to improving educational practice and equity at the elementary and secondary school level.

(e) *Conceptual and technical quality.* (35 points)

(1) The Secretary reviews each application for information that shows that the project is of very high conceptual and technical quality.

(2) The Secretary looks for information that shows—

(i) The adequacy of the analysis, conceptualization, design, methods, and instrumentation, as appropriate;

(ii) The extent to which the application exhibits, and builds upon, a thorough grasp of the results of pertinent prior research as well as the problems and issues facing schools as they undergo change;

(iii) Evidence that, where appropriate, there is collaboration between investigators and practitioners in the conduct of the research;

(iv) The likelihood that the proposed project can achieve the intended results; and

(v) The likelihood that the proposed research will be conducted in a manner that benefits the research sites, if appropriate.

(20 U.S.C. 1221e, 3474)

§ 709.33 How the Secretary selects a new project.

(a) Only applications of the highest quality will be funded by the program, even though all available funds may not be exhausted.

(b) In the case of proposals of substantially equal quality, the Secretary considers whether funding a particular project would contribute to a portfolio of studies throughout the nation that collectively address the range of research needs in the area of knowledge use and school improvement.

(20 U.S.C. 3474)

Subpart E—Conditions a Grantee Must Meet

§ 709.41 Restrictions on the items a grant may support.

No funds may be used for construction, repair, remodeling, or alteration of facilities or sites.

(20 U.S.C. 3474)

Department of Agriculture

Food and Nutrition Service

Food Stamp Program; Verification Requirements

V 45 A G 12 80 UMI

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Parts 272 and 273

[Amendment No. 179]

Food Stamp Program; Verification Requirements

AGENCY: Food and Nutrition Service, USDA.

ACTION: Proposed rule.

SUMMARY: This rulemaking proposes amendments to the regulations published October 17, 1978 (43 FR 47846), concerning the requirements for verifying information in determining household's eligibility for food stamp benefits. The amendments would increase State agencies' authority to verify information in a number of areas. The amendments proposed in this rulemaking would change the requirements for verifying information in determining household's eligibility for food stamp benefits as a result of changes in the Food Stamp Act enacted by Pub. L. 96-249, 94 Stat. 357, May 26, 1980, and per comments solicited by a Notice of Intent published in the Federal Register on October 12, 1979 (44 FR 58915). The purpose of this proposed rule is to improve program integrity without creating barriers to households with a legitimate need of food assistance.

DATE: Comments must be received on or before October 14, 1980 to be assured of consideration.

ADDRESS: Comments should be submitted to: Alberta C. Frost, Deputy Administrator for Family Nutrition Programs, Food and Nutrition Service, USDA, Washington, D.C., 20250. All written comments will be open to public inspection at the offices of the Food and Nutrition Service during regular business hours (8:30 a.m. to 5:00 p.m. Monday through Friday) at Room 678, 500 12th Street, S.W., Washington, D.C.

FOR FURTHER INFORMATION CONTACT: Larry R. Carnes, Chief, Policy and Regulations Section, Program Standards Branch, Program Development Division, Food and Nutrition Service, Washington, D.C. 20250. Phone (202) 447-9075.

The Draft Impact Analysis is available on request from the above named individual.

SUPPLEMENTARY INFORMATION: This proposed action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified "not significant".

Section 11(e)(3) of the Food Stamp Act of 1977 requires State agencies to verify nonexempt gross income along with "such other eligibility factors as the Secretary determines to be necessary." Final regulations published on October 17, 1978, established three categories of verifications; those that are mandatory for all households, those that are mandatory at the State's option, and those that are required when the information is questionable. When a household applies for food stamps, State agencies are required to verify all gross nonexempt income (both earned and unearned), declared alien status, utility expenses in excess of a utility standard, medical expenses, and social security numbers. State agencies determine their own verification policies regarding liquid resources and loans provided that, at a minimum, these items are verified if questionable. States are allowed to verify those two items in all cases. Other factors of eligibility are verified prior to certification if they are questionable and could affect a household's eligibility or benefit level.

These include: (1) household composition; (2) a household's statement that its members are U.S. citizens; (3) tax dependency; (4) deductible expenses: dependent care costs and those shelter costs not already verified on a mandated basis; (5) work registration exemptions; (6) residency; (7) identity; and (8) nonliquid resources. Information on the application for assistance is considered questionable if it is inconsistent with statements made by the applicant, inconsistent with information on the application or previous applications, or inconsistent with information received by the State agency.

As noted below, verification provisions have been strengthened by recently published regulations. State agencies are being given investigative and deterrent tools to help reduce error and fraud.

Food Stamp Program regulations issued January 31, 1980 (45 FR 7208) set forth procedures by which social security numbers may be obtained for all food stamp household members authorized by Section 4 of Pub. L. 96-58, (93 Stat. 391, Aug. 14, 1979). That law enabled the Department to require that each household member furnish the State agency his/her social security number(s) as a condition of eligiblity. Use of a social security number is viewed as a positive measure to counteract underreporting or nonreporting of income.

With the social security number, State agencies have the same access provided to the Department of Health and Human Services (DHHS) to information regarding individual Food Stamp Program applicants and participants who receive Supplemental Security Income (SSI) benefits under Title XVI of the Social Security Act, to the extent that the Secretaries of USDA and DHHS determine that access to SSI information is within the purposes set forth in the statute. Other uses that are consistent with Federal or State privacy laws or other pertinent legislation, and that further administration of the program, would also be permitted. This information would be used to determine a household's eligibility to receive assistance and the amount of assistance, or to verify information related to the household's benefits.

New Legislation

As a result of a new legislation, Pub. L. 96-249, the Department proposes to allow verification of eligibility factors based upon information obtained from error-prone profiles. An error-prone profile is the product of a statistical analysis, based on statistically valid data derived from quality control reviews, including audits, or other special studies to identify types of cases (i.e., categories of households) and types of eligibility factors with a high probability of agency or participant error. In its simplest form, a profile is a description of characteriestics which are most strongly associated with errors. With this information, certain cases characterized by one or more features can be singled out for corrective or preventive action.

The use of error-prone profiles as a verification tool is not foreign to the Food Stamp Program. The West Virginia State agency, under the Food Stamp Act of 1964, implemented such a procedure which resulted in a substantial decrease in error rates and a subsequent dollar savings.

Section 116 of Pub. L. 96-249 provides that States "may verify prior to certification, whether questionable or not, the size of any applicant household and any factors of eligibility involving households that fall within the State agency's error-prone household profiles as developed by the State agency from the quality control program undertaken pursuant to section 16 of this Act and as approved by the Secretary" (94 Stat. 361). The proposed rule would allow State agencies to verify, without regard to a determination of questionable status, those factors of eligibility determined by a State's quality control analysis to be statistically subject to high rates of error. This verification would be applied to those categories of households determined to be subject to high rates of error with regard to these particular eligibility factors.

This would not apply to those eligibility factors already subject to mandatory verification or those eligibility factors for which a State option for expanded verification would be provided under these rules. There would be no need for a State to apply to FNS for approval to verify these factors based on an error-prone profile analysis (that is, those now verified on a mandated basis or those allowed at State option), because a State would already be either required or permitted to do so.

Some States have requested, however, that error-prone profile results also be used to permit them to forego verification of particular eligibility factors for particlular categories of households shown to be relatively error-free. Officials from the West Virginia State agency, the State that has experience in successful use of error-prone profiles, have specifically sought this authority. They wish to divert caseworker resources from areas where they are apparently not needed. Accordingly, the proposed rule also allows State agencies to be exempt from requirements to verify eligibility factors other than income, alien status and social security numbers in those instances where a State can show, based on error-prone profile analysis, an extremely low rate of error for specific eligibility factors with regard to particular categories of households. FNS approval would be required when such authority is requested. This provision would not apply to income, alien status, and social security numbers because verification of income is specifically required by the Act; documentation of alien classification is the only feasible means to accurately determine program eligibility; and the use of social security numbers can be an effective measure to conteract fraud and program abuse.

The determination that verification requirements would be modified based on an error-prone profile would have to be applied on a uniform basis. The House Committee Report observes that individual caseworkers would not have discretion over these matters (House Rpt. No. 96-788, 96th Cong., 2nd Sess., p. 97). That would defeat the purpose of using the error-prone profiles. However, this rulemaking proposes allowing application of the error-prone profiles for verification purposes to particular project areas, rather than State-wide, where a State can show that certain eligibility factors are subject to high error rates in those particular localities. For example, the quality control data may show that additional verification of an eligibility factor is necessary in a large city, but not in the rural areas of the same State. Error-prone profiles applied at the project area level must be based on statistically valid data as well. Project areas containing cities may have a large enough caseload that statistically valid conclusions can be drawn just for that project area. The Department believes States should have the flexibility, in a situation such as this, to provide for expanded verification in an error-prone urban area, without burdening recipients and caseworkers in the rest of the State.

The use of error-prone profiles may result in a number of benefits. Corrective actions based on such quantitative data analysis may reduce the rate of case and allotment errors and ensure that food stamp benefits are correctly issued to eligible households, thereby reducing both program and participant loss. Error-prone profiles may enable more effective use of administrative resources by directing those resources to areas where they may be most beneficial. These profiles can assist the eligibility worker by identifying potentially difficult cases at the time of application or recertification, making it possible to take appropriate preventive or corrective action. They can ease the manager's job by locating weaknesses in procedures which require additional training or supervision of the eligibility workers. Finally, error-prone profiles can provide a way of evaluating the effectiveness of specific corrective actions.

If a State agency opted to utilize the error-prone profile in the manner prescribed by the proposed rule, the State agency's request for expanded verification (or for reduced verification) would be subject to FNS approval. This request would be submitted as part of the State corrective action plan as specified in § 275.17.

The statute directs such an approval process. The House Committee Report states: "Each State's profile would, before being applied in this fashion, have to be approved by the Secretary in order to prevent inadvertent discrimination * * * or the creation of overly broad profiles casting the verification net so widely so to cover most eligibility factors affecting a majority of applicant households * * *. The error-prone profile concept is intended to be a selective tool for error control and not a trigger for universal verification" (House Rpt., p. 97).

As the House Committee Report goes on to explain, the Secetary's approval would be needed both for the statistical methodology by which a particular State is constructing its error-prone profile and for the State's actual use of the profile in determining where to apply more intensive verification. The State agency would be expected to demonstrate that the prevalence of a particular type of error is likely due to lack of verification and not some other causal factor that would remain unaffected (and uncorrected) by additional verification. The Committee Report expresses its intention that the Secretary disapprove a request for "mandatory verification of virtually anything showing up on the error-prone profile, even if it was causing overissuances of only a fraction of one percent. The Secretary should closely monitor this area, requiring States to justify their proposals for the items and/or household types that they want to verify as a result of the error-prone profile data through a showing that the proposals are supported by the profile data" (House Rpt., p. 98).

FNS will provide assistance upon request to States agencies in developing the statistical methodology to construct an error-prone profile.

The new legislation also allows State agencies the option of verifying household size, regardless of whether or not it appears questionable, and this proposal reflects that option. Household size is distinguished from other factors involving household composition such as boarder status or whether or not a particular group of individuals customarily purchases and prepares meals together. Existing regulations would remain in place regarding those other factors of household composition (although expanded verification of these factors also could be performed as a result of an error-prone profile). The distinction is directed by the House Committee report. (House Rpt., p. 97).

Notice of Intent

In establishing the verification requirements contained in the October 17, 1978 regulations, the Department had several concerns: (1) That information provided by the applicant be verified to ensure that eligibility and allotments are correctly determined; (2) that an unnecessary amount of effort and administrative costs are not spent verifying information that is normally reported accurately or that does not affect eligibility and allotment levels; (3) that verification standards not impede participation in the program by needy households; and (4) that verification standards are set to ensure national uniformity. Subsequently, the Department received comments indicating that it may be necessary to

make some adjustments in the requirements.

With the implementation of an ongoing quality control system which began on October 1, 1979, some State agencies requested that we make the verification rules used by eligibility workers to determine the eligibility of households for food stamp benefits more consistent with the procedures used by quality control reviewers to measure the accuracy and validity of eligibility determinations.

In addition, some State agencies requested that they be allowed to implement verification requirements in addition to those contained in the October 17, 1978 regulations. These State agencies felt that additional verification requirements could enhance program accountability.

Based on the above concerns voiced by State agencies, the Department published a Notice of Intent on October 12, 1979, concerning the possibility of changing the requirements for verifying information in determining household eligibility for food stamp benefits which are contained in § 273.2 of the Food Stamp Regulations. In response to this Notice, 137 individuals, groups, agencies and organizations submitted comment letters.

With regard to whether verification need to be changed at this time, the comment letters were basically divided into two groups. One group including 7 State and local agencies, and nearly all public interest groups and individual commenters, expressed a general preference of no change or change conditional on evidence that current policy contributed to a high error rate. The second group, including 37 State and local offices, supported increasing verification requirements.

Nearly all public interest groups and individuals opposed any changes in current verification requirements because they believed this would result in harassment of clients and would present a barrier to participation. One group suggested that verification be changed only in areas where known information indicated a problem.

The proposed revisions to verification requirements contained in this rulemaking respond to concerns to strengthen program integrity by providing State agencies more discretion in a number of areas in determining which eligibility factors to verify.

In developing these proposed verification procedures, the Department has sought to achieve a balance among four factors: the reduction of errors, the administrative cost of verification, the effect of verification on program accessibility, and the administrative feasibility of these proposed procedures.

Mandatory Verification

Some commenters pointed out what they believed to be an inconsistency in the current regulations. They noted that identity and residency had to be verified for households applying for expeditied service, but that the current regulations do not specifically state that identity and residency must be verified for other households.

This was not intended as an inconsistency. In promulgating the October 17, 1978 rules, the Department assumed that information attesting to the household's identity and residency would be captured as part of the regular verification process. For example, income stubs and utility bills would contain this information. However, since normal verification may be postponed when an applicant is considered under the expedited service rules, the Department was concerned that without a special effort to verify identity and residency, the accuracy of these items might not be confirmed prior to the issuance of an emergency allotment. Therefore, verification of identity and residency was specifically required in expedited service cases.

To clarify this issue, this rulemaking proposes that identity and residency be added to the list of eligibility factors for which verification is mandatory during regular application processing. This is not intended to result in a change in procedure or need for additional verification, however. Documents that are used to verify other factors should normally suffice to confirm identity and residency, as well. The change is intended principally as clarification.

To this end, the Department wishes to clarify that this modification in verification rules would not establish a durational residency requirement; the provisions of § 273.3 remain intact.

In addition, State agencies would not be allowed to require that applicants produce birth certificates to verify identity. Any document establishing identity would be accepted, in accordance with § 273.2 (f)(4) and (5).

Optional Verification

Presently State agencies may determine when to verify liquid resources or if moneys received by households are loans, so long as those items are, at a minimum, verified when questionable. In comments on the Notice of Intent, State agencies requested more authority and flexibility to determine when to verify other eligibility factors as well. The Department is now proposing to extend significantly the number of factors which States can determine when to verify, so long as verification is conducted at least whenever the item is questionable. Although error-prone profiles will allow States to verify those factors of eligibility subject to high error rates, their true effectiveness cannot be determined at this early stage. Therefore these proposed options may serve as interim methods of verification for State agencies to use until the results of the use of error-prone profiles are analyzed.

First, all shelter costs, except utilities, would be put in the same category as liquid resources and loans for an initial certification. State agencies would determine when to verify these factors, verifying at a minimum when the factors are questionable. Shelter costs constitute major expenses, and a number of commenters believed errors could be reduced significantly by verifying these major expenses. In addition, there are certain types of households (elderly and SSI recipients and those receiving disability payments under Title II of the Social Security Act) which now receive an excess shelter deduction for the entire monthly cost that exceeds 50 percent of the household's monthly net income. By lifting the maximum allowed for the combined dependent care/excess shelter deduction, household eligibility and benefit levels are more sensitive to changes in the amount of shelter costs.

This State option would be on a one-time basis. At subsequent certifications, the State option regarding shelter costs other than utilities, would apply only if the household had moved or reported an increase in the amount of its individual shelter costs such as rent (in which cases those individual shelter costs that had changed could be reverified). Otherwise, these factors would be verified only if questionable. The reason for this is that shelter costs other than utilities, such as rent and mortgage payments, are extremely unlikely to go down. If they have been verified once, and the household has not moved or reported an increase in these payments, there would be no reason to routinely verify these items again unless they were questionable.

The Department is also proposing a new option in the area of utility expenses. The current requirement that State agencies must verify utility expenses that exceed the State's standard utility allowance is being retained. Several commenters requested a State agency option to verify that households claiming the utility standard do indeed incur a utility expense and are entitled to the standard. This suggestion is incorporated in the proposed rule. State agencies would have the option of determining when to verify the existence of bills for one utility to substantiate the household's eligibility for the standard allowance. Those State agencies with separate standards for each utility which choose this option would be able to verify the existence of bills for the heating/cooling utility and one other utility. This option would apply to the fact that the household was incurring bills for a utility, and not of the amount of the utility bill. The utility cost, itself, would be verified only if the household wished to claim expenses in excess of the utility standard and the expense would result in a deduction in accordance with § 273.2(f)(1)(iii). This option would be on a one-time basis unless the household moved or changed its utilities.

The Department also proposes to allow State agencies the option of determining when to verify that a household is incurring a dependent care expense and the amount of that expense. As with shelter costs, this is a major deductible item and can have a significant effect on eligibility and benefit levels. Verification would be on a one-time basis unless the provider or amount has changed.

Finally, as noted previously, this rulemaking would allow State agencies to determine when to verify household size.

Some further elaboration is also necessary on how the State option is intended to work. Some commenters believed that a State's options under current rules are restricted to verifying liquid resources or loans for every household, or verifying only in questionable cases. Some commenters believed that there was no middle ground.

This was not the intention of the October 17, 1978 rulemaking, nor is it the intention of the current rulemaking. States are allowed to determine when to verify these items, without FNS approval, so long as they are at least verified when questionable. A State agency could establish its own standards for the use of verification, so long as its standard is at least as comprehensive as the Department's "questionable" standard and does not allow inadvertent discrimination. State agencies could elect to allow more room for caseworker decisions on when to verify and when not to verify these items so long as all questionable factors are verified.

State agencies could also elect to adopt different verification policies on these factors in different project areas. The determination as to what verification policy will apply at the project area level must be approved at the State level.

In light of the expanded options for State verification, as well as the use of error-prone profiles, the Department is not proposing to change its definition of "questionable" set forth in § 273.2(f)(2). Information on the application is considered questionable if it is inconsistent with statements made by the applicant, inconsistent with information on the application or previous applications, or inconsistent with other information received by the State agency.

The Department did receive a number of comments on this definition. However, the basic theme of many of the comments was to redefine the term to provide States with more flexibility to verify eligibility factors. This goal would be accomplished through the expanded State options and the error-prone profiles.

Moreover, the commenters arrived at no consensus on how to redefine the terms; some suggested changes conflicted with other suggestions, and most suggested changes posed new problems.

The Department believes that tinkering with this definition is not as effective a response to commenters' concern as the other changes included in the proposal.

Regulations published July 8, 1980, (45 FR 46036) which addressed in part, student provisions, and which deleted § 273.2(f)(2)(iii), *Tax Dependency*, did not make any reference to student verification requirements. The Department welcomes comments on this issue.

Sources of Verification

Presently, regulations allow State agencies to use a collateral contact or home visit only when documentary evidence cannot be obtained. Some commenters believed this was too restrictive. The Department is proposing to allow State agencies more flexibility in determining when to use a collateral contact or home visit. States would now be allowed to use a collateral contact or home visit whenever documentary evidence is judged insufficient to make a firm determination of eligibility or benefit levels, as well as whenever documentary evidence cannot be obtained. Documentary evidence may be considered insufficient, for example, when the household presents pay stubs which do not represent an accurate picture of the household's income (such as, out-dated pay stubs). A document presented to establish identity that appears to have been falsified may also be determined insufficient.

Home visits would still need to be scheduled in advance with the household. The House Committee report is unequivocal in this matter, and declares that constitutional protections must continue to be provided. The Report States: "In *Reyes* v. *Edumunds*, 472 F. Supp. 1218, 48 U.S.L. Week. 2078 (D. Minn. 1979), a Federal district court decided that unannounced home visits without advance notice or arrangement for the purpose of investigating welfare fraud complaints contravened the Fourth Amendment as unreasonable searches. Accordingly, the Committee had not changed the status of home visits in current law." House Rpt., p. 98. However, the Department wishes to emphasize that a household may not refuse to allow a home visit. If the State agency attempts to schedule a home visit but a household simply refuses to allow the visit, the household should be denied for refusal to cooperate.

This proposed rule also clarifies that those sources of verification to which the State agency has routine access are not considered collateral contacts and, therefore, do not require the household's consent. This includes the State Data Exchange (SDX) and the Beneficiary Data Exchange (Bendex). Regulations published April 22, 1980 (45 FR 27426) specify that a release statement from the household is not needed provided the State agency makes the appropriate data request to SSA or executes any SDX or Bendex data exchange agreements required by the Social Security Administration. A household's release statement is also not required in those States where a routine access agreement exists with those agencies administering unemployment compensation, public assistance and the like. Pub. L. 96–249 provides the necessary legal foundation for access to a variety of wage, benefit, and other information contained in Social Security Administration files and in files maintained by State unemployment compensation agencies. These provisions will be addressed in a future rulemaking.

Documentation

Four commenters requested that the requirement for documenting in the casefile why an item is considered questionable be dropped. However, documentation as to why an item is questionable and how it was then verified is needed if a reviewer is to determine the reasonableness of the determination and to assure that regulatory requirements on verification are complied with.

This proposed rulemaking would, however, ease the documentation

requirements in two respects. First, as discussed above, States would have options to go beyond the "questionable" determination, in which case, such a determination would not need to be documented. Secondly, the Department proposes to clarify that for documentation purposes State agencies could, at a minimum, indicate where in the casefile the discrepancy exists, and what documentation was required to resolve the questionable information. This should cut down on time spent documenting the "why" and "how" of questionable information. For example, if a discrepancy exists within the case file (e.g. a household reports receipt of alimony in a previous application but does not report any in a new application), the eligibility worker could write a brief statement such as "Page 3 of previous and new applications show alimony discrepancy; contacted ex-spouse who is currently unemployed and cannot make payments."

Changes Resulting in Increased Benefits

Under current regulations, the State agency must act promptly on all changes affecting eligibility or benefit levels that occur during a certification period. In most cases in which the change would result in an increase in benefits, the change must be reflected in the next normal monthly allotment, or a supplementary benefit must be provided in the next month.

Current rules require that in such cases, any required verification must be obtained prior to issuance of the second normal monthly allotment after the change is reported. If the household does not provide verification, the household's benefits revert to the original benefit level.

A number of commenters suggested that, in the interests of program integrity, State agencies be allowed to verify these changes before any action need be taken to increase a household's benefits. The Department is incorporating this suggestion. States would be permitted to require households to provide verification within ten days after the date the change was reported to the State agency. If the household did so, the State would have to continue to meet current timeliness standards for reflecting the increased benefits in the household's allotment, as prescribed in § 273.12(c)(1). If the household did not provide verification in time, the State agency would not have to act until the verification was provided. States would also be allowed to continue the current procedure of obtaining verification before the second normal monthly allotment after the change is reported. Whenever a State agency increases a household's benefits to reflect a reported change and subsequent verification shows that the household was actually eligible for fewer benefits, the State agency shall establish a claim for the over-issuance in accordance with § 273.18.

Expedited Service

Some comments indicated misunderstanding of current verification requirements regarding expedited service. These commenters believed that all verification, except verification of idenity and residency, is automatically postponed in all expedited service cases.

This is not what the current regulations envisage. The rules state that: "The household's income statements shall be verified through a collateral contact or readily available documentary evidence whenever it can be done in sufficient time to meet the expedited processing standards. However, benefits shall not be delayed beyond the delivery standard . . . solely because income has not been verified." 7 CFR 273.2(i)(4)(i).

The Department is concerned that some State agencies may be automatically deferring income verification in all expedited cases, even when some verification could be accomplished within the expedited standards. Therefore, this rulemaking proposes to restructure and revise § 273.2(i)(4)(i) to emphasize that State agencies are required to make every effort to verify a household's income statements prior to certifying a household under expedited service, and that the sole acceptable reason for not verifying income statements is that the verification cannot be accomplished within expedited processing standards. This means, for example, that where a State agency can verify a household's income statements in one day, it must not postpone income verification in order to certify the household in one or two hours.

In addition, it has come to the Department's attention that some State agencies are verifying the income statements of a household being processed under expedited service rules only when the household has reported income. The proposed regulations allow State agencies to verify the absence of income as well. For example, a collateral contact could be made to corroborate the household's statement of no income.

The Department has always intended that State agencies may also verify a household's report of no income under regular certification procedures.

The proposed rule specifies that State agencies may verify factors other than identity, residency and income for expedited cases provided that verification can be accomplished within expedited processing standards.

Questions have also arisen as to whether work registration is postponed in expedited service cases. The proposed regulations require that the State agency shall, at a minimum, register the applicant (unless the applicant is either exempt or the household's authorized representative). If other household members are subject to work registration, the regulations propose that these households also be registered prior to certification if this can be done within the expedited processing standards. However, if registration of other household members cannot be accomplished within the expedited processing standards, this shall be postponed. Since work registration forms need not be filled out by the individual who is being registered, the applicant may in some cases be able to complete the work registration forms for other household member(s). The proposed rules would allow State agencies to request the applicant to complete work registration forms for other household members to the best of his or her ability. The State agency could also call the household and request the pertinent information on other household members. A clarification is added to the effect that verification of questionable work exemptions shall be postponed when the expedited timeframes cannot be made.

Resources

One commenter noted that a new vehicle may not be listed in the latest blue book used by a State agency. Language is, therefore, proposed to say that, in those instances, the State agency shall determine the wholesale value through some other means such as contacting a dealer which sells that make of vehicle.

Additional Issues

The Department is requesting comments on the feasibility of providing households in writing, at the conclusion of the interview, with information on what verification is needed to make an eligibility determination. Households would then have a written reminder of what exactly is still needed; this would minimize the chances of the household forgetting what was requested. This would not be an FNS prescribed or approved form. State agencies could provide this written information in whatever form they saw fit.

In summary, the overall impact of the proposals should be to increase States' ability to obtain verification where necessary to improve program integrity. A considerable amount of flexibility would be provided to States to determine which factors of eligibility to verify for which households.

While these proposals would allow State agencies to move verification procedures closer to quality control procedures, it would not make the two sets of procedure the same. Some commenters had asked that the two sets of procedures be synonomous. However, the House Committee Report states that difference in the procedures should be maintained. The Report states:

"Finally, in light of the carefully maintained balance between verification that reduces costly program error and verification that harasses applicants and prevents participation without impacting on error, the Committee does not wish as some States have requested, to equate the certification process with the quality control review procedures so as to require comparable verification and investigation in both. What is useful for detecting systemic error tendencies in the latter would hopelessly clog the program if applied to the former. Similarly, the need for the quality control evidence to highlight operational deficiencies and indicate where extra effort would pay off in program savings argues against any attempt to exclude from error analysis and error rate calculation variances in elements which the State agency was not required to verify as of certification absent questionable information. (House Rept., p. 98).

Implementation

The Department proposes that State agencies implement these verification procedures no later than the first of the month 90 days following the date final regulations are published. States would be permitted, however, to implement these rules as soon as possible after publication in order that effective measures could be taken to reduce errors during the new QC review period.

The Department proposes that Parts 272 and 273 of the Federal Regulations be amended to read as follows:

PART 272—REQUIREMENTS FOR PARTICIPATING STATE AGENCIES

1. In § 272.1, a new subparagraph (22) is added to paragraph (g) of that subsection to read as follows:

§ 272.1 General terms and conditions.

* * * * *

(g) *Implementation.* * * *

(22) Amendment 179. State agencies shall implement the verification procedures in §§ 273.2, 273.8, and 273.12 no later than the first of the month 90 days following publication of final regulations.

* * * * *

PART 273—CERTIFICATION OF ELIGIBLE HOUSEHOLDS

Part 273 is amended as follows:

1. In § 273.2(f):

a. Subparagraph (1) is amended by adding new subparagraphs (vi) and (vii).

b. Subparagraphs (2) and (2)(i) are revised and (2)(iii) is deleted.

c. Subparagraph (3) is revised and new subparagraphs (i) through (vi) are added.

d. Subparagraphs (4)(i) and (iii), (5), and (6), are revised; 4(ii) is amended by adding two sentences at the end.

e. Subparagraph (9)(i) is amended.

2. In § 273.2(i), subparagraph (4)(i) is revised.

The amended provisions read as follows:

§ 273.2 Application processing.

* * * * *

(f) *Verification* * * *

(1) *Mandatory verification* * * *

* * * * *

(vi) *Residency.* The residency requirements of § 273.3 shall be verified for all households. Verification of residency should be accomplished in conjunction with the verification of other information such as, but not limited to, rent and mortgage payments, utility expenses, and identity. Documents used to verify other factors of eligibility should normally suffice to verify residency as well. No durational residency requirement shall be established.

(vii) *Identity.* The applicant's identity shall be verified. Examples of acceptable documentary evidence which the applicant may provide include, but are not limited to, a driver's license, a work or school ID, an ID for health benefits or for another assistance or social services program, a voter registration card, wage stubs, or a birth certificate. Any documents which reasonably establish the applicant's identity must be accepted, and no requirement for a specific type of document, such as a birth certificate, may be imposed.

(2) *Verification of questionable information.* With the exception of those items specified in paragraph (3) of this subsection which the State agency has opted to verify, State agencies shall verify all other factors of eligibility prior to certification only if they are questionable as indicated in this paragraph and affect a household's eligibility or benefit level. To be considered questionable, the information on the application must be inconsistent with statements made by the applicant, inconsistent with other information on the application or previous applications, or inconsistent with information received by the State agency. When determining if information is questionable, the State agency shall base the decision on each household's individual circumstances. A household's report of expenses which exceed its income may be grounds for a determination that further verification is required. Additionally, a household reporting no income while still managing its financial affairs could in some instances justify the requirement for additional verification. However, these circumstances shall not, in and of themselves, be grounds for a denial. The State agency shall instead explore with the household how it is managing its finances, whether the household receives excluded income or has resources, and how long the household has managed under these circumstances. Procedures described below shall apply when information concerning one of the following eligibility requirements is questionable:

(i) *Household composition.* With the exception of household size if the State agency opts for more frequent verification of this item in accordance with paragraph (f)(3) of this section, State agencies shall verify factors affecting the composition of a household such as boarder status, if questionable. However, due to the difficulty in verifying whether or not a group of individuals customarily purchases and prepares meals together and, therefore, constitutes a household, State agencies shall generally accept the household's statement regarding food preparation and purchasing.

* * * * *

(iii) [Deleted]

(3) *State agency options.* The State agency may determine when to verify the following items on a uniform basis within a State or project area provided that, at a minimum, these items are verified if questionable as specified in paragraph (2) of this subsection. If these factors are not verified on a uniform basis within a State, the State agency shall approve the verification policies which will be applied at the project area level.

If a State agency opts to verify a deductible expense and obtaining the verification may delay the household's certification, the State agency shall advise the household that its eligibility and benefit level may be determined without providing a deduction for the claimed but unverified expense. This

provision also applies to the allowance

§ 273.9(d)(6), the State agency may

stubs, rent receipts, and utility bills.

level, or cannot be obtained, the State

verified at recertification unless the

allowed 90 days to obtain the SSN, in

provision also applies to the allowance of medical expenses as specified in subparagraph (f)(1)(iv) of this section. Shelter costs would be computed without including the unverified components. The standard utility allowance shall be used if the household is entitled to claim it and has not verified higher actual costs. If the expense cannot be verified within 30 days of the date of application, the State agency shall determine the household's eligibility and benefit level without providing a deduction for the unverified expense. If the household subsequently provides the missing verification, the State agency shall redetermine the household's benefits, and provide increased benefits, if any, in accordance with the timeliness standards in § 273.12 on reported changes. The household shall be entitled to the restoration of any benefits as a result of the disallowance of the expense only if the expense could not be verified within 30-day processing standard because the State agency failed to allow the household sufficient time, as defined in paragraph (h)(1) of this subsection, to verify the expense. If the household would be ineligible unless the expense is allowed, the household's application shall be handled as provided in paragraph (h) of this section.

(i) *Liquid resources and loans.* The State agency may verify liquid resources and if monies received by households are loans. When verifying that income is exempt as a loan, a legally binding agreement is not required. A simple statement signed by both parties which indicates that the payment is a loan and must be repaid shall be sufficient verification. However, if the household receives payments on a recurrent or regular basis from the same source but claims the payments are loans, the State agency may also require that the provider of the loan sign an affidavit which states that repayments are being made or that payments will be made in accordance with an established repayment schedule.

(ii) *Continuing shelter charges.* The State agency may verify those shelter costs as specified in § 273.9(d)(5), other than utilities, if allowing the expense would result in a deduction. For example, for those households subject to a shelter maximum, rent would not be verified if the household's child care expenses exceeded the limit on the combined dependent care/shelter deduction since the amount of the rent could not alter the amount of the deduction.

(iii) *Utility expenses.* For those households entitled to claim the standard utility allowance a specified in § 273.9(d)(6), the State agency may verify that the household actually incurs one utility cost, although the State agency would not verify the amount of the cost. If the State has separate standards for each utility, the State agency may verify that the household actually incurs costs for the heating/cooling utility and one other utility.

(iv) *Dependent care costs.* For those households claiming dependent care costs as specified in § 273.9(d)(4), the State agency may verify that the household actually incurs the costs and the actual amount of the costs, if allowing the expense would actually result in a deduction.

(v) *Household size.* State agencies may verify household size. Other factors involving household composition such as boarder status or whether or not a particular group of individuals customarily purchases and prepares meals together shall not be verified unless questionable in accordance with § 273.2(f)(2)(i) or with prior FNS approval in accordance with paragraph (vi) of this subsection.

(vi) *Error-prone profiles.* The State agency may, with prior FNS approval, require additional verification of other eligibility factors as indicated by error-prone household profiles developed and based on statistically valid data derived from the State agency's quality control review, audits, or other special reviews in accordance with § 275.15(a)(2). These expanded verification requirements would be applied only to those particular eligibility factors and/or households identified as being error-prone, and would apply only on a uniform basis statewide or in one or more project areas. In addition, if the State agency's error-prone household profiles demonstrate that verification of particular eligibility factors (other than gross nonexempt income, declared alien status, and social security numbers) mandated under § 273.2(f)(1) is not needed for particular categories of households, the State agency may, with prior FNS approval, appropriately reduce mandatory verification. FNS must approve both the statistical methodology by which a State agency's error-prone profile is constructed, and the State agency's proposed use of the profile in determining where to apply more intensive (and/or less intensive) verification.

(4) *Sources of Verification.*—(i) *Documentary evidence.* State agencies shall use documentary evidence as the prmary source of verification. Documentary evidence consists of a written confirmation of a household's circumstances. Examples of documentary evidence include wage stubs, rent receipts, and utility bills. Although documentary evidence shall be the primary source of verification, acceptable verification shall not be limited to any single type of document and may be obtained through the household or other source. Whenever documentary evidence cannot be obtained or is insufficient to make a firm determination of eligibility or benefit level, the eligibility worker may require collateral contacts or home visits. For example, documentary evidence may be considered insufficient when the household presents pay stubs which do not represent an accurate picture of the household's income (such as out-dated pay stubs) or identification papers appear to be fasified.

(ii) *Collateral contacts.* * * *

Those sources of verification to which the State agency has routine access are not considered collateral contacts, and therefore need not be designated by the household. Examples are the Beneficiary Data Exchange (BENDEX) and the State Data Exchange (SDX) and any agency where a routine access agreement exists.

(iii) *Home visits.* Home visits may be used as verification only when documentary evidence is insufficient to make a firm determination of eligibility or benefit level, or cannot be obtained, and the home visit is scheduled in advance with the household.

* * * * *

(5) *Responsibility for obtaining verification.*

(i) The household has primary responsibility for providing documentary evidence to support its income statements and to resolve any questionable information. Households may supply documentary evidence in person, through the mail, or through an authorized representative. The State agency shall accept any reasonable documentary evidence provided by the household and shall be primarily concerned with how adequately the verification proves the statements on the application. If it would be difficult or impossible for the household to obtain the documentary evidence in a timely manner or the household has presented insufficient documentation, the State agency shall either offer assistance to the household in obtaining the documentary evidence, except as otherwise stated in this section, or shall use a collateral contact or home visit. The State agency shall not require the household to present verification in person at the food stamp office.

(ii) Whenever documentary evidence is insufficient to make a firm determination of eligibility or benefit level, or cannot be obtained, the State agency may require a collateral contact or a home visit. The State agency shall rely on the household to provide the name of any collateral contact. The household may request assistance in designating a collateral contact. The State agency is not required to use a collateral contact designated by the household if the collateral contact cannot be expected to provide an accurate third-party verification. When the collateral contact designated by the household is unacceptable, the State agency shall either ask the household to designate another collateral contact or substitute a home visit. The State agency is responsible for obtaining verification from acceptable collateral contacts.

(6) *Documentation.* Case files must be documented to support eligibility, ineligibility, and benefit level determinations. Documentation shall be in sufficient detail to permit a reviewer to determine the reasonableness and accuracy of the determination. Where verification was required to resolve questionable information, the State agency shall document why the information was considered questionable, or at a minimum indicate where in the casefile the inconsistency exists, and what documentation was used to resolve the questionable information. The State agency shall also document the reason why an alternate source of verification, such as a collateral contact or home visit, was needed, and the reason a collateral contact was rejected and an alternate requested.

* * * * *

(9) *Verification subsequent to initial certification.*—

(i) *Recertification.* (A) At recertification the State agency shall verify a change in income, medical expenses, or actual utility expenses claimed by a household if the source has changed or the amount has changed by more than $25 since the last time they were verified. State agencies may verify income, medical expenses or actual utility expenses claimed by households which are unchanged or have changed by $25 or less, provided verification is, at a minimum, required when information is questionable as defined in paragraph (f)(2) of this section.

(B) Newly obtained social security numbers shall be verified at recertification in accordance with verification procedures outlined in 273.2(f)(1)(v).

(C) Unchanged information, other than income, medical expenses, and actual utility expenses shall not be verified at recertification unless the information is questionable as defined in paragraph (f)(2) of this section. Changes in items other than income, medical expenses or actual utility expenses shall be subject to the same verification procedures as at initial certification. For example, dependent care costs (unless questionable) may be reverified at State option only if the care provider has changed or the amount has changed and the change would affect the level of the deduction. Shelter costs other than utilities may (if not questionable) be reverified only if the household has moved or has reported a change in the amount of individual shelter cost components and the change would affect the level of the deduction. (If the household reports a change in the cost of particular shelter components, only those components that have changed may be reverified). A household's eligibility to claim the standard utility allowance may be reverified (unless questionable) only if the household has moved or changed utilities.

* * * * *

(i) *Expedited Service.* * * *

* * * * *

(4) *Special procedures for expediting service.*

(i) To expedite the certification process, the State agency shall postpone the verification required by § 273.2(f) except that (A) the household's identity and residency shall be verified through a collateral contact or readily available documentary evidence as specified in paragraph (f)(1) of this subsection, and (B) all reasonable efforts shall be made to verify the household's income statement (including a statement that the household has no income) within the expedited processing standards, through collateral contacts, or readily available documentary evidence. However, benefits shall not be delayed beyond the delivery standards prescribed in paragraph (i)(3) of this subsection, solely because income has not been verified. State agencies also may verify factors other than identity, residency, and income provided that verification can be accomplished within expedited processing standards. Households entitled to expedited service shall not be required to furnish or apply for a social security number until after they have received their first allotment. However, those households shall be required to furnish an SSN before their next issuance in accordance with subdivision (iii) of this subparagraph. Those households unable to provide the required SSN's or who do not have one prior to their next issuance shall be allowed 90 days to obtain the SSN, in accordance with § 273.6(a)(2). With regard to the work registration requirements specified in § 273.7, the State agency shall, at a minimum, require the applicant to register (unless exempt or unless the household has designated an authorized representative to apply on its behalf in accordance with § 273.1(f)). Other household members' work registration shall be postponed if it cannot be accomplished within the expedited service timeframes. the State agency may request that the applicant complete the work registration forms for other household members to the best of his or her ability. The State agency may also attempt to accomplish work registration for other household members in a timely manner through other means, such as calling the household. In addition, verification of questionable work registration exemptions shall be postponed if the expedited service timeframes cannot be met.

* * * * * *

3. In § 273.8, a new sentence is added to the end of paragraph (g) and reads as follows:

§ 273.8 Resource eligibility standards.

* * * * * *

(g) *Fair market value of licensed vehicles.* * * * If a new vehicle is not yet listed in the blue book, the State agency shall determine the wholesale value through some other means (e.g., contacting a new car dealer which sells that make of vehicle).

4. In § 273.12, subparagraph (c)(1)(iii) is revised as follows:

§ 273.12 Reporting changes.

* * * * * *

(c) *State agency action on changes.* * * * (1) *Increase in benefits.*

* * * * * *

(iii) The State agency may elect to verify changes which result in an increase in a household's benefits in accordance with the verification requirements of § 273.2(f)(9)(ii), prior to taking action on these changes. If the State agency elects this option, it must allow the household 10 days from the date the change is reported to provide verification required by § 273.2(f)(9)(ii). If the household provides verification within this period, the State agency shall take action within the timeframes specified in subparagraphs (i) and (ii) of this paragraph. If the household provides the required verification at a later date, the timeframes specified in subparagraphs (i) and (ii) shall run from the date verification is provided rather than from the date the change is

V 45 A G 12 80 UMI

reported. If the State agency does not elect this option, verification required by § 273.2(f)((9)(ii) must be obtained prior to the issuance of the second normal monthly allotment after the change is reported. If in these circumstances the household does not provide verification, the household's benefits will revert to the original benefit level. Whenever a State agency increases a household's benefits to reflect a reported change and subsequent verification shows that the household was actually eligible for fewer benefits, the State agency shall establish a claim for the overissuance in accordance with § 273.18. In cases where the State agency has determined that a household has refused to cooperate as defined in § 273.2(d), the State agency shall terminate the household's eligibility following the notice of adverse action.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday).

This is a voluntary program. (See OFR NOTICE 41 FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY	USDA/ASCS		DOT/SECRETARY	USDA/ASCS
DOT/COAST GUARD	USDA/APHIS		DOT/COAST GUARD	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/FHWA	USDA/FSQS		DOT/FHWA	USDA/FSQS
DOT/FRA	USDA/REA		DOT/FRA	USDA/REA
DOT/NHTSA	MSPB/OPM		DOT/NHTSA	MSPB/OPM
DOT/RSPA	LABOR		DOT/RSPA	LABOR
DOT/SLSDC	HHS/FDA		DOT/SLSDC	HHS/FDA
DOT/UMTA			DOT/UMTA	
CSA			CSA	

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

REMINDERS

The "reminders" below identify documents that appeared in issues of the **Federal Register** 15 days or more ago, inclusion or exclusion from this list has no legal significance.

Rules Going Into Effect Today

Note: There were no items eligible for inclusion in the list of **Rules Going Into Effect Today.**

List of Public Laws

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

Last Listing August 7, 1980

1979-1980 United States Government Manual

As the official handbook of the Federal Government, the *Manual* is the best source of information on the activities, functions, organization, and principal officials of the agencies of the legislative, judicial, and executive branches. It also includes information on quasi-official agencies, international organizations in which the United States participates, and boards, committees, and commissions.

For those citizens interested in where to go and who to see about a subject of particular concern, the *Manual* provides the "Guide to Government Information" section, a reference to an agency's statement of organization in the *Federal Register* or *Code of Federal Regulations*, and comprehensive name, subject, and agency indexes. Particularly helpful is each agency's "Sources of Information" section, which provides addresses and telephone numbers for obtaining specifics on consumer activities, contracts and grants, employment, publications and films, and many other areas of citizen interest.

Of significant historical interest is Appendix A, which describes the agencies and functions of the Federal Government abolished or transferred subsequent to March 4, 1933.

Highlights

53839 **Mobile Homes** FTC announces availability of staff report regarding evidence in rulemaking proceeding on warranty service in mobile home industry; comments by 10-14-80

53806 **Housing** HUD/FHC grants Secretary authority to waive certain provisions of section 235 of the National Housing Act; effective 9-13-80

53807 **Home Improvement** VA authorizes Veterans purchasing homes with VA guaranteed loans to secure additional funds for energy-saving improvements at the time of acquisition; effective 8-6-80

53807 **Veterans** VA clarifies "Medical Series" of regulations to state that claims made under a grant prior to the effective date of the grant of service connection will not be paid; effective 8-6-80

53956 **Disaster Assistance** FEMA revises regulations concerning public assistance; for declarations of major disasters or emergencies made after 9-12-80 (Part II of this issue)

53844 **Radio** FCC proposes to allow the use of bio-medical telemetry radio transmisions on frequencies in 150 MHz band in Special Emergency Radio Service; comments by 9-15-80; reply comments by 9-30-80

CONTINUED INSIDE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $75.00 per year, or $45.00 for six months, payable in advance. The charge for individual copies is $1.00 for each issue, or $1.00 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register.**

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

Highlights

54004 **Education** ED publishes final regulations for nonprofit organization grants under the Emergency School Aid Act (Part VIII of this issue)

53996 **Education** ED issues regulations for Territorial Teacher Training Assistance Program (Part VI of this issue)

54000 **Teachers' Education** ED proposes rules for Pre-College Teacher Development in Science Program; comments by 9–12–80 (Part VII of this issue)

53877 **Continental Shelf** Interior/GS publishes proposed notice to lessees and operators concerning produced oil and gas exempt from royalty requirements; comments by 9–12–80

53840 **Oil and Gas Exploration** Interior/GS proposes to amend its regulations relating to royalty requirements on outer continental shelf leases; comments by 9–12–80

53856 **Computer Technology** Commerce/NBS issues notice providing specific guidance concerning technical interface implementation approaches

53972 **Foreign Government** DOE intends to implement certain provisions governing acceptance of gifts and travel; effective 8–13–80 (Part IV of this issue)

53853 **Antidumping** Commerce/ITA issues early determination of antidumping duties for portable electric typewriters from Japan; effective 8–13–80

53841 **Civil Rights** ED invites comments on proposed FY 1981 Annual Operating Plan; comments by 9–29–80

53835 **Small Businesses** SBA proposes rules to implement section 503, Development Company Program; comments by 9–12–80

53842 **Cancer** EPA extends comment period to 8–12–80 on proposed policy and procedures for identifying, assessing and regulating carcinogens emitted into ambient air from stationary sources

53856 **Commercial or Industrial Activities** Commerce/MA intends to conduct cost comparisons

53941 **Sunshine Act Meetings**

Rules and Regulations

Federal Register
Vol. 45, No. 158
Wednesday, August 13, 1980

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 908

[Valencia Orange Regulation 640, Amdt. 3]

Valencia Oranges Grown in Arizona and Designated Part of California; Amendment of Size Regulation

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This amendment suspends during the period August 8, 1980, through September 4, 1980, the maximum size requirement of 3.41 inches in diameter for fresh shipments of Valencia oranges grown in Arizona and designated part of California. The maximum size requirement remains in effect during the period September 5, 1980, through January 31, 1981. This action is necessary to provide markets with ample supplies of acceptable sizes of fruit to promote orderly marketing in the interest of producers and consumers.

EFFECTIVE DATE: August 8, 1980.

FOR FURTHER INFORMATION CONTACT: Malvin E. McGaha, Chief, Fruit Branch, F&V, AMS, USDA, Washington, D.C. 20250, telephone 202–447–5975. The Final Impact Statement relative to this final rule is available upon request from the above named individual.

SUPPLEMENTARY INFORMATION: This action has been reviewed under USDA procedures in Secretary's Memorandum 1955 to implement Executive Order 12044 and classified as "not significant." This amendment is issued under the marketing agreement, as amended, and Order No. 908, as amended (7 CFR Part 908), regulating the handling of Valencia oranges grown in Arizona and designated part of California. The agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674). The action is based upon the recommendation and information submitted by the Valencia Orange Administrative Committee and upon other available information. It is hereby found that the action will tend to effectuate the declared policy of the act.

Valencia Orange Regulation 640 (§ 908.940; 45 FR 23638; 38339; 45573), during the period April 11, 1980, through January 31, 1981, limits shipments of Valencia oranges grown in Arizona and a designated part of California to oranges not smaller than 2.32 inches in diameter. It also requires that such oranges be not larger than 3.41 inches in diameter during the period August 8, 1980, through January 31, 1981. The amendment suspends this latter requirement during the period August 8, 1980, through September 4, 1980.

This amendment reflects the Department's appraisal of the current and prospective supply and market demand conditions for Valencia oranges. It is designed to assure an ample supply of acceptable sizes of Valencia oranges to consumers consistent with the size composition of the crop.

It is further found that there is insufficient time between the date when information became available upon which this amendment is based and when the action must be taken to warrant a 60-day comment period as recommended in E.O. 12044, and that it is impracticable and contrary to the public interest to give preliminary notice, engage in public rulemaking, and postpone the effective date until 30 days after publication in the **Federal Register** (5 U.S.C. 553). The amendment relieves restrictions on the handling of Valencia oranges and will not require any special preparation by persons subject thereto which cannot be completed by the effective time.

Therefore, § 908.940(b) Valencia Orange Regulation 640 (45 FR 23638; 38339; 45573) is amended to read as follows: (§ 908.940 expires January 31, 1981, and will not published in the annual Code of Federal Regulations).

§ 908.940 Valencia Orange Regulation 640.

(a) * * *

(b) During the period September 5, 1980, through January 31, 1981, no handler shall handle any Valencia oranges grown in Districts 1, 2, or 3 which are of a size larger than 3.41 inches in diameter, which shall be the largest measurement at a right angle to a straight line running from the stem to the blossom end of the fruit: *Provided,* That not to exceed 5 percent, by count, of the Valencia oranges contained in any type of container may measure larger than 3.41 inches in diameter.

(c) * * *

(Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674)

Dated: August 8, 1980, to become effective August 8, 1980.

Charles R. Brader,
Director, Fruit and Vegetable Division, Agricultural Marketing Service.

BILLING CODE 3410–02–M

Commodity Credit Corporation

7 CFR Part 1421

[CCC Grain Price Support Regulations Governing the Grain Reserve Program for 1980 and Subsequent Crops and Alternative Program for 1980 and Prior Crops]

CCC Grain Price Support Grain Reserve Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this document is to announce changes in the regulations which govern the Farmer-Owned Grain Reserve Program. The changes (1) implement the new reserve program for feed grains and food quality wheat, (2) decrease the release level for wheat, (3) decrease the call level for wheat, and (4) removes the provision which provided for the waiver for the first year's interest on corn which enters the reserve. The action is being taken in response to the President's announcement on July 28, 1980, of higher loan rates for 1980 crops and revision of reserve release and call levels. Release and call levels for feed grains remain the same as under the current reserve program.

DATES: This regulation shall become effective upon the date of filing with the Director, Office of the Federal Register (August 8, 1980).

ADDRESSES: Director, Price Support and Loan Division, ASCS, USDA, Room

3741–S, South Building, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: Harold L. Jamison, ASCS, (202) 447–7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified as "signficant". The emergency nature of this action warrants publication of this final action without completion of a Draft Impact Analysis. A Final Impact Statement will be developed after public comments have been received.

Jerome F. Sitter, Director, Price Support and Loan Division, ASCS, USDA, has determined that an emergency situation exists which warrants publication without opportunity for a public comment period of this final action because oats and sorghum in the existing farmer-owned reserves are in call status and farmers are not permitted to enter oats and sorghum into the existing reserves. Implementation of the new reserve will offer farmers an opportunity to place oats and sorghum in the new reserve if prices remain below the call levels for oats and sorghum in the new reserve.

Further, pursuant to the administrative procedure provisions in 5 U.S.C. 553, it is found upon good cause that notice and other public procedure with respect to this emergency final action are impracticable and contrary to the public interest; and good cause is found for making this emergency final action effective less than 30 days after publication of this document in the **Federal Register.** Comments will be received for 60 days after publication of this document, and this emergency final action will be scheduled for review so that a final document discussing comments received and any amendments required can be published in the **Federal Register** as soon as possible.

Title Grain Reserve Program, Number 10.067 from Catalog of Federal Domestic Assistance. This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A–95 was not used to assure that units of local government are informed of this action.

Generally, the existing grain reserve program, as well as the new program implemented by this final rule, provide for the extension of farm storage and warehouse storage loans. Under either reserve program, when the release level is reached, a producer may redeem the applicable commodity without payment of liquidated damages. Also, when the reserve loan is called, the producer must redeem or forfeit such commodity. Release and call levels under both programs are tied to the national average loan rate for each commodity eligible for the reserve program. Loan rates for these commodities are determined by the Secretary for price support purposes in accordance with the provisions of the Agricultural Act of 1949, as amended.

Since the national average price support loan rate for wheat was increased from $2.50 to $3.00 per bushel, decreasing the release level for wheat to 140 percent will permit a farmer with wheat in the new reserve to repay the reserve loan, without penalty, when the national average market price for wheat reaches a lower level than provided for in the existing reserve which has a wheat release level of 150 percent.

Subsection 1421.673 provides for establishing a new reserve when market prices drop below call level after a prior reserve has been called.

Subsection 1421.678 is changed to provide that some wheat which is eligible for regular price support loan may not enter the reserve. Wheat which enters the reserve must be food quality wheat.

All reserve loan agreements approved prior to the effective date of this new program will remain subject to the program regulations governing the applicable reserve program. However, producers with such prior grain reserve agreements could be permitted to enter the new program by executing new agreements.

Final Rule

Accordingly, the regulations at 7 CFR part 1421 are amended by adding a new "Subpart-Regulations Governing the Grain Reserve Program for 1980 and Subsequent Crops and Alternative Program for 1980 and Prior Crops" to read as follows:

Subpart—Regulations Governing the Grain Reserve Program for 1980 and Subsequent Crops and Alternative Program for 1980 and Prior Crops

Sec.

1421.670 General statement.
1421.671 Eligible commodities and length of loans.
1421.672 Limit on reserve quantity.
1421.673 Program availability.
1421.674 Eligibility requirements.
1421.675 Applicability of the general regulations governing price support for the 1978 and subsequent crops.
1421.676 Warehouse receipts.
1421.677 Quantity eligible for grain reserve loans.
1421.678 Quality eligibility requirements of reserve grain.
1421.679 Storage rates.
1421.680 Storage payments.
1421.681 Interest rates.
1421.682 Commingling and replacement of grain.
1421.683 Release levels, redemption requirements, and early redemption charges.
1421.684 Maturity.

Authority: Secs. 4 and 5, 62 Stat. 1070, as amended (15 U.S.C. 714b and c); sec. 110, 91 Stat. 951, as amended (7 U.S.C. 1445e).

Subpart—Regulations Governing the Grain Reserve Program for 1980 and Subsequent Crops and Alternative Program for 1980 and Prior Crops

§ 1421.670 General statement.

(a) The regulations in this subpart set forth the terms and conditions for the reserve program which provides for the extension of farm storage and warehouse storage loans (hereinafter called "grain reserve loan(s)") on eligible commodities as provided in § 1421.671. Farm storage grain reserve loans will be evidenced by notes and secured by security agreements, grain reserve agreements, and in certain cases, chattel mortgages or financing statements. Warehouse storage grain reserve loans will be evidenced by notes, security agreements, and grain reserve agreements and secured by the pledge of warehouse receipts representing an eligible commodity in approved warehouse storage. As used in the regulations in this subpart, "CCC" means the Commodity Credit Corporation and "ASCS" means the Agricultural Stabilization and Conservation Service of the U.S. Department of Agriculture.

(b) To participate in the grain reserve program a producer must request and enter into a grain reserve agreement with the local county ASCS office. Such agreement shall be for a period of time specified in § 1421.671. Storage payments will be paid to the producer annually during the period of the grain reserve agreement for the time the commodity is eligible to earn storage payments. Producers may redeem commodities under the Grain Reserve Program without repaying earned storage when the national average market price reaches the release level, as determined pursuant to § 1421.683. All wheat loans in the grain reserve and all loans on any feed grain in the reserve will be called when the national average market price of such wheat or feed grain reaches the call level pursuant to § 1421.683.

§ 1421.671 Eligible commodities and length of loans.

(a) *Eligible commodities.* Subject to such limitations on quantity as may be provided in accordance with § 1421.672, wheat and feed grain shall be eligible for the grain reserve.

(b) *Length of reserve agreements.* Reserve agreements shall be for a period of not less than three years nor more than five years.

§ 1421.672 Limit on reserve quantity.

An unlimited quantity of feed grains may be stored under this program. The quantity of wheat will not be less than 300,000,000 nor more than 700,000,000 bushels, except that such maximum quantity may be adjusted by the Secretary pursuant to an international agreement containing provisions relating to grain reserves. Notice of such adjustments will be published in the **Federal Register.**

§ 1421.673 Program availability.

Producers with farm or warehouse-stored wheat or feed grain under CCC loan (hereinafter called "regular loan(s)") may participate in the Grain Reserve Program anytime a reserve is in effect for their commodity. The program will be available when announced by USDA press release, but availability will end when the reserve for a commodity is called. A subsequent reserve for a called commodity will be established when the national average market price determined according to § 1421.683(a) has fallen below the call level. The subsequent reserve will be announced by USDA press release. A called commodity loan may only enter a new reserve program under the provisions of § 1421.683(b). A producer desiring to participate in the Grain Reserve program shall file a request to participate at the county ASCS office which disbursed the regular loan. An approved cooperative marketing association shall request a grain reserve loan at the county ASCS office which disbursed the regular loan or at its servicing agent bank which disbursed the regular loan.

§ 1421.674 Eligibility requirements.

(a) *Producer.* A producer shall be eligible to participate in this program if such producer has an eligible commodity under a regular loan or has an eligible commodity under a purchase agreement which is converted into a regular loan.

(b) *Commodities.* Eligibility of producers to place designated wheat and feed grains into the reserve program will be on a first come, first served basis. After the quantities of wheat established pursuant to § 1421.672 have been accomplished, the program will be suspended to new applicants.

§ 1421.675 Applicability of the general regulations governing price support for the 1978 and subsequent crops.

Provisions of the General Regulations Governing Price Support for the 1978 and Subsequent Crops, published at 44 FR 2353, corrected at 44 FR 6351, and any amendments thereto (hereinafter referred to as "General Regulations") which are not inconsistent with provisions of this subpart shall apply to grain reserve loans.

§ 1421.676 Warehouse receipts.

(a) *General.* Warehouse receipts tendered to CCC under this program must meet all of the requirements of this section and any other requirements contained in the regulations in this subpart, the General Regulations, and the applicable commodity supplement.

(b) *Manner of issuance and endorsement.* Warehouse receipts must be issued in the name of the eligible producer or CCC. If issued in the name of the eligible producer, the receipts must be properly endorsed in blank so as to vest title in the holder.

(c) *Requirements.* Warehouse receipts must: (1) be issued by an approved warehouse, (2) represent a commodity which is deemed to be stored commingled, (3) be negotiable, (4) cover the eligible commodity actually in storage in the warehouse of original deposit, except that warehouse receipts may be issued by another warehouse if the eligible commodity was reconcentrated under a "Reconcentration Agreement and Trust Receipt" approved by CCC, (5) be registered or recorded with appropriate State of local officials when required by State law, and (6) show that storage charges have been paid through the end of first year of the grain reserve agreement or the producer must provide evidence that storage charges have been paid or otherwise provided for through the end of the first year of the grain reserve agreement.

(d) *Where a warehouseman is also owner.* If the warehouse receipt is issued for a commodity which is owned by the warehouseman, either solely, jointly, or in common with others, the fact of such ownership shall be stated on the receipt. In States where the pledge of warehouse receipts issued by a warehouseman on their own commodity is invalid, the warehouseman may offer such commodity to CCC for loan only if such warehouse is licensed and operating under the U.S. Warehouse Act.

§ 1421.677 Quantity eligible for grain reserve loans.

(a) *Farm-stored.* The quantity eligible for grain reserve loan is the measured quantity covered by the regular loan, as determined by the county committee.

(b) *Warehouse-stored.* The quantity eligible for grain reserve loan is the quantity shown on the warehouse receipt or the supplemental certificate, if applicable, which secured the regular loan.

§ 1421.678 Quality eligibility requirements of reserve grain.

Quality will be determined according to the Official United States Standards for Grain, Federal Grain Inspection Service (FGIS), U.S. Department of Agriculture.

(a) *Feed grains.* Feed grains which enter the reserve must meet the quality eligibility requirements for securing a regular CCC price support loan.

(b) *Wheat.* Wheat which enters the reserve must be merchantable for food and meet the quality eligibility requirements for securing a regular CCC price support loan. The wheat must: (1) not contain mercurial compounds, toxin-producing molds or other substances poisonous to man or animals, (2) not grade Ergoty or Treated, (3) not grade Weevily, (4) not grade Smutty, and (5) not grade Garlicky.

(c) *Farm-stored grain.*

(1) Prior to approval of a grain reserve farm-stored loan, the commodity will be inspected by a representative of the county committee and the agreement will not be approved unless it is determined on the basis of such inspection that (i) the commodity is such that it can reasonably be expected to be stored with safety until maturity of the loan, and (ii) the commodity meets the quality eligibility requirements as described above in subparagraphs (a) and (b). If the loan inspector questions the eligibility of the commodity, a sample shall be drawn and submitted to FGIS for quality analysis.

(2) The producer is responsible for maintaining the quality and quantity of the farm-stored grain. Farm-stored grain which is delivered to CCC must meet the quality eligibility requirements specified in subparagraphs (a) and (b) above. CCC may reject the delivery of farm-stored grain which does not meet the quality eligibility requirements, in which case the producer shall repay to CCC the loan principal, plus interest, plus unearned storage payments. If CCC accepts the delivery of the ineligible commodity, the producer shall repay to CCC the loan principal, plus interest, plus unearned storage payments, less the settlement value of the commodity

as determined in accordance with the settlement procedures specified in 7 CFR 1421.22.

§ 1421.679 Storage rates.

(a) Producers will be paid per annum storage payments at the initial rate of 26½ cents per bushel for wheat, barley and corn, 20 cents per bushel for oats, and 47.32 cents per hundredweight for sorghum. Such rates may be changed from time to time by announcement in a separate notice published in the **Federal Register** but will not be less than (1) 26½ cents per bushel for wheat, barley and corn, (2) 47.32 cents per hundredweight for sorghum, and (3) 20 cents per bushel for oats.

(b) When storage is computed for less than one year, appropriate daily rates announced in the **Federal Register** will be used, which will not be less than (1) .0726 cents per bushel for wheat, barley and corn, (2) .1296 cents per hundredweight for sorghum, and (3) .0548 cents per bushel for oats. Annual storage payments shall be adjusted and paid in accordance with provisions outlined in § 1421.680.

§ 1421.680 Storage payments.

(a) *Time.* Storage payments shall be paid annually in advance on the date the grain reserve agreement is approved and each anniversary date thereafter, except storage payments will not be made in any State when storage earning has been stopped according to § 1421.680(b) in the State where the grain is stored. If CCC subsequently determines that the price in the State where the grain is stored has dropped below the release level, storage payments will be made for the balance of the year. Second or third year storage payments will not be made to producers having grain reserve warehouse loans until the producers furnish written evidence that at least the next year's storage payment has been paid to the warehouseman or provided for with the warehouseman. If the producer fails to provide written evidence within a reasonable period of time, the county office shall call such loans, and if the loan is not repaid or evidence that that storage has been paid is not furnished, within 10 days after such call, title to the commodity shall vest in CCC on the eleventh day and the producer shall be considered to have voluntarily forfeited his commodity to CCC and shall be subject to the voluntary forfeiture provisions of § 1421.683(d).

(b) *Storage payment units.* Storage payments for farm-stored grain reserve loans shall be based on the regular loan quantity transferred to the reserve, except that such payments can be based on the quantity measured for reserve loan when such measured quantity is more than the regular loan quantity.

(c) *Storage credit.* Storage credit for less than one year will be computed on a daily basis.

(d) *Eligible storage credit.* Storage credit shall be allowed for the duration of the loan, except that no storage credit shall be earned between the day following the second consecutive CCC announcement that the national average market price for the commodity is equal to or exceeds the release level and the date of a subsequent announcement by CCC that the market price is again below the release level. However, notwithstanding the above exception, storage credits will continue to be earned by farmers if their State's mid/month average price received by farmers where the grain is stored (as announced by the Economics, Statistics, and Cooperatives Service) is less than such State's average loan level, plus the difference between the national average loan rate and the release level. Any unearned storage will be subtracted from any future storage payments or will be collected when the loan is redeemed or forfeited to CCC.

(e) *Unearned storage.* No storage payment shall be earned if the producer (1) has made any false representation in the loan documents in obtaining the loan or in settlement of the loan, (2) makes an unauthorized disposition of the commodity with intent to defraud CCC, (3) abandons the commodity, or (4) negligently or otherwise impairs the commodity.

§ 1421.681 Interest rates.

(a) Each grain reserve loan shall bear interest during the first year of the agreement at the rate recorded on the regular loan document or such lower rate as may be later announced in a separate notice(s) published in the **Federal Register.**

(b) The loans shall not bear interest after the first year.

§ 1421.682 Commingling and replacement of grain.

(a) *Commingling.* In the case of farm storage, grain in the grain reserve may, with prior written approval of the county committee, be commingled with other eligible or ineligible grain from the same or any other crop year and of the same class if (1) the county committee gives prior written approval of such commingling, and (2) the county ASCS office inspects and measures the grain prior to commingling at the producer's expense.

(b) *Replacement.* Grain in the reserve may, with prior written approval of the county committee, be replaced with other grain of the same kind and equal value produced by the borrower if (1) the county committee gives prior written approval of such replacement, (2) the grain to be used for replacement is in storage on the farm or the county committee has authorized removal of the reserve grain to licensed storage before replacement according to § 1421.682(c), (3) the county committee inspects and measures the grain replacing the reserve grain at the producer's expense before removal of the reserve grain, and (4) the county committee determines that the grain to be used for replacement is of a quality equal to or better than the grain in storage in the grain reserve program. Removal of farm-stored grain in the grain reserve program without prior written approval will be considered unauthorized removal.

(c) *Licensed storage.* The producer may be authorized to move the grain in the Grain Reserve Program to licensed warehouse storage before replacement if, (1) prior to the movement of grain, a written request to do so is filed in the county office, (2) approval of the county committee is granted in writing, (3) the county ASCS office inspects and measures the grain at the producer's expense prior to removal, and (4) the grain is moved to licensed storage within 30 days after approval is granted and an endorsed negotiable warehouse receipt is deposited in escrow with the County Executive Director. The producer shall agree to remain liable for all charges incident to the storage of the grain in the warehouse and the United States in no way shall be liable for such charges. Whenever the grain which is used to replace the grain covered by the warehouse receipt held in escrow is in farm storage and the county office has determined by inspection and measurement that there is sufficient quantity in storage an the quality is equal to or better than the grain represented on the warehouse receipt, the warehouse receipt shall be returned to the person who deposited it. Whenever, a producer does not place grain in acceptable farm storage as provided herein prior to maturity of the grain reserve agreement, the producer's interest in the grain represented by the warehouse receipt, held in escrow by the County Executive Director, shall transfer to CCC.

(d) *Release for sale or livestock feed.* The producer may be authorized to move farm-stored grain in the Grain Reserve Program for delivery to a buyer for sale or for livestock feed thirty days before the producer intends to have replacement stocks in place if (1) prior to the movement of the grain, a written request to do so is filed in the county office, (2) approval of the county committee is granted in writing, (3) the county ASCS office inspects and measures the grain at the producer's expense prior to removal, (4) the grain released for livestock feed will be fed to the producer's own livestock, and (5) an inspection, at the producer's expense, of the unharvested crops indicates there will be sufficient eligible unencumbered production of equal or better quality to replace the reserve commodity.

§ 1421.683 Release levels, redemption requirements, and early redemption charges.

(a) *General.* Commodities under grain reserve loans shall not be eligible for redemption without the producer incurring liability for liquidated damages unless the national average market price as determined and announced by CCC is at least 140 percent of the then current national average loan rate in the case of wheat and 125 percent of the then current national average loan rate in the case of feed grains (hereinafter called the release level). The national average market price for each commodity, except barley, will be considered by CCC to have reached the release level when the five-day national average price for the respective commodity at major markets published by the Agricultural Marketing Service, adjusted downward to reflect prices received by farmers by the difference between (1) and mid-month prices published by the Economics, Statistics and Cooperative Service for the respective commodity for the previous month, and (2) the average mid-month price for the same month at major markets published by the Agricultural Marketing Service, equals or exceeds the release level for the respective commodity. The national average market price for barley will be considered by CCC to have reached the release level when the five-day average price for barley published by the Agricultural Marketing Service for the major market which serves the area where the majority of the barley in the reserve is stored, adjusted downward to reflect prices received by farmers by the difference between (i) the mid-month price published by the Economics, Statistics and Cooperatives Service for feed barley for the previous month in the are where the majority of the barley in the reserve is stored, and (ii) the average mid-month price for barley published by the Agricultural Marketing Service for the same month at the major market which serves the area where the majority of the barley in the reserve is stored, equals or exceeds the release level for barley. However, if CCC determines that the trend in such wheat or feed grains (including barley) prices is downward, release may not be authorized. Producers will be advised when the market reaches this release level for any such commodity and that their loans are eligible for redemption without an early redemption charge. Such determinations shall be made and announced by CCC and shall be applicable until a subsequent announcement is made. When the release level is reached for a commodity, the intial release period shall be for the remainder of the month in which release is announced plus the next month. Subsequent announcements to continue or discontinue release will be made at the end of the initial or subsequent release period. Subsequent announcements to continue release will be for the month following the preceding release period. If a subsequent announcement shows that the market price is below the applicable release level, the terms of the reserve agreement and the regulations which are applicable prior to release shall again apply and the commodity will not be eligible for redemption without an early redemption charge.

(b) *Call level.* The national average market price shall be detemined to be at the call level when the national average market price is at least 175 percent for wheat of the then current national average loan rate or 145 percent of the than current national average loan rate for feed grains.

(1) CCC will determine that the national average market price is at call level and will call the loans when the moving average AMS market price as determined in the same manner as prescribed for release levels in § 1421.683(a) is at or above such level for five consecutive market days. If the loan is not redeemed within 90 days after notification, CCC may take title to the commodity.

(2) Nothwithstanding any provision of this subpart, with respect to loans called under paragraph (c)(1) of this section, the Secretary may provide producers the options of (i) delaying their date for settlement of such loans for a period of 30 days and such additional 30-day periods as determined necessary by the Secretary in areas where the Secretary determines conditions exist which disrupt orderly marketing of the commodity under loan, and (ii) entering the unsettled loan into a subsequent reserve loan program if during the 90-day settlement period the national average market price of the loan commodity falls below the release level applicable to the loan commodity.

(c) *Redemption or voluntary forfeiture.* Redemption or voluntary forfeiture of a commodity when the national average market price for the commodity is below the release level.

(1) For conditions other than emergency release as provides in paragraph (c)(2), if a producer redeems the commodity prior to CCC announcing that the release level has been reached, such producer will be required to repay as liquidated damages, the higher of the loan principal, plus interest, plus all storage payments, plus interest, or 140 percent of the producer's then current loan rate in the case of wheat or 125 percent of the producer's then current loan rate in the case of feed grains. If a producer voluntarily forfeits the commodity prior to CCC announcing that the release level has been reached, such producer shall be required to repay all storage payments, plus interest and, as liquidated damages, the difference between the amount which would otherwise be due on the loan is redeemed at such time and 140 percent in the case of wheat or 125 percent in the case of feed grains of the producer's then current loan rate.

(2) *Emergency release.* In the case of warehouse-stored loans, if it is determined by CCC that storage space is no longer available and approved in-line storage for wheat, sorghum and barley cannot be found, the producer may repay the loan or forfeit the commodity to CCC without incurring liability for liquidated damages and may retain earned storage payments. In the case of farm-stored loans, if it is determined by CCC that there is insect infestation which cannot be controlled, the commodity is subject to damage by flood or fire, there is damage to the structure, the producer has lost control of the storage structure, or the commodity is going out of condition, the producer may repay the loan or forfeit the commodity to CCC without incurring liability for liquidated damages and retain earned storage payments.

§ 1421.684 Maturity.

Grain reserve loans mature and are due and payable on the last day of the 36th calendar month after the later of (a) the day the regular loan matured, or (b) the last day of the 36th month following the month in which the grain reserve agreement is approved, except, when the grain reserve loan is an extension of the unmatured regular loan, the grain reserve loan matures and is due and payable on the last day of the 36th month following the month in which the grain reserve agreement is approved.

Signed at Washington, D.C., on August 8, 1980.

Bob Bergland,

Secretary.

BILLING CODE 3410-05-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

20 CFR Chapter III

41 CFR Part 3

42 CFR Chapters I, III, and IV

45 CFR Subtitle A and Chapters II, III, and XIII

Nomenclature Changes

AGENCY: Department of Health and Human Services.

ACTION: Final rule.

SUMMARY: This document makes nomenclature changes in Titles 20, 41, 42, and 45 of the Code of Federal Regulations. The Department of Education Organization Act removes the education functions from the Department of Health, Education, and Welfare and redesignates that department as the Department of Health and Human Services, effective May 4, 1980. These changes are necessary to keep the Code Federal Regulations current by reflecting recent statutory changes.

EFFECTIVE DATE: May 4, 1980.

FOR FURTHER INFORMATION CONTACT: Robert Bergstrom, Room 706E, HHH Bldg., 200 Independence Avenue, SW, Washington, D.C. 20201, Telephone: 202-245-6733.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of May 5, 1980 (45 FR 29642), the Department of Health and Human Services announced the redesignation of the Department of Health, Education, and Welfare as the Department of Health and Human Services, in accordance with the Department of Education Organization Act of 1979 (Pub. L. 96-88), effective May 4, 1980. Nomenclature changes to Title 21 were made by the Food and Drug Administration, under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), in the June 17, 1980 edition of the **Federal Register** (45 FR 40976). These amendments are technical and involve no substantive change in any program. Therefore, we find that a notice of proposed rule making and public comment are unnecessary and that there is good cause not to have a delayed effective date. Therefore, under the authority of the Department of Education Organization Act of 1979, the Code of Federal Regulations is amended by changing "Department of Health, Education, and Welfare" to "Department of Health and Human Services" and "HEW" to "HHS" wherever they appear in the following CFR units:

1. Title 20, Chapter III
2. Title 41, Part 3
3. Title 42
4. Title 45, Subtitle A and Chapters II, III, and XIII.

(Sec. 509, Pub. L. 96-88, 93 Stat. 695 (20 U.S.C. 3508))

Dated: August 5, 1980.

Joan Z. Bernstein,

General Counsel.

Approved: August 7, 1980.

Patricia Roberts Harris,

Secretary.

BILLING CODE 4110-12-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Assistant Secretary for Housing—Federal Housing Commissioner

24 CFR Part 235

[Docket No. R-80-855]

Mortgage Insurance and Assistance Payments for Home Ownership and Project Rehabilitation; Waiver Provision

AGENCY: Department of Housing and Urban Development (HUD), Office of Assistant Secretary for Housing-Federal Housing Commissioner.

ACTION: Final rule.

SUMMARY: This rule will provide the Secretary of Housing and Urban Development with discretionary authority to waive, subject to statutory limitations, any provision in the Section 235 regulations in any case where it is determined that good cause exists for such action.

EFFECTIVE DATE: September 13, 1980.

FOR FURTHER INFORMATION CONTACT: John J. Coonts, Director, Single Family Development Division, Office of Single Family Housing, Department of Housing and Urban Development, Washington, DC 20410. Telephone: (202) 755-6720 (This is not a toll free number).

SUPPLEMENTARY INFORMATION: The Section 235 regulations presently do not contain a provision authorizing case waivers of the regulations' requirements. In the past this has resulted in disapprovals of worthwhile and unique proposals to provide much needed housing for lower income families which could have met all applicable statutory requirements. The regulations for the Section 8 program contain a waiver provision, specifically 24 CFR 899.101(a), which has permitted needed flexibility in the administration of that program. Therefore, it has been determined that the Section 235 regulations should be amended to include a similar waiver provision.

It has also been determined that prior notice and public procedure in regard to this rule are unnecessary because the rule will promulgate a minor technical provision intended to facilitate program administration within existing legal requirements. Moreover, early effectiveness of this rule is necessary since a waiver provision may be needed to facilitate processing during the remainder of the current Fiscal Year.

A Finding of Inapplicability respecting the National Environmental Policy Act of 1969 has been made in accordance with HUD procedures. A copy of this Finding of Inapplicability will be available for public inspection during regular hours in the Office of the Rules Docket Clerk, Room 5218, Department of Housing and Urban Development, 451 Seventh Street, S.W., Washington, DC 20410.

This rule is not listed in the Department's semiannual agenda of significant rules, published pursuant to Executive Order 12044.

Accordingly, Part 235 of Chapter II, 24 CFR is amended by adding a new section as follows:

§ 235.3 Waivers.

Upon determination of good cause, the Secretary of Housing and Urban Development may, subject to statutory limitations, waive any provision of this Part. Each such waiver shall be in writing and shall be supported by documentation of the pertinent facts and grounds.

Authority: The provisions of this Part 235 issued under Sections 211, 235, National Housing Act, as amended; 12 U.S.C. 1715b, 1715z; and Section 7(d) Department of Housing and Urban Development Act, 42 U.S.C. 3535(d).

Issued at Washington, DC, August 7, 1980.

Lawrence B. Simons,

Assistant Secretary for Housing-Federal Housing Commissioner.

[FR Doc. 80-24371 Filed 8-12-80; 8:45 am]

BILLING CODE 4210-01-M

VETERANS ADMINISTRATION

38 CFR Part 17

Medical Benefits; Timely Filing of Claims for Payment

AGENCY: Veterans Administration.

ACTION: Final regulations.

SUMMARY: The VA (Veterans Administration) has amended its "Medical Series" of regulations to clarify the present regulation on timely filing of claims to include that payment of claims will not be made for medical care received prior to the effective date of the grant of service connection.

EFFECTIVE DATE: August 6, 1980.

FOR FURTHER INFORMATION CONTACT: Mr. Joseph Fleckenstein (202-389-3785).

SUPPLEMENTARY INFORMATION: On pages 7268 and 7269 of the **Federal Register** of February 1, 1980, proposed amendments were published to §§ 17.82, 17.84 and 17.85, Title 38, Code of Federal Regulations. Interested persons were given 30 days to submit comments, suggestions or recommendations regarding the proposed regulations. No written objections have been received and the proposed regulations are hereby adopted without change and are set forth below.

Approved: August 6, 1980.

By direction of the Administrator.

Rufus H. Wilson,

Deputy Administrator.

§ 17.82 [Amended]

1. Section 17.82 is amended by deleting the word "his" and adding the word "his/her".

§ 17.84 [Amended]

2. Section 17.84 is amended by deleting the words "Veterans Administration hospital" and inserting the words "Veterans Administration facility" in paragraph (a); by deleting the words "Veterans Administration Hospital" and inserting the words "Veterans Administration Medical Center" in paragraph (c); and by deleting the words "Veterans Administration Center" and inserting the words "Veterans Administration Medical and Regional Office Center" in paragraph (e).

3. In § 17.85, paragraph (b) is revised to read as follows:

§ 17.85 Timely filing.

Claims for payment or reimbursement of the expenses of medical care or services not previously authorized must be filed within the following time limits:

* * * * *

(b) In the case of care or services rendered prior to a Veterans Administration adjudication allowing service connection, a claim must be filed within 2 years of the date of notification of such allowance of an original or reopened claim for service connection of the disability for which treatment was rendered, except payment will not be made for any care rendered prior to the effective date of the grant of service connection or more than 2 years prior to filing the original or reopened claim for service connection which resulted in allowance, whichever is later, or

BILLING CODE 8320-01-M

---

38 CFR Part 36

Loan Guaranty; Acquisition and Improvement Loans

AGENCY: Veterans Administration.

ACTION: Final regulations.

SUMMARY: The VA (Veterans Administration) is amending its regulations to authorize veterans purchasing an existing home with a VA guaranteed loan to secure additional funds for energy-saving home improvements or other alterations, improvements or repairs at the time of home acquisition. These regulations will assist veterans to make their homes more energy efficient, to save valuable fossil fuel resources, and to protect the veteran's investment in the home by lowering monthly utility bills.

The VA also is amending its regulations to authorize lenders to report closed loans for guaranty at any time within 60 days following full disbursement of the loan. These amendments are for the purpose of liberalizing loan reporting requirements through extension from 30 to 60 days the time within which a loan must be reported to the VA for loan guaranty. It is expected that these amendments will reduce paperwork for program participants and the VA by eliminating the majority of late reported loans.

EFFECTIVE DATE: August 6, 1980.

FOR FURTHER INFORMATION CONTACT: Mr. George D. Moerman, Assistant Director for Loan Policy (264), Loan Guaranty Service, Veterans Administration, Washington, D.C. 29420 (202-389-3042).

SUPPLEMENTARY INFORMATION: The VA is amending the home loan (§ 36.4300 series) regulations to authorize VA guaranty of loans which include funds for simultaneous acquisition and improvement of existing homes. These amendments make it possible for a veteran purchasing an existing home to finance the installation of energy conserving improvements at the time of home acquisition. For example, improvements may include insulation, storm windows, a heat pump, solar energy water heating equipment or solar heating and/or cooling equipment. A veteran may make other desired alterations, improvements or repairs such as the addition of a bathroom or the modernization of a kitchen.

The addition of § 36.4301(c) provides a new definition entitled "Acquisition and Improvement Loan." The amendments to § 36.4303(a) delete the requirement that home loans processed on the automatic basis may not be guaranteed until the improvements have been completed. The amendment to § 36.4301(n) authorizes lenders to place the portion of the loan funds for improvements in an escrowed or earmarked account pending completion of the home improvements. The amendments to §§ 36.4301(n) and 36.4303(a) therefore, allow acquisition and improvement loans to be guaranteed on the automatic basis once the loan has been closed, title to the property has been properly acquired and the improvement funds satisfactorily escrowed or earmarked. Similarly, the amendments to §§ 36.4301(n) and 36.4303(d) authorize loans closed on the prior approval basis to be guaranteed after the loan has been properly closed, title to the property properly acquired, and the improvement funds placed in an escrowed or earmarked account. In addition, amendments to § 36.4312(d)(6) authorize the veteran to pay the discount on that portion of the loan which is for energy conservation improvements or other alterations, improvements or repairs. Since a majority of VA guaranteed loans are sold to secondary market investors, VA lenders usually require discounts in order to sell the loan on the secondary market. A lender making a VA loan and selling it on the secondary market will require the discount on the entire loan amount. However, the seller of an existing property probably will be unwilling to pay the loan discount on the improvements portion of the loan. Thus, the amendment to § 36.4312(d)(6) authorizes the veteran to pay the loan discount on the improvement portion of the loan provided it does not exceed the

percentage of discount paid by the seller on the acquisition portion of the loan.

Amendments also are adopted to §§ 36.4303 (a), (d), and 36.4335 to allow lenders to report either automatic or prior approval loans for guaranty within 60 days following full loan disbursement. Previously, loans had to be reported to the VA within 30 days of full disbursement in order to be eligible for loan guaranty. A substantial number of loans were reported "late" or over 30 days after full loan disbursement, but were otherwise eligible for guaranty. Lenders reporting loans late must request a waiver which must be accepted by VA, and the waiver appropriately documented in the VA loan file. A very large number of loans are reported within 60 days of full loan disbursement. These amendments will mean that such loans are no longer late reporting thereby eliminating time consuming waivers. The amendments should have the beneficial effect of reducing paperwork for both program participants and the VA.

A technical clarifying amendment also is adopted to § 36.4303(b), and an amendment is adopted to § 36.4303(f) to delete an obsolete proviso.

These amendments were published as proposed regulations in the **Federal Register** on January 21, 1980 (45 FR 3926). Five comments were received concerning the amendments to establish an acquisition and improvement home loan program. All five comments were favorable; however, one commentator expressed concern that veterans would use improvement funds to install heat pump heating and cooling systems when more efficient heating systems are available. We expect the commentator's concern to be solved by normal market forces in which a majority of people will attempt to purchase the most efficient heating and cooling systems depending upon the fuel sources available. Therefore, no amendment to the proposed acquisition and improvement regulations is necessary. No comments were received concerning the change in the late reporting requirements or the technical amendments to other regulations.

Finally, a technical clarifying amendment is adopted to § 36.4312(d)(6)(iv) to conform the VA regulations to a longstanding VA policy. When a refinancing loan or other loan in which the veteran may pay the discount is approved, a VA certificate of commitment is issued specifying a maximum discount which the lender may charge the veteran. Current VA policy requires that only the Chief Benefits Director or the Director, Loan Guaranty Service, as delegated by the Administrator, may authorize an increase in the loan discount payable by the veteran on such loans after the date the certificate of commitment is issued. Previously, § 36.4312(d)(6)(iv) delegated this authority to several officials including officials at the field station level. Section 36.4312(d)(6)(iv) therefore, is amended to conform the regulations to the VA policy and to authorize only the Chief Benefits Director and the Director, Loan Guaranty Service to increase the loan discount maximum payable by a veteran on loans in which certificates of commitments have previously been issued.

These amendments are adopted under authority of sections 210(c), 1803(c)(1), 1810(a)(1), (4) and (7) of title 38, United States Code.

Accordingly, the proposed regulations are hereby adopted and are set forth below.

Approved: August 6, 1980.

By direction of the Administrator.

Rufus H. Wilson,

Deputy Administrator.

1. In § 36.4301, paragraph (c) is added and paragraph (n) is revised so that the added and revised material reads as follows:

§ 36.4301 Definitions.

* * * * *

(c) "Acquisition and improvement loan." A loan to purchase an existing property which includes additional funds for the purpose of installing energy conservation improvements or making other alterations, improvements, or repairs. (38 U.S.C. 1803(c)(1), 1810(a)(1), (4), and (7))

* * * * *

(n) "Full disbursement." Payment by a lender of the entire proceeds of a loan or the purposes described in the report of the lender in respect of such loan to the Administrator either—

(1) By payment to those contracting with the borrower for such purposes, or

(2) By payment to the borrower, or

(3) By transfer to an account against which the borrower can draw at will, or

(4) By transfer to an escrow account, or

(5) By transfer to an earmarked account if

(i) The amount thereof is not in excess of 10 percent of the loan, or

(ii) The loan is an Acquisition and Improvement loan pursuant to § 36.4301(c), or

(iii) The loan is one submitted by a lender of the class specified in 38 U.S.C. 1802(d) or 1815(a). (38 U.S.C. 1803(c)(1))

* * * * *

2. Section 36.4303 is amended as follows:

(a) By deleting "if the application of the veteran to a lender for such loan was made on or after September 15, 1956," in the last sentence of paragraph (f).

(b) By revising paragraphs (a), (b) and (d) to read as follows:

§ 36.4303 Reporting requirements.

(a) With respect to loans automatically guaranteed under 38 U.S.C. 1803(a)(1) evidence of the guaranty will be issuable to a lender of a class described under 38 U.S.C. 1802(d) if the loan is reported to the Administrator within 60 days following full disbursement, and upon the certification of the lender that:

(1) No default exists thereunder which has continued for more than 30 days;

(2) Except for acquisition and improvement loans as defined in § 36.4301(c), any construction, repairs, alterations, or improvements effected subsequent to the appraisal of reasonable value, and paid for out of the proceeds of the loan, which have not been inspected and approved upon completion by a compliance inspector designated by the Administrator have been completed properly in full accordance with the plans and specifications upon which the original appraisal was based, and any deviations or changes of identity in said property have been approved as required in § 36.4304 concerning guaranty or insurance of loans to veterans;

(3) The loan conforms otherwise with the applicable provisions of 38 U.S.C. ch. 37 and of the regulations concerning guaranty or insurance of loans to veterans. (38 U.S.C. 1803(c)(1))

(b) Loans made pursuant to 38 U.S.C. 1815 although not entitled to automatic insurance thereunder may, when made by a lender of a class described in 38 U.S.C. 1802(d)(1), be reported for issuance of an insurance credit or a certificate of commitment as provided in paragraph (a) of this section. (38 U.S.C. 1802(d), 1815)

* * * * *

(d) A certificate of commitment shall entitle the holder to the issuance of the evidence of guaranty or insurance upon the ultimate actual payment of the full proceeds of the loan for the purposes described in the original report and upon the submission within 60 days thereafter of a supplemental report showing that fact and—

(1) The identity of any property purchased therewith,

(2) That all property purchased or acquired with the proceeds of the loan has been encumbered as required by the

regulations concerning guaranty or insurance of loans to veterans,

(3) Except for acquisition and improvement loans as defined in § 36.4301(c), any construction, repairs, alterations, or improvements paid for out of the proceeds of the loan which have not been inspected and approved subsequent to completion by a compliance inspector designated by the Administrator have been completed properly in full accordance with the plans and specifications upon which the original appraisal was based and that any deviations or changes of identity in said property have been approved as required by § 36.4304, and

(4) That the loan conforms otherwise with the applicable provisions of 38 U.S.C. ch. 37 and the regulations concerning guaranty or insurance of loans to veterans. (38 U.S.C. 1803(c)(1))

* * * * *

3. In § 36.4312, paragraph (d)(6)(i)(B) and (iii) is revised and paragraph (d)(6)(iv) is added so that the added and revised material reads as follows:

§ 36.4312 Charges and fees.

* * * * *

(d) The following schedule of permissible fees and charges shall be applicable to all Veterans Administration-guaranteed or insured loans:

* * * * *

(6) Allowable discounts.

(i) The veteran borrower subject to the limitations set forth in this paragraph, may pay a discount required by a lender when the proceeds of the loan will be used for any of the following purposes:

* * * * *

(B) To repair, alter or improve a dwelling owned by the veteran pursuant to 38 U.S.C. 1810(a) (4) or (7);

* * * * *

(iii) A veteran may pay the discount on an Acquisition and Improvement loan (as defined in § 36.4301(c)) provided:

(A) The veteran pays no discount on the acquisition portion of the loan except in accordance with paragraph (d)(6)(i)(D) of this section; and

(B) The discount paid on the improvements portion of the loan does not exceed the percentage of discount paid on the acquisition portion of the loan.

Acquisition and Improvement loans may be closed either on the automatic or prior approval basis.

(iv) All powers of the Administrator under paragraph (d)(6) of this section except the authority to revise the discount after the commitment is issued, are hereby delegated to those officials designated by § 36.4342(b). The power of the Administrator to approve an increase in the discount after the commitment is issued is delegated to those officials designated by § 36.4335. (38 U.S.C. 1803(c)(1), 1810(a))

4. In § 36.4335, paragraphs (a) and (b) are revised to read as follows:

§ 36.4335 Supplementary administrative action.

* * * * *

(a) The requirement in § 36.4303(a) that a lender of a class described under 38 U.S.C. 1802(d) originating a loan under the automatic (nonprior approval) procedure report such loan for issuance of guaranty or insurance evidence within 60 days following full disbursement. Waiver of the lender's failure to report the loan within the 60-day period shall be confined to cases where the loan is not in default. (38 U.S.C. 1803(c)(1))

(b) The requirement in § 36.4303(d) that a lender originating a loan under a certificate of commitment report the loan for issuance of guaranty or insurance evidence within 60 days following actual payment of the full proceeds of the loan. In such cases it is not necessary that a finding be made that the loan is not in default. (38 U.S.C. 1803(c)(1))

BILLING CODE 6320-01-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL 1568-6]

Approval and Promulgation of Implementation Plans; Tennessee: 1979 Plan Revisions

AGENCY: U.S. Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: EPA today announces action on specific State Implementation Plan (SIP) revisions which the Tennessee Air Pollution Control Division submitted pursuant to requirements of Part D of Title I of the Clean Air Act, as amended in 1977, with regard to nonattainment areas. EPA has found all portions of the submitted revisions to be approvable except for certain aspects. First, EPA is giving conditional approval to the CO and ozone control strategy for Nashville on condition that the noted deficiency is corrected by January 31, 1981 and June 30, 1981. Secondly, EPA is giving conditional approval to the Statewide ozone control strategy on the condition that noted deficiency in stationary source regulations be corrected by October 1, 1980. Thirdly, EPA is giving conditional approval to the total suspended particulate (TSP) plan for Nashville provided the noted deficiency be corrected by October 1, 1980. EPA has been informed by the Tennessee Department of Public Health, Division of Air Pollution Control, that the Tennessee Government Operations Committee of the Tennessee Legislature has rejected the regulations pertinent to control of particulates in the Columbia particulate nonattainment area. Under these circumstances, no action on the previously submitted TSP plan for Columbia is being taken and the applicable stationary new source growth restrictions of Section 110(a)(2)(I) of the Clean Air Act continue to apply to that nonattainment area.

DATE: These actions are effective August 13, 1980.

ADDRESSES: Copies of the materials submitted by Tennessee may be examined during normal business hours at the following locations:

Public Information Reference Unit, Library Systems Branch, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460.

Library, Environmental Protection Agency, Region IV, 345 Courtland Street, NE., Atlanta, Georgia 30365.

Tennessee Air Pollution Control Division, 256 Capitol Hill Building, Nashville, Tennessee 37203.

Air Pollution Section, Metropolitan Health Department, 1600 Hayes Street, Nashville, Tennessee 37203.

FOR FURTHER INFORMATION CONTACT: Raymond Gregory, Region IV, Air Programs Branch, 345 Courtland Street, NE., Atlanta, Georgia 30365, 404/881-3286 (FTS 257-3286).

SUPPLEMENTARY INFORMATION:

Background

In the March 3, 1978, **Federal Register** (43 FR 8962 at 9035), the September 11, 1978 **Federal Register** (43 FR 40412 at 40432), and the November 2, 1979 **Federal Register** (44 FR 63104 at 63105), a number of areas within the State of Tennessee were designated as not attaining certain national ambient air quality standards. The areas designated nonattainment for the primary and secondary standards for total suspended particulate matter (TSP) are:

A. That portion of Anderson and Knox Counties surrounding TVA's Bull Run Plant. (Secondary only)

V 45 A G 13 80 UMI

B. Those portions of Campbell County within downtown Lafollette and the area surrounding the Carborundum Company's plant at Jacksboro.

C. That portion of Davidson County within the 1964 Urban Services area of Nashville.

D. That portion of Hamilton County within approximately the city limits of Chattanooga.

E. That portion of Maury County within the northern section of Columbia.

F. Those portions of Shelby County within two sections of downtown Memphis.

G. Those portions of Sullivan County within a section of Bristol and a section of Kingsport.

H. That portion of Sumner County surrounding TVA's Gallatin plant. (Secondary only)

The areas designated nonattainment for the primary and secondary standards for sulfur dioxide (SO_2) are:

A. That portion of Polk County surrounding the Cities Service plant at Copperhill.

B. That portion of Benton and Humphreys Counties surrounding TVA's Johnsonville plant.

The areas designated nonattainment (the same standard serves as both the primary and secondary standard) for carbon monoxide (CO) are:

A. That portion of Davidson County located in downtown Nashville.

B. That portion of Knox County located in metropolitan Knoxville.

C. That portion of Shelby County located in metropolitan Memphis.

The areas designated nonattainment (the same standard serves as both the primary and secondary standard) for photochemical oxidants (ozone) are:

A. Nashville area—Davidson, Sumner, Rutherford, Wilson and Williamson Counties.

B. Shelby County
C. Maury County
D. Hamilton County
E. Knox County
F. Sullivan County
G. Bradley County
H. Roane County

Implementation plan revisions under Part D of the Clean Air Act Amendments (CAAA) previously developed and submitted by the State for the following areas were the subject of final rulemaking published in the **Federal Register** on February 6, 1980 (45 FR 8004): TSP-Sullivan County (Bristol), Campbell County, Sumner County, Anderson/Knox Counties; SO_2—Polk County, Benton/Humphreys Counties; CO—Shelby County, Knox County.

Implementation plan revisions under the CAAA developed by the State and the subject of today's notice include the following areas:

Ozone—Statewide
CO—Davidson County
TSP—Columbia, Nashville

The implementation plan revisions for the remaining nonattainment areas will be proposed later after review of submittals. The revisions which are the subject of today's action were submitted for EPA's approval on June 28, July 2, 1979 and May 8, 1980. The announcement of proposed conditional approval for these revisions was published on October 2, 1979 (44 FR 56717). The Tennessee revisions have been reviewed by EPA in light of the CAA of 1977, EPA regulations, and additional guidance materials. The criteria utilized in this review were detailed in the **Federal Register** on April 4, 1979 (44 FR 20372), and need not be repeated in detail here. Supplements to the April 4 notice were published on July 2, 1979 (44 FR 38583), August 28, 1979 (44 FR 50371), September 17, 1979 (44 FR 53716), and November 23, 1979 (44 FR 67182); these involve, among other things, conditional approval.

As indicated in detail in the October 2, 1979, proposed notice, these Tennessee revisions meet all the requirements of section 172 of the Clean Air Act and EPA's implementing regulations except as noted below. Also, the State has made a commitment to submit as plan revisions any external offsets required of sources impacting nonattainment areas (see revised § 52.2222 below).

EPA is taking final action to approve and to conditionally approve certain elements of Tennessee's plan. A discussion of conditional approval and its practical effect appears in a supplement to the General Preamble, 44 FR 38583 (July 2, 1979). The conditional approval requires the State to submit additional materials by the deadlines specified in today's notice. There will be no extensions of conditional approval deadlines which are being promulgated today. EPA will follow the procedures described below when determining if the State has satisfied the conditions.

1. If the State submits the required additional documentation according to schedule, EPA will publish a notice in the **Federal Register** announcing receipt of the material. The notice of receipt will also announce that the conditional approval is continued pending EPA's final action on the submission.
2. EPA will evaluate the State's submission to determine if the condition is fully met. After review is complete, a **Federal Register** notice will be published proposing that the condition has been met and approve the plan, or that the condition has not been met, withdraw the conditional approval and disapprove the plan. If the plan is disapproved the Section 110 (a)(2)(I) restrictions on construction will be in effect.
3. If the State fails to timely submit the required materials needed to meet a condition, EPA will publish a **Federal Register** notice shortly after the expiration of the time limit for submission. The notice will announce that the conditional approval is withdrawn, the SIP is disapproved and Section 110 (a)(2)(I) restrictions on growth are in effect.

Certain deadlines for satisfying conditions are being promulgated today without prior notice and comment. EPA finds that for good cause notice and comment on these deadlines are unnecessary. See 5 U.S.C. 553(b)(B) (the Administrative Procedure Act). The State is the party responsible for meeting the deadlines; and the State has requested this extension of the deadline from March 1, 1980, to October 1, 1980. This is because the State must have the additional time to complete the SIP revision process after adoption of the changes for Nashville by the Metropolitan Health Department (Nashville-Davidson County). In addition, the public has had an opportunity to comment generally on the concept of conditional approval and on what deadlines should apply for these conditions. 44 FR 38583 (July 2, 1979), 44 FR 56717 (October 2, 1979).

EPA finds good cause to make these approvals and conditional approvals immediately effective, because the Clean Air Act restricts new construction where plans are not approved after June 30, 1979, and making these actions immediately effective will terminate the restriction as soon as possible.

General Discussion

The notice of proposed rulemaking discussed each of the provisions of Section 172(b) of the Clean Air Act of 1977. This notice discusses the substantive issues addressed in the proposal notice of October 2, 1979, and the public comments which were received as a result of that notice as well as responses to comments made on a national basis.

Public hearings were held in the State on the adopted material following 30 days public notice. Public hearings were conducted October 16, 1978, February 14, April 19, May 8 and 9, June 5, 6, 14, and 19, 1979 and March 13, 1980. These SIP provisions were adopted by the State and/or local agency on March 14,

April 11, June 20 and 28, 1979 and May 1, 1980.

Reasonable further progress (RFP) graphs and calculations accompany each explanation of progress toward attainment for each nonattainment area. the submitted revisions which this notice addresses call for meeting the National Ambient Air Quality Standards in all areas by the end of 1982 except for carbon monoxide and ozone in Nashville. The State has requested an extension to the end of 1987 for meeting the carbon monoxide and ozone standards in this area. EPA is approving this extension request. Therefore, a mandatory inspection/maintenance program for motor vehicles, transportation control measures, and a new source review program consistent with Section 172 (b)(11) must be implemented. As a requirement for the extension to 1987, the SIP must include:

A. An adequate inspection and maintenance program for motor vehicles.

"Inspection/Maintenance" (I/M) as it is used in Section 172 (b)(11)(B) above, refers to a program whereby motor vehicles receive periodic inspections to assess the functioning of their exhaust emission control systems. Vehicles which have excessive emissions must then undergo mandatory maintenance. Generally, I/M programs include passenger cars, although other classes may be included as well.

Operation of noncomplying vehicles is prohibited. This is most effectively accomplished by requiring proof of compliance in order to purchase license plates or to register a vehicle. In certain cases, a windshield sticker system can be used, much like many motor vehicle safety inspection programs. Section 172 of the Clean Air Act requires that State Implementation Plans for States which include nonattainment areas must meet certain criteria. For areas which demonstrate that they will not be able to attain the ambient air quality standards for ozone or carbon monoxide by the end of 1982, despite the implementation of all reasonably available measures, an extension to 1987 will be granted. In such cases Section 172(b)(11)(B) requires that: "the plan provisions shall establish a specific schedule for implementation of a vehicle emission control inspection and maintenance program * * *"

EPA issued guidance on February 24, 1978, on the general criteria for SIP approval including I/M, and on July 17, 1978, regarding the specific criteria for I/M SIP approval. Both of these notices are part of the SIP guidance material referred to in the General Preamble for Proposed Rulemaking 44 FR 20372, n 6.

Although the July 17, 1978, guidance should be consulted for details, the key elements for I/M SIP approval are as follows:

- *Legal Authority.* States or local governments must have adopted the necessary statutes, regulations, ordinances, etc., to implement and enforce the inspection/maintenance program. (Section 172 (b) (10).)
- *Commitment.* The appropriate governmental unit(s) must be committed to implement and enforce the I/M program. (Section 172 (b) (10).)
- *Resources.* The necessary finances and resources to carry out the I/M program must be identified and committed. (Section 172 (b)(7).)
- *Schedule.* A specific schedule to establish the I/M program must be included in the State Implementation Plan. (Section 172 (b) (11) (B).) Interim milestones are specified in the July 17, 1978, memorandum in accordance with the general requirement of 40 CFR 51.15(c).
- *Program Effectiveness.* As set forth in the July 17, 1978 guidance memorandum, the I/M program must achieve a 25% reduction in passenger car exhaust emissions of hydrocarbons and a 25% reduction for carbon monoxide. This reduction is measured by comparing the levels of emission projected to December 31, 1987, with and without the I/M program. This policy is based on Section 172 (b)(2) which states that "the plan provisions * * * shall * * * provide for the implementation of all reasonably available control measures * * *"

Specific detailed requirements of these five provisions are discussed below.

To be acceptable, I/M authority must be adequate to implement and effectively enforce the program and must not be conditioned upon further legislative approval or any other substantial contingency. However, the legislation can delegate certain decision making to an appropriate regulatory body. For example, a State Department of environmental protection or Department of Transportation may be charged with implementing the program, selecting the type of test procedure as well as the type of program to be used, and adopting all necessary rules and regulations. I/M legal authority must be included with any plan revision which establishes an attainment date beyond December 31, 1982, unless an approved extension to certify legal authority is granted by EPA. The legal authority certification has been submitted and is addressed later in this notice.

Written evidence is also required to establish that the appropriate governmental bodies are "committed to implement and enforce the appropriate elements of the plan." (Section 172 (b)(10).) Under Section 172 (b)(7), supporting commitment for the necessary financial and manpower resources are also required.

A specific schedule to establish an inspection/maintenance program is required. (Section 172 (b)(11)(B).) The July 17, 1978, guidance memorandum established as EPA policy the key milestones for the implementation of the various I/M programs. These milestones meet the general SIP requirement for compliance schedules as governed by 40 CFR 51.15(c). That section requires that increments of progress be contained in compliance schedules of over one year in length.

To be acceptable an I/M program must achieve the requisite 25% reductions in both hydrocarbon (HC) and carbon monoxide (CO) exhaust emissions from passenger cars by the end of calendar year 1987. The Act mandates "Implementation of all reasonably available control as expeditiously as practicable." Section 172(b)(2). At the time of passage of the Clean Air Act Amendments of 1977, several inspection/maintenance programs were already operating, including mandatory programs of New Jersey and Arizona operating at about a 20% stringency. (The stringency of a program is defined as the initial proportion of vehicles which would have failed the program's standards if the affected fleet had not undergone I/M before initial testing. Because some motorists tune their vehicles before I/M tests, the actual proportion of vehicles failing is usually a smaller number that the stringency of the program.) Depending on program type (private garage or centralized inspection) a mandatory I/M program may be implemented as late as December 31, 1982 and the attainment date may be as late as December 31, 1987. Based on an implementation date of December 31, 1982 and a 20% stringency factor, EPA predicts the reductions of both CO and HC exhaust emissions of 25% can be achieved by December 31, 1987. Earlier implementation of I/M will produce greater emission reductions. Thus, because of the Act's requirement for the implementation of all reasonably available control measures and because New Jersey and Arizona have effectively demonstrated practical operation of I/M programs with 20% stringency factors, it is EPA policy to use a 25% emission reduction as the

criteria to determine compliance of the I/M portion with Section 172(b)(2). (See Nashville (CO) for discussion of the above points.)

B. A program for selecting a package of transportation control measures (and any other necessary measures) to attain the emission reductions target must be described in the SIP. The package should include an adopted schedule for expeditious implementation of currently planned reasonable transportation control measures, and schedules for analysis and adoption of additional transportation control (and other necessary) measures (Ref. CAA Section 110 (a)(3)(D), and Section 172(b)(2)).

C. A commitment to establish, expand, or improve public transportation needs as expeditiously as practicable, including a commitment to use necessary federal grants and State and local funds (Ref. CAA, Section 110(a)(3)(D), and Section 172(b)(2)).

The following is a discussion of the adequacy of the submittals for each nonattainment area:

Nashville (CO)–The State has calculated that a 40% reduction in CO emissions is necessary to achieve the 10 mg/m^3 8-hour ambient standard. Since approximately 99% of the CO emissions are attributed to motor vehicles, all emission reduction measures are directed toward this source category through use of the Federal Motor Vehicle Control Program (FMVCP). Nashville will be unable to meet the CO ambient standard by the end of 1982 and has requested an extension to 1987 to meet the ambient standard. EPA is approving this extension request. EPA's review of the Nashville CO control strategy relative to the transportation control measures has revealed some deficiencies as noted in the Agency's October 2, 1979 [44 FR 56717] proposal notice. Listed below are the deficiences noted in 44 FR 56717 and the corrections submitted on May 8, 1980.

1. Deficiency: The current 1979 Annual Element of the Transportation Improvement Program (TIP/AE) must be reviewed for projects that have a positive air quality impact. Measures that are found to have benefits and are feasible must be submitted with implementation dates. The implementation dates should correspond to the dates shown in the TIP/AE. Those measures selected from the 1979 TIP/AE for incorporating into the State Implementation Plan must also include a commitment to the implementation and enforcement of such measures by the responsible agencies.

Correction: A list of projects, committed to implementation by the end of 1980 on Davidson County, which will have air quality benefits was submitted by the State by letter of May 8, 1980. The projects were taken from the 1979 Annual Element of the area's Transportation Improvement Program. The projects are actions to promote ride sharing, bicycling and transit use. A letter of commitment to these projects by the State Department of Transportation and a resolution of commitment adopted by the Metropolitan Planning Organization was also included in the above submittal. Implementation dates are consistent with the Annual Element of the Transportation Improvement Program.

2. Deficiency: under Section 174, the Memorandum of Understanding (MOU) between the proper State and local officials includes a commitment to the implementation of stationary source controls but not mobile source controls. The I/M schedule should be revised to identify the date by which the enforcement mechanism(s) will be decided. The I/M schedule should also identify when procedures and guidelines for testing and quality control will be adopted.

Correction: The list of projects to be implemented with air quality benefits (see correction above) do not require an enforcement mechanism. Therefore, the Memorandum of Understanding pursuant to Section 174 is considered adequate. The I/M schedule has been revised showing January 1981 as a deadline date for adoption of procedures and guidelines for testing, and quality control. The revised schedule was included in the May 8, 1980 submittal.

EPA is conditionally approving the Nashville transportation control plan upon adoption by Council of the Metropolitan Governments of Nashville of a mechanism to prevent noncomplying vehicles from operating upon public roads in Davidson County. Such a mechanism shall be as equally effective as denial of vehicle registration. The deadline for adoption of this mechanism shall be January 31, 1981. Submission of the adopted mechanism to EPA shall be June 30, 1981.

EPA has received an opinion from the Tennessee Attorney General's office concluding that there is sufficient statutory authority for an inspection and maintenance program to be implemented by certain cities in the State. Further, EPA has received a letter from the Mayor of Nashville committing to seek legislation and the necessary financial and manpower resources to implement a mandatory motor vehicle emission inspection and maintenance (I/M) program for light duty vehicles. Last year, the necessary ordinance was passed by the Council of the Metropolitan Governments of Nashville. This ordinance allows the Metropolitan Board of Health (Board of Health) to adopt by rule or regulation, promulgate, require and enforce programs for vehicles propelled by internal combustion engines and to prescribe reasonable fees. Also, the Mayor's letter and ordinance indicate that the final implementing regulations must be approved by the Council of Metropolitan Governments of Nashville. Because approval by the Council of Governments is the device used routinely for adoption of regulatory requirements, EPA believes the existing legal authority is adequate. However, EPA recognizes that the Mayor cannot commit the Council of Governments to any future action, and it should be understood that a failure by the City to institute a mandatory I/M program according to the schedule submitted in the SIP will make the area liable to the imposition of limitations under the Clean Air Act.

The Mayor's letter endorses the I/M schedule submitted in the SIP. This schedule indicates that a centralized operated I/M program will be instituted, and calls for the mandatory I/M program to begin in September 1981.

The enforcement mechanism is currently undecided, with several options open. The ordinance passed by the Council grants the authority for enforcement and establishment of fees to the Board of Health. One option is for the Board of Health to use its personnel and resources to implement an enforcement program. Another option is to add the I/M enforcement to the current city sticker system. Failure to enact an adequate enforcement mechanism would also make Nashville liable to sanctions under the Clean Air Act.

The SIP also indicates that a 25 percent reduction in CO emissions from light duty vehicles will be achieved and this is reflected in the reasonable further progress (RFP) curve.

Based upon the commitments, legal authority and schedules to implement and enforce the I/M program, EPA is conditionally approving the CO control strategy for Nashville provided that the deficiency noted above in the transportation control plan is corrected by adoption by January 31, 1981 and submittal by June 30, 1981.

Nashville (Ozone)—The State has calculated that a 35 percent reduction in hydrocarbon emissions is needed to meet the ozone standard. Reductions of 34 percent will be obtained through the FVMCP and regulations for volatile

organic compounds (VOCs) emitted by specific categories of sources by 1982. Since the area will not be able to demonstrate attainment of the ozone standard by December, 1982, they have requested an extension to 1987 to attain the ozone standard. This requires that a transportation control plan including a mandatory inspection and maintenance program be implemented in Nashville/Davidson County. EPA is approving this extension request. For the discussion on Nashville/Davidson County's transportation control plan, please refer to the previous discussion on the Nashville CO control strategy. The Nashville Metropolitan Health Department has adopted regulations pertaining to those emission limitations and process and equipment specifications necessary to meet the requirement that RACT be applied to these sources. Categorical compliance schedules are included. These regulations are for sources in nine source categories.

Categories of sources controlled by presently adopted regulations include:

(1) surface coating including (a) coil coating (b) paper coating (c) fabric and vinyl coating; (2) metal furniture coating; (3) large appliance surface coating; (4) petroleum liquid storage; (5) bulk gasoline plants; (6) bulk gasoline terminals; (7) gasoline dispensing facility Stage I; (8) solvent metal cleaning; and (9) cutback asphalt. The Nashville Agency submitted certification that no sources within the remaining source categories were located in Nashville/Davidson County.

In addition, the local agency has committed to adopt VOC regulations for additional RACT categories annually as they are developed by EPA. The Control Techniques Guidelines (CTGs) provide information on available air pollution control techniques and contain recommendations of what EPA calls the "presumptive norm" for RACT. Based on the information in the CTGs, EPA believes that the submitted regulation represent RACT, except for the definition of VOC which was submitted as 1.5 psia instead of the recommended 0.1 mm HG.

The plan included Stage I requirements for gasoline service stations which allowed an exemption for stations with throughput of les than 260,000 gallons per year rather than the recommended throughput of 120,000 gallons per year or tank size cutoff of 2,000 gallons. An adequate demonstration that this deviation represents less than five percent of the amount of control which would have been obtained from the recommended values has been submitted by the Nashville Agency. This was identified as a deficiency in the proposal notice. With the submitted demonstration, the exemption for gasoline service stations is removed as a deficiency.

EPA is conditionally approving the ozone control plan submitted for Nashville/Davidson County provided that the above-noted deficiency correction in the transportation control plan be adopted by January 31, 1981, submitted to EPA by June 30, 1981, and that the stationary source regulations be corrected by the appropriate officials and submitted to EPA by October 1, 1980.

Memphis (Ozone)—The State has calculated that a 13% reduction in hydrocarbon emissions is needed to meet the ozone standard. Reductions will be obtained through the FMVCP and statewide regulations for volatile organic compounds (VOC) emitted by large sources—those with potential emissions equal to or in excess of 100 tons per year. The State projects that a 30% reduction will occur by 1982. Therefore, the area should become attainment by early 1981. EPA is conditionally approving the Memphis ozone plan conditioned upon the State's correcting the deficiencies in the VOC regulations noted under the discussion on "Rural Areas", below.

Chattanooga (Ozone)—The State has calculated that a 7% reduction in hydrocarbon emissions is needed to meet the ozone standard. Reductions will be obtained through the FMVCP and statewide regulations for VOCs emitted by large sources. The State projects that a 27% reduction will occur by 1982. Therefore, the area should become attainment by early 1981. EPA conditionally approves the Chattanooga ozone plan conditioned upon the State's correcting the deficiencies in the VOC regulations noted under the discussion on "Rural Areas", below.

Rural Areas (Ozone)—Several counties in Tennessee were designated as nonattainment for ozone. As discussed under the section Ozone Control Strategy in the General Preamble of April 4, 1979, the criteria utilized in the review of the 1979 SIP revisions, EPA's policy is that only the RACT requirements for major VOC sources covered by Control Techniques Guidelines (CTGs) need to be adopted for rural areas. The State of Tennessee has responded and has adopted all the CTGs (applicable Statewide) which EPA had issued by January, 1978 and committed to adopt additional RACT categories as they are developed by EPA. The CTG provides information on available air pollution control techniques and contains recommendations of what EPA calls the "presumptive norm" for RACT. Based on the information in the CTGs, EPA believes that the submitted regulations represent RACT except for the exemption for 42,000 gallon tanks in the petroleum liquid storage requirements instead of the 40,000 gallon (or less) tanks as recommended. On May 8, 1980, the State submitted material which corrects this deficiency.

The exemption for gasoline service stations noted as a deficiency in the proposal notice is removed as a deficiency. The demonstration referred to in the discussion of the Nashville (Ozone) section of this notice is also applicable to State's Stage I requirements for gasoline service stations.

EPA is approving the ozone control plan submitted for the rural nonattainment areas.

As noted in the "General Preamble for Proposed Rulemaking on Approval of Plan Revisions for Nonattainment Areas", 44 FR 20376 (April, 1979), ozone SIPs such as Tennessee's must include RACT requirements for VOC sources covered by CTGs EPA issued by January 1978. The General Preamble also required such SIPs to contain schedules to adopt and submit by each future January additional requirements for sources covered by CTGs issued by the previous January. The submittal date for the first set of additional RACT requirements was revised from January 1, 1980, to July 1, 1980, by **Federal Register** notice of August 28, 1979 (44 FR 50371). Today's approval of the ozone portion of the Tennessee plan is contingent on the submittal of these additional RACT regulations. Also, by each subsequent January beginning January 1, 1981, RACT regulations for CTGs published by the preceding January must be included in the plan. The above requirements are set forth in the "Approval Status" section of this final rule. If the RACT requirements are not adopted and submitted to EPA according to the time frame set forth in the rule, EPA will take appropriate remedial actions.

Nashville (TSP)—The Nashville-Davidson County Metropolitan Health Department has reviewed all the sources in or impacting on the nonattainment area and found that the ambient violations were not due to a specific source or activity, but were the result of a combination of factors such as process fugitive emissions, nontraditional source emissions, and traditional source emissions. During the review, RACT emission limitations were developed for all traditional sources. These RACT

emission limits were adopted as revised permit conditions which require compliance with specific limits on mass emissions and visible emissions, and in some cases limitations on hours of operation. When modelling all of the sources at their 1982 allowable emission limits, attainment of the annual primary standard was not demonstrated, nor was attainment of the secondary standard demonstrated. One of the factors in the failure to demonstrate attainment of the primary standard was the impact of nontraditional sources. In order to evaluate and develop the necessary nontraditional source control measures to attain the primary standards, Nashville Metropolitan Health Department has submitted a schedule to develop these regulations. On October 2, 1979 EPA proposed conditional approval of the Nashville plan and since no comments were received, EPA is today conditionally approving the plan for attainment of the primary standards on condition that a more detailed listing of measures to be investigated be submitted by October 1, 1980. In addition, Nashville has asked for an 18-month extension in order to develop the attainment plan for secondary standards. On January 10, 1980 (45 FR 2032), EPA granted Nashville's request for an 18-month extension to submit the plan for attainment of the secondary standard.

Columbia (TSP)—The nonattainment designation of this area was due to a combination of factors. Fugitive emissions from roadways, haul roads, materials handling systems and stack emissions all contribute to violations of the ambient standards. The State of Tennessee has made a RACT evaluation of all traditional sources in or impacting on the nonattainment area and adopted, as categorical emission requirements, regulations for the area. These regulations include limitations on stack emissions, more stringent controls on fugitive sources, and in some cases a restriction on hours of operation. When the State modelled the area at the 1982 emission level, attainment of the primary standards was not demonstrated. This was due largely to the impact of emissions from nontraditional sources. The State has submitted a schedule for developing, adopting, and submitting regulations for control of nontraditional sources.

EPA was recently informed by letter that the Tennessee Government Operations Committee had invalidated the regulations concerning the Columbia TSP non-attainment area. This action prevents these regulations from being "state effective" or enforceable by the State. Because the action of the Government Operations Committee causes the Columbia non-attainment plan to be unapprovable, EPA defers action on the Columbia TSP submittal and the applicable stationary source growth restrictions of Section 110(a)(2)(I) of the CAA continue to apply to that nonattainment area. Pursuant to a request made by the State, EPA on January 10, 1980 (45 FR 2032), granted an 18-month extension (to July 1, 1980) for the submittal of a plan to attain the secondary TSP standard in Columbia.

Public Comments

Comment: A spokesman for an industrial source commented concerning EPA's proposed disapproval of the definition of volatile organic compound (VOC) adopted by the metropolitan Nashville/Davidson County Health Department. Specifically, EPA proposed to disapprove the use of a vapor pressure greater than 76.0 millimeters of mercury (1.5 psia) at standard conditions for defining any volatile compound of carbon (excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate). The commenter stated that the selection of 76.0 millimeters of mercury was arbitrary and that the threshold should have been greater.

Response: EPA rejects the contention that 1.5 psia at standard conditions is a more appropriate physical parameter of volatile organic compounds than 0.1 mm of Hg at standard conditions (20°C., 760 mm Hg). The information available to the Agency indicates that almost any organic compound (with few exceptions) that remains air-borne in the vapor state will eventually form oxidants. Two major issues must be addressed in any definition of VOC.

1. What compounds, when emitted in the gaseous state from ovens, will not condense and precipitate but rather remain air-borne and ultimately react to form photochemical oxidants?

2. What is the fate of organic compounds emitted as an ultra-fine aerosol which remains air-borne for extended periods because of its extremely small particle size, but would not normally be expected to evaporate based on its relatively high vapor pressure? (Some printing operations emit tons of such matter annually). There is no evidence of precipitation of these compounds, it is very possible that they remain air-borne until they evaporate and then react to form oxidants.

The Agency desires any definition of VOC to be sufficiently broad so as to address all organic compounds that form oxidants. Accordingly, the Agency has defined organic compounds to include all compounds of *carbon* except carbonates, metallic carbides, carbon monoxide, carbon dioxide, and carbonic acid. Further, volatile organic compounds (VOCs) have been defined as any organic compound that when released to the atmosphere, can remain long enough to participate in photochemical reactions. While there is no clear line of demarcation between volatile and nonvolatile organics, the predominant fraction of the VOC burden are compounds which evaporate rapidly at ambient temperatures. Almost all organics which can be considered VOC have vapor pressures greater than 0.1 mm Hg at standard conditions (20° C., 760 mm Hg). 1.5 psia is an appropriate control level for petroleum liquid storage. However, this physical parameter could be specified in the individual regulation and should not, by itself, be taken as the definition of all VOCs. Many organic solvents have a vapor pressure less than 77.6 mm Hg and greater than 0.1 mm Hg. Those compounds would then become exempt from control if the less stringent 1.5 psia (77.6 mm Hg) definition was used.

The following comments were received prior to the start of the public comment period.

Comment. The first comment concerned a possible contradiction in the cutoff size requirement for vapor recovery on service stations.

Response: The service station regulation (1200–3–18–.10) is specific for the cutoff exemption. A misinterpretation might arise if the regulation for bulk gasoline plants (1200–3–18–.08) were read without reference to the service station regulation. By copy of the response to the commenter, a suggestion was made to the State that clarifying language on applicability could be incorporated in the above regulations.

Comment: A second comment concerned the Columbia, Tennessee, nonattainment area for TSP. Since the Tennessee Government Operations Committee of the Tennessee Legislature has rejected the nonattainment plan for TSP for Columbia, no action is being taken concerning the Columbia TSP nonattainment area and the comments will not be addressed at this time.

National Comments and Responses:

Comment and Response: One commenter submitted extensive comments which it requested be considered part of the record for each State plan. Each of the points raised by the commenter and EPA's response follow. Although some of the issues raised are not relevant to provisions in Tennessee's submission, EPA is notifying the public of its response to these comments at this time.

1. The commenter asked that comments it has previously submitted on the Emission Offset Interpretative Ruling as revised on January 16, 1979 (44 FR 3274), be incorporated by reference as Part of their comments on each State plan. EPA will respond to those comments in its response to comments on the Offset Ruling.

2. The commenter objected to general policy guidance issued by EPA, on grounds that EPA's guidance is more stringent than required by the CAA. Such a general comment concerning EPA's guidance is not relevant to EPA's decision to approve or disapprove a SIP revision since that decision rests on whether the revision satisfies the requirements of Section 110(a)(2). However, EPA has considered the comment and concluded that its guidance conforms to the statutory requirements.

3. The commenter noted that the recent court decision on EPA's regulations for prevention of significant deterioration (PSD) of air quality affects EPA's new source review (NSR) requirements for Part D plans as well. (The decision is *Alabama Power Co. v. Costle*, 13 E.R.C. 1933 (D.C. Cir. 1979).) In the commenter's view, the court's rulings on the definition of "source", "modification", and "potential to emit", should apply to Part D as well as PSD programs. In addition, the commenter believes that the court decision precludes EPA from requiring Part D review of sources located in designated clean areas.

The preamble to the Emission Offset Interpretative Ruling, as revised January 16, 1979, explains that the interpretations in the Ruling of the terms "source," "major modification," and "potential to emit," and the areas in which NSR applies, govern State plans under Part D. (44 FR 3275 col. 3 through 3276 col. 1, January 16, 1979.) In proposed rules published in the **Federal Register** on September 5, 1979, (44 FR 51924), EPA explained its views on how the *Alabama Power* decision affects NSR requirements for State Part D plans. The September 5, 1979 proposal addressed some of the issues raised by the commenter. To the extent necessary, EPA will respond in greater detail to the commenters' concerns in its response to comments on the September 5, 1979, proposal and/or its response to comments on the Offset Ruling.

As part of the September 5, 1979, proposal, EPA proposed regulations for Part D plans in Section 40 CFR 51.18(j). EPA also proposed, for now, to approve a SIP revision if it satisfies either existing EPA requirements, or the proposed regulations. Prior to promulgation of final regulations, EPA proposed to approve State-submitted relaxations of previously-submitted SIPs, so long as the revised SIP meets all proposed EPA requirements. To the extent EPA's final regulations are more stringent than the existing or proposed requirements, States will have nine months, as provided in Section 406(d) of the CAA, to submit revisions after EPA promulgates the final regulations. Since the Tennessee NSR program satisifies existing requirements for Part D, it is now being approved.

In some instances, EPA's approval of a State's NSR provisions, as revised to be consistent with EPA's proposed or final regulations, may create the need for the State to revise its growth projections and provide for additional emission reductions. States will be allowed additional time for such revisions after the new NSR provisions are approved by EPA.

4. The commenter questioned EPA's alternative emission reduction options policy (the "bubble" policy). As the commenter noted, EPA has set forth its proposed bubble policy in a separate **Federal Register** publication, 44 FR 3720 (January 18, 1979). EPA responded to the comments on the "bubble" approach in its final "bubble" policy statement of December 11, 1979 (44 FR 71780).

5. The commenter questioned EPA's requirement for a demonstration that application of all reasonably available control measures (RACM) would not result in attainment any faster than application of less than all RACM. In EPA's view, the statutory deadline is that date by which attainment can be achieved as expeditiously as practicable. If application of all RACM results in attainment more expeditiously than application of less than all RACM, the statutory deadline is the earlier date. While there is no requirement to apply more RACM than is necessary for attainment, there is a requirement to apply controls which will ensure attainment as soon as possible. Consequently, the State must select the mix of control measures that will achieve the standards most expeditiously, as well as assure reasonable further progress.

The commenter also suggested that all RACM may not be "practicable." By definition, RACM are only those measures which are reasonable. If a measure is impractical, it would not constitute a reasonably available control measure.

6. The commenter found the discussion in the General Preamble of RACT for volatile organic compound (VOC) sources covered by Control Techniques Guidelines (CTGs) to be confusing in that it appeared to equate RACT with the guidance in the CTGs. EPA did not intend to equate RACT with the GTGs.

The CTGs provide recommendations to the States for determining RACT, and serve as a "presumptive norm" for RACT, but are not intended to define RACT. Although EPA believes its earlier guidance was clear on this point, the Agency has issued a supplement to the General Preamble clarifying the role of the CTGs in plan development. See 44 FR 53761 (September 17, 1979).

7. The commenter suggested that the revision of the ozone standard justified an extension of the schedule for submission of Part D plans. This issue has been addressed in the General Preamble, 44 FR 20377 (April 4, 1979).

8. The commenter questioned EPA's authority to require States to consider transfers of technology from one source type to another as part of lowest achievable emission rate (LAER) determinations. EPA's response to this comment will be included in its response to comments on the revised Emission Offset Interpretative Ruling.

9. The commenter suggested that if a State fails to submit a Part D plan, or the submitted plan is disapproved, EPA must promulgate a plan under Section 110(c), which may include restrictions on construction as provided in Section 110(a)(2)(I). In the commenter's view the Section 110(a)(2)(I) restrictions cannot be imposed without such a federal promulgation.

EPA has promulgated regulations which impose restrictions on construction on any nonattainment area for which a State fails to submit an approvable Part D plan. *See* 44 FR 38583 (July 2, 1979). Section 110(a)(2)(I) does not require a complete federally-promulgated SIP before the restrictions may go into effect.

Comment: Another commenter, a national environmental group, stated that the requirements for an adequate permit fee system (Section 110(a)(2)(k) of the Act), and proper composition of State boards (Sections 110(a)(2)(F)(vi) and 128 of the Act) must be satisfied to assure that permit programs for nonattainment areas are implemented successfully. Therefore, while expressing support for the concept of conditional approval, the commenters argued that EPA must secure a State commitment to satisfy the permit fee and State board requirements before conditionally approving a plan under

V 45 AG 13 80 UMI

Part D. In those States that fail to correct the omission within the required time, the commenters urged that restrictions on construction under Section 110(a)(2)(I) of the CAA must apply.

Response: To be fully approved under Section 110(a)(2) of the CAA, a State plan must satisfy the requirements for State boards and permit fees for all areas, including nonattainment areas. Several States have adopted provisions satisfying these requirements, and EPA is working with other States to assist them in developing the required programs. However, EPA does not believe these programs are needed to satisfy the requirements of Part D. Congress placed neither the permit fee nor the State board provision in Part D. While legislative history states that these provisions should apply in nonattainment areas, there is no legislative history indicating that they should be treated as Part D requirements. Therefore, EPA does not believe that failure to satisfy these requirements is grounds for conditional approval under Part D, or for application of the construction restriction under Section 110(a)(2)(I) of the CAA.

Comments were also received from the Asphalt Emulsion Manufacturers Association (AEMA) concerning the availability of emulsified asphalts with low solvent content for all applications in all regions of the country. Although some of the issues raised are not relevant to the Tennessee plan, EPA is notifying the public of its response to these comments at this time. AEMA's main point is that no general rule regarding solvent content of emulsified asphalt for the nation is possible because of varying conditions. AEMA urges that EPA accept each State's emulsion specifications as RACT. AEMA also incorrectly concludes that EPA has been using a figure of five percent as nationwide RACT for maximum content in emulsified asphalt.

EPA recognizes that varying conditions may require different solvent content asphalts. RACT for asphalt should be determined on a case-by-case basis in order to take varying conditions into account. Therefore, EPA has not set a nationwide standard for the solvent content of emulsified asphalt. However, EPA has accepted a five percent maximum solvent content regulation where a State has chosen to submit an across-the-board regulation for emulsified asphalt, rather than develop case-by-case RACT. The intent of EPA guidance has been for States to specify in the regulations, and justify, those emulsions and/or applications where addition of solvent is necessary. Since RACT can be determined on a case-by-case basis. States are free to specify necessary solvent contents on the basis of application or asphalt grade. Where a State demonstrates that these are RACT, EPA will approve the regulations. The following maximum solvent contents for specific emulsified asphalt applications have appeared in EPA guidance and are based on ASTM, AASHTO, and State specifications and on information recently received from the Asphalt Institute.

Use, Max. Solvent Content

Seal coats in early spring or late fall—3%.
Chip seals when dusty or dirty aggregate is used—3%.
Mixing w/open graded aggregate that is not well washed—6%.
Mixing w/dense graded aggregate—12%.

The State of New Jersey submitted comments on the proposed Part D ozone SIP revisions for several States. New Jersey contends that SIPs which do not include uniform Statewide controls for existing and new sources which meet the requirements of Part D will not attain the ozone standard. New Jersey urges the Administrator to disapprove ozone SIPs which do not include such Statewide measures. The State of Tennessee, however, has adopted measures including Statewide RACT regulations for existing sources and have met the requirements of Part D for ozone nonattainment areas. Moreover, New Jersey has not made a specific showing that Tennessee's SIP will not attain standards. Therefore, the Administrator has no basis for disapproving Tennessee's SIP.

In addition, New Jersey argues as it did in objecting to the Administrator's ozone nonattainment area designations that entire States should be designated nonattainment, thereby requiring Part D SIP revisions Statewide. The Administrator considered all of New Jersey's objections to the designations and responded in the document entitled "Technical Support Document for Agency Policy Concerning Designation of Attainment, Unclassifiable, and Nonattainment Areas for Ozone" January 5, 1979. Availability of this document was announced in the February 1, 1979 **Federal Register** (44 FR 6395). This document and the Administrator's response to New Jersey's comments are incorporated herein by reference.

Attainment Dates:

Changes in the attainment date table (§ 52.2230) occasioned by the revisions approved today are added to the chart of attainment dates in 40 CFR Part 52, and the corresponding earlier deadlines for attainment under Section 110 (a)(2)(A) of the act are detected. The reader may refer to 45 FR 8004 (February 6, 1980) and read in the preamble of that notice a discussion of this topic.

Action

The measures approved today will be additional to, and not in lieu of, existing SIP regulations. The present emission control regulations for any source will remain applicable and enforceable to prevent a source from operating without controls, or under less stringent controls, while it is moving toward compliance with the new regulations (or, if it chooses, challenging the new regulations). Failure of a source to meet applicable pre-existing regulations will result in appropriate enforcement action, including assessment of noncompliance penalties. Furthermore, if there is any instance of delay or lapse in the applicability or enforceability of the new regulations, because of a court order or for any other reason, the pre-existing regulations will be applicable and enforceable. The only exception to this rule is in cases where there is a conflict between the requirements of the new regulations and the requirements of the existing regulations such that it would be impossible for a source to comply with existing regulations while it is achieving compliance with the new regulations. In these situations, the State may exempt a source from compliance with the pre-existing regulations. Any exemption granted will be reviewed and acted on by EPA either as part of these approved regulations or as future SIP revisions.

The Administrator approves Tennessee's 1979 revisions for the ozone nonattainment areas and for the Nashville TSP nonattainment area, on the condition that the deficiency noted in the volatile organic compound regulations and in the list of measures to be investigated for control of nontraditional sources of TSP in Nashville be corrected by October 1, 1980. Since the action by the Tennessee Government Operations Committee invalidated the plan for the Columbia TSP nonattainment area, the new source growth restrictions (Section 110(a)(2)(I) CAA) remain in place for the Columbia TSP nonattainment area. The Administrator approves Tennessee's 1979 revisions for the Nashville CO ozone nonattainment area.

These actions are effective immediately. EPA finds good cause to make these actions immediately effective, because the Clean Air Act restricts new construction where plans are not approved after June 30, 1979. Making these actions immediately effective will terminate the restriction as soon as possible. Also, they impose no requirement that is not already in effect at the State level.

Under Section 307(b)(1) of the Clean Air Act, judicial review is available only by the filing of a petition for review in the United States Court of Appeals for the appropriate circuit within 60 days of today. Under Section 307(b)(2) of the Clean Air Act, the requirements which are the subject of today's notice may *not* be challenged later in civil or criminal proceedings brought by EPA to enforce these requirements.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized". I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(Secs. 110, 172, Clean Air Act (42 U.S.C. 7410, 7502))

Dated: July 31, 1980.

Douglas M. Costle,

Administrator.

Part 52 of Chapter I, Title 40, Code of Federal Regulations, is amended as follows:

Subpart RR—Tennessee

1. In § 52.2220, paragraph (c) is amended by adding subparagraph (33) as follows.

§ 52.2220 Identification of Plan.

* * * * *

(c) The plan revisions listed below were submitted on the dates specified.

* * * * *

(33) 1979 implementation plans for the Nashville TSP and CO nonattainment areas and Statewide ozone nonattainment areas, including regulations 1200–3–18–.01 through .47, adopted on March 14, April 11, June 20 and 28, 1979, and May 1, 1980 and submitted on June 28, July 2, 1979, and May 8, 1980 by the Tennessee Department of Public Health.

2. Section 52.2222 is revised to read as follows:

§ 52.2222 Approval status.

(a) With the exceptions set forth in this subpart, the Administrator approves Tennessee's plans for the attainment and maintenance of the national standards under § 110 of the Clean Air Act. Furthermore, the Administrator finds the plans thus far submitted satisfy all requirements of Part D, Title I, of the Clean Air Act as amended in 1977, except as noted below.

In addition, continued satisfaction of the requirements of Part D for the ozone portion of the SIP depends on the adoption and submittal of RACT requirements by July 1, 1980, for the sources covered by CTGs issued between January 1978 and January 1979 and on adoption and submittal by each subsequent January of additional RACT requirements for sources covered by CTGs issued by the previous January.

(b) New source review permits issued pursuant to Section 173 of the Clean Air Act will not be deemed valid by EPA unless the provisions of Section V of the emission offset interpretative rule (Appendix S of 40 CFR Part 51) are met.

3. Section 52.2225 is amended by adding paragraph (b) as follows:

§ 52.2225 Control strategy: Carbon monoxide and ozone.

Part D conditional approved.

* * * * * *

(b) The control strategy submitted pursuant to Part D of Title I for the Nashville CO and ozone nonattainment area is approved on condition the indicated actions are taken by the appropriate dates as follows:

(1) The Council of Metropolitan Governments of Nashville adopt a mechanism to prevent noncomplying vehicles from operating upon public roads in Davidson County by January 31, 1981, and that the adopted mechanism be submitted to EPA by June 30, 1981.

(c) The ozone control strategy submitted pursuant to Part D of Title I is approved on condition that the State by October 1, 1980, submit an adequate demonstration that the VOC regulations represent RACT or submit revisions in the regulations such that:

(1) VOC is defined as a compound having a vapor pressure of 0.1 millimeter of mercury at standard conditions.

4. A new § 52.2231 is added as follows:

§ 52.2231 Control strategy: Sulfur oxides and particulate matter.

Part D conditional approval.

(a) The control strategy submitted pursuant to Part D of Title I for the Nashville TSP area is approved on condition that the State by October 1, 1980, submit a detailed listing of measures to be investigated concerning nontraditional source control measures.

5. Section 52.2230 is revised to read as follows:

§ 52.2230 Attainment dates for national standards.

The following table presents the latest dates by which the national standards are to be attained. The dates reflect the information presented in Tennessee's plan.

Air quality control region	Pollutant						
	Particulate matter		Sulfur oxides		Nitrogen dioxide	Carbon monoxide	Ozone
	Primary	Secondary	Primary	Secondary			
Eastern Tennessee-Southwestern Virginia Interstate:							
a. Sullivan County—Bristol nonattainment area [1]	d	d	c	c	b	b	d

BILLING CODE 6560-01-M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[BC Docket No. 79-176; RM-3171; RM-3387; RM-3493; RM-3494]

TV Broadcast Stations in Riverside and Santa Ana, Calif.; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Report and Order.

SUMMARY: This action assigns UHF TV Channel 62 to Riverside, California. In taking this action, the Commission denied various alternative proposals which would have assigned Channel 62 to Santa Ana, California; reserved Channel 62 at Riverside for noncommercial educational use; or reassigned Channel 40 from Santa Ana to Riverside. The assignment of a non-reserved channel to Riverside allows all potential applicants, commercial and noncommercial, to apply for the channel.

DATE: Effective September 19, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Mike McGregor, (202) 653-7586, or Mark N. Lipp, (202) 632-7792, Broadcast Bureau.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of § 73.606(b), *Table of Assignments,* Television Broadcast Stations. (Riverside and Santa Ana, California), BC Docket No. 79-176, RM-3171, RM-3387, RM-3493, RM-3494.

Report and Order—Proceeding Terminated

Adopted: July 31, 1980.

Released: August 12, 1980.

1. Before the Commission for consideration is the *Notice of Proposed Rule Making* (44 FR 44194), released July 24, 1979, which proposed the assignment of UHF television Channel 62 to Riverside, California, for noncommercial educational use, or the assignment of UHF television Channel 62 to Santa Ana, California, for commercial use. Spacing restrictions preclude assigning the channel to both communities. Comments have been filed by petitioner, Bethel Broadcating, Inc. ("Bethel") for Riverside, and by Asian American Telecasters ("Asian"), which supports the assignment of Channel 62 to Santa Ana. Comments were also submitted by Golden Orange Broadcasting Company ("Golden Orange"), permittee of UHF Television Station KGOF (Channel 56), Anaheim, California; and Asian International Broadcasting Corp. ("AIB"), an applicant for a new television broadcast station on Channel 16 in Ventura, California (BPCT-790130LO); Comments in the nature of counter-proposals were submitted by the Greater Riverside Chambers of Commerce, which proposes that UHF Channel 62 be assigned to Riverside for commercial use; and by Trinity Broadcasting Network, Inc. ("Trinity"), proposing that UHF Channel 40, currently assigned to Santa Ana, California, be reassigned to Riverside and that UHF Channel 62 be assigned to Santa Ana. Trinity controls International Panorama TV, Inc., licensee of KTBN-TV, Channel 40, Fontana, California, and applicant for Channel 40 at Santa Ana, California (BPCT-5154).[1] To summarize, the following proposals are before the commission:

Petitioner and Proposal

Bethel; Assign Channel *62 to Riverside.

[1] For a full discussion of Trinity's current status, see para. 6, *infra.*

Asian; Assign Channel 62 to Santa Ana.
Chambers of Commerce; Assign Channel 62 to Riverside.
Trinity; Assign Channel 40 to Riverside and Channel 62 to Santa Ana.

Reply comments were filed by Asian, Trinity, Golden Orange, and Saddleback Broadcasting Company, Inc. ("Saddleback"), another applicant for the new television station on Channel 40 at Sant Ana, California (BPCT-5203). Saddleback's application is mutually exclusive with the application of Trinity for the same facilities. Several parties submitted informal comments in this proceeding.[2]

2. Santa Ana (pop. 155,762),[3] the seat of Orange County (pop. 1,420,676), is located approximately 53 kilometers (33 miles) southeast of Los Angeles. It has two TV assignments: Channel 50, which is reserved for noncommercial use and presently being used under the 15-mile rule, § 73.607(a) of the Commission's Rules, at Huntington Beach, by noncommercial educational Station KOCE-TV; and Channel 40, on which the mutually exclusive applications of Trinity and Saddleback are pending. Orange County has one other TV assignment, Channel 56, at Anaheim.

3. Riverside (pop. 140,089), seat of Riverside County (pop. 459,074), is located approximately 90 kilometers (55 miles) east of Los Angeles. It has one UHF TV channel assignment, Channel 46, which is used by Station KBSA and is licensed, under the "15-mile rule," to serve Guasti, California. No other channels are assigned to communities in Riverside County.

The Comments

4. Bethel and Asian submitted comments which incorporated their original pleadings by reference and restated their intentions to apply for the channel, if assigned, and, if authorized, to build the station promptly. Asian argues that Channel 62 should be assigned to Santa Ana. However, if that channel is assigned to Riverside and not reserved for noncommercial use, it still intends to apply for the channel there. Asian argues that the comparative hearing would then be the best forum for deciding whether the channel should be used for commercial or noncommercial operations. Finally, Asian refutes the need for any further noncommercial assignments in the Los Angeles area by pointing out that there are already four licensed educational stations in the area and an application is pending for a fifth station. Golden Orange argues for the assignment of Channel *62 to Riverside. It reasons that Riverside has a greater need for the assignment because Santa Ana already has two assignments and Riverside's existing assignment, Channel 46, is licensed to serve Guasti. Further, a transfer of the Guasti station is pending, and the assignee proposes to operate the facility as an STV station. Golden Orange implies that such an operation will fall short of meeting the non-entertainment needs of the city of Riverside. Moreover, Golden Orange opposes the assignment to Santa Ana because it might have a detrimental economic impact on its own broadcast operations in Orange County. AIB also supports the reservation of Channel 62 to Riverside, by stating that there is a greater need for an educational assignment in Riverside than there is for another commercial assignment in Santa Ana. AIB contends that if it were successful in obtaining a license for Channel 16, it will be providing a service similar to that proposed at Santa Ana by Asian and will serve substantially the same area. AIB therefore concludes that there is no need to assign a commercial channel to Santa Ana for the purposes proposed by Asian.

The Counterproposals

5. The Greater Riverside Chambers of Commerce filed a counterproposal requesting that Channel 62 be assigned to Riverside but not as a reserved channel. If such an assignment were made, the Chambers of Commerce would apply for the license. Petitioner lists several factors in support of its counterproposal. First, Riverside's physical distance from Los Angeles deprives the area of coverage of local events and news from the Los Angeles television stations. Although the Riverside area lies within 11 predicted Grade A signal contours, Santa Ana receives 14 such signals. Riverside's one commercial assignment, Channel 46, is currently licensed to a community outside of Riverside County and therefore no station is licensed to provide local commercial service to Riverside.

6. A second counterproposal, filed by Trinity Broadcasting Network, requests that Channel 62 be assigned to Santa Ana, and that Channel 40 be reassigned from Santa Ana to Riverside. To understand Trinity's rationale for its counterproposal, a recitation of the background of the assignment of Channel 40 to Santa Ana is necessary. Channel 40 was initally assigned to Riverside, California, and was licensed to Fontana, California, under the "15 mile" rule. Trinity gained control of the licensee (International Panorama) of Channel 40 in 1974.

Subsequently, Trinity moved the station's studio to Santa Ana and petitioned the Commission to assign Channel 40 to Santa Ana. Trinity also requested that the Commission amend International Panorama's license to designate Santa Ana as its city of license. The Commission did assign Channel 40 to Santa Ana but decided that International Panorama must apply for a permit authorization there. *Riverside and Santa Ana, California,* 65 F.C.C. 2d 920 (1977); *reconsideration denied,* 68 F.C.C. 2d 557 (1978). The Commission reasoned that the addition of a channel to a particular community for which interested parties have not had an opportunity to apply necessitated the acceptance of competing applications for that channel. Pursuant to that ruling, Trinity filed an application for Channel 40 at Santa Ana. A second application was filed by Saddleback Broadcasting Company, Inc. Trinity continues to operate on Channel 40 by virtue of its existing license to serve Fontana, which will expire in December, 1980. In the instant proceeding, Trinity asks the Commission to reassign Channel 40 to Riverside "* * * not without rueful perspective and not without reassessment of formerly held positions." Trinity states that it commissioned a random public viewing survey which revealed that the Fontana/Riverside area leads all other areas in receptiveness to the religious programming offered by Trinity. Trinity asks that Channel 40 be reassigned to Riverside so that it can better serve the communities whose residents appreciate its programming the most. Once Channel 40 is reassigned to Riverside, Trinity argues that Channel 62 should then logically be assigned to Santa Ana. Trinity states that this will serve the public interest by giving both cities new allocations and by extricating Trinity from the expense and disruption of the pending comparative proceeding concerning Channel 40 at Santa Ana. Reassignment of Channel 40 to Riverside would not necessitate opening up the channel to competing applications, Trinity argues, since its station is already licensed to serve Fontana "* * * and the change would be a mechanical amendment to the

[2] Informal comments were received by Most Reverend William R. Johnson, Bishop of Orange; Korean American Christian Business Men's Committee of Southern California; Edward S. Wheeler, Jr., San Bernardino Councilman; Olen J. Jones, Executive Asst. to San Bernardino City Council; Sue Tsuda, Mayor Pro Tem of Fullerton; Robert Hoyt, Mayor of Orange; Robert T. Anderson; Pacific Asian American Center; Greater Santa Ana Chamber of Commerce; and Robert Presley, California State Senator. Also, several petitioners appended letters of support and recommendation along with their formal filings.

[3] All population data are taken from the 1970 U.S. Census, as corrected.

V 45 A G 1 3 0 UMI

Table of Allocations." Trinity states that if Channel 40 is reassigned to Riverside, it will establish a studio in Fontana, its current city of license. This action, if taken, would effectively wash out Saddleback's application for Channel 40 at Santa Ana. Trinity argues that this is not unfair to Saddleback because Saddleback can amend its application to specify Channel 62 and because "Saddleback has already demonstrated its willingness to go through the comparative process."

The Reply Comments

7. In its reply comments, Bethel reiterates its intention to apply for Channel 62 if assigned to Riverside. Asian generally refutes the arguments made by AIB and Golden Orange in their comments by charging that the commenters were motivated by fear of competition rather than sound public policy. Asian restates its position that Channel 62 should be assigned to Santa Ana, but if it is assigned to Riverside, it should not be reserved for noncommercial use. With regard to Trinity's counterproposal, Asian takes no position except to urge the Commission not to delay assignment of Channel 62 while it decides the Channel 40 issue. Golden Orange, in its reply comments, changes its original position and now argues that Trinity's counterproposal should be adopted. This counterproposal would provide Riverside with a local television station (Channel 40), in the most expeditious manner, while eliminating one of two prospective comparative hearings, while also providing a local service for Santa Ana (Channel 62). Trinity's reply comments restate the arguments made in its counterproposal based on the market research survey which it commissioned. Trinity attempts to refute the counterproposal of the Greater Riverside Chambers of Commerce for Channel 62 at Riverside, by stating that its own counterproposal will serve the same purposes (*i.e.*, a local commercial outlet for the Riverside area), yet avoid the "* * * administrative nightmare of a Chambers of Commerce applicant, or licensee, with its periodic wholesale changes in officers and directors, and fluctuating membership * * *" Saddleback Broadcasting Company's reply comments were addressed entirely to Trinity's counterproposal. Saddleback finds the basis for Trinity's arguments "inherently unbelievable" given the fact that for the past five years Trinity has operated Channel 40 but only now discovers that interest in its programming centers around the Fontana/Riverside area. Saddleback also attacks the reliability of the market study relied on by Trinity. According to Saddleback's experts, the Trinity study is flawed in several important respects. Trinity's argument that shifting Channel 40 back to Riverside would preclude any comparative applications for the channel is also challenged by Saddleback. The same principles which required opening up the channel for competing applications in Santa Ana, Saddleback argues, would require a similar result if Channel 40 were reassigned to Riverside. Finally, Saddleback takes issue with Trinity's assertions that Saddleback will not be harmed if Channel 40 is assigned back to Riverside. Saddleback argues that it has "protected status" as being one of two applicants for the Santa Ana channel, and further explains that it has invested a significant amount of time and energy in the Santa Ana proceeding. Saddleback concludes that Channel 40 should remain at Santa Ana, and Channel 62 should be assigned to Riverside.

Discussion

8. As stated in the *Notice*, the decision made in this proceeding is important because it appears that Channel 62 is the last television channel which could be assigned to Riverside, Santa Ana, or elsewhere in the Los Angeles area. Our analysis logically breaks down into three separate issues. These issues may be stated as follows: (1) Should each city, Riverside and Santa Ana, receive a television assignment or should one of the two cities receive both channels; (2) should Channel 40, if assigned to Riverside, be open to other applicants; and (3) should the Riverside assignment be reserved for noncommercial educational use or left unreserved. These issues are addressed, in turn, below.

9. Many interested parties have filed comments in this proceeding. In determining whether each city should receive an assignment, we think it bears noting that the issue is whether a channel should be assigned to a particular community, and not the qualifications of a particular party. *UHF Channel Assignments*, FCC 66–137, 2 F.C.C. 2d 527, 535 (1966). We begin by reiterating that each of the original petitioners have made a sufficient public interest showing to warrant assignment of a new channel to each of the communities. Santa Ana currently has two assignments, including one commercial assignment, but no local service as yet. It is one of the largest cities in the country without local television service. Riverside does have one commercial assignment, but that channel is currently used at Guasti, which is outside of Riverside County. Thus, Riverside, only slightly less populated than Santa Ana, is also unserved by a local television station. As to the comments of Golden Orange and AIB, the Commission has consistently decided against placing artificial restraints on competition unless the overall public interest would be adversely affected by such competition. *Oxnard, California*, 20 R.R. 2d 1570 (1970). Furthermore, existing (or potential) licensees are not entitled to protection from additional assignments which might have a possible adverse effect on private economic interests. The economic impact question is better evaluated in passing upon an applicant's proposal for use of a new assignment. *Grand Junction, Colorado*, 38 F.C.C. 2d 1167 (1973). We have decided to assign a new channel to Riverside and to retain a channel at Santa Ana, as the most equitable option in distributing the last available channels in the Los Angeles area.

10. Having decided that each community deserves a channel assignment, we now turn to the issue of which channel to assign, Channel 62 or Channel 40, to which community. Channel 40 was very recently reassigned from Riverside to Santa Ana at the request of Trinity. *Riverside and Santa Ana, California, supra*. Now Trinity requests that Channel 40 be reassigned to Riverside. Trinity primarily bases its request to reassign Channel 40 on the following argument. Trinity reasons that if Channel 40 is reassigned to Riverside, the channel would not be opened up for the filing of competing license applicants. Because Trinity is licensed to Fontana, which is within 15 miles of Riverside, Trinity argues that the assignment would be merely a mechancial adjustment which would effectuate immediate local service to the Riverside/Fontana area. Such an action would further benefit Trinity by extricating it from the comparative application process which it currently faces in Santa Ana. Trinity notes that Saddleback, the other Santa Ana applicant, could amend its application to specify Channel 62. The other petitioners in this proceeding could apply for Channel 62 in Santa Ana, and the result would be one comparative hearing instead of two. We disagree with Trinity's assessment of the situation. The same reasoning which led us to conclude that competing applications could be filed when Channel 40 was assigned to Santa Ana, equally applies to reassigning the channel to Riverside. In the prior case, we concluded that under the principles

of *Ashbacker Radio Corp. v. F.C.C.*, 326 U.S. 327 (1945), the assignment of a television channel to a community requires the opportunity for competing filings. We stated that in policy terms alone this approach was preferable because it allowed us to select the applicant which would best serve the public interest. This is particularly true according to our Commission policy where another interest in a proposed assignment has been expressed. See *Cheyenne, Wyoming*, 62 F.C.C. 2d 63 (1976). The present situation is sufficiently analogous to assigning a channel to a community for the first time that *Ashbacker* principles should be applied here also. Since Trinity took control of International Panorama, it has never operated a studio in its city of license, Fontana. Only three years ago, Trinity persuasively argued that Riverside had no compelling need for a television service and that Fontana had not provided sufficient financial support for the station. Indeed, Trinity argued that the assignment of Channel 40 to Santa Ana was necessary to permit the station to conform to the realities of its existing operation. Also, even though Channel 40 was initially assigned to Riverside, no station was licensed there. Riverside thus does not now have, and has not had in the past, a local television station licensed to serve its unique needs. Given these facts, we feel that assigning Channel 40 back to Riverside would be essentially the same as making the assignment available to Riverside for the first time, and that, under the *Ashbacker* principles elucidated in *Riverside and Santa Ana, California, supra*, assignment of Channel 40 back to Riverside would necessitate the opportunity for filing competing applications. See also *Los Angeles, California*, 31 F.C.C. 2d 666 (1971). Reassigning Channel 40 to Riverside would not, therefore, produce the results (*i.e.*, the elimination of one comparative hearing and the concomitant facilitation of local service to Riverside/Fontana) which Trinity had hoped for. This effectively negates the major basis for Trinity's counterproposal.[4] In summary, while the original assignment of Channel 40 to Santa Ana certainly presents no bar to reassigning the channel to Riverside, we find no public interest benefits in doing so.

11. The final issue to resolve is whether in assigning Channel 62 at Riverside a reservation for noncommercial educational use should be placed. Generally, when one party has requested a reserved assignment and another party seeks a non-reserved assignment, we have opted to leave the assignment unreserved. See *e.g., Eureka, California*, 3 F.C.C. 2d 614 (1966); *Medford and Brookings, Oregon*, 3 F.C.C. 2d 860 (1966). This leaves the assignment open for all qualified applicants, commercial and noncommercial. *UHF Channel Assignments*, 2 F.C.C. 2d 527, 541 (1966). In doing so, the ultimate decision as to what use is best for the community can be made in the comparative hearing process rather than in a rule making proceeding such as this. *San Angelo, Texas*, 4 F.C.C. 2d 889 (1966). At least three parties have expressed an interest in applying for a new channel in Riverside. In order to give all potential applicants an equal footing in applying for the channel, we will not reserve the channel for noncommercial use. Rather, as stated, the broadcast use which most clearly meets the public interest needs of the Riverside market can thus be decided in a comparative proceeding.

12. Mexican concurrence in the assignment of Channel 62 to Riverside has been obtained.

13. Accordingly, it has ordered, that the Television Table of Assignments, § 73.606(b) of the Commission's Rules, IS AMENDED, effective September 19, 1980, as follows:

City; Channel No.

Riverside, California—46, 62.

14. Authority for the action taken herein is found in Section 4(i), 5(d)(1), 303(g) and (r) and 307(b) of the Communications Act of 1934, as amended.

15. It is further ordered, that the petition of Asian American Telecasters to assign Channel 62 to Santa Ana, California, is denied.

16. It is further ordered, that the counterproposal of Trinity Broadcasting Network to reassign Channel 40 from Santa Ana, California, to Riverside, California, and to assign Channel 62 to Santa Ana is denied.

17. It is further ordered, that the petition of Bethel Broadcasting, Inc., to assign and reserve Channel 62 at Riverside, California is denied in part.

18. It is further ordered, that this proceeding is terminated.

19. For further information concerning this proceeding, contact Michael A. McGregor, (202) 653–7586, or Mark N. Lipp, (202) 632–7792, Broadcast Bureau.

BILLING CODE 6712-01-M

47 CFR Part 73

[BC Docket No. 79–256; RM–3116]

Radio Broadcast Services FM Broadcast Station in Lockhart, Tex; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Report and Order.

SUMMARY: Action taken herein assigns Channel 234 to Lockhart, Texas, as that community's first FM assignment, in response to a petition filed by D. Garry Munson and John Charles Larsh. Further action denies the counterproposal of Entertainment Communications, Inc. to substitute Channel 296A for Channel 292A at Gonzales, Texas, and assign Channel 292A to Lockhart.

DATE: Effective September 19, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Molly Pauker, Broadcast Bureau, (202) 632–6302.

SUPPLEMENTARY INFORMATION:

Report and Order

(Proceeding Terminated)

Adopted: July 31, 1980.

Released: August 8, 1980.

By the Commission:

1. The Commission has before it a *Notice of Proposed Rule Making*, adopted September 27, 1979, in which it proposed to amend the FM Table of Assignments, § 73.202(b) of the Commission's Rules, by assigning Channel 234 to Lockhart, Texas, as that community's first FM channel assignment. The *Notice* was issued in response to a petition filed by D. Garry Munson and John Charles Larsh ("petitioners"). Comments and reply

[4] Furthermore, although it is not necessary to our decision in this case, we wish to comment briefly on Trinity's argument that Saddleback, Trinity's competition for the Channel 40 license in Santa Ana, would not be unfairly prejudiced by Trinity's counterproposal. It is certainly true that a license applicant is not denied its rights whenever, during the pendency of the application, the Commission takes action otherwise within its authority, even if one of the consequences may be to lessen the probabilities in favor of a grant of the pending application. *Western Communications, Inc.*, 38 F.C.C. 2d 970 (1972). At this time, Saddleback does enjoy protected status by virtue of its application having been cut-off. If made available for competing applications, a hearing involving more than two parties could result. See *Austin A. Harrison*, 3 R.R. 2d 847, 851–52 (1964). The very purpose for establishing our cut-off procedures would be defeated and Saddleback would surely be affected thereby.

comments have been filed by petitioners and by Hicks Communications, Inc. ("Hicks"). Entertainment Communications, Inc. ("ECI"), licensee of Station KLEF(FM), (Channel 233), Houston, Texas, filed an opposition, a counterproposal, and reply comments. The counterproposal suggests that Channel 296A be substituted for Channel 292A in Gonzales, Texas,[1] and Channel 292A be reassigned to Lockhart.[2]

2. Lockhart (population 6,489),[3] seat of Caldwell County (population 21,178), is located approximately 32 kilometers (20 miles) south of Austin, Texas, and 222 kilometers (140 miles) west of Houston, Texas. Lockhart is currently served by daytime-only AM Station KCLT (1060 kHz). Channel 234 could be assigned to Lockhart in conformity with the Commission's minimum distance separation requirements at a site approximately 25 kilometers (15.6 miles) northwest of the community. The site being within 318 kilometers (199 miles) of the Mexican border, Mexican concurrence in the assignment has been obtained. Both petitioners and Hicks have affirmed an intent to apply for Channel 234, if assigned to Lockhart.

3. In comments, petitioners reiterated their view that a Class C channel is appropriate for a community the size and nature of Lockhart. Hicks filed comments supporting the allocation of Channel 234 to Lockhart, stating that no other channel of any class is available for assignment to this community. Hicks provided corrected *Roanoke Rapids*[4] data, which reduced slightly petitioners' original first and second service estimates. See fn. 5, *infra*.

4. ECI filed opposing comments stating that there are no alternative sites available to relocate the transmitter and still enable it to provide a 70 dBu signal over all of Houston, so that assignment of Channel 234 to Lockhart may effectively preclude KLEF from continuing to offer adequate service to the public. ECI tells us that this is especially significant, in light of KLEF's unique classical music format. It put forward its counterproposal as a solution by which KLEF could remain at its present temporary site and not preclude Lockhart from receiving a first FM and fulltime aural service.

5. In reply comments, petitioners argued that there are alternative locations available to ECI which would permit the Class C assignment to Lockhart. They also stated that they would not apply for a Class A channel at Lockhart. Hicks, in reply comments, argued that ECI's own comment indicated that other non-short-spaced sites are available for KLEF, in particular a common "tall tower" site southwest of Houston, which several licensees have proposed, subject to FAA approval. Hicks also refused to commit itself to apply for a Class A channel at Lockhart. ECI's reply comments suggested that both the signal of educational Station KUT–FM, Austin, and 50 uV/m interference-free contours should have been considered in estimating the amount of first and second service a Class C facility at Lockhart could provide, citing *Rhinelander, Wisconsin,* Docket No. 18289, 34 FR 13736, 16 R.R. 2d 1681 (1969). ECI further argued that it is not clear that the FAA would approve a tower of the height necessary to provide the first and second service petitioners claim they could provide with a Class C facility at Lockhart. Finally, ECI argued that any alternative site available to it would result in short spacing with Lockhart. In a later pleading, petitioners moved to strike ECI's arguments relating to 50 uV/m contours and FAA approval of its tower height, on the grounds that because they had not been raised previously they were improperly alleged in reply comments. ECI opposed the motion to strike, to which opposition petitioners filed a reply.

6. A threshold issue to be resolved here is the propriety of our assigning a Class C channel to a community the size of Lockhart, to which ECI vigorously takes issue. As was pointed out in the *Notice,* there is a general policy that Class A channels be allocated to smaller communities. However, we have on numerous occasions found provision of significant first or second service to justify the Class C channel assignments. See *e.g., Antigo, Wisconsin, and Hart, Michigan,* 44 Fed. Reg. 6721, 45 R.R. 2d 22 (1979); *Yermo and Mountain Pass, California,* 44 Fed. Reg. 4486, 45 R.R. 2d 58 (1979); *Columbia, North Carolina,* 44 Fed. Reg. 2455, 45 R.R. 2d 757 (1979); *Marco, Florida,* 54 F.C.C. 2d 886 (1975). Provision of first or second service is without doubt one of the highest priorities in FM allocation. See, *e.g., Anamosa, Iowa,* 46 F.C.C. 2d 520 (1974). In unserved or underserved areas, assignment of a high-powered facility to a small community may be the only means of achieving provision of first or second service to sparsely populated outlying areas. See, *e.g., Cape Charles, Virginia,* 43 Fed. Reg. 6606, 42 R.R. 2d 363 (1978). Preclusion is generally not a significant barrier in such situations. In the instant case, we are told that assignment of Channel 234 to Lockhart could provide a first FM service to 1,487 persons in a 146 square kilometer (57 square miles) area and a second FM service to 3,768 persons in a 384 square kilometer (150 square miles) area, using facilities of 100 kW at 850 feet.[5] The assignment of Channel 234 to Lockhart will not cause preclusion to any community with a population greater than 1,000.[6] We believe that these figures justify assignment of a class C channel to Lockhart.

7. ECI argues that it is doubtful that petitioners could obtain FAA approval for a tower in excess of 500 feet, because of the site's proximity to existing highway and railway routes.[7]

[1] Channel 292A is assigned to Gonzales but is unoccupied at present.

[2] During the pendency of the instant rule making proceeding, ECI filed an application to relocate the transmitter site of Station KLEF some 24 kilometers (15 miles) to the east of Houston, on an existing tower, on the grounds that expiration of its lease and construction in downtown Houston prevented it from locating another suitable transmitter site closer to the city (File No. BPH0790209 AE). The application was opposed by petitioners, because ECI's propsed site would result in short spacing of 13.07 kilometers (8.17 miles) to the proposed Lockhart site. By Commission action of July 12, 1979, ECI was granted special temporary authority for its requested relocation, as an immediate and temporary means for Station KLEF to provide uninterrupted service to its listenership. However, the grant clearly specified that the instant rule making proceeding would in no way be prejudiced thereby.

[3] Population figures are based on 1970 U.S. Census data.

[4] 9 F.C.C. 2d 672 (1967).

[5] These figures were provided in comments by Hicks. Staff analysis indicates that they are substantially correct. They indicate less first and second service than that reflected in data previously submitted by petitioners; however, petitioners did not take into account all existing stations. ECI's contentions that 50 uV/m contours should have been used and that the signal of educational Station KUT–FM should have been considered are incorrect. See *Hubbard Broadcasting, Inc., et al.,* 12 F.C.C. 2d 765 (1968); *The News-Sun Broadcasting Co., et al.,* 7 F.C.C. 2d 203 (1967); *Campbell and Sheftall, et al.,* 7 F.C.C. 2d 658, 664 (1967). Also see *Anamosa, Iowa, supra.* Since Hicks' data is based on facilities of greater magnitude for the Lockhart station than those assumed under *Roanoke Rapids* criteria, we would expect the applicant for the channel to propose to use such greater facilities.

[6] The preclusion analysis presumes operation by Station KLEF at its previous site, not at the present STA location. KLEF's STA grant, by its terms, is not to "be of any decisional significance to the [instant] rule making." Therefore, petitioners were not required to base their preclusion analysis on KLEF's STA site.

[7] Petitioners have moved that we strike this contention, as well as ECI's argument that 50 uV/m contours should be used to reduce first and second service estimates, on the grounds that those arguments were not previously alleged in comments. We believe we have the flexibility to give consideration to all relevant issues and, if necessary, seek additional comments thereafter. None of the cases cited by petitioners persuades us otherwise. The public interest is ultimately better served if we permit introduction of all relevant factors via pleadings filed in a timely manner. See *Citizens Committee v. F.C.C.,* 436 F. 2d 263 (1970). We also note that the two new arguments raised by ECI in reply comments are indeed germane to issues

Footnotes continued on next page

Without facilities of this magnitude, ECI contends, the Lockhart facility would be unable to provide the first and second service promised. While we believe that such matters should generally be taken up at the application stage, we do note that petitioners' rebuttal, which argues that ECI focused on only one of at least two significant factors in air hazard determination by the FAA (indeed, one which might well not be dispositive in this case), is sufficient to assuage concerns we might entertain at this stage of the proceeding.

8. Staff analysis indicates that Channel 296A can be assigned to Gonzales as a substitute channel at a site at least 12 kilometers (7.5 miles) east of the community, and that Channel 292A can then be reassigned to Lockhart at a site at least 10.3 kilometers (6.4 miles) northeast of the community, in conformity with the Commission's minimum distance separation requirements. However, we are constrained from further acting on ECI's counterproposal, due to the expressed lack of interest of either petitioners or Hicks in applying for the Lockhart assignment on Channel 292A.[8] It is against our policy to assign a frequency to a community absent stated interest on the part of at least one party in applying to utilize the assignment for the provision of broadcast service. See *e.g., West Memphis, Arkansas,* Docket No. 20787, RM–2607, *Memorandum Opinion and Order,* September 28, 1976.

9. The principal matter in contention here is whether an existing licensee's site preference should be permitted to take precedence over an assignment which could provide a first local FM service to a community, as well as a significant amount of first and second FM service. Provision of FM service to persons who are currently unserved is of the highest priority in FM allocation. See *Anamosa, Iowa, supra,* 46 F.C.C. 2d at 524. Also see *Colorado West Broadcasting, Inc., et al.,* 57 F.C.C. 2d 526 (1976). Only the assignment of a Class C channel to Lockhart would achieve this.

Footnotes continued from last page

raised in the record heretofore. Most importantly, we note that petitioners, in their motion to strike, have responded substantively to ECI's contentions. Thus, the notice-giving function of pleading has clearly been fulfilled. See *Kuhn v. C.A.B.,* 183 F. 2d 639, 641–642 (D.C. Cir. 1950). Accordingly, we shall deny petitioners' motion to strike and have herein considered ECI's arguments (and petitioners' responses) on the merits.

[8] Petitioners tell us that, given the inability of a Class A facility to reach the rural audience, they would not apply to construct a station of the magnitude necessary to provide city-grade coverage to Lockhart at the site mandated by the separation requirements. Hicks likewise refuses to commit itself to apply for Channel 292A.

10. On the other hand, we recognize that ECI faces an interference problem at its present site, a problem shared by other Houston stations, and we do not discount the magnitude of its difficulties. Our deliberations here may be guided by a recent decision by the Broadcast Bureau, pursuant to Section 0.281 of the Commission's Rules, in which the facts are quite similar. See *Freeport, Texas,* Docket No. 21513, 45 FR 21638 (1980). That case involved a proposed first FM assignment of a Class C channel to Freeport, a community of 11,997, on the Gulf Coast. No Class A channel was available for assignment to Freeport. Opposing the assignment was Houston Station KMJQ, which claimed to provide unique service to the minority population of that city. Station KMJQ complained that its signal was sustaining interference caused by construction in downtown Houston, and sought to relocate its transmiter at a site 27.2 kilometers (17 miles) outside of Houston. This would have resulted in short spacing with the proposed Freeport site. In ultimately assigning the Class C channel to Freeport, the Bureau gave great decisional weight to the fact that KMJQ had offered no evidence, beyond its bald assertion, that it was unable to procure an alternative transmitter site which would not be short-spaced to Freeport. We find the same to be true in the instant case. It appears from the record that alternative locations exist to which Station KLEF's transmitter might be moved. In particular, we note the "tall tower" site, 24 kilometers (15 miles) from Houston (see par. 3, *supra*), east of Station KLEF's present STA location. The record indicates that a 1,049 foot tower could be erected here with FAA concurrence.[9] From this site, Station KLEF could provide the necessary signal contour over Houston. If Station KLEF were to operate from this location, the Lockhart site would have to be moved 8 kilometers (5 miles) west, to meet the mileage separation requirements. A Class C facility operating there would in all likelihood be able to cover Lockhart adequately. In addition, the record indicates that Station KLEF could be sited further east than the "tall tower" site, enabling the Lockhart site originally proposed to be utilized.

[9] KLEF is part of a group of stations which have applied for FAA approval of a 1,970 foot tower (2,049 feet above mean sea level) at this "tall tower" site. In an October 5, 1979, letter to an engineering consultant to KLEF, Mr. Frank Lappas, an aeronautical consultant, stated that he believes the FAA would approve a maximum tower height of 1,049 feet above mean sea level at the "tall tower" site. The letter was filed by ECI as an attachment to its comments and counterproposal.

11. The significance of the possibility of other available sites for Station KLEF's transmitter can best be evaluated by an analogy to cases in which waiver of short-spacing prohibitions is sought. In such situations, we require concrete evidence, as opposed to mere undocumented assertion, that no non-short-spaced site is available. See *Townsend Broadcasting Corporation,* 62 F.C.C. 2d 511 (1976). Further, it is only in the most compelling circumstances that we have been willing to deviate from the original FM allocation plan. *John Lamar Hill,* 70 F.C.C. 2d 153 (1978). Here, no party has thus far sought waiver of the minimum distance separation requirements, although the possibility has been addressed in the pleadings. We shall not decide an issue which is not before the Commission, however, we note that the absence of categorical evidence that no non-short-spaced sites are available for KLEF is dispositive in the instant situation, just as it would be in the context of a requested waiver. We would be extremely reluctant to deny a first local FM service to Lockhart and favor ECI, when there are apparent solutions to the controversy which would permit both the continued operation of Station KLEF at a permissible site and the assignment of Channel 234 to Lockhart.[10] On the evidence before us, it appears that our action herein need not entail the demise of Station KLEF. Thus, considering all the factors before us, it appears that the public interest would best be served by our assigning Channel 234 to Lockhart as a first FM assignment.

12. Accordingly, pursuant to authority contained in Sections 4(i), 5(d)(1), 303(g) and (r) and 307(b) of the Communications Act of 1934, as amended, and Section 0.281 of the Commission's Rules, It is ordered, That effective September 19, 1980, the FM Table of Assignments, Section 73.202(b) of the Commission's Rules, IS AMENDED with respect to Lockhart, Texas, as follows:

City and Channel No.
Lockhart, Texas 234

13. It is further ordered, That the counterproposal of ECI to substitute Channel 296A for Channel 292A at Gonzales, Texas, and assign Channel 292A to Lockhart, Texas, is denied.

[10] Since we do not believe that assignment of Channel 234 to Lockhart would cause Station KLEF to cease operation, it is not necessary for us to consider substantively ECI's argument that the Lockhart assignment would cause loss of Station KLEF's unique classical format.

14. It is further ordered, That this proceeding is terminated.

15. For further information concerning this proceeding, contact Molly Pauker, Broadcast Bureau, (202) 632–6302.

(Secs. 4, 5, 303, 48 Stat., as amended, 1066, 1068, 1082; 47 U.S.C. 154, 155, 303).

Federal Communications Commission.

BILLING CODE 6712-01-M

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1033

[S.O. No. 1470, Amdt. 1]

Norfolk and Western Railway Co. Authorized To Operate Over Tracks of Consolidated Rail Corp. and of Illinois Central Gulf Railroad Co.

August 7, 1980.

AGENCY: Interstate Commerce Commission.

ACTION: Amendment No. 1 to Service Order No. 1470.

SUMMARY: This order provides authority for the Norfolk and Western to operate over tracks of the Illinois Central Gulf Railroad and Conrail, which expedites the movement of freight traffic to be interchanged with those carriers. Amendment No. 1 amends Service Order No. 1470 by extending the expiration date until 11:59 p.m., October 30, 1980.

EFFECTIVE DATE: 11:59 p.m., August 8, 1980.

FOR FURTHER INFORMATION CONTACT:

M. F. Clemens, Jr. (202) 275–7840.

Upon further consideration of Service Order No. 1470 (45 FR 31724), and good cause appearing therefor:

§ 1033.1470 [Amended]

It is ordered, § 1033.1470 *Norfolk and Western Railway Company Authorized To Operate Over Tracks of Consolidated Rail Corporation and of Illinois Central Gulf Railroad Company.* Service Order No. 1470 is amended by substituting the following paragraph (e) for paragraph (e) thereof:

(e) *Expiration date.* The provisions of this order shall expire at 11:59 p.m., October 30, 1980, unless otherwise modified, amended, or vacated by order of this Commission.

Effective date. This amendment shall become effective at 11:59 p.m., August 8, 1980.

This action is taken under the authority of 49 U.S.C. 10304–10305 and 11121–11126.

This amendment shall be served upon the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and car hire agreement under the terms of that agreement and upon the American Short Line Railroad Association. Notice of this amendment shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members Joel E. Burns, Robert S. Turkington and John H. O'Brien.

Agatha L. Mergenovich,

Secretary.

[FR Doc. 80-24361 Filed 8-12-80; 8:45 am]

BILLING CODE 7035-01-M

49 CFR Part 1033

[Sixth Rev. S.O. No. 1473]

Various Railroads Authorized To Use Tracks and/or Facilities of the Chicago, Rock Island & Pacific Railroad Co., Debtor (William M. Gibbons, Trustee)

August 7, 1980.

AGENCY: Interstate Commerce Commission.

ACTION: Sixth Revised Service Order No. 1473.

SUMMARY: Pursuant to Section 122 of the Rock Island Transition and Employee Assistance Act, Public Law 96–254, this order authorizes various railroads to provide interim service over Chicago, Rock Island and Pacific Railroad Company, Debtor (William M. Gibbons, Trustee), and to use such tracks and facilities as are necessary for operations. This order permits carriers to continue to provide service to shippers which would otherwise be deprived of essential rail transportation.

In particular, Sixth Revised Service Order No. 1473, is revised by deleting from Appendix A, Item 1, the authority for Louisiana and Arkansas Railway to operate between Hodge and Winnfield, and at Alexandria, Louisiana, which operation was never commenced. That operation is now being authorized for the Louisiana Midland Railway Company which has undertaken a lease/purchase agreement with the Trustee (Item 23). Items 5 and 8 are corrected as indicated, to be consistent with the operations being performed. Also deleted from Appendix A, is Item 21, which authorized the Winchester and Western Railroad Company to operate between LaSalle and Ottawa, Illinois, which operation was assumed by the Baltimore and Ohio Railroad on August 4, 1980. All Items after Item 20 are renumbered one number less.

EFFECTIVE: 12:01 a.m., August 9, 1980, and continuing in effect until 11:59 p.m., August 31, 1980, unless otherwise modified, amended or vacated by order of this Commission.

FOR FURTHER INFORMATION CONTACT:

M. F. Clemens, Jr. (202) 275–7840.

Pursuant to Section 122 of the Rock Island Transition and Employee Assistance Act, Pub. L. 96–254, the Commission is authorizing various railroads to provide interim service over Chicago, Rock Island and Pacific Railroad Company, Debtor, (William M. Gibbons, Trustee), (RI) and to use such tracks and facilities as are necessary for that operation.

In view of the urgent need for continued service over RI's lines pending the implementation of long-range solutions, this order permits carriers to continue to provide service to shippers which would otherwise be deprived of essential rail transportation.

Sixth Revised Service Order No. 1473, is revised by deleting from Appendix A, Item 1, the authority for Louisiana and Arkansas Railway to operate between Hodge and Winnfield, and at Alexandria, Louisiana, which operation was never commenced. That operation is now being authorized for the Louisiana Midland Railway Company which has undertaken a lease/purchase agreement with the Trustee (Item 23). Items 5 and 8 are corrected as indicated, to be consistent with the operations being performed. Also deleted from Appendix A, is Item 21, which authorized the Winchester and Western Railroad Company to operate between LaSalle and Ottawa, Illinois, which operation was assumed by the Baltimore and Ohio Railroad on August 4, 1980. All Items after Item 20 are renumbered one number less.

It is the opinion of the Commission that an emergency exists requiring that the railroads listed in the attached appendix be authorized to conduct operations, also identified in the attachment, using RI tracks and/or facilities; that notice and public procedure are impracticable and contrary to the public interest; and good cause exists for making this order effective upon less than thirty days' notice.

It is ordered,

§ 1033.1473 Service Order No. 1473.

(a) *Various railroads authorized to use tracks and/or facilities of the Chicago, Rock Island and Pacific Railroad Company, Debtor, (William M. Gibbons, Trustee).* Various railroads are authorized to use tracks and/or facilities of the Chicago, Rock Island and Pacific Railroad Company (RI), as listed in Appendix A to this order, in order to provide interim service over the RI.

(b) The Trustee shall permit the affected carriers to enter upon the property of the RI to conduct service essential to these interim operations.

(c) The Trustee will be compensated on terms established between the Trustee and the affected carrier(s); or upon failure of the parties to agree as hereafter fixed by the Commission in accordance with pertinent authority conferred upon it by Section 122(a) Public Law 96–254.

(d) Interim operators authorized in Appendix A to this order, shall, within fifteen (15) days of its effective date, notify the Railroad Service Board of the date on which interim operations were commenced or the expected commencement date of those operations.

(e) Interim operators, authorized in Appendix A to this order, shall, within thirty days of commencing operations under authority of this order, notify the RI Trustee of those facilities they believe are necessary or reasonably related to the authorized operations.

(f) During the period of these operations over the RI lines, interim operators shall be responsible for preserving the value of the lines, associated with each interim operation, to the RI estate, and for performing necessary maintenance to avoid undue deterioration of lines and associated facilities.

(g) Any operational or other difficulty associated with the authorized operations shall be resolved through agreement between the affected parties or, failing agreement, by the Commission's Railroad Service Board.

(h) Any rehabilitation, operational, or other costs related to the authorized operations shall be the sole responsibility of the interim operator incurring the costs, and shall not in any way be deemed a liability of the United States Government.

(i) *Application.* The provisions of this order shall apply to intrastate, interstate and foreign traffic.

(j) *Rate applicable.* Inasmuch as this operation by interim operators over tracks previously operated by the RI is deemed to be due to carrier's disability, the rates applicable to traffic moved over these lines shall be the rates applicable to traffic routed to, from, or via these lines which were formerly in effect on such traffic when routed via RI, until tariffs naming rates and routes specifically applicable become effective.

The operator under this temporary authority will not be required to protect transit rate obligations incurred by the RI or the directed carrier, Kansas City Terminal Railway Company, on transit balances currently held in storage.

(k) In transporting traffic over these lines, all interim operators involved shall proceed even though no contracts, agreements, or arrangements now exist between them with reference to the divisions of the rates of transportation applicable to that traffic. Divisions shall be, during the time this order remains in force, those voluntarily agreed upon by and between the carriers; or upon failure of the carriers to so agree, the divisions shall be those hereafter fixed by the Commission in accordance with pertinent authority conferred upon it by the Interstate Commerce Act.

(l) *Employees*—In providing service under this order interim operators, to the maximum extent practicable, shall use the employees who normally would have performed work in connection with the traffic moving over the lines subject to this Service Order.

(m) *Effective date.* This order shall become effective at 12:01 a.m., August 9, 1980.

(n) *Expiration date.* The provisions of this order shall expire at 11:59 p.m., August 31, 1980, unless otherwise modified, amended, or vacated by order of this Commission.

This action is taken under the authority of 49 U.S.C. 10304–10305 and Section 122, Pub. L. 96–254.

This order shall be served upon the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and car hire agreement under the terms of that agreement and upon the American Short Line Railroad Association. Notice of this order shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission at Washington, D.C, and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members Joel E. Burns, Robert S. Turkington and John H. O'Brien.

Agatha L. Mergenovich,

Secretary.

Appendix A.—RI Lines Authorized To Be Operated by Interim Operators

1. *Louisiana and Arkansas Railway Company (L&A):*

A. Tracks one through six of the Chicago, Rock Island and Pacific Railroad Company's (RI) Cadiz yard in Dallas, Texas, commencing at the point of connection of RI track six with the tracks of the Atchison, Topeka and Santa Fe Railway Company (ATSF) in the southwest quadrant of the crossing of the ATSF and the Missouri-Kansas-Texas Railroad Company (MKT) at interlocking station No.19.

2. *Peoria and Pekin Union Railway Company (P&PU):* All Peoria Terminal Railroad property on the east side of the Illinois River, located within the city limits of Pekin, Illinois

3. *Union Pacific Railroad Company (UP):*

A. Beatrice, Nebraska

B. from Colby to Caruso, Kansas

C. approximately 36.5 miles of trackage extending from Fairbury, Nebraska, to RI Milepost 581.5 north of Hallam, Nebraska

4. *Toledo, Peoria and Western Railroad Company (TP&W):*

A. Keokuk, Iowa

B. Peoria Terminal Company trackage from Hollis to Iowa Junction, Illinois

5. *Burlington Northern, Inc. (BN):*

A. Burlington, Iowa (milepost 0 to milepost 2.06)

B. Fairfield, Iowa

C. Henry, Illinois (milepost 126) to Peoria, Illinois (milepost 164.35) including the Keller Branch (milepost 1.55 to 8.62).

D. Phillipsburg, Kansas (milepost 282) to CBQ Junction, Kansas (milepost 325.9)

* E. CBQ Junction, Kansas (milepost 325.9) to Gem, Kansas (milepost 380.5).

6. *Fort Worth and Denver Railway Company (FW&D):*

A. From Groom, Texas (milepost 718.9) to Adrian, Texas (milepost 809.5)

B. Terminal trackage at Amarillo, Texas, including approximately (3) three miles northerly along the old Liberal Line, and at Bushland, Texas.

C. North Fort Worth, Texas (milepost 603.0 to milepost 611.4).

7. *Chicago and North Western Transportation Company (C&NW):*

A. from Minneapolis-St. Paul, Minnesota, to Kansas City, Missouri

B. from Rock Junction (milepost 5.2) to Inver Grove, Minnesota (milepost 0)

C. from Inver Grove (milepost 344.7) to Northwood, Minnesota

D. from Clear Lake Junction (milepost 191.1) to Short Line Junction, Iowa (milepost 73.6)

E. from Short Line Junction Yard (milepost 354) to West Des Moines, Iowa (milepost 364)

F. from Short LIne Junction (milepost 73.6) to Carlisle, Iowa (milepost 64.7)

G. from Carlisle (milepost 64.7) to Allerton, Iowa (milepost 0)

H. from Allerton, Iowa (milepost 363) to Trenton, Missouri (milepost 502.2)

I. from Trenton (milepost 415.9) to Air Line Junction, Missouri (milepost 502.2)

J. from Iowa Falls (milepost 97.4) to Esterville, Iowa (milepost 206.9)

K. from Rake (milepost 50.7) to Ocheyedan, Iowa (milepost 502)

L. from Palmer (milepost 454.5) to Royal, Iowa (milepost 502)

M. from Dows (milepost 113.4) to Forest City, Iowa (milepost 158.2)

* Corrected.

N. from Cedar Rapids (milepost 100.5) to Cedar River Bridge, Iowa (milepost 96.2) and to serve all industry formerly served by the RI at Cedar Rapids
O. from Newton (milepost 320.5) to Earlham, Iowa (milepost 388.6)
P. Sibley, Iowa
Q. Worthington, Minnesota
R. Altoona to Pella, Iowa
S. Carlisle, Indianola, Iowa
T. Omaha, Nebraska, (between milepost 502 to milepost 504).
U. Earlham, (milepost 388.6) to Dexter, Iowa (milepost 393.5).

8. Chicago, Milwaukee, St. Paul and Pacific Railroad Company (Milwaukee):

A. from West Davenport, through and including Muscatine, to Fruitland, Iowa, including the Iowa-Illinois Gas and Electric Company near Fruitland
*B. Seymour, Iowa
C. Washington, Iowa
D. from Newport, to a point near the east bank of the Mississippi River, sufficient to serve Northwest Oil Refinery, at St. Paul Park, Minnesota

9. Davenport, Rock Island and North Western Railway Company (DRI):

A. Davenport, Iowa
B. Moline, Illinois
C. Rock Island, Illinois, including 26th Street yard
D. from Rock Island through Milan, Illinois, to a point west of Milan sufficient to include service to the Rock Island Industrial complex
E. from East Moline to Silvis, Illinois
F. from Davenport to Wilton, Iowa
G. from Rock Island, Illinois, to Davenport, Iowa, sufficient to include service to Rock Island arsenal

10. Illinois Central Gulf Railroad Company: (ICG) Ruston, Louisiana.

11. St. Louis Southwestern Railway Company (SSW): operating the Tucumcari Line from Santa Rosa, NM, to St. Louis, MO (via Kansas City, KS/MO), a total distance of 995.2 miles. The line also includes the RI branch line from Bucklin to Dodge City, KS, a distance of 26.5 miles, and North Topeka, KS. Also between Brinkley and Briark, Arkansas, and at Stuttgart, Arkansas.

12. The Southwestern Oklahoma Railroad Company: from Hobart, Oklahoma (milepost 70) to Mangum, Oklahoma (milepost 97.7), and from Hobart, (milepost 70) to Anadarko, Oklahoma (milepost 18.5).

13. Little Rock & Western Railway Company: from Little Rock, Arkansas (milepost 135.2) to Perry, Arkansas (milepost 184.2); and from Little Rock (milepost 136.4) to the Missouri Pacific/RI Interchange (milepost 130.6).

14. Missouri Pacific Railroad Company: from Little Rock, Arkansas (milepost 135.2) to Hazen, Arkansas (milepost 91.5); Little Rock, Arkansas (milepost 135.2) to Pulaski, Arkansas (milepost 141.0); Hot Springs Junction (milepost 0.0) to and including Rock Island milepost 4.7.

15. Missouri-Kansas-Texas Railroad Company/Oklahoma, Kansas and Texas Railroad Company:

A. Herington-Ft. Worth Line of Rock Island: beginning at milepost 171.7 within the City of Herington, Kansas, and extending for a distance of 439.5 miles to milepost 613.5 within the City of Ft. Worth, Texas, and use of Fort Worth and Denver trackage between Purina Junction and Tower 55 in Ft. Worth
B. Ft. Worth-Dallas Line of Rock Island: beginning at milepost 611.9 within the City of Ft. Worth, Texas, and extending for a distance of 34 miles to milepost 646, within the City of Dallas, Texas
C. El Reno-Oklahoma City Line of Rock Island: beginning at milepost 513.3 within the City of El Reno, Oklahoma, and extending for a distance of 16.9 miles to milepost 496.4 within the City of Oklahoma City, Oklahoma
D. Salina Branch Line of Rock Island: beginning at milepost 171.4 within the City of Herington, Kansas, and extending for a distance of 27.4 miles to milepost 198.8 in the City of Abilene, Kansas, including RI trackage rights over the line of the Union Pacific Railroad Company to Salina, (including yard tracks) Kansas
E. Right to use joint with other authorized carriers the Herington-Topeka Line of Rock Island: beginning at milepost 171.7 within the City of Herington, Kansas, and extending for a distance of 81.6 miles to milepost 89.9 within the City of Topeka, Kansas, as bridge rights only
F. Rock Island rights of use on the Wichita Union Terminal Railway Company and the Wichita Terminal Association, all located in Wichita, Kansas
G. Rock Island right to interchange with and use the properties of the Great Southwest Railroad Company located in Grand Prairie, Texas
H. The Atchison Branch from Topeka, at milepost 90.5, to Atchison, Kansas, at milepost 519.4 via St. Joseph, Missouri, at mileposts 0.0 and 498.3, including the use of interchange and yard facilities at Topeka, St. Joseph, and Atchison, and the trackage rights used by the Rock Island to form a continuous service route, a distance of 111.6 miles
I. The Ponca City Line at approximately milepost 26.1 at Billings, Oklahoma, to North Enid, Oklahoma, at milepost 339.5 on the Southern Division main line, a distance of 26.1 miles
J. That part of the Mangum Branch Line from Chickasha, milepost 0.0 to Anadarko at milepost 18, thence south on the Anadarko Line at milepost 460.5 to milepost 485.3 at Richards Spur, a distance of 42.8 miles
K. Oklahoma City-McAlester Line of Rock Island: Beginning at milepost 496.4 within the City of Oklahoma City, Oklahoma, and extending for a distance of 131.4 miles to milepost 365.0 within the City of McAlester, Oklahoma.

16. El Dorado and Wesson Railroad Company: from El Dorado to Catesville, Arkansas, a distance of 8 miles, in order to serve the Velsical Plant.

17. The Denver and Rio Grande Western Railroad Company:

A. from Colorado Springs (milepost 609.1) to and including all rail facilities at Colorado Springs and Roswell, Colorado, (milepost 602.8), all in the vicinity of Colorado Springs, Colorado.

18. Norfolk and Western Railway Company: is authorized to operate over tracks of the Chicago, Rock Island and Pacific Railroad Company running southerly from Pullman Junction, Chicago, Illinois, along the western shore of Lake Calumet approximately four plus miles to the point, approximately 2,500 feet beyond the railroad bridge over the Calumet Expressway, at which point the RI track connects to Chicago Regional Port District track; and running easterly from Pullman Junction approximately 1,000 feet into the lead to Clear-View Plastics, Inc., for the purpose of serving industries located adjacent to such tracks and connecting to the Chicago Regional Port District. Any trackage rights arrangements which existed between the Chicago, Rock Island and Pacific Railroad Company and other carriers, and which extend to the Chicago Regional Port District Lake Calumet Harbor, West Side, will be continued so that shippers at the port can have NW rates and routes regardless of which carrier performs switching services.

19. St. Louis-San Francisco Railway Co.:

A. At Okeene, Oklahoma.
B. At Lawton, Oklahoma.

20. Southern Railway Company:

21. Cadillac and Lake City Railroad:

A. From Sandown Junction (milepost 0.1) to and including junction with DRGW Belt Line (milepost 3.9) all in the vicinity of Denver, Colorado.

22. Baltimore and Ohio Railroad Company:

A. From Blue Island, Illinois (milepost 15.7) to Bureau, Illinois (milepost 114.2), a distance of 98.5 miles.

23. Louisiana Midland Railway Company:

A. From Hodge, Louisiana (milepost 173.3) to Alexandria, Louisiana (milepost 247.8), which includes assumption of RI's trackage rights over the Louisiana and Arkansas Railway Company between Winnfield, Louisiana, and Alexandria, Louisiana, and the RI's track and yard in Alexandria, Louisiana.

49 CFR Part 1033

[S.O. No. 1481]

The Kansas City Southern Railway Co. Authorized To Operate Over Certain Tracks of St. Louis-San Francisco Railway Co. and Missouri Pacific Railroad Co.

August 7, 1980.

AGENCY: Interstate Commerce Commission.

ACTION: Final rule (Service Order No. 1481).

SUMMARY: This order authorizes Kansas City Southern to operate over certain tracks of the St. Louis-San Francisco and the Missouri Pacific due to damage to its bridge over the Elk River near Noel, Missouri. The operation is between Neosho, Missouri and Sallisaw, Oklahoma, a total distance of about 171.8 miles. This order will remain in effect until September 15, 1980, to provide time to make necessary repairs.

EFFECTIVE DATE: 12:01 a.m., August 9, 1980.

FOR FURTHER INFORMATION CONTACT:
M. F. Clemens, Jr. (202) 275-7840.

The Kansas City Southern Railway Company (KCS) is unable to operate over a portion of its lines in Missouri and Oklahoma due to an inability to operate over its Elk River Bridge, 3 miles north of Noel, Missouri. An alternate route is available over lines of the St. Louis-San Francisco Railway Company (SLSF) between Neosho, Missouri and Claremore, Oklahoma, and over lines of the Missouri Pacific Railroad Company (MOP) between Claremore and Sallisaw, Oklahoma. MOP and SLSF have consented to the use of their lines by the KCS for a period of time sufficient to allow the bridge to be repaired.

It is the opinion of the Commission that an emergency exists requiring the operation by KCS over tracks of MOP and SLSF in the interest of the public; that notice and public procedure are impracticable and contrary to the public interest; and that good cause exists for making this order effective upon less than thirty days' notice.

It is ordered,

§ 1033.1481 Service Order No. 1481.

(a) *The Kansas City Southern Railway Company authorized to operate over certain tracks of St. Louis-San Francisco Railway Company and Missouri Pacific Railroad Company.* The Kansas City Southern Railway Company (KCS) is authorized to operate over tracks of the St. Louis-San Francisco Railway Company (SLSF) between Neosho, Missouri (milepost 309.14) and Claremore, Oklahoma (milepost 397.0); and over tracks of the Missouri Pacific Railroad Company (MOP) between Claremore, Oklahoma (milepost 609.7) and Sallisaw, Oklahoma (milepost 525.8), a total distance of approximately 171.8 miles.

(b) *Application.* The provisions of this order shall apply to intrastate, interstate, and foreign traffic.

(c) *Rates applicable.* Inasmuch as this operation by the KCS over tracks of the MOP and SLSF is deemed to be due to carrier's disability, the rates applicable to traffic moved by the KCS over these tracks shall be the rates which were applicable on the shipments at the time the shipment was originally routed.

(d) *Effective date.* This order shall become effective at 12:01 a.m., August 9, 1980.

(e) *Expiration date.* The provisions of this order shall expire at 11:59 p.m., September 15, 1980, unless otherwise modified, amended or vacated by order of this Commission.

This action is taken under the authority of 49 U.S.C. 10304-10305 and 11121-11126.

This order shall be served upon the Association of American Railroads, Car Service Division, as agent of the railroads subscribing to the car service and car hire agreement under the terms of that agreement and upon the American Short Line Railroad Association. Notice of this order shall be given to the general public by depositing a copy in the Office of the Secretary of the Commission at Washington, D.C., and by filing a copy with the Director, Office of the Federal Register.

By the Commission, Railroad Service Board, members Joel E. Burns, Robert S. Turkington and John H. O'Brien.

Agatha L. Mergenovich,
Secretary.

[Finance Docket No. 28990F]

Rail Carriers; Common Carrier Status of States, State Agencies and Instrumentalities, and Political Subdivisions

Decided: July 23, 1980.

AGENCY: Interstate Commerce Commission.

ACTION: Notice of final rules and exemptions.

SUMMARY: We are exempting the acquisition by a State of rail lines approved for abandonment, when the abandonment has not been consummated. Further, we are exempting from our regulation the start up and termination of operations over lines abandoned or approved for abandonment, which have been acquired by a State. We are also adopting rules for a modified certificate of public convenience and necessity for these operations. This will insure that our regulations do not prevent a State or political subdivision from initiating programs to continue rail service, and will encourage operators to provide service over State acquired lines.

FOR FURTHER INFORMATION CONTACT:
Richard Kelley, (202) 275-7564.

EFFECTIVE DATE: September 12, 1980.

SUPPLEMENTARY INFORMATION:

On March 26, 1980, a notice of proposed rulemaking and proposed exemptions was served and published at 45 FR 19585. These proposals were in response to petitions filed by States concerned about the effect regulation might have on their programs to continue rail service. In that notice, we proposed to exempt from our approval, under 49 U.S.C. 10901, the acquisition by a State of rail line which had been abandoned or approved for abandonment. In addition, we proposed to exempt the operators who provide service over these lines, from our regulatory requirements concerning start up and termination of operations. (49 U.S.C. 10901 and 10903). We also proposed special rules which would apply to the States and to the operators of these lines.

The purpose of these proposals is to promote continuation of rail service by removing certain regulatory constraints from the States and thus encouraging rail continuation programs. In addition, it will remove regulatory constraints which might discourage new operators from initiating service over marginal lines. Within the last year two major rail systems, the Chicago, Rock Island and Pacific Railroad Company, and the Chicago, Milwaukee, St. Paul and Pacific Railroad Company have terminated either all or a substantial portion of their operations. In response to the threat of losing rail service that the States find vital to their economic well being, several States have developed programs to continue service. These programs include plans by States to purchase rail lines and contract with operators to provide service. Also, new businesses have been organized to provide service over these lines. This proposal is designed to facilitate these efforts.

Comments on the notice were filed by five States: the State of Michigan, Department of Transportation (MI-DOT), the State of Wisconsin, Department of Transportation (WI-DOT), the Commissioner of Transportation of the State of New York (NY), the State of South Dakota (SD), the State of Iowa, Department of Transportation, the United States Department of Transportation (DOT), Railway Labor Executives' Association (RLEA), the Illinois Legislative Director for the United Transportation Union (UTU), the Association of American Railroads (AAR) and the Freight User Association of Long Island, Inc. Generally, the States and DOT favored the proposals but raised several questions about them. The labor and

*Added.

shipper organizations opposed the proposals.

NY filed a petition to be considered a party and moved to dismiss the proceeding, on the ground that this Commission has no jurisdiction over a State. NY is a proper party to the proceeding. The motion to dismiss is denied. It is well established that when a noncarrier, including a State, acquires a railroad, it must seek our approval under section 10901. See *United States* v. *California*, 297 U.S. 175 (1936); *Iowa Term. R. Co. Acquisition and Operation*, 312 I.C.C. 546, 549 (1961).

Discussion and Conclusion of Issues

1. *Exemptions.*—RLEA and UTU contend that the proposed exemptions are beyond the scope of section 10505 and that the Commission has not met the statutory burdens of this section. The unions' concern is that these proposed rules and exemptions will be used to avoid the labor protective provisions of 49 U.S.C. subtitle IV. They contend that the Commission cannot act as a superlegislature and exempt a class from important statutory provisions.

The language of section 10505 and the legislative history [1] give the Commission broad discretion concerning exemptions. We can exempt not only a transaction, but transactions. The Senate report explained the scope of the Commission's exemption authority as follows:

> The requirement of full proceedings before exemption can be granted * * *, as well as the findings which must be made, assure that the Commission will not act in such a manner as to contravene its Congressional mandate to regulate interstate commerce. At the same time, the power to exempt from regulation in whole or in part will enable the Commission to commit its limited resources in areas where they are most needed, by enabling it to deregulate those areas which have no significant bearing on the overall regulatory scheme. [S. Rept. 94–499, p. 53 (November 26, 1975).]

See also H. Rept. 94–725, p. 75 (December 12, 1975) which stated:

> The Committee has given the Commission the [exemption] power to study and review the areas of its regulation so as to eliminate from regulation those areas where regulation is not required to effectuate the national transportation policy or where the removal of the regulation would be no undue burden on persons or class or persons in interstate or foreign commerce, or where such regulation would serve little or no useful public purpose.

Additional legislative history indicates that the exemption power is to be used where regulation is not necessary to carry out the statutory criteria. See H. Rept. 94–768, p. 125 (December 10, 1975) and H. Rept. 94–781, p. 153 (January 23, 1976). Based on the clear legislative history of our exemption power and its precise wording as enacted in the Railroad Revitalization and Regulatory Reform Act of 1976, we can clearly exempt a class of transactions.

Under section 10505, we are authorized to exempt from our regulation a class of persons, or a transaction or service where appropriate "because of the limited scope of the transaction or service." This exemption is available when we find that continued regulation:

(1) is not necessary to carry out the transportation policy contained in section 10101 of the act;

(2) would be an unreasonable burden on a person, class of persons, or interstate and foreign commerce; and

(3) would serve little or no useful public purpose.

We will now apply these statutory requirements to the two exemptions proposed here. The scope of the exempted transactions is limited. Both exemptions will apply only to rail lines which have been approved for abandonment. Out of a national rail system totaling approximately 325,000 miles of main and branch lines, we approved the abandonment of only 2,873 miles in 1979, 2,417 miles in 1978, 2,500 miles in 1977, and 1,789 miles in 1976. The average length of the lines approved for abandonment is short: 23 miles in 1979, 22 miles in 1978, 17 miles in 1977, and 18 miles in 1976. In addition, States have shown interest in acquiring only a small fraction of these abandoned lines. Also, lines approved for abandonment generally have relatively sparse traffic, and have been either not profitable or only marginally profitable.

a. *Acquisition by State of a rail line approved for abandonment.*—When a rail line has been fully abandoned,[2] it is no longer rail line and the transfer of the line is not subject to our jurisdiction. However, when a line has not been fully abandoned, the transfer of the line is subject to our jurisdiction. We are exempting States from our regulatory requirements concerning acquisition of lines not fully abandoned. When a State wishes to acquire a line approved for abandonment by the Commission or a Bankruptcy Court, and the line has not been fully abandoned we will not require the filing of an application. This is a narrow class of transactions which does not require review by this Commission to protect the public interest.

We are requiring States to notify the Commission of the acquisition of these rail lines and whether operations will be continued over them.

The fact that the abandonment has not been consummated will not result in any change in employee protective conditions which may have been imposed in the abandonment proceeding. In acquisition proceedings where the vendor had filed abandonment applications for the involved line, but the application was dismissed when the acquisition was granted, the Commission has required the selling railroad to assume the costs of labor protection. See *Prairie Trunk Railway—Acquisition and Operation*, 348 I.C.C. 832 (1977) and *Cadillac & Lake City Ry. Co. Acquisition and Operation*, 320 I.C.C. 617 (1964).

SD requests that this exemption proposal be modified to include nonabandoned lines of bankrupt railroads purchased by a State with the approval of the Bankruptcy Court. We see no justification for abdicating our concurrent jurisdiction. Under the Milwaukee Railroad Restructuring Act, section 5(b)(2) (MRRA), a Bankruptcy Court may not authorize a sale or transfer *until* an application has been filed with the Commission. To comply with the requirements of MRRA, we have adopted special procedures in Ex Parte No. 282 (Sub-No. 4), *Acquisition Procedures for Lines of Railroads*, 360 I.C.C. 623 (1980). These procedures streamline the information filed by applicants; yet enable the Commission to rule quickly and knowledgeably on the acquisition. We have ruled upon an acquisition under these procedures with a 30-day court imposed time limit. See, Finance Docket No. 29237, *State of Wisconsin—Acquisition of Certain Lines of Chicago Milwaukee, St. Paul and Pacific Railroad Company* (not printed), decided January 30, 1980. However, transfers to States of those lines abandoned or approved for abandonment will fall within the scope of this exemption.

b. *Operators exempt from filing start up and abandonment applications.*—(49 U.S.C. 10901 and 10903.) The lines involved under this exemption are lines that have been approved for abandonment, or have been fully abandoned; as discussed above, the scope of the transaction is limited.

In acquiring these lines the States may be contracting with new operators for service over these lines which have proven uneconomical to operate. Service over lines may be in danger of immediate termination. Requiring an application under section 10901 to start up operations may result in temporary cessation of service to shippers. The new carriers may also be concerned with the necessity of continuing operations for months should another abandonment application be required. To require applications for the start up and termination of service over these lines serves no public purpose, is an unreasonable burden, and is not necessary to carry out the transportation policy.

We recognize the concern of RLEA and UTU regarding the Commission's statutory duty to impose employee protective conditions. However, these exemptions will not affect the labor protective conditions imposed by the Bankruptcy Court or the Commission in abandonment proceedings. All rail lines exempted here will have been approved for abandonment and employees protective conditions will have been imposed on the abandoning carrier.

The purpose of this proceeding is to facilitate the acquisition and operation of lines for which service by the current carrier will in all likelihood not be continued. This purpose clearly fulfills our most fundamental congressional mandate: to ensure the development, coordination, and preservation of a transportation system. This proposal should increase employment opportunities for railroad employees. However, employees of the new operators will be on notice from the beginning that this is an enterprise that may go out of business, and as with most business enterprises, the employees will have no protections other than those provided by the original abandoning carrier imposed if the new operations terminate.

2. *Common carrier status of states.*—In our March 26 notice, we suggested that both the State and the operator would become common carriers, even though certain transactions would be exempt from our jurisdiction. The States argue strenuously that no common carrier status should attach when they acquire rail line and contract for the operations over the line. They contend that a State should be required to file an application for a common carrier certificate only if it operates a rail line. Further, where the operator has assumed the entire burden of operating the line, no purpose is served by requiring a State to become a common carrier. WI–DOT explained:

> These Wisconsin counties and cities do not provide any rail service for compensation. They simply permit an operator on their track and WISDOT land and hope the operator can break even or turn a profit with a minimum contribution of public moneys for track maintenance and rehabilitation. [WI–DOT comment, p. 1.]

In addition, they contend that a finding that States incur a common carrier obligation merely by owning a rail line is contrary to established Commission policy and contrary to the purpose of 49 U.S.C. subtitle IV. They argue that the fundamental test for determining common carrier status is whether there has been a "holding out to the public as a common carrier." *Status of Bush Universal, Inc.*, 342 I.C.C. 550, 564 (1973). See also *State of Okla. Ex Rel., Dept. of Highways, Abandonment*, 324 I.C.C. 666 (1965), where the State paid the contruction cost of a rail line, but was not considered a "carrier" under 49 U.S.C. 10901. Further, in *State of Vt. and Vermont Ry., Inc., Acquisition and Op.*, 320 I.C.C. 609, 610 (1964), the Commission, Division 3, ruled that a State, which acquired a rail line authorized to be abandoned, was not considered a common carrier when it never performed, or held itself out to perform transportation service.

WI–DOT notes that many State constitutions prohibit a State from becoming a common carrier. WI–DOT also asks the Commission to consider the additional burden common carrier status would impose on States insofar as employee protective arrangements under 49 U.S.C. 11347 and liability under the Federal Employee's Liability Act.

We are persuaded by the States' arguments. The purpose of this proposal is to promote continuation of rail service and to remove obstacles which might inhibit States from acquiring lines so that service can be continued. Our mandate to promote transportation is best served by following the policy that mere ownership of a rail line by a State does not create common carrier status. When a State has not held itself out to be the operator of a line and thus has not incurred a duty to the public, the common carrier duty to provide and maintain service should be only on the operator. Therefore, we have modified our proposal, and we will not require the State to file jointly with the operator of a notice for a modified certificate.[3] A State will be considered a common carrier if it operates a rail line itself. *United States* v. *California, supra.*

3. *Modified certificate of public convenience and necessity.*—The operators, whether a State or its contractor, which would be exempted from our regulatory requirements concerning start up and termination of operations, must however, file a notice for a modifed certificate of public convenience and necessity under 49 CFR 1120A. See appendix. This notice will provide the Commission with essential information concerning the financial condition of the operator, liability insurance coverage, and the nature of the operations. An operator may commence operations immediately upon the filing of a completed notice under 49 CFR 1120A. Service can be terminated after providing 60 days' notice to the State, the Commission, and shippers on the line.

The operators under the modified certificate incur full common carrier obligations (within any limitations contained in the certificate such as shipper subsidy) and may subscribe to existing industrywide agreements and rules pertaining to the joint movement and interchange of freight cars and traffic, and arrangements for accounting, billing, and settlements.

DOT questions whether an operator under this type of certificate should be eligible for antitrust immunity under section 10706. The issue of rate bureau antitrust immunity is being considered in other proceedings before the Commission [4] and in legislation pending in Congress. DOT has not shown how granting the immunity to these operators would promote uneconomical transportation. It is our view, that insofar as operations are concerned, the operators under modified certificates are the same as other common carriers—they differ only in the requirements for start up and termination of service. To the extent that these carriers join rate bureaus for the purpose of discussing collective rates, they will be held to the same standards applicable for rail carrier antitrust immunity generally.

We should also clarify the limitation of service under the modified certificate. The State through its operational agreement and/or the operator of the line may determine certain preconditions, such as payment of a subsidy, which must be met by shippers to obtain service over a line. All shippers must be notified of the

[1] See H. Rept. 94–725, p. 75 (December 12, 1975), H. Rept. 94–781, p. 153 (January 23, 1976), and S. Rept. 94–499, p. 53 (November 26, 1975).

[2] A line is fully abandoned after a cerficiate of public convenience and necessity has been issued, and when operations have ceased, tariffs have been canceled and a letter has been filed with the Commission that the abandonment has been consummated.

[3] In our original notice, we had proposed exempting the States from the securities requirements of section 11301. Under that proposal the State, as the nonoperating owner of a rail line was required to join in the application for a modified certificate. Since, we have ruled here that only the operator of a line is a common carrier, this exemption for the States is not needed.

[4] Section 5(b) Application No. 2, Western Railroads—Agreement; Section 5(b) Application No. 3, Eastern Railroads—Agreement; and Section 5(b) Application No. 6, Southern Railroads—Agreement.

precondition and any shipper who meets the requirements must be served. The modified certificate will authorize service only to the shippers who meet these preconditions and the operator's common carrier duty will extend only to those shippers.

4. *Other issues.*—DOT suggests that the exemptions apply only to rail lines which carried traffic of 5 million gross ton-miles or less during its last year of operation. This limitation is needed, DOT contends, because States may acquire abandoned main line and these State-owned lines could achieve "unfair competitive advantages." This limitation is not necessary. DOT has not shown what "unfair competitive advantages" may result from this proposal. Also, shippers along lines served by these operators are on notice that service may be terminated after providing 60 days' notice. If the operations become profitable enough, a carrier would, in all likelihood, apply for a common carrier certificate so that shippers would know the service was long term and would be willing to expand or locate on the line.

DOT is authorized, under 49 U.S.C. 1654 (f) and (k), with certain limited exceptions, to grant assistance to States for *subsidizing* service over lines previously authorized for abandonment by this Commission, and to grant assistance for *rehabilitating* light density lines that have not been abandoned or authorized for abandonment. Thus, the type of assistance which DOT is authorized to provide varies depending on whether the line for which a State seeks assistance has been abandoned or authorized for abandonment.

DOT requests that we clarify whether the line operated under a modified certificate of public convenience and necessity is a line authorized for abandonment and therefore eligible only for operating subsidies, or is a line operated under a common carrier certificate and thus eligible for rehabilitation assistance. Since all the rail lines that will be covered by this exemption would have been abandoned pursuant to our regular procedures but for this exemption, we conclude that they would not be eligible for rehabilitation assistance. If a carrier wishes to take advantage of Federal rehabilitation assistance programs, it will have to apply for a full-fledged certificate of public convenience and necessity pursuant to section 10901 of the act.

UTU asks why States should be treated differently than private sector railroads. Our statutory mandate requires us "to cooperate with each State and the officials of each State on transportation matters." 49 U.S.C. 10101(a)(15). In addition, Congress has clearly enunciated its view that States should take an active role in maintaining rail service. See the Regional Rail Reorganization Act of 1973 and the Railroad Revitalization and Regulatory Reform Act of 1976.

We adopt the exemptions discussed in this notice and the rules set forth in the appendix.

This action does not affect significantly the quality of the human environment or conservation of energy resources.

Issued under the authority of 5 U.S.C. 553 and 49 U.S.C. 10321 and 10505.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis, and Gilliman.

Agatha L. Mergenovich,
Secretary.

Appendix

The following rules are added as 49 CFR 1120A:

PART 1120A—MODIFIED CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

Sec.
1120A.1 Scope of rules.
1120A.2 Exemptions and common carrier status.
1120A.3 Modified certificate of public convenience and necessity.
1120A.4 Termination of service.

Authority: 5 U.S.C. 553 and 49 U.S.C. 10321 and 10505.

§ 1120A.1 Scope of rules.

These special rules apply to the operations over abandoned rail line, which has been acquired (through purchase or lease) by a State. The rail line must have been fully abandoned, or approved for abandonment by the Commission or a Bankruptcy Court. As used in these rules, the term "State" includes States, political subdivisions of States, and all instrumentalities through which the State can act. An operator has the option of applying for a modified certificate of public convenience and necessity under this section or a common carrier certificate under 49 U.S.C. 10901 and 49 CFR 1120.

§ 1120A.2 Exemptions and common carrier status.

The acquisition by a State of a fully abandoned line is not subject to the jurisdiction of the Interstate Commerce Commission. The acquisition by a State of a line approved for abandonment and not yet fully abandoned is exempted from the Commission's jurisdiction. If the State intends to operate the line itself, it will be considered a common carrier. However, when a State acquires a rail line described under section 1120A.1 and contracts with an operator to provide service over the line, only the operator incurs a common carrier obligation. The operators of these lines are exempted from 49 U.S.C. 10901 and 10903 to which are the statutory requirements governing the start up and termination of operations. Operators exempted from these requirements must comply with the requirements of this part and must apply for a modified certificate of public convenience and necessity. The operator is a common carrier and incurs all benefits and responsibilities under 49 U.S.C. subtitle IV; however, the State through its operational agreement or the operator of the line may determine certain preconditions, such as payment of a subsidy, which must be met by shippers to obtain service over the line. The operator must notify the shippers on the line of any preconditions. The modified certificate will authorize service to shippers who meet these preconditions and the operator will be required to provide complete common carrier service under this certificate only to those shippers. (See 363 I.C.C. 132.)

§ 1120A.3 Modified certificate of public convenience and necessity.

(a) The operator must file a notice with the Commission for a modified certificate of public convenience and necessity. Operations may commence immediately upon the filing; however, the Commission will review the information filed, and if complete, will issue a modified certificate notice. If an operator has an application pending under section 10901a the time the rules become effective, it may file a request to convert the application to a modified certificate within 60 days of the effective date of these rules.

(b) A notice for a modified certificate of public convenience and necessity shall include the following information:

(1) The name and address of the operator and, unless the operator is an existing rail carrier:

(i) its articles of incorporation or, if it is unincorporated, the facts and organizational documents relating to its formation;

(ii) the names and addresses of all of its officers and directors and a statement indicating any present affiliation each may have with a rail carrier; and

(iii) sufficient information to establish the financial responsibility of the operator.

(2) The exact dates of the period of operation which have been agreed upon by the operator and the State which owns the line (if there is any agreement, it should be provided);

(3) A description of the service to be performed including, where applicable, a description of:

(i) the line over which service is to be performed;

(ii) all interline connections, including the names of the connecting railroads;

(iii) the nature and extent of all liability insurance coverage, including binder or policy number and name of insurer; and

(iv) any preconditions which shippers must meet to receive service.

(4) The name and address of any subsidizers, and,

(5) Sufficient information to establish the financial responsibility of any subsidizers (if the subsidizer is a State, the information should show that it has authority to enter into the agreement for subsidized operations).

(c) The service offered and the applicable rates, charges, and conditions must be described in tariffs published by the operator pursuant to the Commission's rules.

§ 1120A.4 Termination of service.

The duration of the service may be determined in the contract between the State and the operator. An operator may not terminate service over a line unless it first provides 60 days' notice of its intent to terminate the service. The notice of intent must be: (1) filed with the State and the Commission, and (2) mailed to all persons that have used the line within the 6 months preceding the date of the notice.

BILLING CODE 7035-01-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 611

Bering Sea and Aleutian Islands Groundfish Fishery; Apportionment of Reserve Amounts

AGENCY: National Oceanic and Atmospheric Administration (NOAA)/ Commerce.

ACTION: Apportionment of reserve amounts; response to comments.

SUMMARY: This notice announces the apportionment of (1) the remaining reserve amounts of fish to the total allowable level of foreign fishing (TALFF) and domestic annual harvest (DAH) and (2) DAH amounts to TALFF. These amounts were eligible on August 2, 1980, in the Bering Sea/Aleutian Islands in accordance with provisions of the preliminary fishery management plan (PMP) for the Bering Sea and Aleutian Islands Groundfish Fishery (see 45 FR 1028) and implementing regulations (50 CFR 611.93(b)(3)). These PMP regulations apply to vessels of foreign nations fishing for groundfish in the Bering Sea/Aleutian Islands.

EFFECTIVE DATE: August 9, 1980.

FOR FURTHER INFORMATION CONTACT: Robert W. McVey, Acting Director, Alaska Region, National Marine Fisheries Service, P.O. BOX 1668, Juneau, Alaska 99802; telephone: (907) 586–7221.

SUPPLEMENTARY INFORMATION:

I. Background

Because of uncertainties about specifications of U.S. domestic harvest, including the extent to which U.S. vessels delivering to U.S. and foreign processors would harvest groundfish, this PMP established reserves of fish in the Bering Sea/Aleutian Islands which could be apportioned to DAH or, if U.S. vessels did not harvest at anticipated levels, to TALFF.

On January 4, 1980, the Secretary of Commerce published approved amendments to the PMP that established initial amounts of TALFF, DAH and reserves for the fishing year. Amounts of DAH were determined by surveys conducted by the National Marine Fisheries Service and by the North Pacific Fishery Management Council. Reserves were established to assure that an adequate supply of fish was available to U.S. vessels wishing to sell U.S.-caught fish to U.S. processors or to foreign processors at sea (joint ventures). Regulations implementing these amendments were effective January 1, 1980.

II. Determination of Amounts of Reserve and DAH Apportionment

In accordance with regulations implementing the PMP, (611.93(b)(3)(iii)), the Regional Director has determined that:

1. The remaining reserves of all species except "other flounders" in the Bering Sea and Aleutian Islands area should be apportioned to TALFF.

The remaining reserves of "other flounders" should be apportioned to the JVP portion of DAH.

2. Certain amounts of the DAH for pollock, Pacific cod, Pacific ocean perch, rockfish, sablefish and "other species" should be transferred to TALFF.

3. Certain amounts of the DAP for yellowfin sole and "other flounders" should be transferred to JVP.

In making this determination, the Regional Director considered the need for DAH in the Bering Sea/Aleutian Islands to be supplemented with reserves. U.S. fishermen have caught a large portion of the JVP component of DAH for yellowfin sole and other flounders in U.S.-Soviet and U.S.-South Korean joint ventures. Because of this activity, it is necessary to supplement JVP with amounts of "other Flounder" from the reserves, and with yellowfish sole and "other flounder from DAP. For certain species (Pacific ocean perch, "other rockfish" and "other species") amounts of JVP considered surplus to joint venture needs are being apportioned to TALFF. Amounts of DAP considered surplus to the projected U.S. groundfish fishery for pollock, Pacific ocean perch, "other rockfish" and sablefish are being apportioned to TALFF.

Amounts of fish apportioned from reserves and DAH to TALFF and JVP are summarized in the following table.

Summary of amount (mt) being apportioned

Pollock:	
Apportioned from reserve to TALFF	25,000
Apportioned from DAH to TALFF	5,000
Yellowfin sole: Apportioned from DAP to JVP	1,100
Turbots:	
Apportioned from reserve to TALFF	1,125
Apportioned from DAH to TALFF	800
Other Flounders:	
Apportioned from reserve to JVP	763
Apportioned from DAP to JVP	1,100
Pacific cod:	
Apportioned from reserve to TALFF	2,935
Apportioned from DAH to TALFF	2,000
Pacific Ocean Perch:	
Apportioned from reserve to TALFF	537
Apportioned from DAH to TALFF	1,900
Rockfish:	
Apportioned from reserve to TALFF	500
Apportioned from DAH to TALFF	1,300
Sablefish:	
Apportioned from reserve to TALFF	500
Apportioned from DAH to TALFF	800
Atka mackerel: Apportioned from reserve to TALFF	620
Squid: Apportioned from reserve to TALFF	500
Other species:	
Apportioned from reserve to TALFF	1,856
Apportioned from DAH to TALFF	500

III. Response to Public Comments

One comment was received that addressed the Bering Sea/Aleutian Islands reserves. It is summarized and responded to below:

Comment: Eligible reserves and surplus DAH amounts of sablefish, Pacific cod, and turbot should be apportioned to TALFF.

Response: The remaining reserves and surplus DAH amounts of sablefish, Pacific cod, and turbot will be apportioned to TALFF.

IV. Other Matters

An environmental impact statement was prepared for the PMP and is on file with the Environmental Protection

Agency (EPA). A negative assessment of environmental impact prepared for the reserve apportionment provisions of the PMP is also on file with the EPA.

The Assistant Administrator for Fisheries has determined that this action does not require the preparation of a regulatory analysis under Executive Order 12044. The Assistant Administrator further finds that delaying the implementation of this order under the requirements of the Administrative Procedure Act would be detrimental to the orderly fishery now being conducted by fishermen of several foreign countries. This action confers a benefit.

Signed at Washington, D.C. this 8th day of August, 1980.

Robert K. Crowell,

Deputy Executive Director, National Marine Fisheries Service.

In accordance with 50 CFR 611.93(b)(3), Appendix I, § 611.20 is amended to include the following revised numbers:

Species	Area	DAH	JVP	Reserve	TALFF
Pollock	Bering Sea	27,050	[1] 21,550	0	972,950
	Aleutians	[1] 0	[1] 0	[1] 0	[1] 100,000
Yellowfin:					
Sole		[1] 7,900	7,800	0	[1] 109,100
Turbots		1,400	[1] 1,200	0	98,600
Other: Flounders		2,825	2,725	0	[1] 58,175
Pacific Ocean perch	Bering Sea	430	330	0	2,820
	Aleutians	430	330	0	7,070
Other: Rockfish		250	150	0	7,477
Sablefish	Bering Sea	300	200	0	3,200
	Aleutians	300	200	0	1,200
Pacific cod		22,265	15,065	0	36,435
Atka mackerel		[1] 720	[1] 720	0	24,080
Squid		[1] 50	[1] 50	0	9,950
Other species		750	550	0	73,499

[1] No change.

BILLING CODE 3510-22-M

50 CFR Part 661

Commercial and Recreational Fisheries off the Coast of California, Oregon, and Washington

AGENCY: National Oceanic and Atmospheric Administration (NOAA)/ Commerce.

ACTION: Final rulemaking.

SUMMARY: The Director, Northwest Region, (Regional Director) National Marine Fisheries Service, (NMFS), in accordance with the 1980 Amendment to the Fishery Management Plan (FMP) for the *Commercial and Recreational Salmon Fisheries off the Coast of Washington, Oregon, and California Commencing in 1978,* and regulations implementing the 1980 Amendment (50 CFR Part 661), has evaluated the latest catch and effort information for the recreational salmon fishery and has found that the projected ocean harvest of coho salmon by the recreational fishery has exceeded 240,000 coho in the Oregon Production Index (OPI) and will exceed 347,000 coho in the Washington Production Projection Regulatory Area by the end of the season (September 14, 1980). As a result of these findings, the Regional Director issues a final regulation (Field Order) reducing the daily ocean recreational catch limit of salmon from three fish to two fish in the fishery conservation zone (FCZ) off the coasts of Washington and Oregon.

EFFECTIVE DATE: August 8, 1980.

FOR FURTHER INFORMATION CONTACT: H. A. Larkins, Acting Director, Northwest Region, National Marine Fisheries Service, 1700 Westlake Avenue North, Seattle, Washington 98109, Telephone (206)442-7575.

SUPPLEMENTARY INFORMATION: The final regulations implementing the FMP at 50 CFR 661, were published in the **Federal Register** on July 31, 1980 (45 FR 50764). They specify in § 661.12(a) that the Regional Director of the Northwest Regional Office, NMFS, on August 7, may reduce the recreational daily catch limit of salmon from three fish to two fish in any portion of subareas A, B or C by issuing a Field Order if the Regional Director finds that (1) the total catch by the recreational fishery in the Washington Production Projection (WPP) Regulatory Area (as defined in § 661.5(v)) will exceed 333,000 (adjusted upward to 347,000 by Washington Department of Fisheries on May 21, 1980) coho salmon by or before September 14 or, (2) if the total catch by the recreational fishery in the Oregon Production Index (OPI) Regulatory Area (as defined in § 661.5(1)) will exceed 240,000 coho salmon by or before September 14.

According to § 661.12(c)(1) of the regulations, the Regional Director on July 29, 1980, made a preliminary projection of the coho salmon harvest by the ocean recreational fishery based on the following criteria:

(A) Coho salmon stock abundance, as updated during the season, in the WPP Regulatory Area and the OPI Regulatory Area; and

(B) Catch and effort in the recreational fishery to date; and

(C) The effort trend to date compared to average efforts as specified in subparagraphs (d)(2)(i) and (ii) of this section and projected effort to September 14.

Notice of the preliminary projection was issued on July 30, 1980. Comments were invited until August 6.

Information received from the Washington Department of Fisheries (WDF) during the comment period estimates that the catch of coho salmon in the WPP area through July 27, 1980, by the ocean recreational fishery to be 284,397 fish; effort is 174,764 angler days as compared to 1979 effort of 171,820 (as of July 29, 1979) and average effort for the 1974–76 period of 217,333 at a comparable date. On the basis of this information, I project that the recreational harvest of coho in the WPP will exceed 347,000 coho before September 14. It is still too early to assess the accuracy of the preseason estimate of total allowable ocean harvest in the WPP area as adjusted upward by WDF (from 833,000 to 857,000 coho) on May 21, 1980. Data through mid-August will be necessary before this estimate can be refined.

The Oregon Department of Fisheries and Wildlife (ODFW) estimated the catch of coho salmon in the OPI area through July 27, 1980, by the ocean recreational fishery to be 373,421 fish, well in excess of the target harvest of 240,000 fish. The data available as of August 6 still are inadequate to determine the accuracy of the preseason estimate of a total allowable ocean harvest of 820,000 coho in the OPI area. Therefore this estimate remains the best assessment of coho abundance within the OPI area as of this date.

The Washington Department of Fisheries and the Oregon Department of Fisheries and Wildlife reduced the daily catch limit to two fish in state waters effective July 16. The action taken by the two state fishery agencies was prompted by projections that the ocean recreational fishery would exceed its historical share of the total catch by September 14.

The Regional Director has reviewed the most recent recreational harvest data for Washington and Oregon and concurs with the conclusions drawn from that data. The Regional Director received no public comments as a result of the preliminary projections of July 29.
